Therefore, I submit that the President, in his statement, has contradicted his own reorganization order as submitted to the Congress with his message of April 11, 1940. Also, I submit that between the wording of the President's statement and the wording of the plan itself as quoted above, it is very evident that our newest and most efficient means of transportation is to be scuttled by the spoils system so long established and nurtured in the Department of Commerce. Given the power to supervise the selection of aviation personnel, the Secretary of Commerce would be given the power to hire and fire. And given control over the Budget of the Authority, he would be given control over the will of the Authority. It was the intention of the Congress, under the Civil Aeronautics Act of 1938, to make the Authority and the Safety Board relatively independent of politics. There it is now and there it should remain.

Under item 3 of the President's statement to the press, it is contended that certain phases of the proposed reorganization are intended "to eliminate a blind spot created by the failure of the Civil Aeronautics Act of 1938 to carry out the intention of Congress." Now I submit that the only real blind spot in this proposal is the wording used by the President in his public statement to befog and camouflage the real wording and intent of section 7 of the reorganization plan. Further, if Congress has left a blind spot in the law, it can be remedied by amendment. But it cannot be remedied by junking it.

Under item 4 of the President's statement, it is said that the function of investigating accidents is transferred from the Air Safety Board to the Civil Aeronautics Authority and it is specifically stated that this will continue "the present independence of accident investigations." Now it seems odd that the President should be so zealous to carry out the intentions of Congress as he proposes in item 3 of his statement and then turn right around and specifically disregard the intention of Congress in items 1 and 4. By this time it must be known by everyone, except the President, that the intent of Congress, under the Civil Aeronautics Act of 1938, was to separate the investigation of accidents from the Authority making the rules. Also, by this time it must be known to everyone, except the President, that the independence of the Safety Board, together with its method of investigating and reporting accidents, is one of the principal reasons why the United States air lines of today are the safest in the world.

Under item 5 of his statement to the press, the President states that "appreciable savings" will be made by abolishment of the offices of the members of the Air Safety Board. The Civil Aeronautics Act provides for three members at $7,500 per annum, a total of $22,500 a year. So far as I have been able to determine, that is the only specific saving claimed for Reorganization Plan IV.

Now I ask, is a potential saving of $22,500 annually of any consequence when it is known that a single air carrier accident costs approximately $200,000 on the average, to say nothing of the lives lost? Also, is it not true that the people of the United States have received real dividends on their investment in the Air Safety Board when it is noted that 13 months have now been completed without the loss of a single life on the air lines of the United States?

Mr. Speaker, and gentlemen, it is my carefully considered opinion that the savings proposed and implied by Reorganization Plan IV are part of the camouflage, a part of the real blind spot—the smoke screen—intended to conceal the real intent and importance of the plan.

Moreover, in the preliminary part of his statement to the press on Tuesday, the President stated that one of the reasons for Reorganization Plan IV was internal friction "particularly within the Air Safety Board."

Several times we have heard rumors to this effect so I have inquired. And this is what I learned:

In the first place, the act wisely provides that at least one member of the Air Safety Board must have been an air-line pilot, and as a matter of fact, I find that all 3 of the original members of the Air Safety Board were veteran pilots with years of experience.

The original chairman was Col. Sumpter Smith, of Alabama, who from 1917 to 1919, during the World War, was

an officer in the Air Corps and a pilot instructor. In 1921 he was a colonel in the aviation section of the Alabama National Guard, and he still holds an active license as a transport pilot. Another original member, and present chairman of the board, Mr. Thomas O. Hardin, was a former air-line pilot and air-line executive in Texas. The third member of the board is Mr. C. B. Allen, a former newspaperman and pilot from New York and West Virginia.

Now I want to elaborate for a minute on the past history of Col. Sumpter Smith in the early days of the W. P. A., under the direction of Mr. Harry Hopkins, now the Secretary of Commerce and to whom it is now proposed to return the control of aviation. It was at his request that Colonel Smith entered the employ of the Government and was given complete charge of W. P. A. airport construction. We know something of the history of this work, some of which was good but all of which was extremely and excessively costly. Based on his previous training, therefore, under W. P. A., it is perhaps not strange that when Colonel Smith was asked to submit a budget, as chairman of the new Safety Board, that he found it extremely difficult to set any top limit and in effect, following his W. P. A. training, stated that the Board should have all the money it might find necessary to expend.

Now, to get back to this question of friction. At the outset my inquiry revealed there were a few of the minor differences which might beset any new body of men setting up an entirely new organization. But there was never any real friction, as stated by the President, until Mr. Smith, who was then Chairman of the Air Safety Board, undertook other duties which caused him to neglect his duties as Chairman of the Air Safety Board, in contradiction of the Civil Aeronautics Act of 1938.

Under the Civil Aeronautics Act of 1938, section 702 (b), members of the Board are specifically prohibited from other duties. Nevertheless, Mr. Smith undertook to supervise the construction of the new national airport at Gravelley Point. It has been said that he undertook this supervision at the express request of the President. In any event the undertaking of that supervision, as I pointed out, was expressly prohibited by the original act of Congress. And in so doing he so completely neglected his duties as prescribed by the law governing his appointment to the Safety Board that the two other members of the Board were compelled to remove him as Chairman so they could carry on the statutory functions of the Board.

After having been removed as Chairman, Mr. Smith resigned from the Board some time last fall, and since then there has been complete harmony within the Board, and the effectiveness of its work has been widely noted, notwithstanding that two members of the Board have been compelled to carry on the work of three.

Business Moves—Down

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

Mr. BENDER. Mr. Speaker, business last week reached the lowest mark it has hit in the last 10 months. Spending averaged more than $10,000,000 a day less in the Nation's busiest areas than it has at any time during the last month.

This sharp change from the usual upturn in conditions every spring has New Deal Washington deeply concerned. With tax receipts and factory production declining, and business already feeling the impact of these conditions, the prospect for any success in living within the budget proposed by the President at the beginning of the congressional session looms dark indeed. Already the talk throughout the Nation's Capital has it that the President will shortly ask for the right to spend at least one-third more for relief and W. P. A. than he had anticipated.

Tax increases may be forestalled for the remainder of the present session, but they appear inevitable by the time the first session of the Seventy-seventh Congress convenes next January, if the present national program is continued. It looks like a sad, sad year for Mr. Taxpayer, and are not we all?

Widows and Orphans' Pension Bill

EXTENSION OF REMARKS

OF

HON. JOHN M. COSTELLO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

ARTICLE FROM THE LOS ANGELES TIMES AND EDITORIAL FROM THE WASHINGTON TIMES-HERALD

Mr. COSTELLO. Mr. Speaker, under permission to revise and extend my remarks which I obtained 2 days ago, I am submitting for the benefit of the Members, an article which appeared in the Los Angeles Times on April 21, and which was written by Mr. Warren B. Francis. The article gives a very clear indication of what the effect of enacting H. R. 9000 will ultimately be, and that it is a step toward universal pensions. The article by Mr. Francis follows:

[From the Los Angeles Times of April 21, 1940]

VETERANS CRACKING THE WHIP—UNIVERSAL PENSION FOR SERVICE MEN SEEN AS STRATEGY IS PERFECTED

(By Warren B. Francis)

WASHINGTON, APRIL 20.—With an organized minority cracking the whip, Congress will have gone a long way by adjournment time toward giving reality to a threat which has caused increasing alarm for two decades—a universal pension for World War veterans.

At the present moment the stage is being fixed for a drive to provide an income of $60 monthly to all veterans upon reaching the age of 65, regardless of need or disability. Establishment of the system is a foregone conclusion; the only question is how soon it will occur.

A preliminary skirmish in the House recently showed that it is merely a matter of time before regular checks start going out to the 4,000,000 men who joined the colors in 1917 and 1918. The veterans are well organized, so the result of the battle is indisputable.

The immediate issue is $30 monthly pensions to widows and dependents of all veterans—a little matter of $48,000,000 the first year and an estimated over-all outlay of $5,000,000,000 to $10,000,000,000. Stopped so far by the efforts of an unaided Californian—Representative COSTELLO (Democrat), of Hollywood—this measure is sure to pass the House before adjournment. It is almost certain to fail in the Senate this year.

Strategy in pushing veterans' legislation through Congress has been pretty well perfected, as the handling of this widows' and orphans' pension bill shows. Usual technique is for the House World War Veterans' Committee to take a half dozen bills and hold hearings at which objections are registered. The group then drafts a complete proposal, embodying different features of as many measures as possible, which it offers as a substitute for one of the original measures without further public discussion. Tactically this maneuvering is important; it means there are no adverse reports from Government agencies against the version taken up for debate.

The principal lobbyists for a universal pension are willing to take their time, not minding if the widows' and orphans' measure fails to get to the White House this year. Next session the skids will be greased—since hearings were held this year and the House already will have gone on record as favoring the proposal—and the bill will get to the Senate speedily. Then all political attention can be focused on one spot, carrying out the fundamental principle of concentrating strength on one objective at a time.

The widows' and orphans' pension is almost the climax of a long-time campaign. At first, parents of men lost in action had 20-year insurance policies. When these ran out pensions were provided.

Then widows of men who were 30-percent disabled began receiving aid. The percentage of disability was steadily reduced until almost all of this group was taken care of. Now the proposition is to provide Government benefits for those widows and children—many still unborn—of any former service man after his death. To complete the process only universal pensions will be needed.

In addition I present an editorial which appeared in the Washington Times-Herald on April 27, which I believe is very timely:

[From the Washington Times-Herald of April 27, 1940]

ISOLATION AGITATION

The American Legion and the Veterans of Foreign Wars, our two biggest veterans' groups.

Almost no Americans that we know of who saw the previous show want to see a repeat performance, let alone act in one. The horrors of the former exhibit remain fresh in the memories of hundreds of thousands of Americans now in their prime.

We suggest that all Legionnaires and Veterans of Foreign Wars take to telling their families and friends about those horrors—that these veterans' groups constitute themselves committees of the whole to agitate United States isolation throughout this war.

That would be a vital public service.

It would be a great deal worthier than the present main activity of the Legion and Veterans of Foreign Wars lobbyists, which is to organize raids on the United States Treasury for wider and wider World War pensions. The lobbyists have now come to the point of demanding pensions for widows of soldiers who were not injured in the war.

How about the Legion and Veterans of Foreign Wars rank and file pulling the props out from under these grab artists, and getting in there and fighting to keep their country from committing another such tragic mistake as it committed when it went to war in 1917?

The Labor Movement

EXTENSION OF REMARKS

OF

HON. CHARLES KRAMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

ADDRESS BY RAY C. KIRKPATRICK

Mr. KRAMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Ray C. Kirkpatrick, assistant on labor relations, Public Works Administration, Federal Works Agency, International Union of Operating Engineers, Washington, D. C., April 10, 1940:

It is a distinct pleasure to meet with this convention. I have been instructed by Mr. John M. Carmody, Administrator of the Federal Works Agency, and Col. E. W. Clark, Acting Commissioner of the Public Works Administration, to extend to you their greetings and their wishes for a most successful convention.

I come before you not only as the assistant on labor relations for the Public Works Administration, but also as a friend of your officers and your organization. I have known President Possehl, Secretary and Treasurer Fitzgerald, Mr. John P. Coyne, and many others of you here today for many years and have learned to appreciate deeply these friendships. The sincerity of this relationship has been demonstrated in the splendid cooperation extended me and the administration I represent, in accomplishing the big job that has been ours. A real tribute to the caliber of the leadership of your organization lies in the selection by the building and construction trades department of the American Federation of Labor of its president. It was, in addition, a compliment to the personal ability of the chairman of your board of trustees, Mr. John P. Coyne.

In observing this splendid organization, with its excellent leaders and extensive membership, I am reminded of the tremendous steps achieved by organized labor in the last few years. For centuries activities of organizations such as this were considered conspiracy against the state and were punished accordingly. The very assembly itself was considered illegal, regardless of the nature of the proceedings. Even far into the nineteenth century the efforts of legislatures and courts appear to have been not only to curb but also to crush all efforts to organize for self-betterment. In our own country the early judiciary declared that "A combination of workmen to raise their wages may be considered in a twofold point of view. One is to benefit themselves, * * * the other is to injure those who do not join their society. The rule of law condemns both."

Since that time, however, there have been great changes, both in the industrial life of our people, and in their social concepts. Rapid transportation and communication have been the means of such general education and mutual understanding that the people throughout the country have developed common problems and common attitudes. Thinking, in general, has become less circumspect and localized.

Even as this social evolution has tended toward a federalization of government, it has also removed the ignorance, intolerance, and the restrictions of economic monarchies that had handicapped organized labor. The type of thinking encouraged under the new democracy developed a working class that objected to the economic suppression that came with the industrial era. There thus developed labor organizations as an appropriate and necessary part of our national life.

That this position was accepted and understood is demonstrated by the following excerpts from a report by a commission appointed by the Congress to investigate labor in 1898:

"By the organization of labor, and by no other means, it is possible to introduce an element of democracy into the government of industry. By this means only, the workers can effectively take part in determining the conditions under which they work. This becomes true in the fullest and best sense only when employers frankly meet the representatives of the workmen and deal with them as parties equally interested in the conduct of affairs. It is only under such conditions that a real partnership of labor and capital exists * * *.

"If the working people are prevented from introducing an element of democracy into industrial life by way of labor organizations, they will undertake to introduce it in another way."

The problems and purposes of the labor movement, as such, were also gaining the respect of the general public. Although some steps were previously taken to further labor's position, it was not until 1933 that far-reaching measures were designed to secure to labor a position of relative significance commensurate with its importance in our national life. Under the present progressive administration, more legislation, favorable to labor, has been passed than in all the previous history of our country.

I am happy that I may refer to the construction terms and conditions of the Public Works Administration for an example of regulations permitted by legislation of this type. There are required, in every contract signed under the $4,000,000,000 P. W. A. construction program, the following, among other provisions, in which are couched guaranties favorable to labor:

1. That contract minimum rates be determined and paid in accordance with the rates prevailing in the locality in which the project is to be constructed.

2. That all employees engaged in work on the project have the right to organize and bargain collectively through representatives of their own choosing and that such employees be free from interference of employers in the designation of such employees' representatives in self-organization. That no person seeking employment on the project and no person employed thereon shall be required as a condition of initial or continued employment to join any company union or to refrain from joining, organizing, or assisting a labor organization of such person's own choosing.

3. That no person under the age of 16 years, no convict labor, and no person whose age or physical condition is such as to make his employment dangerous to health and safety may be employed, although physically handicapped persons who are otherwise employable are not thus affected.

4. That there be no discrimination because of race, creed, color, or political affiliation.

5. That persons be not permitted to work more than 8 hours per day or more than 40 hours per week, except in cases of emergency.

It is undoubtedly a new day for labor—a day of recognition merited by long years of effort. You have great cause for pride in the efforts you have taken to elevate the trade, encourage a higher standard of skill among your members, and in the cultivation of feelings of friendship among members of your craft and those who may employ them. There is further cause for commendation, because of your efforts to assist your members in securing and stabilizing employment, and your attempts to consummate contracts with employers, whereby wages, hours, and conditions of work may be regulated to the benefit of both your membership and the employers.

In addition to the above, this organization has demonstrated a fine spirit of cooperation in all matters relating to national progress. As society has become more complex, it has become more interdependent. It can succeed only when based upon the far-sighted cooperation of those comprising it. In this sense, "cooperation" is more than an abstract principle; it is an economic necessity.

That the efforts of this organization are directed toward the forwarding of the labor movement by correlating its activities with the general functions of society has already been demonstrated by the remarks made by Mr. Coyne in an address some months ago to the Rotarians in Washington. He said: "All we want is our fair due.

We will fight to protect you in your due. We will, if necessary, fight to get our due. We will preferably cooperate, for in all war, by whatever name described, there is only loss to everybody."

I desire to thank again the officers and members of this organization for the assistance you have rendered the Public Works Administration through me and my office.

The Public Works Administration is now being liquidated. Created in 1933 to relieve unemployment, particularly among the building trades, it has financed in whole or in part some 34,508 projects, estimated to cost over $6,000,000,000. To carry out this tremendous program the support of organized labor was a vital necessity. Permit me to express to you the appreciation of the Public Works Administration for your part in providing this necessary support. Labor has more than justified the confidence of the Government.

I am grateful for this opportunity of meeting with you today. I thank you.

Shall We Abolish the Air Safety Board?

REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

Mr. THORKELSON. Mr. Speaker, before launching on my subject, I wish to comment on the recent million-dollar prize offered for murder or kidnaping by Samuel Harden Church, president of Carnegie Institute. It would be interesting to know who the "50 wealthy Pittsburghers" are. As a matter of fact, the Department of Justice should, under the law, expose the names of those who made this offer.

I realize, of course, that a Carnegie fund, and perhaps other funds set up by Carnegie, are pro-British and pro-international. I realize that in his book, Triumphant Democracy, published in 1893, he expressed the hope that the United States would again become a colony of Great Britain. He was like Cecil Rhodes, who hoped the same. Both of them made their fortunes on slave labor. The disposition of their wealth was, of course, their own business, and so I grant are their private opinions. But when it has reached the point where their funds involve the rights and liberties of the people, or where they engage in the old tactics of putting the prize on murder and kidnaping, we are going back a long way from civilization.

The offer of such a prize may well lead to real murder and real kidnaping in the United States, and should this happen, no one should be to blame except those who are overeducated in internationalism instead of nationalism.

I hope the gentleman will withdraw the offer and that others will do the same, for this is an incident that might lead this Nation into war. Surely, if any foreign power offered a price on the life of our President or any prominent person in this country we would be ready to go to war. Yet we indulge in the very things that we would condemn and this attitude is even lauded by those who should know better.

Mr. Speaker, on March 6, 7, 9, and 16, 1939, I inserted in the RECORD statements in opposition to the reorganization bill and to the unconstitutional and dangerous powers granted to the President of the United States. In order to refresh your memories, I shall quote a few paragraphs from my remarks on March 7, 1939:

Mr. Speaker, after listening to the debate on H. R. 4425, the Reorganization Act of 1939, as propounded by the gentlemen from Missouri and North Carolina, I can readily foresee a purge in the United States no different from that which caused bloodshed in Europe. It is always well to remember that the American people are beginning to think for themselves. They are not going to tolerate socialism and communism imported from Europe. The small minority who are advocates of these "isms" are sticking their necks a long way out, and I predict they will be cut off.

The many Communists who have been appointed to positions in the Federal Government is sufficient evidence to show which way the administration leans. Such appointments are un-American, and those who make them are no better than the appointees.

We have been asleep for a long time, and we are still slumbering, but when our people become thoroughly aroused, I am positive that Congress will be instructed to clean house and the people will help to perform such necessary house cleaning.

It is difficult for a new man to understand how anyone can support this reorganization bill, a bastard offspring of the last bill, and it is no better than its parent It is not to reorganize the Government. It is not to reduce expenses. It is for one purpose alone—to centralize greater control in some evil power in our Government.

How anyone can stand up and defend this measure, and state to the Members that this bill is necessary and that Congress is not capable of performing reorganization, is an insult to Congress itself.

I did not see this bill until March 6, 1939, and I believe one of my colleagues said the same when he addressed the House yesterday. I question the purpose and the good faith of a committee that brings a bill of this type on the floor without giving our people an opportunity to study a measure which is going to deprive them of their birthright. I am, however, much more alarmed at the manner in which all bills come out of the committees. They are so obscure and confusing, interwoven with legislation and appropriation, that no one can vote on them intelligently. The purpose of the bills and of the administration that backs them can only be to destroy our Government, as this administration has done in the last 6 years.

I do not like to see a bloody revolution, yet as I observe the submissiveness and blindness of some of the majority Members in their acquiescent attitude to administration leaders, I realize the end is near.

The National Health Act was introduced in the Senate February 27. It is a brother to the Reorganization Act of 1939. It is for no other purpose than to turn over full control to the President and his bureaucrats. The Democrats are in the majority and can pass any legislation they please, which they have done.

To hasten final dissolution and destruction of our Government, I advise you to pass both of these acts. After you have borrowed and appropriated $10,000,000,000 more we will be bankrupt and you may then pack your baggage and go home.

After having performed this noble deed you may in your declining years listen to your master's crack of the whip and cogitate upon the aid you rendered in the destruction of your own Government. You will not be so cocky then as you are now, because you will be despised by every patriotic man and woman who sees you.

The legislation should be passed now, while you are in power. You are responsible; you should therefore clean the slate. Your action of today may be responsible for destruction of life tomorrow. I want you to be credited with that. I want it to be a crown of glory for those who vote for this bill and betray our people. Congress should know that it cannot shift its power to others; that in the very act of passing this power it dishonors its oath of affirmation.

The reorganization bill of 1939 will reorganize and consolidate the Government under one man. It will not reduce cost, and it will not simplify. It will, instead, complicate much more than now. This bill will create a costly totalitarian, communistic state.

I now quote from the bill, section 301:

"The President is authorized to appoint not to exceed six administrative assistants and to fix the compensation of each at the rate of not more than $10,000 per annum. Each such administrative assistant shall perform such duties as the President may prescribe."

This paragraph informs you about the dictator, and the Members of Congress should know that they elected him, and not the people. This congressional fiasco will cost the taxpayers of the United States $60,000 per year for six administrative assistants. That is the beginning. The Lord only knows how much it will cost for administrators or how many it will add to the Federal pay rolls, for no administration adherent will be discharged or left unemployed.

The purpose of this act is not to reorganize or to provide reduction in the cost of operating the Federal Government. It is not to aid the people by reducing taxes. It is, instead, the opposite, for it adds more cost to the Government's operations, which, of course, will have to be met by greater taxation.

Now, what is the act for?

I quote from the bill, section 1 (a):

"The President shall investigate the organization of all executive agencies of the Government and shall determine what changes therein are necessary to accomplish the following purposes."

The question now arises, what can the President do? And the answer is "Nothing," for he must employ someone to do the work for him. If he appoints the same caliber of men that he has recently appointed, even my colleagues on the right may visualize what might happen. There is too much socialism and communism in the Federal Government now, and this bill will, if nothing else, help to promote that tendency.

What is he further supposed to do?

I quote from the bill:

"To reduce expenditures to the fullest extent consistent with the efficient operation of the Government."

Does this mean anything? Certainly not, for this bill has already appropriated $60,000 per year for additional help, and nothing is said about how much more is to be appropriated or if anyone is to be eliminated.

I quote from the bill:

"To increase the efficiency of the operations of the Government to the fullest extent practicable within the revenues."

For the past 7 years, I believe, the Government has spent about $10,000,000,000 per year, or between sixty or seventy billion dollars. If this was not enough revenue to meet the present attempt at efficiency, just how much will be needed to meet contemplated efficiency, if you please?

These statements which I made then are now confirmed, for we have greater centralization in Government, dissension and friction between departments, and complaints from our constituents as a result of changes of which they do not approve. In addition to this, we have increased the Federal employment list by thousands and the cost of Federal operation by millions of dollars. This, of course, is no more than what we might have expected, for when the Executive promises economy, the reverse is true, for his economy means greater wastefulness and spending. Instead of cooperation between departments, we now have dissension and friction, and instead of greater efficiency we have inefficiency. As a matter of fact, it is clearly evident that no one appears to know what it is all about. If we keep shifting departments around, no one should be surprised if some day we find the Post Office Department conducting experiments in farming.

We are now confronted with the fourth reorganization bill, which in my opinion will, if it is passed, display either extreme tolerance or ignorance on the part of Congress. For 531 Members of Congress to pass one law on top of another in which they deprive Congress of power and bestow this on some hairbrained appointee of the Executive needs a lot of explaining when the Members confront their constituents for reelection. If Members of Congress have come to the conclusion that the appointees of the President are more competent than themselves, they should, in order to save the taxpayers money, go home and leave the Government in the hands of these crackpots in the Federal Government. Just how much evidence is needed by Congress to establish incompetence is a question the Members must decide. Nothing more is needed to prove this to the people, for nearly everyone is worried over the national debt, hocus-pocus money, inflation, dying industries, stagnant business, unemployment, stupid diplomacy, agitation for war, and the persistent attempts by the Executive to concentrate all power of Government under bureaucratic control, with headquarters in the kitchen cabinet.

The stumbling block in this last reorganization bill, however, is the contemplated change of the Civil Aeronautics Authority to the Department of Commerce, and the abolition of the Air Safety Board. The objection to this change is purely one expressed by the air-traveling public, for they have come to the conclusion that their families prefer to meet them at the airport in the ship instead of meeting them at home in a hearse.

The President is being quoted as having said:

Since the transmittal of Reorganization Plans Nos. III and IV, a flood of misinformation has engulfed those sections dealing with the Civil Aeronautics Authority. Much of this has fallen of its own absurdity and needs no comment. This morning, however, we saw a group of well-intentioned people staking out an exclusive claim to a so-called Lobby To Save Lives.

Such a statement is immaterial to the air traveler, for he appreciates the interest the air pilots are taking in his safety. Many of them, no doubt, recall the many tragedies which occurred when aeronautics was under the control of the Department of Commerce. I, as a pilot, have not forgotten some of my friends who are now dead.

The persons best qualified to express their opinions upon this problem are the pilots who have come to Washington to plead with the Government, not for their own sakes, but for the safety of their passengers. There is not a more loyal group of men than those who sit at the controls of our air liners, and we should listen to their advice instead of listening to some absent-minded palooka or political appointee. Air travel has become efficient and safe because it has been free of politics and under the guidance of people who understand that business, so the administration should, to be fair, give these gentlemen credit for a clean record instead of belittling the work that they have done so well.

Let me quote:

Here, in simply summary, is the proposal:

1. Despite handicaps, the Federal program for civil aeronautics has now achieved a stature and an importance which justify bringing this program more closely into the Federal family. The proposal will place it within the framework of the Department of Commerce, where it will have a closer relationship with the important reporting services of the Weather Bureau, and the essential air-navigation chart service of the Coast and Geodetic Survey. More than that, it will provide representation at the Cabinet table for a program of basic significance to our national transportation and our national defense. Present world conditions make the merit of this phase of the proposal obvious.

To justify this shift because aeronautics has achieved stature and importance is strange reasoning, for anyone else would reason that it should be left in the department where it had achieved its safety and importance.

That, however, is not the reason for the change, for here is the actual reason:

More than that, it will provide representation at the Cabinet table for a program of basic significance to our national transportation and our national defense. Present world conditions make the merit of this phase of the proposal obvious.

The cat is out of the bag. The President wants the C. A. A. in the Department of Commerce, so that it can be dominated by him and woven into an instrument to bring about a much-desired war.

I can only say that this makes it doubly obvious that it should be left where it is. It is there the people want it. The people of this Nation do not want to die in crashes in order to please the President, or anyone else. The people want, instead, a sensible and intelligent administration, particularly where their own safety and lives are concerned.

I do not believe the people are willing to risk the safety of air travel or to sacrifice their lives in order to help the President to build up our national defense, as he stated. In the first place, the American people do not want war, either now or after Congress adjourns. We recognize that there are certain powers that wish to pull the United States into war, and that war is favored by the administration itself, and that we are now engaged in active help to belligerents. The American people are equally sure that they shall go no further than that, and the President and his advisers should recognize that attitude now and lay their course accordingly.

I shall not waste time on reasons 2, 3, and 4, but I shall quote No. 5, because it is the same old "baloney":

Not only are we advancing the cause of air safety by these changes but we will also realize appreciable savings. Several highly paid positions on the Air Safety Board will be eliminated and other economies made possible.

The proposed change of the C. A. A. will not advance the cause of air safety, but will, I believe, bring about the same crack-ups and wash-outs we had before. However, to say that this change will bring about economy is absurd, for everyone knows that not one act of this administration has ever been economical. The President knows that, and his statement in this quotation confirms it, for he says that economies will be made possible. I can only say that so far there is no evidence that anyone now employed in the administration could now or at any future time make economy possible.

Benjamin Ryan Tillman

EXTENSION OF REMARKS
OF
HON. BUTLER B. HARE
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 2, 1940

ADDRESS BY HON. JAMES F. BYRNES, OF SOUTH CAROLINA

Mr. HARE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Hon. JAMES F. BYRNES, of South Carolina, on May 1, 1940, at the unveiling of a monument to the late Benjamin R. Tillman:

Surely it is fitting that here in the city where many of his political battles were fought and won, you and I should meet to pay homage to Benjamin Ryan Tillman. And surely it is equally appropriate that here, on the battlefield, should be unveiled the monument which is to remind future generations of the achievements of the stalwart figure whose memory it shall enshrine.

South Carolina ranks high among the States of this Union when historians recount the deeds of those who established and nurtured this democracy. Warriors who strode across the battle scene did not always wear armor or bear muskets. Many of the battles which exerted a profound influence upon South Carolina's growth and development were fought upon the rostrum. And the conditions which necessitated such struggles imposed upon the State's leaders responsibilities as numerous and as grave as military leaders of any era have been called upon to assume.

No period in our State's history was fraught with so many momentous problems as that during which Benjamin Ryan Tillman was developing into manhood. The War between the States and the period of reconstruction which followed, brought to South Carolina tribulations which tried the souls of her harassed citizens. The State saw its most treasured ideals and institutions converted into unhappy memories. Bankruptcy had overtaken most of those who had been wealthy. The masses were restive. They feverishly sought a solution for their problems, and they wanted, above all else, a leader who had walked through the valley with them, who understood their needs and who would fight unwaveringly for their cause.

Like the Romans of old, they found that man of destiny behind a plow. Their Cincinnatus was a rugged farmer from Edgefield County, a tireless dynamo who, like those who sought his guidance, was dissatisfied with the conditions prevalent in that period.

The farmer from Edgefield led a crusade whose goal was the freedom of South Carolina's agricultural interests from what the farmers felt was virtually taxation without representation. And he led that crusade with a flaming torch that proved an inspiration to many who have followed the trail he blazed.

Tillman came from sturdy, distinguished stock. His father died when young Ben was only 2 years old, and thereafter the child was reared under the tutelage of his accomplished mother. Mrs. Tillman managed her estate in Edgefield County without the aid of an overseer, and she did it with remarkable efficiency.

By her side, young Ben learned about agricultural and other economic problems. His intimate contact with the practical phases of life on the farm groomed him for the tremendous tasks which confronted him in later years. His mental powers developed steadily, along with his knowledge of the problems of his fellow citizens, and he sensed with uncanny accuracy those economic and social changes which were occurring in South Carolina. He and thousands of other South Carolina farmers were convinced that, among other things, they needed agricultural education. With the meager weapons at their command, they were fighting a losing, hopeless battle against intolerable economic conditions. They concluded that their lot could not be improved without far-reaching changes in the State's leadership.

Francis Simkins in his splendid history, The Tillman Movement in South Carolina, writes that it was on August 10, 1885, at a joint meeting of the State Grange and the Agricultural and Mechanical Society of South Carolina, the State first learned that an Edgefield farmer had evolved revolutionary ideas concerning a State's responsibility to its agricultural interests.

In a speech replete with dry humor, yet overflowing with hard truths, Ben Tillman electrified that gathering in the Bennettsville courthouse. He offered a set of resolutions designed to advance the cause of agricultural education. He urged that the legislature establish a technical school where students might work and come forth at graduation ready to earn a living. It was from this plea that Clemson College eventually emerged.

Yesterday afternoon I visited Clemson College. From the burial ground to the cemetery more than 2,000 students lined the roadway. We passed through that human lane sorrowfully, following to its last resting place the body of another distinguished South Carolinian, Asbury Francis Lever. As I gazed into the faces of the young men on either side of that road I knew that they were the sons of Tillmanites and anti-Tillmanites, and I realized that many of them would never have received the blessings of that character of education within the limits of South Carolina but for the vision and determination of Ben Tillman.

I know that if Senator Tillman were present this morning he would have enjoyed the musical program and would have been proud of the band from Winthrop College, the institution he loved so well.

From the day of that convention until his death 33 years later, Tillman was a commanding political figure in South Carolina. At the outset of his entry into South Carolina politics he proclaimed: "If I had no peculiarities, perhaps I would be an insignificant and an unknown man. I am what I am, and God made me what I am, and therefore, if this conglomeration of flesh and bones becomes a factor in South Carolina, it will be by reason of my peculiarities."

What he chose to characterize as his peculiarities were quickly recognized as genius by the people of his State. The farmers recognized in him their unchallenged leader, and they followed the standard he bore through some of the stormiest political campaigns ever waged in the Nation.

A trained warrior on the battlefield never fought with greater skill than did Tillman in his many political battles. He aroused among his followers an enthusiasm that knew no bounds, and the majority of those who rallied around his banner in the early days of his struggles remained loyal to his cause until their leader laid down his arms at the call of the Great Commander in Chief for the last long sleep.

April 29, 1886, was a momentous day in South Carolina political history. On that date the farmers of the State assembled here in Columbia. Tillman's address on that occasion attracted Statewide attention. His broad contention was that farmers constituted 76 percent of the State's population at that time, but had little voice in government. With a thoroughness that amazed those unacquainted with his thorough grasp of public affairs, he discussed the problems of government and urged the farmers to elect to public office men who would loyally carry out reforms needed to improve agricultural conditions.

The convention selected a committee, with Tillman as chairman, to appear before the next legislature and advocate certain reforms, among them a separate agricultural annex to the State college, a tax on fertilizer for inspection and analytical purposes; a State board of agriculture, the repeal of the lien law through which so much farm property had become mortgaged, the establishment of a State college for women, and the calling of a convention to frame a new constitution for the State.

Rebuffed by the legislature at the next session, the Tillman forces redoubled their efforts to bring their program to fruition. Unaware of the powerful, irresistible movement under way, the State's lawmakers unwittingly had sown the seeds that were to grow into a rich harvest in an amazingly short time. On March 27, 1890, the farmers of the State again assembled in Columbia for the avowed purpose of nominating their own candidates for State offices.

Tillman had insisted repeatedly that he did not desire public office. But the assemblage in Columbia that March day had other plans. Time after time the audience called for Ben Tillman.

Finally he yielded to their insistent appeals. "I do not want to be the nominee," he said, "but if you ask me to fight * * * I will fight as long as I have a dollar left and the health with which to fight."

They asked him to fight. Ben Tillman kept his word.

At the age of 43, in the prime of mental and physical vigor, he waged a gubernatorial campaign which South Carolina has not forgotten. That county-to-county canvass brought scenes of tense excitement. Tillman marched across the State explaining the objectives of his fight, and his strength grew daily.

Tillman so aroused the farmers that in many counties they would not permit his opponents to speak. When those opponents denounced him, he excelled them in denunciation. When the press lectured him for conducting an undignified campaign and resorting to personalities he placed the responsibility for the character of campaign upon his enemies. He told the story of a farmer with pitchfork in his hand walking by the side of a wagon loaded with hay. As he passed a neighbor's place a savage-looking bulldog attacked him and, just in the nick of time, the farmer stuck him with the pitchfork. The owner of the dog yelled, "Why didn't you use the other end?" To which the farmer replied, "Why didn't your dog use the other end?" The illustration delighted the farmers. One of them promptly called him "Pitchfork Ben." The name stuck to him for the rest of his life.

The realization that a new power in the State had made its appearance spread like wildfire. Tillman was elected Governor by a margin of almost four to one, and on December 4, 1890, the

largest crowd ever gathered on this plaza assembled to witness the inauguration of the Edgefield farmer as chief executive.

No glittering generalities marked the inaugural address of Governor Tillman. "The responsibilities of my position demand practical statesmanship," he told his audience. "We are here to do business, not evolve beautiful theories or discuss ideal government. We come as reformers, claiming that many things in the government are wrong."

None of those who weighed and analyzed his address realized it, perhaps, but South Carolina that day inaugurated the man who might truly be termed "the first new dealer."

South Carolina needed profound changes—a New Deal—and Governor Tillman went about his task of reorganizing the State government with the same grimness of purpose that had always characterized his actions. Before his first term of 2 years had expired, the State had witnessed many changes under its New Deal Governor.

Construction of Clemson and Winthrop Colleges had been started. South Carolina College had been reorganized. Many other changes advocated by the farmers of the State had been effected, but Governor Tillman regarded his program as incomplete. He asked for another term in which to perfect the reforms he had launched.

The Governor went even further: He told the people that many members of the legislature had obstructed his program and asked that they be defeated. His request was granted. Ben Tillman went back to the Governor's chair for another term with a legislature whose overwhelming majority was in thorough sympathy with his objectives. There were many then and there will be many now who will assert that his course was wrong, that he sought to be a dictator. I do not agree. I believe in responsible government. If we elect a Governor with a definite program, we should elect a legislature that will enact it into law. If the program is successful, the Governor and the legislators should be rewarded. If it is a failure, they should be retired.

Governor Tillman put through both Houses an authorization for holding a popular referendum to determine whether a constitutional convention should be held.

His railroad regulation bill, sidetracked by the preceding legislature, was passed, providing for a railroad commission of 3 to be given power to examine all schedules and books of railroad companies in order to fix fair freight and passenger rates and prevent unjust discrimination in charges. His program of fiscal reform aroused wide opposition, but he engineered it through to enactment. Under his supervision the legislature took its first step in the direction of social legislation by enacting a law limiting the hours of labor in the cotton mills of the State.

No better indication of the speedy tempo with which America moves could be cited than by retrospection at this point. The News and Courier declared the bill would drive capital out of the State. Cotton-mill executives in South Carolina proclaimed that the proposed legislation would bankrupt every mill in the State. The law, as finally passed in 1892, provided for a limit of 66 hours work per week. Four decades later we have a 40-hour week, and last month we had more active spindles in South Carolina than in any other State in the Union.

Governor Tillman inaugurated other reforms. The legislature approved his plan for reorganization of county governments to enable these units to function more efficiently and economically. The State debt of $5,500,000 was refunded. Pensions of Confederate veterans were increased. Salaries of public officials were decreased. The tax levy was decreased by one-half a mill. The Governor's efforts to shift some of the burden of taxation from land to corporations were successful. His program was bitterly opposed by the conservatives but the best evidence of the constructive character of that program is the fact that with the one exception no important bill enacted during the Tillman administration was repealed by those who subsequently came into control of the State government.

The one exception was the dispensary law. In a State-wide referendum the people had voted in favor of prohibition. Tillman did not believe that the State was ready for this reform. He feared the violations of the law which subsequently contributed to the repeal of the national prohibition statute. As a compromise he offered the dispensary system, patterned after a municipal law in Sweden, which had worked remarkably well. The law was opposed both by liquor dealers and prohibitionists. The efforts to enforce it caused riots and bloodshed. With the persistence and courage that characterized the man, Tillman called into action all the powers of government. When several units of the National Guard failed to respond to his call he disbanded the companies. He appointed a small army of State constables and by the end of his term the law was being enforced, not with complete effectiveness, but as well as any law regulating the sale of alcoholic liquors could have been enforced at that time. Subsequently corruption in the administration of the law and the rising tide of public sentiment against the sale of alcoholic liquors under any system resulted in its repeal.

Tillman's espousal of the dispensary system was unfortunate. The tremendous task of enforcing the law diverted him from the accomplishment of social reforms which he believed to be overdue and which would have been possible under his leadership. Unfortunate, too, because the spectacular methods resorted to in order to enforce the law caused people without the State and some within the State to associate his name only with the dispensary law and to overlook the incomparable program of constructive legislation enacted during his administration.

That South Carolina ratified his acts as Governor was attested in 1894, when Tillman sought and won easily a seat in the United States Senate. In his final message to the general assembly, he listed the numerous accomplishments of his administration, and that which he was especially proud to list was the passage of a resolution calling for a constitutional convention.

Coincident with his election to the Senate, South Carolina had voted to hold a convention to draft a new constitution. At that time the State's constitution was based on that of Ohio. Its shortcomings were exasperating to Tillman, who had fought for years to bring about changes he deemed necessary. Therefore the convention which began in Columbia on September 10, 1895, represented a personal triumph for the Edgefield statesman, and the real leadership of the convention devolved upon him.

For 12 weeks this convention wrestled with difficult tasks under the unrelaxing vigilance of Senator Tillman, and the constitution which emanated from this gathering registered with almost uncanny accuracy the desires of the dominant element in South Carolina. That this is true is proved by the fact that 34 years after its promulgation it still remains as the fundamental law of our State.

South Carolina's constitution stands, in reality, as another imposing monument to Senator Tillman's vision, his tenacity of purpose and his indomitable will to win every battle for which he enlisted.

As a Member of the United States Senate, Tillman's forcefulness, independence, and honesty of purpose quickly won for him the respect of his colleagues. Senators discovered that in debate he was a dangerous opponent. The CONGRESSIONAL RECORD will disclose that in the national arena he still possessed and used effectively the power of ridicule, which had been so devastating to opponents on the hustings in South Carolina.

"Pitchfork Ben" soon became as well known in the Capital City of the Nation as in the capital city of South Carolina. He contributed to the enactment of many progressive measures affecting the agricultural interests of the Nation. He was intensely interested in the United States Navy. When the Democratic Party came into power in 1913, he was made chairman of the Naval Affairs Committee of the Senate. He advocated measures of preparedness and when we entered the World War rendered inestimable services as chairman of the Naval Affairs Committee.

In the field of national politics he played a prominent part. As national committeeman from this State he participated in the management of his party's battles. His liberalism placed him in the camp of another great liberal. He contributed to the nomination of Woodrow Wilson, and to the day of his death remained one of the most loyal friends and supporters of the war President.

His attitude toward Wilson was entirely different from his attitude toward the previous Democratic President, Grover Cleveland. He differed with Cleveland and in Tillmanesque language criticized his acts. But Tillman was first, last, and all the time a Democrat. He believed in fighting his battles in the Democratic Party and abiding by the will of the majority. He had no patience with those who deserted the party. He told me that after he had severely criticized Cleveland, several southern leaders who had embraced the Populist cause came to urge him to join that third party. In commenting upon his refusal, he stated: "I remained in the Democratic Party and I had the opportunity in the Senate to contribute to the accomplishment of many of the reforms the Populists advocated, while those men who deserted the party went into a political wilderness from which they have never emerged, and have been unable to help their country or themselves."

I have devoted the greater part of my remarks to the activities of Tillman the farmer and Tillman the Governor, because it is my belief his greatest public service was rendered during that period of his career. That was his own opinion. In the closing days of his life I heard him say time and again that: "I would rather be Governor of South Carolina than hold any other office in the gift of the people." He held that opinion because it was in the office of Governor he had been given the opportunity to render greatest service to the people he loved.

The statement that in 1890 reforms were overdue in South Carolina does not reflect in the slightest degree upon the integrity of those who had been in control of the State government. Even Tillman, who certainly showed little restraint in criticizing opponents in debate, never once questioned the honesty and integrity of the men who from 1876 to that date had administered the government of the State. South Carolina from the days of reconstruction had enjoyed a government free of corruption, a government controlled by men who in time of war as well as peace had demonstrated their patriotism. They were as a rule followers of the revered Wade Hampton.

The campaign of 1890 resulted in these two leaders, Hampton and Tillman, becoming political antagonists. Each possessed the power to arouse his supporters. This feud only added to the bitter feeling already engendered. Considering the intensity of feeling it is fortunate indeed that it has disappeared. If today it exists at all, it is lodged only in the hearts of a few persons who participated in those contests. It does not exist in the hearts of the

young. It matters not whether our young people today graduate from The Citadel, or from the South Carolina University, which were at one time the targets of his criticism; or from the institutions he loved so well, Clemson and Winthrop. As they visit these grounds and look upon that figure to the left or that figure to the right of the statehouse, they will join in paying tribute to the memory of those two great South Carolinians, Wade Hampton and Benjamin Ryan Tillman.

When praise is bestowed upon Tillman for having given to the State a new constitution, we are apt to overlook another achievement. It cannot be said that he initiated the demand for a direct primary for the nomination of candidates for public office. That demand was voiced before Tillman urged it upon the State in 1888, but the primary was not assured until the closing days of his second administration, when he was in absolute control of the legislature and the party machinery.

An even greater service was rendered by Tillman in arousing the masses of the people to take an interest in their own government. I have no fear for the future of this State or of this country so long as the masses of the people have the right to determine the kind of government under which they live, and freely exercise that power.

It has been said that Senator Tillman in the last few years of his life became more conservative in his views. I think that is true. It only emphasizes that great truth that the liberal of today is the conservative of tomorrow.

From 1911 to 1918, while I was a Member of the House, I spent many hours with Senator Tillman in his office and in his home. It was difficult for me to understand how the man I knew could, in earlier days, have aroused the intense hatred and animosity of men for whose judgment I had great respect. I concluded they had seen him only when he was engaged in his political battles, or that he had mellowed with age.

Certainly it was true that while I found Senator Tillman still a positive character, a man's man, whose earnestness was often mistaken for temper, I found him in his homelife gentle and kind. When aroused in a political discussion in his office or home, I have seen him at a mere word from the wife who called him "Bennie," discard his earnestness and smile in good humor. I have seen him walk among the flowers he had planted and speak of them as of children. I have watched his devotion to little children and had ample opportunity to know his respect for women and the pedestal upon which he placed womanhood.

In one of his campaigns, replying at Edgefield to cruel attacks that had been made upon him, Tillman uttered this appraisal of himself:

"I have a rough outside; God did not make me of silken material to bamboozle men, to give lip service, or to pretend what I do not mean; but my heart beats warm for the people of South Carolina; and those who know me best love me most. Although I make no pretensions to religion or to being a churchman, is there a man here who ever knew me to do an act of dishonor or dishonesty?"

There was no man there, or elsewhere, who would have made such a charge against Tillman. He hated hypocrisy and detested hypocrites. And, while he said he did not pretend to be a churchman, as I looked upon him a few hours before he left us, I recalled conversations with him that caused me to know that he had a simple faith in the Master, a faith that guided his footsteps from childhood to the grave, and imbued him with strength to march on when others faltered.

Those who knew Tillman, and those who have studied his career realize that what enabled this man to rise to the heights he attained was courage. Time and again he faced audiences of armed men who came to heckle him. He faced them without fear, and never once wavered in his attacks. He had more than physical courage. He had that courage which caused him not to falter in his course because of social ostracism or misrepresentation. Had he been less courageous, less persistent, or less dogmatic he would have been swayed by adversities and criticism and would have failed in his leadership. Possessed of a stout heart, he fought on and on, and the fight he waged for the masses of the people will ever be an abiding inspiration to all true lovers of democracy, and an enduring memorial to Benjamin Ryan Tillman.

The Relief Situation in Nebraska

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

LETTER FROM GOV. R. L. COCHRAN

Mr. CURTIS. Mr. Speaker, I realize the deplorable situation of the United States Treasury and that all appropriations must be handled very carefully, but I find it necessary to call the attention of Congress to the situation in Nebraska. We have had 6 or 7 years of prolonged drought. No one will ever know the actual poverty and want that prevails in many parts of my State. If a deficiency appropriation bill to further aid distressed territories is presented, I shall support it.

I feel that Federal funds for relief should be allotted to States in conformity to their needs. Since the need is very great in Nebraska, I hope that something can be done to relieve the situation. All possible waste should be eliminated in the administration of relief, and the heaviest cuts should be in those territories that have been more fortunate than my distressed State.

I have received many letters and telegrams from individuals, county commissioners, and other organizations. I wish to extend my remarks by including a letter that I received this morning from the Governor of Nebraska on this subject.

STATE OF NEBRASKA,
EXECUTIVE OFFICE,
Lincoln, April 30, 1940.

Hon. CARL T. CURTIS,
Member of Congress, Washington, D. C.

DEAR CONGRESSMAN CURTIS: The announcement that there will be a reduction of 5,000 in Nebraska on the W. P. A. rolls effective May 1 has caused considerable concern, not only among those directly dependent upon W. P. A. but also to all citizens who are familiar with our conditions.

It seems to me to be a situation that would justify a deficiency appropriation; and if a deficiency appropriation is not made, we feel that the reduction for Nebraska should be much less drastic than that announced because of our long period of drought, which has created a condition perhaps unlike that of any other State in the Union.

I am writing to the other Members of the Congress from Nebraska and to Colonel Harrington.

Very sincerely yours,

R. L. COCHRAN,
Governor of Nebraska.

The Real Friends of Labor Want the N. L. R. A. Amended

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

Mr. HOFFMAN. Mr. Speaker, certain union officials assume to speak for all labor. Certain others claim to be the only friends of labor. Both classes take it upon themselves to charge all those who disagree with their views with being antilabor.

It would be well, when listening to the statements of these gentlemen, to inquire as to what degree, if any, their expressed views are influenced by their personal interest. As an illustration: When you hear some high union official asserting that this or that law should not be amended, you might consider the amount he receives by way of salary or expenses as a union official, and whether or not, if all labor legislation was just and equitable, there would be the same need to retain him in office.

The same applies to some union organizers who seem bent upon always having a strike on the horizon and who, unless there was prospect of a strike or of a labor dispute, would be out of a job.

Then there are some politicians who must have an issue and, unless there is labor conflict, they would not be able to go out and shout from the housetops about the unfairness of the employer and how he paid a starvation wage.

It might be well, too, when listening to the statements of some of those who proclaim so loudly their friendship for labor, to consider how much of their argument is mere "flag waving" and how much of it is really in support of leg-

islation which will do something to remedy the unemployment situation.

Nor should we forget, as we listen to them, that as a rule none of these advocates ever created a job or gave industrial employment and that the force of their remarks is usually directed against those who, throughout the years, have provided the pay check which made the American workingman the highest-paid employee in all the world.

That some of the real laboring men and officials of labor organizations see the trend is quite evident, if we follow labor publications and their editorials. An editorial from Maurice R. Franks, editor of the Railroad Workers Journal, appearing in the current issue, is as follows:

BLAME THE "POLL"ITICIANS

The success of this Nation can be greatly credited to politicians like Washington, Lincoln, Jefferson, and others of their caliber, who pursued a policy of political wisdom based on equity and justice to all citizens. These politicians followed a course of action supported by the courage of their convictions, irrespective of personal ambitions. When laws were passed which proved to be of no remedial value, they did not figure in terms of how many votes they would win or lose by making amendments. They made amendments, believing that "right is might."

We have politicians today with equal courage and integrity, who can be well proud of being politicians. But we have, also, a type of opposite tendencies who believe in terms of votes, and how many they can poll through side-stepping an issue, even though it be the wrecking of our Nation. The latter are not genuine politicians; they are "poll"iticians.

If it were not for the "poll"iticians, the politicians would make amendments to some recent legislative blunders. Their first act would be to amend the Labor Act, a law that is not based on equity and justice to the citizenry as a whole. To analyze the enforcement of this law is to realize it unfairness. Three parts of our citizenry are involved by the Labor Act; the worker, the employer, and the public. But only one part is given consideration; the worker. The employer has no rights, and can be abused by the worker, with no provision allowed in the law for retaliation. He can be cited for his abuse of the law, but he cannot cite the worker. The public must take the consequences.

This law has proven inadequate in diminishing the causes of labor disputes burdening or obstructing interstate or foreign commerce, making it apparent that it must be changed to benefit not only the workers but the employers and the general public as well if we are to enjoy a "government of the people, for the people, and by the people." As long as we remain in the hands of "poll-iticians," the chances of rectification of this miscarriage of justice are minute.

The Labor Act can be amended only in accordance with popular demand. The specific changes should be: First, the depoliticalizing of labor unions, making it against the law for unions to play politics in any way, shape, or form, thereby eliminating political campaign contributions; second, the abolition of the forced closed-shop and check-off system of dues collection; third, absolute equity to all parties affected by the law. With these amendments, it is doubtful if some of the newer labor organizations could survive. Which means that the present division of labor might turn out to be an amalgamation.

By and large, labor is becoming more conservative. No one realizes this fact more than the "poll-iticians" who, being strategists, know that the amalgamation would turn out to be their elimination at the next election. So, if the Labor Act is not amended this year, do not blame the politicians, blame the "poll-iticians."

Frankly yours,

MAURICE R. FRANKS,
Editor, Railroad Workers Journal.

The Members of the House will shortly have an opportunity to get rid of the National Labor Relations Board and to correct some of the injustices of the N. L. R. A. It is to be hoped that, before it is too late, conservative labor will realize how a few Communists and a somewhat larger number of politicians have been using the labor issue to advance their own plans and interests; that the man who works remembers that neither the Communists nor the agitators nor the union officials themselves are the ones who provide the jobs; and that, after all, the old saying that we should not kill the goose that lays the golden egg contains the thought that, if you bankrupt the corporation or the individual who is operating the industry in which you work; if you destroy private business, then you know the Government will take over, and labor, every time it has fallen into the hands of the government—as in Italy and in Germany—will find itself under the control of the politicians, who are more greedy, more selfish, more ruthless, than private employers ever dreamed of being.

Six Months' Operation of Neutrality Law Has Protected American Neutrality, Prevented Loss of American Lives and Property, and Has Increased Our National Defense Facilities

EXTENSION OF REMARKS
OF
HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 2, 1940

Mr. BLOOM. Mr. Speaker, the present Neutrality Act was signed by the President on November 4, 1939. It has now been tested for 6 months, during which foreign war has prevailed. The war has been greatly extended since the Neutrality Act was signed, but the United States remains at peace, and none of the belligerents has challenged the fairness and impartiality of this country under the Neutrality Act.

The foremost objective of the Congress, the President, and people of the United States is to keep out of war. This fixed purpose has been powerfully aided by the Neutrality Act. But for that law, the United States might by this time have become seriously involved.

Predictions were made by opponents of the Neutrality Act that it would take this country along the road to war. These predictions were honestly made, but they were not based upon reality.

It was said that the United States would become the arsenal of the Allies by lifting the embargo upon arms and implements of war, and that this policy would provoke war upon us.

The United States has not become an arsenal, and no belligerent finds fault with our old-established policy of dealing freely with all parties.

It was said that the United States was unwise in withdrawing its ships from embattled areas. We were accused of abandoning the freedom of the seas.

The wisdom of the present Neutrality Act in this respect has been demonstrated. Other neutral nations have sent ships into the war zones and these ships have been sunk, with great loss of life. The United States has not lost a single ship because of the great war. American citizens have not perished in attacks upon American ships. This fact alone vindicates the wisdom of the Neutrality Act.

It was said that Americans would lose heavily because of withdrawal of American shipping from war zones. On the contrary, American shipping to foreign ports since the beginning of the European conflict has increased sharply to its highest point in a decade. In January and February of this year 1,042 American vessels were employed, an increase of 110 from the like 1939 period. The rise was more striking in view of the diversion of American vessels from the war zone to Mediterranean, South American, African, and Asiatic ports, and the withdrawal of passenger liners from the North Atlantic. Our commerce with other peaceful nations is increasing—and this growth is permanent, not depending upon the abnormal demands of war.

By furnishing implements of war to belligerents the United States is stimulating invention and improvement in these weapons, besides building up immense productive capacity in aviation factories. These inventions and improvements, and this increased productive capacity vastly increase the effectiveness of our national defense, without any cost to us. As the war continues, the United States keeps abreast of

all new devices and mechanisms of war, so that our national defenses are stronger than would have been the case if we had maintained the embargo.

Thus, three prime objectives have been attained by the Neutrality Act.

First. We have made it less likely than ever that the United States will become involved in war.

Second. We have averted loss of American life and property and yet have maintained commerce.

Third. We have kept American national defense modernized without the necessity of spending huge sums for equipment and expansion of manufacturing capacity.

While sentiment in the United States is overwhelmingly in sympathy with the cause of the Allies in the European war, sentiment in this country is equally overwhelming against our country becoming involved in the war.

We intend to stay out of the war. We are safeguarded in this determination by the present Neutrality Act.

New England's Place In National Defense

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

ADDRESS BY HON. J. JOSEPH SMITH, OF CONNECTICUT

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Hon. J. JOSEPH SMITH, a member of the House Committee on Military Affairs, at the New England council meeting in Washington yesterday:

New England has from her earliest days taken an active part in our national defense. The traditions of our people as well as our position as the region of our country nearest Europe have kept awake in us a lively interest in the nations across the Atlantic and their relation to us.

New England's people have taken a leading part in furnishing the manpower of our armies from colonial days through Lexington and Concord down to the late World War. New England has also contributed her industrial skills and products from the days when Washington's cannon were cast in Connecticut and Massachusetts down to this age of the machine tool.

We are proud of the part our men and our industries have played in the defense of this Nation and the liberties of its people. We rightly raise monuments to the deeds of our youth from Concord to the Argonne. But it sometimes seems to me that in contemplating their heroic deeds we are too prone to forget their needless sacrifices in many of our wars.

The Revolution dragged on 8 years because of our bungling in the equipment and provisioning of our troops. The War of 1812 saw untrained and ill-equipped militia break at the approach of an enemy and abandon our Capital to the sack of the victorious invader.

Lack of equipment and training brought us Bull Run and its aftermath of 4 bloody years of rebellion. The War with Spain showed up our antiquated weapons and brought attention to worthless coast defenses. In the World War, although our factories had been making equipment for the Allies for 3 years before our entry into the war, we again were forced to throw untrained troops into battle and were unable to furnish them equipment of our own manufacture until it was all over.

We have had bitter lessons born of the failure of our people in the past to plan, provide, coordinate, and train, in time of peace, our magnificent human and industrial resources for our defense.

We have had lessons, but have we learned? Our course during the last 20 years hardly shows it.

After the World War we again abandoned any effective effort to maintain an adequate defense system. True, we drew up a blueprint of defense based on our World War experience, in the National Defense Act of 1920. It provided a Regular Army of 280,000 men, a National Guard of about 440,000, and contemplated reserves of equipment for the use of this force in the defense of the Nation and weapons and ammunition for its expansion in time of danger to whatever size might be necessary by the Organized Reserve.

The size and organization of our defense force has of necessity been modified from time to time to give us the best force possible from the funds available. At present mobilization plans call for the utilization of the existing Regular Army and the National Guard, with whatever regular reservists and recruits may be available, as an initial protective force. This would amount to something over 400,000 troops available in the continental United States. It would provide only five of the small triangular regular divisions with one full set of corps troops, with some additional regular units, and 18 National Guard divisions of the old type, somewhat larger in strength.

The act provided also for procurement and for "the assurance of adequate provision for the mobilization of matériel and industrial organizations essential to wartime needs"—both under the Assistant Secretary of War.

The National Defense Act of 1920 contemplated annual appropriations sufficient to maintain the forces provided in the act, with their arms, equipment, and necessary reserves of supplies. This has not been done.

The world knows the result on our Navy of the conferences and scrapping of the 1920's. Our own people do not realize the criminal neglect of our land forces during that time. We are paying now in cash and in huge additions to our debt for the neglect which avoided some expenditures during the 1920's and early 1930's but which left us without vital reserves of arms and ammunition, and without facilities to produce them in case of need.

In the 14 years from 1922 to 1935, our total Army expenditures ran from roughly two hundred and fifty to three hundred and fifty million dollars per year, with the average under three hundred million. Today it approaches nine hundred million and may go higher before we have made up the deficiencies in equipment which still face us.

The time necessary to produce Army equipment is usually not so long as that necessary to complete warships for our naval defense. It is a long time in the present day of lightning attack, however. It runs, in general, from 6 to 24 months, with some things such as seacoast heavy batteries sometimes taking 6 years.

Articles such as arms and ammunition can be produced in quantity within from 3 to 6 months if factories are tooled up and ready to go into production, and sufficient raw materials are on hand. If the factories are not sufficiently tooled and trained, we will have a recurrence of our World War experience, with an average time for reaching full production rate of about 2 years.

Let me cite you some examples from the World War experience:

75 mm. guns: Initial plans in 1917 called for 3,200 (2,100 at once and 1,100 a few months later for reserve and replacement). Those plans were increased in 1918 to require some 8,000 pieces for 1919. An early production of 300 to 400 per month was required if the supply was to be met within a reasonable time. Actually, no production was reached in 1917, and only 100 per month of all calibers of artillery by July 1918, and 400 per month of all calibers by October 1918, 19 months after war was declared.

75 mm. ammunition: Production in small quantity began in January 1918, but it was not until October 1918 that production neared 3,000,000 per month, approximately three-fourths of the monthly requirement. After orders were placed the average time to produce shells and deliver to shipside was 366 days. The machining of the shell body was, in itself, a huge task, requiring great industrial genius for its solution. To machine 1,000 shells in 8 hours, 78 machines, some of special design, were required. Twenty-four operations were required on each shell body, requiring 30 minutes if no delay occurred in the factory.

As to the 155-millimeter gun recoil mechanism which was new to American manufacturers: On an order placed November 1, 1917, production began in January 1919, 14 months later, and production of 45 per month was reached in July 1919, 20 months later. It was necessary to design 22 machines for this order, in addition to other manufacturing aids, and learn how to apply them to this mechanism.

The same situation prevailed in regard to many other items, which we needed in spite of the billions which were spent in those days by the Allied purchasing agents in this country.

We are fond of slogans. We have a slogan for the Army—A small well-equipped, well-trained, streamlined force. We have repeated that so often that I am afraid most of our people believe we actually have such an army in existence. They are wrong. I have mentioned the blue-print of the act of 1920. Before I came to the Congress, a little over 5 years ago, I shared the public impression that while we might be a little short of ideal preparedness we were rapidly approaching it. Nothing could be further from the truth.

Including our overseas establishments, we had in 1935 an average of 118,000 men in the Regular Army. Some months it was as low as 112,000. Today it stands at 227,000. To take one example of the condition of our resources, in 1935 we had reserves of aerial bombs, of less than 1 day's supply in most types. We found the present Chief of the Air Corps, then in command of the First Wing on the Pacific coast, forced to use bombs cast of concrete for practice for his squadrons.

The Army was small. Its equipment was obsolescent and totally lacking in some modern weapons we now know to be essential—

such as effective antitank and antiaircraft weapons. Its reserves of ammunition were of World War age and deteriorated near or beyond the end of its efficient life. The industrial mobilization called for in the act was entirely on paper.

We have made great progress since that time, but we have been staggered by the cost and the time required. At the present rate of progress we are still several years away from readiness to defend ourselves.

We have increased our force of regulars from 112,000 to 227,000, including overseas possessions. We have increased the National Guard to 235,000. We are giving some of the regulars opportunity to learn to operate as divisions and corps, essential to their training for any effective defense use.

We have adopted new forms of organization which we expect to make the infantry more mobile, and more efficient with the new weapons now being provided. These divisions, of which five are now organized and under intensive training in the South, are not, however, and are not intended to be what is called mechanized or motorized divisions. They will not be fully equipped with modern weapons for many months. Again we face the great time lag in production of munitions of war in a country which has for so long a period neglected its industrial preparedness for defense—and this is the country with greater potential industrial power for war than any other nation or combination of nations.

We have appropriated for the procurement of planes sufficient to bring the Air Corps from its present strength of about 2,000 planes of all types to 5,500, which we hope to reach by June 1941.

We have provided a system of great air bases for the training of our Air Corps. Work is now under way on the Chicopee base under the Wilcox Act of 1935.

We have appropriated, or expect to appropriate in the bill which is now under consideration in the Senate, funds to complete the modern equipment of one corps and five peace-strength Regular Army divisions.

We are completing equipment for 37 antiaircraft regiments, of which we hope to form 5 in the National Guard this year to supplement the 7 Regular and 14 Guard regiments now in existence.

We are carrying on the training of industry under the program started in 1937 under the educational orders bill. The House, however, has not provided sufficient funds to carry out this program on the 55 most critical items. The amount of $14,250,000 additional will be needed to complete this part of the program and make actually available for our defense a far greater portion of our potential industrial power. We have made a start in the procurement of reserves of those few critical war materials needed in war which are not produced in sufficient quantity in this country.

New England is the key to our military industrial strength. Eighty percent of the gages required in the manufacture of munitions in the country are made in New England. The only plants equipped to make the Garand shoulder rifle for our infantry are in Massachusetts and Connecticut.

One-third of our country's productive capacity for military aircraft engines, a substantial part of our capacity for planes and propellers, fire-control instruments, guns and carriages for our artillery, gas masks and surgical instruments, searchlights for our seacoast and antiaircraft defenses, cartridges, artillery fuses and shells, and many more of the essentials of modern war must be produced in our area. Our men, our plants, and our traditions are adapted to production of those things most needed for the Nation's defense.

We must complete the job and have ready for our defense if it should be needed a small, well-equipped, well-trained force, with an industry behind it trained and equipped to give it the best tools known for the job of the defense of this country.

We must face the facts. Anything less than an adequate provision for our own security must not be tolerated. The cost is enormous. It must be met. To maintain the initial protective force now in existence after our existing deficiencies have been provided for will call for an annual expenditure of approximately $400,000,000, exclusive of the Air Corps.

The Air Corps alone, including replacements to maintain it at the strength now authorized, will cost an additional $250,000,000 annually.

Anything less will leave us in a condition inviting attack. Until world conditions are far more stabilized than they are today we cannot afford any lesser degree of preparedness.

The change in the status of Greenland, when the German invasion of Denmark first raised the question of possible air bases of an unfriendly power within reach of New England should bring us down to earth. We cannot longer avoid, postpone, or ignore the problem. The way to its solution is pointed out by the act of 1920, adapted to modern developments.

We must never again allow ourselves to reach the criminally weak condition we have fallen back so often in the past. We may not again have allies to hold off any thrust to our own shores while we make up for our neglect. Maintenance at all times of a small, well-equipped, well-trained force, backed by a trained industry and sufficient reserves of equipment and raw materials will in the long run be the soundest insurance of our future against military aggression.

Our knowledge of the problems of industrial preparedness, our necessary concern with the possible approach of the war to our shores combine with our military tradition to make New England the leader in the recognition of our needs and willingness to meet them, at whatever sacrifice.

Federal Tax Commission—Random Thoughts on Taxation

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

ADDRESS BY HON. EMANUEL CELLER, OF NEW YORK

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address which I delivered Friday, April 26, 1940, before the conference of the National Association of Real Estate Boards, as follows:

In such a representative meeting as we have here today, it may seem somewhat trite to state that taxation is one of the leading public issues of the day. Taxation is the ultimate expression of sovereignty. We know how a people are governed by the way they are taxed. Nearly all social and economic upheavals have come as the result of obnoxious taxation. Since mankind emerged from the caves there have been taxes, and taxes will continue so long as man continues to be a social creature.

Since the advent of depression, with its crop of relief expenditures, new governmental functions, mounting debts, and unbalanced budgets, most of us have gradually grown round-faced with protest, popeyed with wonder, and diminutive in all matters pertaining to finances. It is apparent from recent expressions that the majority of our citizens have become acutely aware of the knack in taxes.

The depression has emphasized several phases of taxation as it pertains to the average man, who is now more than ever bewildered. At one moment political leaders tell him that budgets should be reduced. At the next moment they demand that the Government should undertake new functions. In spite of his inexperience in financial matters, the average taxpayer recognizes the paradox. Unfortunately for him, his thinking has been clouded. He has been told that somebody else, not he, will foot the bills, and he has honestly come to believe it. He has rarely stopped to think that the increased taxes, which the merchant and bus company pay, will be passed on to him in increased prices and fares. There is a dawning realization that the men entrusted with spending his tax money have been "having themselves a good time."

In the next place the average taxpayer wonders why there are so many different taxes, which he must pay at so many agencies. Conflicting and multiple tax jurisdictions are an old and sometimes trying story to the tax official and expert, but to the average person they fail to make sense.

The United States probably has the most complex tax system known to history. Perhaps we are straining a point in calling it a tax system. In reality, the American tax structure contains 49 separate and distinct systems—one for the Federal Government and one for each of the 48 States. In addition, there are more than 175,000 local agencies which levy taxes under the authority of the State governments. Practically every variety of tax exists somewhere in the vast, conglomerate system which embraces all of these tax-levying authorities.

The inevitable result of this complexity is a great deal of confusion and misunderstanding. Federal taxes, for example, often are thought of as constituting the majority tax burden. Actually, however, combined State and local taxes account for substantially more revenue than do Federal taxes. Only the huge exploitable wealth of this country has prevented a breakdown of the multiple tax structure under which Federal, State, and local governments have thus far operated. The opinion of those who believe the system should be coordinated and simplified is amply supported by the experience of less wealthy countries than our own. And I hope that no one will say that we can afford it, because we cannot. Tax money should be economically spent, or else the money should be left in private possession to promote private enterprise.

The thinking of the average taxpayer has led him to the conclusion that there is much unfairness and injustice in taxation matters. For example, frequent instances are to be found in the inequalities in evaluating and assessing real property bolstered

by exemptions and failures in collections. Then there are the difficulties growing out of sales taxes, which are even more complex, when payment can be evaded by simply driving over State lines and purchasing in neighbor States. Furthermore, the average citizen resents tax-exempt securities no matter how sound such exemptions may be. The list could easily be extended, but enough has been said to show that the average man has grievances in spite of the honest past efforts of all Government agencies.

There is one avenue for the partial improvement of the real-estate situation and thus for the correction of some of the contentions of unfairness. States might profitably set up standards which assessing and evaluating officials must meet before they are allowed to perform their duties. Manuals might be compiled by commissions and commissioners, training schools might be organized, and programs regularized. I have been told that a few States have taken steps in this direction and that the program has been adopted as fast as the respective legislatures would permit. Please do not misunderstand me. I have the highest respect for the local evaluating and assessing officials. The point I wish to make is that with a few changes in program he can be made more efficient and able to the advantage and comfort of the community, of the taxpayer, and of the official himself.

The average taxpayer feels that double taxation is unfair and in some instances illegal. The average citizen senses an incongruity in the double-tax situation. When he has once paid a tax, that should be the end of the matter. He fails to understand the duplicating and conflicting tax jurisdiction. Double income taxes; double taxes on mortgages; double taxes on dividends, wages, profits, and rents have created inequities which can be described in no other terms than discriminatory double taxation. The average man may be wrong in believing double taxation to be illegal, but he is correct in holding it to be discriminatory and in need of correction.

This overlapping of our State and Federal Governments in the field of direct and indirect taxation has come gradually without the guidance of any broad policy or plan of apportionment. It represents a complete break with the original segregation of fields. The conflict lies deeper than the duplication of particular taxes. Fundamentally, these overlapping jurisdictions are competing for the same economic resources, whatever the form of the taxes by which the different shares are obtained.

Competition is not limited to Federal and State Governments and State and local governments. Counties compete with counties, counties compete with towns, and towns compete with school districts. The competition is not even limited to jurisdictions that cover the same geographic area. One city may not tax real estate situated in another city; but it may, by granting tax exemptions for a limited period, induce a manufacturing concern to build new plants within its boundaries instead of in a neighboring city. In this way, it may ultimately add to its taxable real estate at the expense of its neighbor. States compete with one another in much the same fashion.

One State may obtain its maximum revenue from a corporation income tax by allocating all interstate income, for purposes of taxation, to the State in which gross receipts arise. Another State may obtain its maximum by allocating such income to the State where the taxable property of the corporation is located. If each State pursues its own immediate interests, some corporations may pay taxes in both States on their interstate income, while their competitors pay taxes in neither. These facts are so well known that it is hardly necessary to enlarge on them here in order to demonstrate the importance of coordinating tax systems.

With these thoughts in mind, on March 5 of this year I introduced a joint resolution calling for the establishment of a Federal Tax Commission. This is known as House Joint Resolution 483. Among the provisions contained in this resolution are the following:

(1) "To establish a stable, more permanent tax structure, so as to avoid frequent changes in tax laws and minimize the adverse effect of changes in tax laws on individual initiative, investment, and employment.

(2) "To simplify the Federal tax system, including the forms of taxation, the statement of the law, and the methods of administration.

(3) "To coordinate the Federal tax system with those of the State and local governments, to the end that double taxation may be minimized and overlapping or needless cost of administration reduced."

There are, of course, other provisions in the resolution for the establishment of such a Federal Tax Commission, which will be composed of seven members, representing Government, agriculture, labor, individual taxpayers, consumers, industry and finance, lawyers, certified public accountants, and economists. It may be desirable or even necessary to increase the number of members of the Commission to give representation to other groups not already included.

The Commission is authorized to hold hearings; to make surveys; to utilize the services, information, facilities, and personnel of the departments and agencies in the executive branch of the Government, of the Joint Congressional Committee on Internal Revenue Taxation, and of the office of the legislative counsel.

In my opinion, Congress could do no one thing of greater importance to assure future economic stability than to create a qualified nonpartisan committee to formulate a permanent and consistent policy of Federal taxation. The annual revision of tax laws on the basis of political expediency and social reform is the major cause of hesitancy and lack of confidence on the part of businessmen and taxpayers. Fixed principles of taxation are urgently required to give taxpayers the necessary confidence to face the future.

A permanent tax structure should be established, with fixed principles, subject only to changes in rates to meet the varying requirements of the Federal Budget. Business can adjust itself to changing rates, so long as such rates are nonconfiscatory, but staggers under the impact of successive changes in the general scheme and incidence of taxation, a procedure which calls for new interpretations of tax provisions from year to year. Recently, before the ink has hardly become dry on revenue measures, changes have been proposed, even before time has elapsed to determine whether previous revenue measures were workable or not.

It is not intended nor is it provided in my resolution that legislative or administrative powers be delegated to the proposed commission. It is merely expected that the commission will function as a study group in examining national tax problems and, on the basis of its deliberations, recommend to Congress the adoption of such principles and methods of taxation as would promote uniformity and simplicity. It is expected that the commission would also make recommendations to remove as much as is possible of the present complexity and uncertainty, and to make recommendations to eliminate unnecessary duplication and overlapping as well as effective coordination of tax systems of the Federal, State, and local units of government.

Secretary Morgenthau, in his testimony before the House Ways and Means Committee in May 1939, made certain suggestions representing to some extent a start toward a national commission as provided for in my bill. He proposed that the House Ways and Means Committee, the Senate Finance Committee, and the House and Senate Appropriations Committees sit as one body during and between sessions of Congress to consider the aspects of expenditures and revenues. He said: "This joint committee would in effect be a lens through which all appropriation and revenue measures could be viewed in relationship both to what the Nation needs and to what the Nation could afford."

The Secretary also suggested a small temporary national commission to report to Congress as soon as feasible on the various aspects of intergovernmental (Federal-State) fiscal policy and propose a plan for a solution of the problems involved. He stated: "Such a commission should be made up of men of ability who command the highest public confidence, who are familiar with fiscal problems, but who will represent the public at large rather than particular Government units. The recommendations of such a commission should assist us in achieving more orderly relationship between the Federal, State, and local fiscal systems." His recommendations on that point, therefore, are on all fours with the provisions of my bill.

The real solution of our national-tax dilemma awaits the appointment of an unbiased national-tax commission, comprising individuals from business, labor, Government, property owners, agriculture, professional circles, and others who have a well-rounded knowledge of tax matters.

The strongest argument I could advance for the appointment of such a commission is supplied by the chart which I hold in my hand. This chart was prepared several months ago by the staff of the Bureau of Internal Revenue of the Treasury Department. It is a picture of our National, State, and local tax systems. It is a bewildering presentation of the field of taxation now occupied by these respective taxing units. The same chart also shows the bewildering maze of expenditures by the same taxing jurisdictions. Let me refer briefly to some of its contents. (I explained briefly and in an informal way, the chart.)

Of course, I am not advocating that we should cease all efforts for sound tax legislation pending the appointment of a Federal Tax Commission and the submission of its findings to Congress. There are numerous ways in which our present tax system—Federal, State, and local—can be improved. For example, there is almost complete agreement that the rates in some of our Federal tax levies today have long since passed the point of diminishing returns. This is unquestionably true of the maximum rates on the individual income taxes, inheritance taxes, and gift taxes. The net result is a drying up of sources of supply or what might be termed "risk" capital. The net result, of course, is stagnation in business and unwillingness of investors to place their funds in business enterprises where all loss would be assumed by themselves and practically all gains, if any were achieved, would be taken in taxes.

I have introduced a resolution calling for a constitutional amendment to definitely limit the Federal taxing power to a maximum of 25 percent on incomes, gifts, and inheritances. This bill has been referred to the Judiciary Committee of the House. The American Taxpayers Association, of this city, has made this a part of its national program. It has laid the matter before a number of State legislatures, because if two-thirds of these legislatures adopt this resolution, it will be mandatory upon Congress, under section V of the Constitution, to call a Constitutional Convention to ratify such action.

Already both branches of 2 legislatures have adopted the resolution; favorable action has been taken in 1 branch of 3 additional legislatures; and the judiciary committees of 13 other legislatures have reported favorably on the resolution to their governing bodies. To guard against handicapping the Federal Government by such a limitation in the event of war, the proposed amendment prescribes that the limitation may be lifted in such an emergency for a period of not to exceed 1 year by a vote of three-fourths of both branches of Congress.

This is one way to eliminate confiscatory rates and to establish levies on a basis which experience has demonstrated will stimulate business and increase revenue to the taxing jurisdictions. It is not likely that the majorities in the two Houses of Congress would long defy such an expression of the popular world as would be represented by applications from as many as two-thirds of the legislatures of the States.

In this discussion it has been impossible to do more than outline some of the main points about which there is considerable agitation today. The big task of tax officials and all groups interested in taxation must be to spread correct information abroad on tax matters. The average man has very definite impressions of the right and the wrong of taxation. Most of them are couched in terms of his own pocketbook. He needs to be told the truth and the meaning of taxes. He needs to be reminded of it often until it becomes a part of his daily thinking. Not until then will he act. No greater task can be performed by your groups in the service of this country.

Civil Aeronautics Authority—It Should Remain Independent

EXTENSION OF REMARKS

OF

HON. ANTHONY J. DIMOND

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

Mr. DIMOND. Mr. Speaker, the proposal under the fourth reorganization plan to place the Civil Aeronautics Authority under the jurisdiction of the Secretary of Commerce and within the framework of the Department of Commerce has aroused widespread apprehension, particularly in the minds of practically all persons who are concerned with air transport in the United States or between the United States and foreign countries. I have yet to hear of a single individual directly interested in air transport who favors that feature of Reorganization Plan No. IV. The adoption of the plan would, in my judgment, have a disquieting effect not only upon those who through occupation or business are interested in air transport, but also upon the traveling public and thus the fortunes of the air-transport business as a whole and the welfare of all those engaged in it may be seriously affected. This is obviously the time to let well enough alone.

In Alaska, air transportation has become part and parcel of our economic being. We would find it hard to exist without the advantages which are afforded by air transport. Every resident of Alaska is concerned to see that the administration of the Authority is the most efficient possible. No one doubts, indeed no reasonable man can doubt, that the present administration under the Civil Aeronautics Authority has been highly efficient and scientific and the safety factor has been nowhere overlooked. To now change in supervisory control an agency of the Government which has given such excellent service would, in my opinion, be a grave and perhaps a tragic mistake. That the pilots of Alaska share the concern of most other people over the proposed change is indicated by the following telegram addressed to me by the Fairbanks, Alaska, Council of the Air Line Pilots Association:

FAIRBANKS, ALASKA, *April 25, 1940.*

Hon. ANTHONY J. DIMOND,
Washington, D. C.:

We are definitely opposed reorganization plan which abolishes Air Safety Board and puts Civil Aeronautics Authority back in politics. We ask that you voice our attitude to those concerned. The C. A. A. has been very satisfactory, which was not true of the aeronautics branch of Department of Commerce. We believe that the past year's air-safety record speaks for itself.

Fairbanks Council Air Line Pilots Association, Al Monsen, Bill Knox, Walter Hall, Ralph Savory, Gene Meyring, Bert Lien, Herman Joslyn, Dick Hawley.

Mr. Speaker, I join wholeheartedly in the protest made by the Air Line Pilots Association of Alaska against the adoption of that feature of Reorganization Plan No. IV which seeks to place the Civil Aeronautics Authority within the framework of the Department of Commerce. It should be overwhelmingly rejected.

The Verendrye Plate and French Claims in North America

EXTENSION OF REMARKS

OF

HON. FRANCIS H. CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

Mr. CASE of South Dakota. Mr. Speaker, perhaps, as some have said, "the most historic event in the development of South Dakota" was the exploration of our soil by the Verendryes in the early part of the eighteenth century and the claiming of the vast region west of the Mississippi for France by the simple ceremony of planting a lead plate upon a butte which now overlooks the dome of South Dakota's capitol.

The history of that period and the events leading up to the planting of the plate have been the subjects of considerable research by Doane Robinson, former South Dakota historian, and Lawrence K. Fox, his successor, and their findings are of great interest.

The French, in control of Canada, were anxious to expand their jurisdiction westward to the Pacific, and commissioned Pierre Gaultier Varennes de la Verendrye, who was experienced in war and commerce, to extend the trade to the western sea. Verendrye entered upon the enterprise with enthusiasm in 1731. His method was to enter into the wilderness a short distance, build a post and secure the friendship of the Indians and supply them with trade; thence to take another step, build another post and after securing the allegiance of the Indians, move on to repeat the process.

By this means in 1738 Verendrye had reached the present Portage la Prairie, 50 miles west of Winnipeg, where he built Fort la Reine. Having only Indian information to guide him he resolved to strike southwest from Fort la Reine, to the Missouri, which he believed to run west to the Pacific.

On October 18, 1738, having been joined by 8 white men, he set out with a party of 52, chiefly Assiniboin Indians. On November 30 they reached a Mandan post, 1 day's march from the Missouri. They remained there 5 days while Pierre, the eldest son of Verendrye, made an overnight trip to the Missouri to secure what useful information was available.

They returned convinced that the Missouri turned west to the Pacific. At this time Verendrye Senior was taken severely ill and it was deemed prudent to hasten him back to Fort la Reine. Thus ended the first attempt to reach the west from the La Reine base.

On April 29, 1742, the two sons of Verendrye—François, the chevalier—and his younger brother, Louis Joseph, accompanied by two Frenchmen, Louis La Londette and A. Miotte, departed from Fort la Reine upon the journey that resulted in planting the plate at Fort Pierre. They did not cross the Missouri, near Fort la Butte, until July 23.

They spent the remainder of the season running about from one Indian village to another probably in the western Dakotas, until the 18th of November, when they came upon a large body of Bow Indians going up to fight their enemies

in the mountains. It was agreed that the Frenchmen would accompany the Bows that they might ascend the mountains and look over to see the Pacific Ocean. They soon formed a camp in which to leave the noncombatants. Louis Joseph remained in this camp to look after their property and the chevalier and the two Frenchmen accompanied the war party. When they reached the mountains and found the enemy camp deserted, they thought the foe had flanked them and had gone to destroy the noncombatants. The Bows determined to retreat to protect their families. A terrible blizzard had struck western Dakota and 2 feet of snow covered the prairies. The Indian warriors were practically without supplies and starvation was imminent.

When the storm was over they broke camp, starting back to the southeast. En route the Verendryes left the Bows and started to the camp of the Little Cherry on the Missouri, near Fort Pierre, where they arrived on March 19.

François (the chevalier) Verendrye kept a brief journal in which he recorded:

> We arrived at that fort on the 19th and were received with great manifestations of joy.

It is while staying at that fort that the plate was buried. In his journal, Verendrye wrote of the planting, which took place the end of March 1743:

> I placed, on a hillock near the fort, on behalf of our general, a plate of lead with the arms and name of the King, and raised a pyramid of stones. I told the savages, who had no knowledge of the plate of lead which I had buried in earth, that I placed those stones as a memorial of our having come to their lands. (I should have greatly liked to take the height at that place, but our astrolabe had been out of use, from our start its ring having been broken.)

In 1913 M. Jusserand, Ambassador from France, wrote of the finding:

> Everything about the plate tallies with everything in the journal; its authenticity cannot be doubted. As a reminder of the plucky attempts of ancestors, acting under most trying difficulties, the new-found relic has a truly sacred character for Frenchmen and for Americans both.

On Sunday afternoon, February 16, 1913, a group of school children were strolling on the bluffs near Fort Pierre. Hattie May Foster, one of the group, noticed an object protruding partly from the earth and loosened it and removed it from the ground. The others all clustered around, but none, apparently, were aware of the great value or vital significance of their discovery. The plate is now in the possession of the State of South Dakota.

Today efforts are being increased to develop a monument in recognition of the Verendrye expedition and of this historic planting by which our vast Northwest Territory was claimed in the name of France. A committee consisting of Fred S. Minier, L. J. Gaugenmaier, F. J. Hodoval, G. E. Sumner, C. M. Weirauch, and Rex Terry has been especially active in developing plans for a fitting recognition of the historic Verendrye expedition, which culminated in the ceremony on the butte above the Missouri River near the town of Fort Pierre. This site should become a part of the Verendrye National Monument, and I have introduced H. R. 9460 to accomplish that purpose.

The bill proposes "to add to the Verendrye National Monument the site where in 1743 the Verendryes planted plates claiming the Northwest Territory for France." It would authorize the Secretary of the Interior to accept, on behalf of the United States, title to an area of not more than 25 acres of land near the town of Fort Pierre, S. Dak., including the actual site where the lead plate was planted, and declare that area to be a part of the Verendrye National Monumen, to be administered under the laws relating thereto. A representative of the National Park Service visited the spot when ceremonies were held there last summer, and I am sure that he was impressed by the historical importance of the event as well as the naturalness of the site chosen by the chevalier for the planting of the plate.

Marketing America's Movies

EXTENSION OF REMARKS

OF

HON. JOHN M. COSTELLO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

Mr. COSTELLO. Mr. Speaker, perhaps no industry in the world is discussed as much or as frequently as the movies. This is no doubt because of the prevalence, fascination, and glamour of this most popular of all commercial entertainment. It has been frequently said that "everybody in this country has two businesses, his own and motion pictures." This may be quite true of the products, personalities, and publicity of Hollywood and of the local theater, but the actual business operation of the industry itself, how it operates and why it operates that way, is little understood by those not actively engaged in the business. Indeed, few of those who see a motion picture on a screen have any idea of all that was required to put it there, but every man, woman, and child who sees a picture has, and is entitled to, an individual opinion concerning it.

Although it is clearly impossible to understand motion pictures without considering the business aspects of the industry, this phase is usually brushed aside or dealt with summarily as an uninteresting, or at least an unromantic one to talk about, in order to get on to the more glamorous topics. Hence, it remains somewhat of a mystery, or is mistakenly assumed to be just like any other business.

As a matter of fact, the business operation of the motion-picture industry in many fundamental respects is quite unique and different from that of all other industries, and presents a number of economic and commercial problems peculiar to itself. Far too little attention has been given to these essential methods of operation by governmental and legislative agencies that are called upon to deal with motion-picture matters. While there are many people who are not interested in the business aspects of this or any other industry, yet to dismiss such phases of the business as being either uninteresting, obscure, or incidental precludes any fair appraisal or understanding of the motion-picture industry.

It is my purpose to set forth a more or less elementary explanation of some of the essential features of the structure and operation of this great industry, which centers its production activities in my district, so that its widespread operations may be fairly and better understood.

II

The principal and almost sole product of this vital industry is the modern motion picture. The motion-picture industry has adapted to its own affairs the methods of commercial operation generally used in the modern business world, and more particularly the business practices developed out of years of experience of the earlier theatrical enterprises—vaudeville, stage shows, road companies, concert stage, and so forth—and brought over by showmen trained in this field who engaged in the motion-picture industry in the early days. But in addition many of the unique and peculiar methods employed in the manufacture and marketing of motion pictures are due primarily to the characteristics of the article in which the business deals. Motion pictures are as intangible as the shadow on a wall, a voice in the air. The film on which both shadow and sound is recorded, and from which the fleeting illusion of reality is created in the theater when reproduced by ingenious mechanical and electrical devices, is 1⅜ inches in width, six one-thousandths of an inch thick, of fragile nitrocellulose.

Over 2 miles—10,800 feet—of such film is required to project 2 hours of entertainment upon the screen, yet this film

Already both branches of 2 legislatures have adopted the resolution; favorable action has been taken in 1 branch of 3 additional legislatures; and the judiciary committees of 13 other legislatures have reported favorably on the resolution to their governing bodies. To guard against handicapping the Federal Government by such a limitation in the event of war, the proposed amendment prescribes that the limitation may be lifted in such an emergency for a period of not to exceed 1 year by a vote of three-fourths of both branches of Congress.

This is one way to eliminate confiscatory rates and to establish levies on a basis which experience has demonstrated will stimulate business and increase revenue to the taxing jurisdictions. It is not likely that the majorities in the two Houses of Congress would long defy such an expression of the popular world as would be represented by applications from as many as two-thirds of the legislatures of the States.

In this discussion it has been impossible to do more than outline some of the main points about which there is considerable agitation today. The big task of tax officials and all groups interested in taxation must be to spread correct information abroad on tax matters. The average man has very definite impressions of the right and the wrong of taxation. Most of them are couched in terms of his own pocketbook. He needs to be told the truth and the meaning of taxes. He needs to be reminded of it often until it becomes a part of his daily thinking. Not until then will he act. No greater task can be performed by your groups in the service of this country.

Civil Aeronautics Authority—It Should Remain Independent

EXTENSION OF REMARKS

OF

HON. ANTHONY J. DIMOND

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

Mr. DIMOND. Mr. Speaker, the proposal under the fourth reorganization plan to place the Civil Aeronautics Authority under the jurisdiction of the Secretary of Commerce and within the framework of the Department of Commerce has aroused widespread apprehension, particularly in the minds of practically all persons who are concerned with air transport in the United States or between the United States and foreign countries. I have yet to hear of a single individual directly interested in air transport who favors that feature of Reorganization Plan No. IV. The adoption of the plan would, in my judgment, have a disquieting effect not only upon those who through occupation or business are interested in air transport, but also upon the traveling public and thus the fortunes of the air-transport business as a whole and the welfare of all those engaged in it may be seriously affected. This is obviously the time to let well enough alone.

In Alaska, air transportation has become part and parcel of our economic being. We would find it hard to exist without the advantages which are afforded by air transport. Every resident of Alaska is concerned to see that the administration of the Authority is the most efficient possible. No one doubts, indeed no reasonable man can doubt, that the present administration under the Civil Aeronautics Authority has been highly efficient and scientific and the safety factor has been nowhere overlooked. To now change in supervisory control an agency of the Government which has given such excellent service would, in my opinion, be a grave and perhaps a tragic mistake. That the pilots of Alaska share the concern of most other people over the proposed change is indicated by the following telegram addressed to me by the Fairbanks, Alaska, Council of the Air Line Pilots Association:

FAIRBANKS, ALASKA, *April 25, 1940.*

Hon. ANTHONY J. DIMOND,

Washington, D. C.:

We are definitely opposed reorganization plan which abolishes Air Safety Board and puts Civil Aeronautics Authority back in politics. We ask that you voice our attitude to those concerned. The C. A. A. has been very satisfactory, which was not true of the aeronautics branch of Department of Commerce. We believe that the past year's air-safety record speaks for itself.

Fairbanks Council Air Line Pilots Association, Al Monsen, Bill Knox, Walter Hall, Ralph Savory, Gene Meyring, Bert Lien, Herman Joslyn, Dick Hawley.

Mr. Speaker, I join wholeheartedly in the protest made by the Air Line Pilots Association of Alaska against the adoption of that feature of Reorganization Plan No. IV which seeks to place the Civil Aeronautics Authority within the framework of the Department of Commerce. It should be overwhelmingly rejected.

The Verendrye Plate and French Claims in North America

EXTENSION OF REMARKS

OF

HON. FRANCIS H. CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

Mr. CASE of South Dakota. Mr. Speaker, perhaps, as some have said, "the most historic event in the development of South Dakota" was the exploration of our soil by the Verendryes in the early part of the eighteenth century and the claiming of the vast region west of the Mississippi for France by the simple ceremony of planting a lead plate upon a butte which now overlooks the dome of South Dakota's capitol.

The history of that period and the events leading up to the planting of the plate have been the subjects of considerable research by Doane Robinson, former South Dakota historian, and Lawrence K. Fox, his successor, and their findings are of great interest.

The French, in control of Canada, were anxious to expand their jurisdiction westward to the Pacific, and commissioned Pierre Gaultier Varennes de la Verendrye, who was experienced in war and commerce, to extend the trade to the western sea. Verendrye entered upon the enterprise with enthusiasm in 1731. His method was to enter into the wilderness a short distance, build a post and secure the friendship of the Indians and supply them with trade; thence to take another step, build another post and after securing the allegiance of the Indians, move on to repeat the process.

By this means in 1738 Verendrye had reached the present Portage la Prairie, 50 miles west of Winnipeg, where he built Fort la Reine. Having only Indian information to guide him he resolved to strike southwest from Fort la Reine, to the Missouri, which he believed to run west to the Pacific.

On October 18, 1738, having been joined by 8 white men, he set out with a party of 52, chiefly Assiniboin Indians. On November 30 they reached a Mandan post, 1 day's march from the Missouri. They remained there 5 days while Pierre, the eldest son of Verendrye, made an overnight trip to the Missouri to secure what useful information was available.

They returned convinced that the Missouri turned west to the Pacific. At this time Verendrye Senior was taken severely ill and it was deemed prudent to hasten him back to Fort la Reine. Thus ended the first attempt to reach the west from the La Reine base.

On April 29, 1742, the two sons of Verendrye—François, the chevalier—and his younger brother, Louis Joseph, accompanied by two Frenchmen, Louis La Londette and A. Miotte, departed from Fort la Reine upon the journey that resulted in planting the plate at Fort Pierre. They did not cross the Missouri, near Fort la Butte, until July 23.

They spent the remainder of the season running about from one Indian village to another probably in the western Dakotas, until the 18th of November, when they came upon a large body of Bow Indians going up to fight their enemies

in the mountains. It was agreed that the Frenchmen would accompany the Bows that they might ascend the mountains and look over to see the Pacific Ocean. They soon formed a camp in which to leave the noncombatants. Louis Joseph remained in this camp to look after their property and the chevalier and the two Frenchmen accompanied the war party. When they reached the mountains and found the enemy camp deserted, they thought the foe had flanked them and had gone to destroy the noncombatants. The Bows determined to retreat to protect their families. A terrible blizzard had struck western Dakota and 2 feet of snow covered the prairies. The Indian warriors were practically without supplies and starvation was imminent.

When the storm was over they broke camp, starting back to the southeast. En route the Verendryes left the Bows and started to the camp of the Little Cherry on the Missouri, near Fort Pierre, where they arrived on March 19.

François (the chevalier) Verendrye kept a brief journal in which he recorded:

> We arrived at that fort on the 19th and were received with great manifestations of joy.

It is while staying at that fort that the plate was buried. In his journal, Verendrye wrote of the planting, which took place the end of March 1743:

> I placed, on a hillock near the fort, on behalf of our general, a plate of lead with the arms and name of the King, and raised a pyramid of stones. I told the savages, who had no knowledge of the plate of lead which I had buried in earth, that I placed those stones as a memorial of our having come to their lands. (I should have greatly liked to take the height at that place, but our astrolabe had been out of use, from our start its ring having been broken.)

In 1913 M. Jusserand, Ambassador from France, wrote of the finding:

> Everything about the plate tallies with everything in the journal; its authenticity cannot be doubted. As a reminder of the plucky attempts of ancestors, acting under most trying difficulties, the new-found relic has a truly sacred character for Frenchmen and for Americans both.

On Sunday afternoon, February 16, 1913, a group of school children were strolling on the bluffs near Fort Pierre. Hattie May Foster, one of the group, noticed an object protruding partly from the earth and loosened it and removed it from the ground. The others all clustered around, but none, apparently, were aware of the great value or vital significance of their discovery. The plate is now in the possession of the State of South Dakota.

Today efforts are being increased to develop a monument in recognition of the Verendrye expedition and of this historic planting by which our vast Northwest Territory was claimed in the name of France. A committee consisting of Fred S. Minier, L. J. Gaugenmaier, F. J. Hodoval, G. E. Sumner, C. M. Weirauch, and Rex Terry has been especially active in developing plans for a fitting recognition of the historic Verendrye expedition, which culminated in the ceremony on the butte above the Missouri River near the town of Fort Pierre. This site should become a part of the Verendrye National Monument, and I have introduced H. R. 9460 to accomplish that purpose.

The bill proposes "to add to the Verendrye National Monument the site where in 1743 the Verendryes planted plates claiming the Northwest Territory for France." It would authorize the Secretary of the Interior to accept, on behalf of the United States, title to an area of not more than 25 acres of land near the town of Fort Pierre, S. Dak., including the actual site where the lead plate was planted, and declare that area to be a part of the Verendrye National Monumen, to be administered under the laws relating thereto. A representative of the National Park Service visited the spot when ceremonies were held there last summer, and I am sure that he was impressed by the historical importance of the event as well as the naturalness of the site chosen by the chevalier for the planting of the plate.

Marketing America's Movies

EXTENSION OF REMARKS

OF

HON. JOHN M. COSTELLO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

Mr. COSTELLO. Mr. Speaker, perhaps no industry in the world is discussed as much or as frequently as the movies. This is no doubt because of the prevalence, fascination, and glamour of this most popular of all commercial entertainment. It has been frequently said that "everybody in this country has two businesses, his own and motion pictures." This may be quite true of the products, personalities, and publicity of Hollywood and of the local theater, but the actual business operation of the industry itself, how it operates and why it operates that way, is little understood by those not actively engaged in the business. Indeed, few of those who see a motion picture on a screen have any idea of all that was required to put it there, but every man, woman, and child who sees a picture has, and is entitled to, an individual opinion concerning it.

Although it is clearly impossible to understand motion pictures without considering the business aspects of the industry, this phase is usually brushed aside or dealt with summarily as an uninteresting, or at least an unromantic one to talk about, in order to get on to the more glamorous topics. Hence, it remains somewhat of a mystery, or is mistakenly assumed to be just like any other business.

As a matter of fact, the business operation of the motion-picture industry in many fundamental respects is quite unique and different from that of all other industries, and presents a number of economic and commercial problems peculiar to itself. Far too little attention has been given to these essential methods of operation by governmental and legislative agencies that are called upon to deal with motion-picture matters. While there are many people who are not interested in the business aspects of this or any other industry, yet to dismiss such phases of the business as being either uninteresting, obscure, or incidental precludes any fair appraisal or understanding of the motion-picture industry.

It is my purpose to set forth a more or less elementary explanation of some of the essential features of the structure and operation of this great industry, which centers its production activities in my district, so that its widespread operations may be fairly and better understood.

II

The principal and almost sole product of this vital industry is the modern motion picture. The motion-picture industry has adapted to its own affairs the methods of commercial operation generally used in the modern business world, and more particularly the business practices developed out of years of experience of the earlier theatrical enterprises—vaudeville, stage shows, road companies, concert stage, and so forth—and brought over by showmen trained in this field who engaged in the motion-picture industry in the early days. But in addition many of the unique and peculiar methods employed in the manufacture and marketing of motion pictures are due primarily to the characteristics of the article in which the business deals. Motion pictures are as intangible as the shadow on a wall, a voice in the air. The film on which both shadow and sound is recorded, and from which the fleeting illusion of reality is created in the theater when reproduced by ingenious mechanical and electrical devices, is 1⅜ inches in width, six one-thousandths of an inch thick, of fragile nitrocellulose.

Over 2 miles—10,800 feet—of such film is required to project 2 hours of entertainment upon the screen, yet this film

wound on reels can be stored on a 2-foot shelf. The moving picture you see upon a screen as big as the theater's stage actually does not move at all, you just think it does because of an optical illusion. The film from which it is projected is a series of still pictures. Each separate picture, about the size of one of Mr. Farley's oversized postage stamps, each of these miniature photographs is reproduced upon the screen in such rapid succession that the eye cannot detect the change from one picture to the next. Thus the actors appear to move in a perfectly natural manner, but you are actually looking at a series of greatly enlarged photographs, each projected separately and perfectly still upon the screen.

However, it must be realized, this film is not really the article in which the industry deals, but is merely the mechanical means of conveying the motion picture itself from the studio to the numerous theaters. It is what is recorded upon the film, the wholly intangible dramatic and musical entertainment, with which the industry deals. This popular entertainment is the product of imagination, of talent, of many skilled technicians and arts and crafts, of long and painstaking effort in the studio. It is not machine made, nor the product of mass production. Each motion picture is specially designed and individually created by itself.

The motion-picture industry is a "style" business, fashions in pictures change as fast and as unexpectedly as in women's hats. A new and different idea in a motion picture succeeds if it strikes the public fancy, fails if it does not. But the public, sooner or later, will turn even against a new style. Thus, the constant search for new story ideas, new personalities, new types and treatments of drama and comedy, even though in the last analysis public fancy is largely unpredictable. The one thing that every style business does know is that public fancy will not remain static.

Commercial dealings in articles with the characteristics of a motion picture require protection, hence the use of the copyright law for the purpose. Without such a safeguard, the months of preparation and effort and the very substantial manufacturing investment in a modern motion picture could not be risked by the producer. It would be easy for anyone to duplicate the film on which this intangible photoplay is recorded, and for a nominal expense be able to reproduce identically the same motion picture in any theater. This is prevented by copyrighting the motion picture.

Thus protected by copyright the marketing of a motion picture is accomplished by the sale of the exhibition rights, which are in the form of a limited and restricted license under the copyright for its reproduction and exhibition in theaters, limited to a particular time and place in each instance. This exhibition right or copyright license is another intangible and should not be confused with the motion-picture film itself. Neither the motion picture nor the film is sold to any of the theaters that exhibit the picture, it is only the limited exhibition rights which they acquire.

The picturesque and colorful terms customarily used within the motion-picture business may mislead many people who seriously try to understand its structure and operation. Perhaps some of these should be explained by listing the equivalent term generally used in other industries:

"Studio": Factory.
"Producer": Manufacturer.
"Distributor": Wholesale dealer.
"Film exchange": Wholesale house or warehouse.
"Exhibitor": Retail dealer or merchant.
"Theater": Retail store or shop.
"Patron": Retail customer or consumer.
"Film rental": License fee for the exhibition rights.
"Box-office receipts": Total retail sales.
"Admission charge": Retail sale price.
"Negative cost": Total manufacturing cost of a picture, that is, all costs to the point where the "negative" is completed and ready for the laboratory to use in making the many "positive" prints that are used by the theaters.

The motion-picture industry is divided structurally into three main sections: Production in the studios, wholesale distribution in the film exchanges, and retail exhibition in the theaters. Both the wholesale distributor and the retail exhibitor are middlemen engaged in the marketing of motion-picture entertainment to the general public. Because of the pretentious and complex effort required and the extensive equipment and studio facilities necessary to produce a single successful motion picture, neither the exhibitor nor the distributor can produce a picture; hence, each of the three divisions of the industry is completely dependent upon the other two, so much so that they are sometimes integrated into the same corporate structure.

Production activities are necessarily concentrated in one place for a variety of reasons. Production of a single successful modern motion picture is a project of such magnitude financially and physically, requires such extensive, specialized studio facilities, and involves such hazards and risks, that it can only be undertaken by an organization of experience, skill, resources, and plant equipment sufficient to reasonably assure a finished product that will be up to acceptable standards of entertainment value as set by the general public and by competition. Thus, the number of studios equipped to turn out the finer grade of motion pictures in any volume is necessarily limited by economic factors.

Wholesale distribution of motion pictures today, to be efficient and economical, has to be on a Nation-wide scale by a centrally coordinated organization. But, on the other hand, retail exhibition is essentially a local activity, with multiple units of operation widely scattered all over the country, most of them with little contact with each other, and with little opportunity to become familiar with the complex operations and problems of either production or wholesale distribution.

III

On a huge sound stage inside a well-guarded studio in Hollywood a new play is enacted before the cameras, scene by scene and bit by bit, over a period of weeks and sometimes months. The final recording is the result of intricate planning, elaborate preparation, long and tiresome rehearsals, much editing, many retakes, and many headaches. While there is no audience to witness the performances, and one would be bored to tears by monotony if it were there, nevertheless, this operation is well-known and widely discussed. Hollywood receives constant attention in the public print.

A short time later this same dramatic performance of the same play, identical to the last detail of acting, scenery, costume, lighting, and even inflection of voice, is reproduced by ingenious mechanical devices in the local theaters throughout the country for the public to enjoy. Everyone is familiar with the final result upon the screen; but, I want to repeat, what goes on between the performance in the studio and the performance upon the screen is a phase of the business that receives little attention. This unseen and unsung but extremely important function is not accomplished by any magic, but by a commercial operation that functions with efficiency, speed, and precision to bring to the largest and to the smallest theaters throughout the country the finest in entertainment at a price within the reach of all. It is the wholesale distribution of motion pictures.

It should be clearly realized that neither the general public nor any part of it can buy motion-picture entertainment at the film exchanges, which are the branch offices of the wholesale distributing companies. The distributors do an exclusively wholesale business; that is, they sell motion-picture entertainment only to retail dealers for resale to the public. This plain fact is frequently disregarded or confused, sometimes intentionally, in public discussions of the commercial practices in the motion-picture business.

The wholesale distribution of motion pictures, which is what goes on between the production of the picture in the studio and the widely separated exhibitions of the motion picture in the theaters throughout the country, is vital to the operation of every motion-picture theater. The theater must secure its exhibition rights by negotiating a license agreement for each copyrighted motion picture it intends to exhibit, arrange for definite exhibition dates, and advertise the showing of each picture by dealings with the wholesale distributor or film exchange. The films must arrive at every theater in time exactly on the day the picture has been advertised and scheduled for showing.

To accomplish this continuously for approximately 17,000 theaters, scattered over 48 States, requires a highly trained organization of some 12,500 skilled and experienced workers in 431 film exchanges, strategically located in 31 or more key cities. Twenty-seven thousand miles of film is handled daily by the wholesale distributors in the United States. The precision and efficiency of this intricately organized and technical operation is attested by the fact that it rarely fails to deliver the scheduled film at the exact time for the show to go on in every theater as planned.

As I said before, motion pictures are copyrighted and the wholesale distributors market the exhibition rights to theaters. These exhibition rights are conveyed by a written limited-license agreement for the exclusive right to exhibit the film in a specified competitive area for a limited time, for which a license fee, commonly called "film rental," is paid by the exhibitor. The film, or print, itself is never bought by the exhibitor, nor is it actually leased or rented, but it is merely loaned by the distributor under the license agreement to enable the performance of the photoplay to be reproduced in the theater. The film must be returned to the distributor immediately after the booking for use in other theaters. The number of prints of the same picture is definitely limited because of the cost of each print, which is usually several times the amount of the license fee paid by an individual theater for its exhibition.

In order that 10,000 theaters might play the picture with not more than 250 prints in existence and available for use, 40 or more theaters must use the same print. Because of this, an orderly sequence of playing dates or engagements has to be arranged for each print, which also involves extensive bargaining and trading over runs and clearance, availability, congestion of bookings of other pictures at the theater, open time on the prints available, and many other factors.

While the exhibitor, or retail dealer, buys pictures in wholesale quantities, maybe 4 dozen feature pictures in a deal with one distributor, the 48 pictures cannot be shipped and billed in one lot. The wholesale distributor is required by the nature of the business to ship the pictures one by one at intervals as needed by the theater, and to collect for each picture at the time the entertainment is sold to the public for cash by the theater. Thus, the major part of the distribution operation consists of service rather than sales activity, and requires the year-round maintenance of a network of servicing establishments or film exchanges throughout the country within convenient and accessible shipping distances of the theaters.

After the sale of the exhibition rights has been negotiated and reduced to a written-license agreement, the first picture in the series to be released by the distributor becomes available. The exchange and the exhibitor then negotiate a booking date on which the theater can show the picture without conflict with other pictures that have been booked by the theater. This date must not be in conflict with the run and clearance specified in existing license agreements with other competing theaters on the same picture, and also a print must be available in the film exchange for use by the theater. When the date for exhibition is agreed upon, a print is reserved for the theater on that date. The theater then proceeds to advertise its coming attraction, frequently using posters and advertising materials prepared by the distributor.

Each distributor maintains an inspection department in its film exchange which then must inspect ever foot of the film for defects in the print, as the film is very fragile and frequently is damaged in projection at the theater which previously used the same print. Any damage found must be repaired before the film can be sent to the next theater. Adequate arrangements must be made for transit so that the print will reach the theater on time for exhibition, wherever the theater is located. The distributor at the same time bills and collects for the exhibition rights on that particular picture according to the terms as previously agreed upon in the written license agreement. Next, the distributor must get the print back from the theater promptly to fill the other engagements that have been booked for its exhibition. This whole process has to be repeated in its entirety with every theater for each feature picture and short subject licensed for exhibition. Every day some 6,000 of these 17,000 theaters in the United States change their entire programs, which consist of from 12 to 20 of the standard reels of film, which are about 900 feet in length.

The average theater requires about 250 feature pictures a year for continuous operation, plus varying numbers of short subjects and newsreels. No theater can carry films in stock for future use, nor can it produce its own films. It is thus essential that theaters license pictures far in advance of exhibition to assure an uninterrupted flow of pictures and to give ample opportunity to advertise coming attractions. Theaters do this by licensing wholesale groups or blocks of pictures for future delivery, thus securing wholesale prices for the pictures used and assuring themselves of an adequate supply of exhibition rights to fill their play dates, and to insure the uninterrupted operation of the theater.

It is not possible to have a standard pricing system for the exhibition rights to motion pictures as between the wholesale dealer and the retail dealer, primarily because it is not possible to determine the delivered unit cost of the article sold by the wholesale distributor, that is, the exhibition rights to a particular motion picture at a particular theater. In most industries the manufacturer knows the cost of the labor and materials that go into each article and can easily and accurately determine just what each article costs at the point of delivery. Accordingly, the manufacturer and wholesale dealer base the selling price on such unit delivered cost of the article offered for sale. In the motion-picture business there is no conceivable way to arrive at such a cost figure.

The manufacturer or producer of a motion picture has a production cost on each feature picture at the factory or studio ranging from $100,000 to well over a million dollars. But no retail dealer can pay more than a small fraction of this production cost for the exhibition rights to the picture for his theater. The production cost, plus sales and service expense, plus a reasonable profit, has to be recovered from perhaps 10,000 theaters, scattered over 48 States; theaters of various sizes, locations, seating capacities, admission scales, and so forth.

The wholesale distributor therefore has no possible way of determining the cost of the exhibition rights of any of the pictures he is distributing, delivered to a particular theater, on which to base the price quoted to the theater. Moreover, these quoted prices cannot be uniform, as one theater can afford to pay many times what another theater can afford, and one picture may be worth several times the value of another picture at the same theater. This presents a problem in economics that is both difficult and unique, and is the fundamental reason for many marketing methods employed in motion-picture distribution, both wholesale and retail, that are quite different from those used in other lines of business.

Since the inception of the business the price paid by the retail dealer for the exhibition rights to the pictures used in his theater has been based primarily on what the picture grosses or earns during the period it is exhibited. The formula employed is merely that the exhibitor should pay to the distributor a fair share of the gross receipts for the picture used. Sometimes this is an agreed upon percentage of the actual receipts, but more often it is a fixed amount in dollars. Either way it is based upon this fundamental formula.

It will at once be realized that this is a rather vague and uncertain basic formula on which to base definite wholesale prices, but it is the only practical method possible. The owner of the picture and the owner of the theater very frequently disagree, and violently, on what is a fair share of the gross earnings of the picture, or even on how much of the gross earnings at the theater is produced by the particular picture and how much is produced by other attractions running on the same program. And the bargain must be struck between the buyer and the seller over terms for the exhibition rights some time before the picture is shown in the theater, before either the exhibitor or the distributor knows what the actual gross receipts will be.

Years of experience have developed many shrewd traders in this field on both sides, many ingenious and resourceful tactics to secure commercial advantages in this bargaining and trading. To complicate the matter even further, there are numerous factors other than the picture itself and the theater itself that affect the value of the exhibition rights bargained for and the prices paid for such exhibition rights. Some of these are psychological, such as the efforts of exhibitors to convince the distributors that their business is bad and not up to expectations, and to keep secret the actual receipts on the distributors' pictures. And motion pictures are "perishable merchandise" in that the value of a picture as a box-office attraction or drawing card depreciates with varying degrees of rapidity after the picture goes into general circulation; the initial advertising and publicity the picture receives is gradually fogotten, and the general public eventually loses its interest in the particular motion picture.

Included in the exhibition rights bargained for by the exhibitors are such factors as "run" and "clearance." A run is what the theaters competing for the same patronage bargain for, so as to show the picture before, or after, the other theaters desiring to exhibit the same picture. Clearance is the interval of time agreed upon between runs. The more clearance secured over other competing theaters, and the less clearance sold to prior runs, within certain limitations, the more valuable the exhibition rights are to a particular theater. If the exhibitor can thus increase the value of the exhibition rights without increasing the price he pays for them by securing any change in the clearance and run, he can profit by such a change to the disadvantage of his competitors, and without additional cost to himself.

Since the earliest days of motion pictures, theater owners have insisted that directly competing theaters shall not be licensed to show the same attraction at the same time. In fact, before there were motion pictures, this principle was well established in the show business and is still retained in vaudeville and stage shows. Many motion-picture theaters today refuse to license any pictures that are licensed by certain directly competing theaters, known in the business as "opposition" theaters. The distributor of a motion picture can license it to one such theater for showing, but must forego licensing it to the "opposition" theaters.

However, other competing theaters may be willing to license the picture for exhibition after the first showing in the competitive area. These are known as "subsequent run" theaters. As I have explained, the interval between exhibitions in the vicinity specified in the license agreement is known as "clearance," the sequence of showings is known as "runs," also sometimes as "availability." A subsequent run theater may also have opposition theaters, that is theaters in direct competition which customarily play the same run, but which refuse to play the same pictures. Subsequent-run theaters pay consecutively smaller license fees for a picture and also charge lower admissions than the prior-run theaters, as a rule. In the larger metropolitan centers this run and clearance becomes very complex and is the subject of intensive bargaining and trading between exhibitors and distributors. It is an integral part of the negotiations over license fees or film rentals.

The transaction between a motion-picture exhibitor and the wholesale distributor, to whom he looks for his stock-in-trade, in nature still resembles the "horse trading" of a previous economic era; the bargaining tussle between buyer and seller arrays one against the other in a position of combat and natural antagonism as each is fighting for commercial advantage for its own immediate benefit. Since what is bartered has uncertainties and contingencies much greater than is predictable as to its ultimate value, there is an inherent premium upon attempts at sharp trading. The pull for advantage is not lessened and the sharpness of trading is in no way dulled because the parties to the bargain in many ways are mutually interdependent. It is precisely because the wholesale distributor in most situations finds only certain exhibition outlets for the display of his motion pictures, and the exhibitor must make his bargain for motion pictures with a definitely limited number of wholesale distributors, that the feeling which attends the making of a bargain is so intense.

Thus, the business of exhibiting and distributing motion pictures is kept in a turmoil of disputes, arguments, and controversies brought about by the fact that the marketing of the exhibition rights has to be on this uncertain basis which I have described, with the suspicion always present that the other fellow is getting the better of the bargain, or that a better bargain could be secured if it could be done over again.

The inherent nature of motion-picture entertainment brings about some unusual characteristics in the retailing of such entertainment by the theaters. Unlike most retail businesses, theaters cannot offer the immediate customer a wide selection of goods and articles. Every time a theater changes its program an entirely new stock of goods is on sale, with none of the items previously on sale in stock. As I said before, no theater can carry a stock or selection of motion-picture films on hand, nor can it produce any films for its own use.

It is interesting to note that, unlike most other retail establishments which are compelled to carry a substantial cash investment in merchandise in order to do business, the theater has no such investment. The "stock" of shows necessary to carry on the business is secured by merely signing a license agreement, with no investment by the exhibitor or retailer. The pictures must be delivered one at a time by the wholesale distributor as they are needed for exhibition and paid for one by one upon delivery by the exhibitor, who sells them for cash to the public at the theater.

Motion-picture theaters are considered a highly desirable economic unit for local communities because an unusually large amount of the gross sales or receipts is retained and spent in the same locality on pay roll, rent, advertising, and supplies. This runs from 65 to 75 percent of the gross receipts, as only 35 to 25 percent is sent away to the wholesale distributor for the goods (entertainment) sold. It is the local theaters' privilege to give the public relaxation and fine entertainment at a relatively low cost to the public because of the efficient operation of the industry. The most remote motion-picture theater provides a show which in costumes, scenery, talent, and technical perfection is identical with the performance given in the finest theaters in the country.

IV

For the past 12 years there have been introduced in Congress various bills intended to prohibit what is called compulsory block booking and blind selling of motion pictures. The Neely anti-block-booking bill, S. 280, is now pending before the Committee on Interstate and Foreign Commerce of the House of Representatives, having passed the Senate last year. This legislation has long received the ostensible support of several worthy public organizations interested in improving the moral standards in motion-picture entertainment, in the welfare of children and adolescents, and in what is termed "community selection of motion pictures." It also has the organized support of one of the several trade associations of independent exhibitors in this country. However, the active motion-picture producers, wholesale distributors, and independent exhibitors, other than the one organization referred to, have registered strong opposition to the measure at each of the public hearings on this legislation.

Block booking is nothing more than the selling of exhibition rights to more than one motion picture at a time to an exhibitor. It is a method of the wholesale distribution of motion pictures that has been generally employed by the industry since it was first established as a commercial enterprise. Blind selling, likewise, is the licensing of a motion picture for exhibition before the exhibitor sees the picture. It is not contended that either block booking or blind selling of motion pictures is practiced by the retail dealer upon the public; only by the wholesale distributor upon the retail exhibitor. This is what the Neely bill seeks to prohibit and regulate by Federal statute under penalties of fine and imprisonment.

It is explained, however, by the sponsors of the bill that block booking as such is not objectionable and should be permitted, that it is not the intention to prohibit block booking, but only to prohibit compulsory block booking, which is defined as a trade practice whereby exhibitors are required to lease all or a specified number of an offered group of films in order to obtain any individual, desired film or films in the group.

How much compulsion is there in block booking? This question seems to be much disputed, and it may be difficult to ascertain accurately the extent of the compulsion referred to. Unsupported charges and inferences by the sponsors of the bill that this is the uniform practice throughout the industry are flatly contradicted by the booking records of the leading wholesale distributors, which have been presented at the hearings on this legislation. Attempts to explain this, by assuming that the producer-distributor controlled theaters account for the variations in bookings, fall down because there are not nearly enough such theaters altogether to match the difference in bookings for any of the distributors.

Moreover, what causes this compulsion in block booking about which complaint is made? Is it an arbitrary sales policy of the wholesale distributor? Is it the competitive struggle between rival exhibitors for the best pictures. Is it the anxiety of every exhibitor to secure for himself enough pictures to keep his theater in continuous and uninterrupted operation? Or is it the rather obvious fact that a retail dealer can secure better prices and terms by buying in quantity and thus make his business more profitable? To insist that the compulsion derives solely and entirely from the sales policy of the wholesale distributor is improbable and does not seem reasonable.

Recalling that opposition theaters in direct competition with each other ordinarily refuse to exhibit the same pictures and recognizing the perishable and intangible nature of the exhibition rights bought and sold, it would appear logical that a wholesale distributor with several pictures to license would be foolish not to accept the offer of an exhibitor who wanted to license all of the pictures offered rather than the offer of a rival exhibitor to license only part of the pictures. If this is true, is it not the competitive buying between rival exhibitors that exercises the compulsion in block booking?

Apparently the sponsors of this legislation realize that this compulsion, at least in part, is based upon the compelling desire of the exhibitor to secure the best possible terms in buying motion pictures for his theater, because the important part of section 3, the block-booking section of the Neely bill, is concerned with regulating the prices quoted by the wholesale distributor to the exhibitor on the exhibition rights offered for sale. This section of the act prohibits by penalties of fine and imprisonment some of the relationships or differentials between the separate and several prices and the aggregate price, either as quoted by the distributor or as agreed upon between the exhibitor and the distributor.

Exactly what pricing or price quotations by the wholesale distributor it is intended to declare illegal and punishable under the act appears to be uncertain and ambiguous. But, as this is the heart of the act, it should be examined carefully and clearly understood, before Congress ventures into the field of price-control legislation for an industry that has the peculiarities of the motion picture to contend with in its marketing and pricing problem.

Independent theater owners who have examined the price control provisions of section 3 of the Neely bill, and who are familiar with practical theater operation and management responsibilities, are alarmed at its possible interpretation and application to their business by the courts under the severe penalties provided for any violations. In their opinion it will arbitrarily freeze the asking prices first quoted by each distributor on its pictures, which is usually somewhat higher than those finally agreed upon, will prevent negotiations for more favorable prices and terms, and will prohibit price discounts and reductions by the wholesale distributor to secure orders for more than one picture.

It is strongly urged that such an arbitrary requirement by statute will force an artificial and very substantial increase in film costs, particularly to the smaller theaters, with no improvement likely in quality or values, which may prove disastrous to many small independent exhibitors, though possibly not contemplated or understood by the supporters of this legislation.

Exactly how the exhibition rights to motion pictures must be priced according to the specifications of section 3 of the bill when offered to an exhibitor by the wholesale distributor, what changes in the quoted prices are allowed during negotiations, and just what changes are forbidden, and specifically what arrangement of prices and percentage terms finally agreed upon will be within the law are matters of considerable doubt that have never been made explicit. To impose such uncertainties and risks of fine and imprisonment on the innumerable transactions of the motion-picture industry seems intolerable.

The only other operative and enforceable section of the Neely bill is section 4, which deals with blind selling. This section would require that a full and accurate description of each motion picture must be made a part of each license agreement for the exhibition of the picture. While the law purports to deal only with distribution, there is an overwhelming opinion, and testimony by those responsible for the production of motion pictures that this requirement would have far-reaching effects upon that complex and difficult operation. No one quite knows what would be required to comply with the prescribed "accurate synopsis of the contents of such film" and other descriptive matter specified. The objections to this section by those who operate the business and are responsible for its success are many and varied.

It is insisted by the sponsors of the bill that these restrictions imposed under penalties by Federal statutes are necessary to establish community freedom in the selection of motion pictures. The theory advanced seems to be that such selection by the community will be made from the prescribed synopsis which must be made a part of the license agreement. This agreement is a private contract between the exhibitor and the wholesale distributor. Just how the community will be assured access to the accurate synopsis and descriptive matter on which to base its selection, either before or after the contract is made, is not revealed so far.

Everyone seems to be in favor of selecting the best motion pictures and rejecting those that are not good entertainment. The community is obviously composed of individuals who are perfectly free to select and reject motion pictures as they are shown according to their own tastes and preferences. Commercial success or failure of every motion picture rests upon such selection. It is direct, potent, and effective. Most of the returns to the producer on every important motion picture come from theaters that pay a percentage of the gross admissions at the theater as the license fee for the exhibition of the picture. Is it intended to deprive the individual of the inherent right to select his own entertainment by this statute? Who is it proposed under the Neely bill is going to select and reject the pictures for the individual in the community? How can the composite taste and preference of the whole community be ascertained and expressed on a particular picture before it is shown?

Or is the complaint really that community taste as expressed individually at the box office of the theater is not high enough, that enough of the individuals who compose the community do not prefer the finest types of pictures that are shown? How can that be changed by passing another law? Is it not the responsibility of the churches, the schools, and the community organizations to educate the individuals in the community in the appreciation of finer pictures and the taste for better pictures, so that there will be public demand and support for these more artistic endeavors?

No one quarrels with the avowed purposes of this act. Everyone wants to see better and finer motion pictures exhibited, and it is not surprising that this purpose is widely endorsed. There is nothing in the Neely bill that prohibits the showing of the most objectionable motion pictures, or that will require the showing of the finest pictures. It is merely an uncertain but drastic bill to regulate wholesale prices and commercial transactions between the wholesale dealers and the retail dealers in the motion-picture business that is likely to produce quite unexpected and devastating results. It is offered as a legislative patent medicine to cure all the ills of the motion-picture industry, but it contains a slow poison as its active ingredient. I strongly urge the Members of Congress to examine the operative sections of the Neely bill carefully before taking the responsibility of imposing it upon the motion-picture industry as a Federal statute.

MOTION-PICTURE DATA

[Condensed from U. S. Department of Commerce Bulletin No. S-4 of Mar. 15, 1940]

Motion-picture theaters in the United States classified by size (seating capacity)

Seating capacity	Number of theaters	Cumulative total
Over 3,000 seats	117	
2,000 to 3,000 seats	374	491
1,500 to 2,000 seats	689	1,180
1,000 to 1,500 seats	1,646	2,826
500 to 1,000 seats	5,500	8,326
200 to 500 seats	7,303	15,629
Less than 200 seats	1,912	17,541

Average seating capacity, all theaters, 623 seats.

Theaters in United States, by location (equipped for sound pictures)

Population of town	Towns with theaters		Theaters		Seating capacity	
	Number	Cumulative total	Number	Cumulative total	Number of seats	Capacity, cumulative total
Over 500,000	13		2,251		2,426,986	
500,000 to 200,000	28	41	1,104	3,355	1,010,079	3,437,065
200,000 to 100,000	52	93	783	4,138	754,669	4,191,734
100,000 to 50,000	94	187	801	4,939	760,579	4,952,313
50,000 to 20,000	276	463	1,202	6,141	1,053,508	6,006,120
20,000 to 10,000	494	957	1,341	7,482	992,570	6,998,690
10,000 to 5,000	845	1,802	1,626	9,108	1,006,388	8,005,078
5,000 to 2,500	1,351	3,153	1,959	11,067	961,516	8,966,594
2,500 to 1,000	2,874	6,027	3,221	14,288	1,113,357	10,079,951
1,000 and less	3,160	9,187	3,253	17,541	844,533	10,942,484

Average weekly attendance at theaters in the United States (1939), 85,000,000.

Average movie admission charge, 23 cents.

Theaters in operation in the United States classified by ownership and management (in 1938)

Number of independent theaters (i. e., not affiliated with a producer or distributor of motion pictures):		
3 or less theaters under 1 management		10,722
4 or more theaters operated as a circuit (394 circuits)		3,829
Number of theaters affiliated with a producer or distributor		2,300
Number of theaters operating in 1938		16,251
Number of theatrical-film exchanges in the United States		447

Number of feature-length pictures released and distributed in the United States in 1939

Major companies:		
United States produced	367	
Imported from abroad	21	
		388
Independent companies:		
United States produced	116	
Imported from abroad	257	
		373
Total features released		761
Number of people employed in United States motion-picture theaters		241,000
Number of persons employed at all film exchanges		12,500
Number of people employed in United States production		28,500
Total number employed		282,000
Estimated cost of production, 1939		$165,000,000
Estimated annual studio pay roll, 1939		$129,000,000

Amendment of the Wage-Hour Law for Puerto Rico

EXTENSION OF REMARKS

OF

HON. BOLÍVAR PAGÁN

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

TELEGRAM FROM PUERTO RICAN CITIZENS

Mr. PAGÁN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein a telegram received by me today from all important business, industrial, and agricultural associations of Puerto Rico backing the amendment to the wage-hour law as it refers to Puerto Rico:

SAN JUAN, P. R., *May 2, 1940.*

Hon. BOLÍVAR PAGÁN,

House of Representatives, Washington, D. C.:

At meeting of leading economic organizations it was unanimously resolved to urge imperative need for remedial legislation for Puerto

Rico on matter of wages-and-hours law. It was the unanimous opinion that failure to secure relief means the total collapse of industries vital to our economic structure and thousands of wage earners dependent thereon. We look forward to your leadership and active cooperation in urging congressional action.

Sam Schweitzer, Puerto Rico Needlework Association; F. de Hostos, Chamber of Commerce; J. A. E. Rodriguez, Manufacturers Association; Rafael Rodriguez, Federation of Merchants; J. P. Klein, Fruit Exchange; M. González Quiñones, Farmers Association; R. Aboy Benitez, Association of Sugar Producers of Puerto Rico.

Increase in Personnel of Executive Departments

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

EDITORIAL FROM THE MAMARONECK (N. Y.) TIMES

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Times of Mamaroneck, N. Y., of April 26, 1940, titled "You're Paying Them"—a comparison of the number of employees in the executive departments in 1933 and 1939:

YOU'RE PAYING THEM

Remember when Franklin D. Roosevelt was running for President in 1932 and pledged himself to a 25-percent reduction in the cost of Federal Government?

Here are figures, from the United States Civil Service Commission, showing the personnel increase in Government departments under President Roosevelt:

	Feb. 28, 1933	Dec. 31, 1939
State	4,664	6,249
Treasury	52,266	60,216
War	44,188	123,624
Justice	9,022	10,074
Post Office	272,550	291,114
Navy	46,879	99,024
Interior	15,018	45,844
Agriculture	26,132	86,250
Commerce	17,971	8,535
Labor	5,569	6,759

Has your business permitted any such increases in staff; that is, your private business? For this is your business, too, and you're paying for these public servants, whether you realize it or not.

Corporation Directors

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 2 (legislative day of Wednesday, April 24), 1940

ADDRESS BY RICHARD C. PATTERSON, JR.

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address delivered by the former Assistant Secretary of Commerce, Mr. Richard C. Patterson, Jr., before the Harvard School of Business Administration, at Cambridge, Mass., on March 15, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I'd like to begin by posing this question: Have corporate directors abdicated? Have they surrendered their legitimate powers over the affairs of business and, in so doing, abandoned their responsibilities as trustees for the public interest and for the owners of business? The answer, I believe, is that certainly in some cases they have been so abdicating, imperceptibly, bit by bit, for a long time. It's true that most directors have faithfully tried to perform their duties as they understand them, and that only a minority have been negligent toward their responsibilities. It's true that directors of great integrity and ability have had an important part in bringing American business up to the high plane it occupies today. Nevertheless, I think that, paralleling the tendency toward centralization of executive powers in government, there has, in recent years, been a trend toward centralization of authority in the executive management of corporations. Business executives now carry as much responsibility as they should—often more. This, perhaps, is because the evolution of corporate business during the past 50 years has been such that sometimes the meaning and purpose of directorships have been obscured. The effect of this evolution, though not the individual intention, has been, indeed, a kind of abdication of directorial duty. And unless that trend is reversed, we may well see government and bureaucracy step in to assume some of the powers that properly belong, under both democratic and corporate theory, to the elected representatives of the Nation's stockholders—the directors.

THE HISTORY OF DIRECTORSHIPS

I hold that the main trouble with the system is not organic. I don't believe that any drastic operation upon it is necessary. I think that if the trouble is diagnosed business can cure itself by measures as simple as a change of diet. Indeed, I'm convinced that business must cure itself of whatever is wrong in corporate practice, for, if in default of that, government should step into a directorial seat in private corporations, that would be the beginning of the end of free enterprise upon which our institutions are founded. This afternoon I am going to try to make a beginning at that diagnosis and to suggest a cure that is based not upon my own wisdom but upon the common denominators of experience of hundreds of the outstanding corporation directors whose examples in office leave nothing to be desired. Let me begin by tracing very briefly how the modern American board of directors evolved, how it's likely to be made up, and why.

The idea of the corporation is, as you probably know, very old, and therefore very tested. It was written into early English civil law, and has continued to operate without serious challenge ever since. I shan't review its developments in detail. But it is interesting to notice that it probably never functioned perfectly, and more than a century and a half ago it had at least one outstanding critic. Adam Smith, writing The Wealth of Nations, in 1776, described stockholders as people who, having invested in a joint stock company, neither did nor could take much further interest in its affairs except to welcome the dividends it paid them. Then he went on to say of the directors entrusted with the stockholders' interests (I quote) that "being managers rather of other people's money than their own, it cannot be well expected that they should watch over it with the same anxious vigilance with which the partners in a private co-partnery frequently watch over their own. Like the stewards of a rich man, they are apt to consider attention to small matters as not for their master's honor, and very easily give themselves a dispensation from having it. Negligence and profusion, therefore, must always prevail, more or less, in the management of the affairs of such a company." Since Adam Smith wrote that, corporate practices have greatly improved, otherwise we would not have witnessed so great a growth of corporate enterprise nor so many examples of corporate efficiency. There is still, to be sure, "negligence and profusion," but these have become the exception rather than the rule. I believe that during the last century in America directorial responsibility and attention to company business probably reached its peak of performance. Since it was a period of economic growth with the industrial revolution, directors more often than not were founders, or the sons of founders, and therefore had considerable stockholdings and a personal interest in the affairs of the companies. Outside directors generally were drawn from related kinds of business and were well equipped to understand the problems of the companies for which they were trustees. And the problems were certainly simpler, in the environment of a less complicated economic system. People were not specialists then, and a businessman was simply a businessman, and stood or fell upon his record as such.

TWENTIETH CENTURY CHANGES

Then, after about the first decade of the present century, things speeded up even more. Three-quarters of the Nation's business wealth was to become changed to corporate form, and the number of corporations was headed toward its 1929 peak. There were probably 1,000,000 directorships to be filled. Stockholdings in corporations came to be more and more widely held, which meant that the owners were more numerous, more scattered over the face of the earth, and further removed from the management. The proportion of stock held by directors became, accordingly, smaller, and the holding of qualifying shares often developed into a formality rather than a factor giving directors a personal stake in their companies. Meanwhile everyone was becoming a specialist of some kind. Some dentists gave up pulling teeth, others did

nothing but that. The old family doctor was split into half a dozen parts, so that it's now supposed to take about six doctors at least completely to service one human body. Public relations became the sorcery of a new kind of science reserved to certain mystical high priests. Industrial and labor relations, once a simple concern of management as a whole, followed as the province of expert practitioners. Merchandising, and its chromium-plated sister, advertising, developed into the rarest and most intricate art of all.

THE MODERN DIRECTORATE

How was all this reflected in the composition of boards of directors? For one thing, specialization set in in many cases. Experts on this or that were elected to office for the benefit of their special knowledge. Cheek by jowl with the experts set men with names with a capital N—men whose presence was regarded as valuable solely because they were known as big shots rather than because they were expected to work. And these "honorary directors" were often willing to serve without any substantial pay, both for the slightly empty honor of belonging to as many boards as possible, and because, in a world of increasing complexity, they thought it might do them some good in their own interests to have a finger in as many pies as possible. As for the descendants of some of the founding fathers back in the nineteenth century, some of them, their blood thinned, stayed with the family business as playboy directors who didn't need or care to bother their pretty heads about the intricacies of corporate management. And along with this medley of directors, the executive management of corporations, the salaried presidents and often a number of vice presidents and other working officials, also sat on the boards. Thus was built up a practice whereby in some boards a large proportion of the members might be almost anything but actual representatives of the ownership. A director might or might not need adequate compensation for his services; might or might not receive it regardless of need or of services actually rendered.

In a great many instances the management, often represented by an ambitious and able president, took over the functions of ownership and of the directorate, running the business brilliantly, expanding it, making money, paying dividends. Some managements came to expect, and to receive, little from the boards except the expert counsel of specialist members, just as though they were on the pay roll instead of on the board. At any rate, more and more of the large questions of policy were resolved by the management of many corporations and passed upon by the boards in a purely perfunctory way because not all the directors had the inclination or could afford the time to study them in detail. One solution chosen by certain companies was the elimination of outside directors altogether and the constitution of an entire board of working executives. Standard Oil provides one of the best examples of this. But this is far from ideal as a general practice. It cuts out the opportunity for outside advice and a fresh viewpoint. And it means, substantially, that the management is merely reporting back to itself instead of to trustees for the owners and for the public interests.

Undoubtedly the whole corporate system worked efficiently in most cases. No matter how valuable individual directors were to consult on special problems, the less they had collectively to say on the broader issues, the less conflict was there with able executive management. Some of the most efficient and admirable corporations we have today are shining examples of the unshackled genius of their executive heads. But so was Philip Musica, alias F. Donald Coster, an extraordinarily efficient and successful president for McKesson & Robbins—up to a point. Let me quote from Supreme Court Justice Douglas, in a speech he made last year while he was still Chairman of the Securities Exchange Commission: "What we frequently have today is a large majority of directors who are dominated by a few management men, or men representing special interest. These directors have abdicated. It's not enough to describe them as directors who do not direct. Too often they do not even influence. * * * They ratify decisions they have not reached, based on arguments and evidence which they cannot appraise. * * * The average modern director does not direct the course of the corporation to a much greater extent than a conductor directs the course of his trolly car. Both of them go along with the vehicle, and one of them is often present only for the sake of the ride."

THE CRASH—AND STOCKHOLDER SUITS

All this time, up to the great depression, stockholders were, on the whole, uncritical, so long as they received their dividends. As for the election of new directors, they were content to vote into office the men selected by the president without much question. If their board of directors had a lot of good names on it, so much the better. If they didn't like something about the board, all they had to do was to sell that particular stock and buy another, rather than make any effective protest or send in disapproving proxies. It was as simple as that. But after the crash came, all this changed a good deal. Stockholders were reminded that directors are personally and individually liable, under a number of laws, to suit on various grounds. And the number of stockholder suits that followed, many of them against absolutely blameless and prudent individuals, changed many a directorship from an asset into a grave liability. Those liabilities are at their greatest at this moment due to such recent laws as the Securities Exchange Act of 1933 and the Public Utilities Act of 1935. So grave a deterrent has this threat become that many men of directorial timber are shy of becoming directors unless the company has taken measures to indemnify them against the costs of defending groundless stockholder suits.

THE RESULTING CONFUSION

I hope that in this quick thumbnail review I've not made too dark a picture of the performance of United States directorates up to now, or of the consequences. That would be most unfair to thousands of wise and capable men under whose guidance United States corporate business has functioned extraordinarily well during years of dire adversity as well as during the good times. What I want to impress upon you, gentlemen, is that the march of events has been so swift and so complicated that it has created in many minds a state of profound confusion as to what directors are for. We have all kinds of them, performing all kinds of general or specific functions, or no function at all. We pay some a lot, some a little, some nothing at all. According to a recent study by the National Industrial Conference Board, the average pay for all outside directors who receive any remuneration is something like $285 a year. Such a nominal rate of pay provides a busy man with an excellent excuse for rendering only nominal services, especially if, in the confusion, he has lost sight of what the original and basic functions of a director are supposed to be. So it's to the credit of United States directors that the conference board study shows that actually as many as 42 percent of the directors of manufacturing companies, and 26 percent of those of nonmanufacturing companies, had perfect attendance records at board meetings in 1938. If these men function as directors (and I am sure many of them do) their remuneration is ridiculously inadequate.

TOWARD A SOLUTION

What are we to conclude from all this? What are the things that must be accomplished by the cure to be found? In the first place, obviously, good men should be picked for directorates. Then they must be persuaded to accept election despite the liabilities of the office. Then they must be induced, no matter how busy they are, to attend the meetings of their boards. Their duties as members of the board must be clearly defined so that they may know exactly what is expected of them. The definition of those duties must be sufficiently comprehensive to mean that the directors actually do direct. And the stockholding public must be made aware of these also, so that they will understand the meaning and purpose of electing directors and be able to judge their performance. That sounds like a large order, but it must be done, and done by business, and done soon, if the danger of having the Government try it is to be avoided. For the least that Government might do is to prescribe that "public directors" be appointed by the Government to the boards of all corporations. That would amount to bringing a Trojan horse of bureaucracy into the walls of private business. It might easily end in reducing all capitalism to a state of political vassalage.

CHOOSING DIRECTORS

As for choosing directors—which is the first matter of concern in finding a solution—let us agree at once that each must have, as prime requisites, the qualities of integrity, ability, courage, and judgment, and the capacity to work in cooperation with others. But beyond this axiom, the last thing in the world that could be reduced to a formula is the classes of directors a company should have on its board. It's useful, however, to take a look at the categories into which directors on modern boards may fall.

(1) There are the inside directors chosen from among the executive officers of the company. The president is almost always one of them. In some cases the entire board consists of inside members, but on the average board inside members are half or less of the total.

(2) Outside directors who are on the board by reason of their large holdings of stock or as representatives of large interests in the company. The presence of such directors is often useful and desirable, since it gives effect to the principle of owner-representation. Only when one or two such members dominate a board is there a danger that the public interest will not be served.

(3) Outside directors chosen for their broad business qualifications and ability. They are generally men active in other businesses and are known for their knowledge of finance and public relations, of governmental and world affairs, and for their wide contacts among business leaders and officialdom. This class of director can be of inestimable value to any corporation. Whether he actually is or not depends upon the time and attention he can give to his duties. And this in turn depends upon the prior requirements of his own business affairs, and the number of other boards on which he sits.

(4) Working directors who make a full-time profession of serving on boards of more than one company. To be of maximum use such working directors must be men of the highest caliber and ability. Of them I shall speak more in a minute.

(5) Outside directors who are selected for their special knowledge of some technical field affecting the business—public or labor relations, legal matters, merchandising, patents. These men present a problem on which opinions widely differ, to which I shall refer presently.

(6) And the last class includes all the directors who ride along on the board as "supers"—the window-dressing men there only for the value of their names; the inactive "honorary" directors whose services are practically nil; the playboy, the dilettante, the stuffed shirt, and the man who belongs to so many boards that he could

not possibly discharge his responsibilities to a quarter of them. These men must be retired from the boards of American business, because so long as there is one member on a board who neither receives nor expects responsibility, all members may be infected, as by contagion, with the germ of irresponsibility.

Now, forgetting the useless directors and considering only the other five classifications that serve a valuable purpose, it becomes apparent why the confusion has grown up, since the days when all directors alike were directors pure and simple, as to what the real functions of a director comprise. There are now many kinds of directors and of functions. In my own opinion the fifth class of directors I mentioned, the men who sit on a board by virtue of special technical knowledge, have provided one of the sources of confusion. If they serve as directors their responsibility should not be limited to matters concerning their own special fields of knowledge and they should be paid as directors, not as experts. Otherwise their presence on the board would violate the basic principle that all directors are equally liable for all of the affairs of the company. But generally I believe it would be better for such experts to be retained as consultants and advisers to the board, and to be paid accordingly.

How many of each of the other kinds of directors—inside directors, outside directors, and "working" directors—should be placed on the board of any given company is not for me or anyone else to say. It depends entirely upon what business the company is in, what problems are likely to confront the management. But with the possible exception of the inside salaried executive serving on the board, all should be paid for their services, whether they are wealthy or not, if they are to be expected to give their best efforts. And all, being fairly paid, should undertake clearly defined responsibilities of such a nature as those I shall presently suggest.

I might mention parenthetically here that bank directorates usually stand high in public esteem because they contain few deadwood members, they take their job seriously, and they are so composed of various kinds of men as to contribute special and diverse values to their corporations. Also they provide a model example of division of labor within the board by director action in small compact committees, each charged with responsibility for applying institutional policy to given fields of activity, but all collectively bearing the responsibility for the total results.

Once a new director has been designated for election, the stockholders entitled to vote for or against him should be informed not only of his name but the main facts of his biography and business connections. This may be looking for trouble. But the trouble of informing the stockholders on the subject of their vote is at least preserving more than a semblance of the democratic process which underlies the whole theory of stockholder representation.

INDEMNIFICATION OF DIRECTORS

Upon accepting office a director assumes, of course, not only moral responsibilities but legal liabilities. The Government is doing more and more to impose penalties upon directors who fail to act according to high standards fixed by law. But the imposition by law of heavy penalties upon directors for technical violations is not an unmixed blessing. Responsible, able men have declined positions as directors which they were well qualified to fill. They have done so because of doubt as to the policy of law-enforcement agencies and of the ease with which strike suits are brought against whole boards by minority stockholders.

These suits are for the most part solely in the hope of securing settlements unjustified except for nuisance value. They are a constant source of annoyance, wasters of vast quantities of time, and not infrequently involve costly preparation of adequate defense. Also every suit, however slender the grounds, holds the threat of liability. A solution of the problem of protecting decent, conscientious directors against unjustified harassment without shielding the lazy or unscrupulous director against accountability to genuinely aggrieved stockholders, or public prosecution, presents many difficulties. The problem should challenge more attention than it has received from the bar associations. In certain communities a few easily identifiable attorneys appear to be retained with surprising frequency in the more odorous of these litigations.

Until a solution to this problem is found, it will stand as a deterrent to the willingness of many prudent men to become members of boards. A partial solution offered, which the conference board reports has the approval of 75 percent of business opinion, is the indemnification of directors for the expense of defending groundless suits. (Such indemnification, of course, should not operate where the suits are successful.) Only a few corporations have so far taken the step of giving their directors such indemnity. Just this week President Lewis Brown of Johns-Mansville announced not only the policy of indemnifying its directors but of paying them salaries of $5,000 a year. I think these are steps in the right direction toward a new era for active directors.

It's really up to business itself to find men who can and will direct the affairs of business. And the incentive is not measured alone in dollars and cents, or in conformity to government demands for boards that are responsible; it is, basically, the incentive of strengthening the whole American system of economy.

AN ENGLISH EXAMPLE

A few moments ago I referred to a class of directors known as the working director, who makes a profession of serving on boards for a salary. In this country the idea has not found very wide acceptance. Some believe that the professional, paid director would cause friction between the board and the management, and that the election of salaried executive officers to the board would serve the same purpose. Others declare this working director would be an added and duplicating expense, and might serve as a dumping ground for impecunious friends and relatives. There is, however, in English procedure important precedent for having professional directors who give all of their time to directorial duties for one or a few companies. English directors are paid from $1,000 to $20,000 a year. And although there is also to be found in the British business press plenty of criticism of the ornamental guinea pigs—which is the English equivalent of what we mean by stuffed shirts serving no useful purpose—Ambassador Kennedy has said:

"Directors are expected to take and actually do take an active part in supervising corporate affairs. The result is on the whole that the British enjoy a higher standard of directorate responsibility than obtains in this country. Moreover, usually the membership on a board is small, with the result that it is seldom found that directors serve on more than a few boards. The English, with a sense of reality, compensate their directors for the time and effort they are required to devote, and do actually devote, to an enterprise. In line with the duties they assume, their compensation is fairly substantial."

I submit, therefore, that although there are arguments on both sides of the case, American business should study the possibilities of employing more paid working directors who can contribute to their boards better judgment resulting from experience on a number of boards.

CREED FOR DIRECTORS

Whether a director is a company executive, spokesman for large stockholders, captain of industry and finance, specialist or professional director, there are certain standards by which he should test his own performance. These standards are capable of specific definition. Their definition cannot be drawn from any one individual's experience. But it can be based upon well-considered judicial opinions and upon the examples of the best of our business leaders. These men, who have fulfilled to the utmost their public trust who have directed much of American business to its present high plane of development, have sought to maintain standards, the definition of which may well be accepted by stockholders and directors alike as a creed for every director:

1. Before he becomes a director, he makes sure that he can exercise his own independent judgment without conflicting loyalties.

2. He accepts a directorship only where his time and other commitments permit him in fact to perform the duties of the office.

3. He resolves to discharge his obligations conscientiously under the laws of the land and the bylaws of the company.

4. He is entitled to be fairly paid for his services.

5. He familiarizes himself with the company's history, organization, set-up, products, and services, its markets, its place in industry, its properties, and its relations with government, public, and investors; and in deciding policy, he weighs the long-term economic and social trends and how they may affect the company's future.

6. He comprehends the object and effect of contracts on which the board's approval is necessary or proper; he sufficiently understands the need and uses of security issues, loans, investments, capital expenditures, and sale of corporate assets to form a judgment respecting such matters.

7. He attends meetings promptly and regularly, and examines the minutes for accuracy and information.

8. Without interference in management detail, he examines the character and ability of its keymen, the fairness of their compensation, and the reliability of the auditing agency which should be directly answerable to the board.

9. He is mindful of his trusteeship for stockholders, creditors, and employees, seeking a just treatment of the claims of each; and he insists that company reports go to those entitled to be informed concerning company operations, finances, and management.

10. He does not profit—himself, his friend, his family—by reason of confidential information gained by him as a director; nor does he allow blood or friendship to dilute his judgment of what is best for the company.

For the conscientious directors who already govern themselves according to personal unwritten creeds such as this one, there is no need in publishing these findings. For the lazy and negligent director there can be no creed or cure but replacement. Under the laws and traditions of democracy and free enterprise that go back to Elizabethan times, the final and highest authority over corporate business rests with the directors elected by the stockholders. It is up to us, if our institutions are to live, to keep it there. And the best way to keep it there is not by legislation or Government intervention, but by having clearly before us the importance of holding corporate directorates at a high level of performance, both by making them attractive to able men, and by leaving no doubt as to the nature of their stewardship. This creed is offered as a contribution toward that end.

Personnel of the Ways and Means Committee Since the First Congress

EXTENSION OF REMARKS
OF
HON. ROBERT L. DOUGHTON
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 2, 1940

COMPILATION BY THE ASSISTANT LIBRARIAN OF THE HOUSE OF REPRESENTATIVES

Mr. DOUGHTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting compilation of facts about the Ways and Means Committee personnel since the First Congress. This compilation was prepared by Mr. Bryce N. Harlow, assistant librarian of the House, and contains historical facts which I know will be of interest to the Members of the House:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 27, 1940.

Hon. ROBERT L. DOUGHTON, M. C.,
House of Representatives, Washington, D. C.

DEAR MR. DOUGHTON: The attached lists are compilations of various interesting facts about the Ways and Means personnel since the First Congress.

You may be interested to note that, with the exception of the 12-year term of Sereno Payne, of New York, you have served longer as chairman of the Ways and Means Committee than any Representative since the First Congress in 1789.

Also attached are lists of all Members who have served on the committee since its creation, the Members being segregated into their respective States. You will notice that you are the fourteenth member to serve from North Carolina. In passing it is interesting that Mr. TREADWAY needs serve but one more term on the committee to tie the longest consecutive term of any man since the committee was established.

These lists are submitted to you with the understanding that you desired to insert them into the CONGRESSIONAL RECORD for the information of other members of the Ways and Means Committee.

Very respectfully yours,

BRYCE N. HARLOW,
Assistant Librarian, House of Representatives.

Ways and Means Committee chairmen, First to the Seventy-sixth Congress

Years	Congresses	Chairman	Number of Members
1789	First	Thomas Fitzsimons, Pennsylvania.	7
1795–96	Fourth and Fifth	William L. Smith, South Carolina.	14, 7, 9, 16
1799–1801	Sixth	Robert G. Harper, South Carolina.	9
1801–06	Seventh to Ninth (1st sess.).	John Randolph, Virginia	7
1806–07	Ninth (2d sess.)	Joseph Clay, Pennsylvania	7
1807–09	Tenth	G. W. Campbell, Tennessee	7
1809–11	Eleventh	John W. Eppes, Virginia	7
1811–12	Twelfth (1st sess.)	Ezekiel Bacon, Massachusetts.	7
1812–13	Twelfth (2d sess.)	Langdon Cheves, South Carolina.	7
1813–15	Thirteenth	John W. Eppes, Virginia	7
1815–18	Fourteenth to Fifteenth (1st sess.).	William Lowndes, South Carolina.	
1818–23	Fifteenth (2d sess.) to Eighteenth.	Samuel Smith, Maryland	7
1823–27	Eighteenth and Nineteenth.	Louis McLane, Delaware	7
1827	Twentieth (1st sess.)	John Randolph, Virginia, excused.	7
1827–28	do	Alexander Smyth, Virginia	7
1828–32	Twentieth (2d sess.) to Twenty-second (2d sess.).	George McDuffie, South Carolina.	7
1832–33	Twenty-second (2d sess.)	Julian C. Verplank, New York.	7
1833–35	Twenty-third	James K. Polk, Tennessee	9
1835–39	Twenty-fourth and Twenty-fifth.	C. C. Cambreling, New York.	9
1839–41	Twenty-sixth	John W. Jones, Virginia	9
1841–43	Twenty-seventh	Millard Fillmore, New York.	9
1843–47	Twenty-eighth and Twenty-ninth.	James J. McKay, North Carolina.	9
1847–49	Thirtieth	Samuel F. Vinton, Ohio	9
1849–51	Thirty-first	Thomas H. Bayly, Virginia	9
1851–55	Thirty-second and Thirty-third.	George S. Houston, Alabama.	9
1855–57	Thirty-fourth	Lewis D. Campbell, Ohio	9
1857–58	Thirty-fifth (1st sess.)	J. Glancy Jones, Pennsylvania.	9
1858–59	Thirty-fifth (2d sess.)	John S. Phelps, Missouri	9
1859–61	Thirty-sixth	John Sherman, Ohio	9
1861–65	Thirty-seventh and Thirty-eighth.	Thaddeus Stevens, Pennsylvania.	9
1865–67	Thirty-ninth	Justin S. Morrill, Vermont	9
1867–71	Fortieth and Forty-first	Robert C. Schenck, Ohio	9
1871–75	Forty-second and Forty-third.	Henry L. Dawes, Massachusetts.	11
1875–77	Forty-fourth	William R. Morrison, Illinois.	11
1877–81	Forty-fifth and Forty-sixth.	Fernando Wood, New York	13
1881–83	Forty-seventh	William D. Kelley, Pennsylvania.	13
1883–87	Forty-eighth and Forty-ninth.	William R. Morrison, Illinois.	13
1887–89	Fiftieth	Roger Q. Mills, Texas	13
1889–91	Fifty-first	William McKinley, Jr., Ohio.	13
1891–93	Fifty-second	William M. Springer, Illinois.	15
1893–95	Fifty-third	William L. Wilson, West Virginia.	17
1895–99	Fifty-fourth and Fifty-fifth.	Nelson Dingley, Maine	17
1899–1911	Fifty-sixth to Sixty-first	Sereno Payne, New York	17, 18, 19
1911–15	Sixty-second and Sixty-third.	Oscar Underwood, Alabama	21
1915–19	Sixty-fourth and Sixty-fifth.	Claude Kitchin, North Carolina.	22
1919–23	Sixty-sixth and Sixty-seventh.	Joseph W. Fordney, Michigan.	25
1923–27	Sixty-eighth and Sixty-ninth.	William R. Green, Iowa	25, 26
1927–31	Seventieth and Seventy-first.	Willis C. Hawley, Oregon	25
1931–33	Seventy-second	James W. Collier, Mississippi.	25
1933–40	Seventy-third to Seventy-sixth.	Robert L. Doughton, North Carolina.	25

Members serving seven or more terms on the Ways and Means Committee from the First to the Seventy-sixth Congress

Members	Congresses	Term	State
Sereno E. Payne	51–63	13	New York.
Allen T. Treadway	65–76	12	Massachusetts.
William D. Kelley	41–50	10	Pennsylvania.
Henry T. Rainey	62–66; 68–72	10	Illinois.
James W. Collier	63–72	10	Mississippi.
Cordell Hull	62–66; 68–71	9	Tennessee.
John N. Garner	63–71	9	Texas.
Charles R. Crisp	64–72	9	Georgia.
Isaac Bacharach	66–74	9	New Jersey.
Frank Crowther	68–76	9	New York.
Joseph W. Fordney	60–67	8	Michigan.
William R. Green	63–70	8	Iowa.
Willis C. Hawley	65–72	8	Oregon.
Robert L. Doughton	69–76	8	North Carolina.
Benton McMillan	49–55	7	Tennessee.
Charles H. Grosvenor	53–59	7	Ohio.
Samuel W. McCall	56–62	7	Massachusetts.
Ebenezer J. Hill	57–62;64	7	Connecticut.
Nicholas Longworth	60–62; 64–67	7	Ohio.
C. C. Dickinson	63–66; 68–70	7	Missouri.
William O. Oldfield	64–70	7	Arkansas.
Charles B. Timberlake	66–72	7	Colorado.
Lindley H. Hadley	66–72	7	Washington.

Is the Wheeler-Lea Railroad Bill Being Sabotaged?

REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

Mr. VAN ZANDT. Mr. Speaker, great confusion prevails among the true friends of the railroaders in Congress because of wild rumors indicating that the railroad brotherhoods do and do not support the conference report on the Wheeler-Lea railroad bill, S. 2009.

I am unable to speak for the railroad brotherhoods or to explain this reported change of attitude of their leaders, since information received by me to this date indicates their support of S. 2009. The support of this measure may best by attested to by revealing the contents of a telegram received from Mr. A. F. Whitney, president of Brotherhood of Railroad Trainmen, and addressed to the Honorable CLARENCE F. LEA, chairman of House Interstate and Foreign Commerce Committee, which reads as follows:

APRIL 29, 1940.

Hon. CLARENCE F. LEA, M. C.
House Office Building.

DEAR CONGRESSMAN: Please be advised that opposition Brotherhood Railroad Trainmen to Senate bill 2009 was based upon the consolidation section of the bill. Now that conferees have eliminated that section, the source of our opposition is eliminated. However, we shall continue our earnest effort to obtain legal protection for labor in consolidation and abandonment situations.

A. F. WHITNEY.

Every Member of this House knows that all the brotherhoods, with the exception of the Brotherhood of Railroad Trainmen, indicated over a period of months that they were favorable to S. 2009. With the receipt of President Whitney's telegram quoted above and his statement therein, "Now that the conferees have eliminated that section"—Harrington amendment to consolidation section—"the source of our opposition is eliminated." This position on the part of President Whitney and the Brotherhood of Railroad Trainmen led me to believe that the brotherhoods were unanimous in their support of S. 2009.

With the consolidation section striken from S. 2009 by the conferees, it is evident that the brotherhoods acknowledge the Washington agreement executed in May 1936 as furnishing adequate guarantee of protection to employees likely to be affected by any possible consolidation. The Washington agreement was designed to protect thousands of railroad employees and their families and was signed not alone by railroad executives but by the spokesmen and representatives of 21 brotherhoods. The signing of this agreement by the Nation's principal railroads and the various brotherhoods representing railway employees was made known to the Seventy-fourth Congress by the true friend of all railroaders, the Honorable ROBERT CROSSER, of Ohio, when, on May 21, 1936, he made the following statement praising the Washington agreement as being mutually beneficial to both the management and employees. Congressman CROSSER's statement, which appeared in the CONGRESSIONAL RECORD May 21, 1936, page 7766, is as follows:

AGREEMENT BETWEEN RAILROAD CARRIERS AND THEIR EMPLOYEES

Mr. CROSSER. Mr. Speaker, I ask unanimous consent to address the House for 3 minutes in regard to a matter of importance to the entire membership.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. CROSSER. Mr. Speaker, with much pleasure I wish to make a statement which I am sure all Members of the House will be glad to hear.

The differences between the railroads of the United States on the one hand and the railroad employees on the other, in regard to the rights of employees in connection with proposed consolidations of terminal facilities, have been adjusted. A written agreement was signed today by the representatives of the railroads and by the representatives of the railroad workers. The agreement is for a period of 5 years, beginning on June 18, 1936, and does away with the necessity for the enactment of the Wheeler-Crosser bill which would restrict reductions in railroad employment, and which is now pending before congressional committees in the Senate and House of Representatives.

I think it proper to say that much credit is due to both the representatives of the railroad workers and to the representatives of the railroads for the rare intelligence, high sense of justice, and devotion to duty manifested by them in their efforts to reconcile their great and serious differences. In the controversy was involved the loss of the positions of possibly 200,000 men, a very serious matter, indeed, at this time. The management and men have worked out with a great deal of care an arrangement that is mutually satisfactory to management and men.

I think that we should pay tribute to the fine spirit evidenced by both parties for the satisfactory conclusion of the whole matter. When the railway labor bill was before the House for consideration, I stated that the use of the means provided in that bill for mediation in and settlement of railway labor disputes would rapidly develop a spirit of conciliation and cooperation between the workers and the management which would tend to establish good will and harmony throughout the whole industry.

The signing today of the remarkable document to which I have referred—that is, the contract between the railroad companies and their workers—fulfills in a gratifying measure the prediction to which I have referred. It is a triumph of principle over force and advances the cause of justice immeasurably.

At the time my colleague from Ohio [Mr. CROSSER] made the above remarks he caused to have inserted in the CONGRESSIONAL RECORD for the information of his colleagues a copy of the Washington agreement, which is inserted again at this time, as follows:

AGREEMENT OF MAY 1936, WASHINGTON, D. C.

This agreement is entered into between the carriers listed and defined in appendixes A, B, and C, attached hereto and made a part hereof, represented by the duly authorized joint conference committee signatory hereto, as party of the first part, and the employees of said carriers, represented by the organizations signatory hereto by their respective duly authorized executives, as party of the second part, and, so far as necessary to carry out the provisions hereof, is also to be construed as a separate agreement by and between and in behalf of each of said carriers and its employees who are now or may hereafter be represented by any of said organizations which now has (or may hereafter have during the life of this agreement) an agreement with such carrier concerning rates of pay, rules, or working conditions.

The signatories hereto, having been respectively duly authorized as aforesaid to negotiate to a conclusion certain pending issues concerning the treatment of employees who may be affected by coordination as hereinafter defined, hereby agree:

SECTION 1. That the fundamental scope and purpose of this agreement is to provide for allowances to defined employees affected by coordination as hereinafter defined, and it is the intent that the provisions of this agreement are to be restricted to those changes in employment in the railroad industry solely due to and resulting from such coordination. Therefore, the parties hereto understand and agree that fluctuations, rises and falls, and changes in volume or character of employment brought about solely by other causes are not within the contemplation of the parties hereto, or covered by or intended to be covered by this agreement.

SEC. 2 (a). The term "coordination" as used herein means joint action by two or more carriers whereby they unify, consolidate, merge, or pool in whole or in part their separate railroad facilities or any of the operations or services previously performed by them through such separate facilities.

(b) The term "carrier" as used herein when it refers to other than parties to this agreement means any carrier subject to the provisions of part I of the Interstate Commerce Act; when it refers to a party to this agreement it means any company or system listed and described in appendixes A, B, or C, as a single carrier party to this agreement.

(c) The term "time of coordination" as used herein includes the period following the effective date of a coordination during which changes consequent upon coordination are being made effective; as applying to a particular employee it means the date in said period when that employee is first adversely affected as a result of said coordination.

SEC. 3 (a). The provisions of this agreement shall be effective and shall be applied whenever two or more carriers parties hereto undertake a coordination; and it is understood that if a carrier or carriers parties hereto undertake a coordination with a carrier or carriers not parties hereto, such coordination will be made only upon the basis of an agreement approved by all of the carriers parties thereto and all of the organizations of employees involved (parties hereto) of all of the carriers concerned. No coordination involving classes of employees not represented by any of the organizations parties hereto shall be undertaken by the carriers parties hereto except in accord with the provisions of this agreement or agreements arising hereunder.

(b) Each carrier listed and established as a separate carrier for the purposes of this agreement, as provided in appendixes A, B, and C, shall be regarded as a separate carrier for the purposes hereof during the life of this agreement; provided, however, that in the case of any coordination involving two or more railroad carriers which also involves the Railway Express Agency, Inc., the latter company shall be treated as a separate carrier with respect to its operations on each of the railroads involved.

(c) It is definitely understood that the action of the parties hereto in listing and establishing as a single carrier any system which comprises more than one operating company is taken solely for the purposes of this agreement and shall not be construed or used by either party hereto to limit or affect the rights of the other with respect to matters not falling within the scope and terms of this agreement.

SEC. 4. Each carrier contemplating a coordination shall give at least 90 days' written notice of such intended coordination by posting a notice on bulletin boards convenient to the interested employees of each such carrier and by sending registered mail notice to the representatives of such interested employees. Such notice shall contain a full and adequate statement of the proposed changes to be effected by such coordination, including an estimate of the number of employees of each class affected by the intended changes. The date and place of a conference between representatives of all the parties interested in such intended changes for the purpose of reaching agreements with respect to the application thereto of the terms and conditions of this agreement, shall be agreed upon within 10 days after the receipt of said notice, and conference shall commence within 30 days from the date of such notice.

SEC. 5. Each plan of coordination which results in the displacement of employees or rearrangement of forces shall provide for the selection of forces from the employees of all the carriers involved on bases accepted as appropriate for application in the particular case; and any assignment of employees made necessary by a coordination shall be made on the basis of an agreement between the carriers and the organizations of the employees affected, parties hereto. In the event of failure to agree, the dispute may be submitted by either party for adjustment in accordance with section 13.

SEC. 6. (a) No employee of any of the carriers involved in a particular coordination who is continued in service shall, for a period not exceeding 5 years following the effective date of such coordination, be placed, as a result of such coordination, in a worse position with respect to compensation and rules governing working conditions than he occupied at the time of such coordination so long as he is unable in the normal exercise of his seniority rights under existing agreements, rules, and practices to obtain a position producing compensation equal to or exceeding the compensation of the position held by him at the time of the

particular coordination, except, however, that if he fails to exercise his seniority rights to secure another available position, which does not require a change in residence, to which he is entitled under the working agreement and which carries a rate of pay and compensation exceeding those of the position which he elects to retain, he shall thereafter be treated for the purposes of this section as occupying the position which he elects to decline.

(b) The protection afforded by the foregoing paragraph shall be made effective whenever appropriate through what is hereby designated as a "displacement allowance" which shall be determined in each instance in the manner hereinafter described. Any employee entitled to such an allowance is hereinafter referred to as a "displaced" employee.

(c) Each displacement allowance shall be a monthly allowance determined by computing the total compensation received by the employee and his total time paid for during the last 12 months in which he performed service immediately preceding the date of his displacement (such 12 months being hereinafter referred to as the "test period") and by dividing separately the total compensation and the total time paid for by 12, thereby producing the average monthly compensation and average monthly time paid for, which shall be the minimum amounts used to guarantee the displaced employee, and if his compensation in his current position is less in any month in which he performs work than the aforesaid average compensation he shall be paid the difference, less compensation for any time lost on account of voluntary absences to the extent that he is not available for service equivalent to his average monthly time during the test period, but he shall be compensated in addition thereto at the rate of the position filled for any time worked in excess of the average monthly time paid for during the test period.

SEC. 7 (a) Any employee of any of the carriers participating in a particular coordination who is deprived of employment as a result of said coordination shall be accorded an allowance (hereinafter termed a coordination allowance), based on length of service, which (except in the case of an employee with less than 1 year of service) shall be a monthly allowance equivalent in each instance to 60 percent of the average monthly compensation of the employee in question during the last 12 months of his employment in which he earned compensation prior to the date he is first deprived of employment as a result of the coordination. This coordination allowance will be made to each eligible employee while unemployed by his home road or in the coordinated operation during a period beginning at the date he is first deprived of employment as a result of the coordination and extending in each instance for a length of time determined and limited by the following schedule:

Period of payment (months)

Length of service:	
1 year and less than 2 years	6
2 years and less than 3 years	12
3 years and less than 5 years	18
5 years and less than 10 years	36
10 years and less than 15 years	48
15 years and over	60

In the case of an employee with less than 1 year of service, the total coordination allowance shall be a lump-sum payment in an amount equivalent to 60 days' pay at the straight time daily rate of the last position held by him at the time he is deprived of employment as a result of the coordination.

(b) For the purposes of this agreement the length of service of the employee shall be determined from the date he last acquired an employment status with the employing carrier and he shall be given credit for 1 month's service for each month in which he performed any service (in any capacity whatsoever) and 12 such months shall be credited as 1 year's service. The employment status of an employee shall not be interrupted by furlough in instances where the employee has a right to and does return to service when called. In determining length of service of an employee acting as an officer or other official representative of an employee organization he will be given credit for performing service while so engaged on leave of absence from the service of a carrier.

(c) An employee shall be regarded as deprived of his employment and entitled to a coordination allowance in the following cases:

1. When the position which he holds on his home road is abolished as result of coordination and he is unable to obtain by the exercise of his seniority rights another position on his home road or a position in the coordinated operation, or

2. When the position he holds on his home road is not abolished but he loses that position as a result of the exercise of seniority rights by an employee whose position is abolished as a result of said coordination, or by other employees, brought about as a proximate consequence of the coordination, and if he is unable by the exercise of his seniority rights to secure another position on his home road or a position in the coordinated operation.

(d) An employee shall not be regarded as deprived of employment in case of his resignation, death, retirement on pension, or on account of age or disability in accordance with the current rules and practices applicable to employees generally, dismissal for justifiable cause in accordance with the rules, or furloughed because of reduction in forces due to seasonal requirements of the service; nor shall any employee be regarded as deprived of employment as the result of a particular coordination who is not deprived of his employment within 3 years from the effective date of said coordination.

(e) Each employee receiving a coordination allowance shall keep the employer informed of his address and the name and address of any other person by whom he may be regularly employed.

(f) The coordination allowance shall be paid to the regularly assigned incumbent of the position abolished. If the position of an employee is abolished while he is absent from service, he will be entitled to the coordination allowance when he is available for service. The employee temporarily filling said position at the time it was abolished will be given a coordination allowance on the basis of said position until the regular employee is available for service and thereafter shall revert to his previous status and will be given a coordination allowance accordingly if any is due.

(g) An employee receiving a coordination allowance shall be subject to call to return to service after being notified in accordance with the working agreement, and such employee may be required to return to the service of the employing carrier for other reasonably comparable employment for which he is physically and mentally qualified and which does not require a change in his place of residence, if his return does not infringe upon the employment rights of other employees under the working agreement.

(h) If an employee who is receiving a coordination allowance returns to service the coordination allowance shall cease while he is so reemployed and the period of time during which he is so reemployed shall be deducted from the total period for which he is entitled to receive a coordination allowance. During the time of such reemployment, however, he shall be entitled to protection in accordance with the provisions of section 6.

(i) If an employee who is receiving a coordination allowance obtains railroad employment (other than with his home road or in the coordinated operation) his cordination allowance shall be reduced to the extent that the sum total of his earnings in such employment and his allowance exceeds the amount upon which his coordination allowance is based; provided that this shall not apply to employees with less than 1 year's service.

(j) A coordination allowance shall cease prior to the expiration of its prescribed period in the event of:

1. Failure without good cause to return to service in accordance with working agreement after being notified of position for which he is eligible and as provided in paragraphs (g) and (h).

2. Resignation.

3. Death.

4. Retirement on pension or on account of age or disability in accordance with the current rules and practices applicable to employees generally.

5. Dismissal for justifiable cause.

SEC. 8. An employee affected by a particular coordination shall not be deprived of benefits attaching to his previous employment, such as free transportation, pensions, hospitalization, relief, etc., under the same conditions and so long as such benefits continue to be accorded to other employees on his home road, in active service or on furlough, as the case may be, to the extent that such benefits can be so maintained under present authority of law or corporate action or through future authorization which may be obtained.

SEC. 9. Any employee eligible to receive a coordination allowance under section 7 hereof may, at his option at the time of coordination, resign and—in lieu of all other benefits and protections provided in this agreement—accept in a lump sum a separation allowance determined in accordance with the following schedule:

Separation allowance (months' pay)

Length of service:	
1 year and less than 2 years	3
2 years and less than 3 years	6
3 years and less than 5 years	9
5 years and less than 10 years	12
10 years and less than 15 years	12
15 years and over	12

In the case of employees with less than 1 year's service, 5 days' pay, at the rate of the position last occupied, for each month in which they performed service will be paid as the lump sum.

(a) Length of service shall be computed as provided in section 7.

(b) One month's pay shall be computed by multiplying by 30 the daily rate of pay received by the employee in the position last occupied prior to time of coordination.

SEC. 10 (a). Any employee who is retained in the service of any carrier involved in a particular coordination (or who is later restored to service from the group of employees entitled to receive a coordination allowance) who is required to change the point of his employment as result of such coordination and is therefore required to move his place of residence, shall be reimbursed for all expenses of moving his household and other personal effects and for the traveling expenses of himself and members of his family, including living expenses for himself and his family and his own actual wage loss during the time necessary for such transfer, and for a reasonable time thereafter (not to exceed 2 working days), used in securing a place of residence in his new location. The exact extent of the responsibility of the carrier under this provision and the ways and means of transportation shall be agreed upon in advance between the carrier responsible and the organization of the employee affected. No claim for expenses under this section shall be allowed unless they are incurred within 3 years from the date of coordination and the claim must be submitted within 90 days after the expenses are incurred.

(b) If any such employee is furloughed within 3 years after changing his point of employment as a result of coordination and

elects to move his place of residence back to his original point of employment, the carrier shall assume the expense of moving his household and other personal effects under the conditions imposed in paragraph (a) of this section.

(c) Except to the extent provided in paragraph (b) changes in place of residence subsequent to the initial changes caused by coordination and which grow out of the normal exercise of seniority in accordance with working agreements are not comprehended within the provisions of this section.

SEC. 11 (a). The following provisions shall apply, to the extent they are applicable in each instance, to any employee who is retained in the service of any of the carriers involved in a particular coordination (or who is later restored to such service from the group of employees entitled to receive a coordination allowance) who is required to change the point of his employment as a result of such coordination and is therefore required to move his place of residence:

1. If the employee owns his own home in the locality from which he is required to move, he shall at his option be reimbursed by his employing carrier for any loss suffered in the sale of his home for less than its fair value. In each case the fair value of the home in question shall be determined as of a date sufficiently prior to the coordination to be unaffected thereby. The employing carrier shall in each instance be afforded an opportunity to purchase the home at such fair value before it is sold by the employee to any other party.

2. If the employee is under a contract to purchase his home, the employing carrier shall protect him against loss to the extent of the fair value of any equity he may have in the home and in addition shall relieve him from any further obligations under this contract.

3. If the employee holds an unexpired lease of a dwelling occupied by him as his home, the employing carrier shall protect him from all loss and cost in securing the cancellation of his said lease.

(b) Changes in place of residence subsequent to the initial change caused by coordination and which grow out of the normal exercise of seniority in accordance with working agreements are not comprehended within the provisions of this section.

(c) No claim for loss shall be paid under the provisions of this section which is not presented within 3 years after the effective date of the coordination.

(d) Should a controversy arise in respect to the value of the home, the loss sustained in its sale, the loss under a contract for purchase, loss and cost in securing termination of lease, or any other question in connection with these matters, it shall be decided through joint conference between the representatives of the employees and the carrier on whose line the controversy arises, and in the event they are unable to agree, the dispute may be referred by either party to a board of three competent real-estate appraisers, selected in the following manner: One to be selected by the representatives of the employees and the carrier, respectively; these two shall endeavor by agreement within 10 days after their appointment to select the third appraiser or to select some person authorized to name the third appraiser; and in the event of failure to agree, then the Chairman of the Interstate Commerce Commission shall be requested to appoint the third appraiser. A decision of a majority of the appraisers shall be required and said decision shall be final and conclusive. The salary and expenses of the third or neutral appraiser, including the expenses of the appraisal board, shall be borne equally by the parties to the proceedings. All other expenses shall be paid by the party incurring them, including the salary of the appraiser selected by such party.

SEC. 12. If any carrier shall rearrange or adjust its forces in anticipation of a coordination with the purpose or effect of depriving an employee of benefits to which he should be entitled under this agreement as an employee immediately affected by a coordination, this agreement shall apply to such an employee as of the date when he is so affected.

SEC. 13. In the event that any dispute or controversy arises (except as defined in sec. 11) in connection with a particular coordination, including an interpretation, application, or enforcement of any of the provisions of this agreement (or of the agreement entered into between the carriers and the representatives of the employees relating to said coordination as contemplated by this agreement) which is not composed by the parties thereto within 30 days after same arises, it may be referred by either party for consideration and determination to a committee which is hereby established, composed in the first instance of the signatories to this agreement. Each party to this agreement may name such persons from time to time as each party desires to serve on such committee as its representatives in substitution for such original members. Should the committee be unable to agree, it shall select a neutral referee and in the event it is unable to agree within 10 days upon the selection of said referee, then the members on either side may request the National Mediation Board to appoint a referee. The case shall again be considered by the committee and the referee and the decision of the referee shall be final and conclusive. The salary and expenses of the referee shall be borne equally by the parties to the proceeding; all other expenses shall be paid by the party incurring them.

SEC. 14. Any carrier not initially a party to this agreement may become a party by serving notice of its desire to do so by mail upon the members of the committee established by section 13 hereof. It shall become a party as of the date of the service of such notice or upon such later date as may be specified therein.

SEC. 15. This agreement shall be effective June 16, 1936, and be in full force and effect for a period of 5 years from that date and continue in effect thereafter with the privilege that any carrier or organization party hereto may then withdraw from the agreement after 1 year from having served notice of its intention so to withdraw: *Provided, however,* That any rights of the parties hereto or of individuals established and fixed during the term of this agreement shall continue in full force and effect, notwithstanding the expiration of the agreement or the exercise by a carrier or an organization of the right to withdraw therefrom.

This agreement shall be subject to revision by mutual agreement of the parties hereto at any time, but only after the serving of a 60 days' notice by either party upon the other.

For the participating carriers listed in appendix A: H. A. Enochs, Jno. V. Walton, Wm. White.

For the participating carriers listed in appendix B: C. A. Clements, E. Connors, C. M. Dukes.

For the participating carriers listed in appendix C: H. A. Benton, W. J. Jenks, J. B. Parrish.

For the participating carriers: H. A. Enochs, chairman, Joint Conference Committee.

For the participating organizations of employees: A. Johnston, by H. J. B. grand chief engineer, Brotherhood of Locomotive Engineers; D. B. Robertson, president, Brotherhood of Locomotive Firemen and Enginemen; J. A. Phillips, president, Order of Railway Conductors of America; A. F. Whitney, president, Brotherhood of Railroad Trainmen; T. C. Casher, president, Switchmen's Union of North America; E. J. Manion, president, Order of Railroad Telegraphers; J. J. Lehmann, president, American Train Dispatchers Association; A. W. Seaton, president, International Association of Machinists; J. A. Franklin, president, International Brotherhood of Boilermakers, Iron Ship Builders, and Helpers of America; Ray Gann, president, International Brotherhood of Blacksmiths, Drop Forgers, and Helpers; John J. Hynes, president, Sheet Metal Workers' International Association; C. J. McGlogan, vice president, International Brotherhood of Electrical Workers; Felix H. Knight, president, Brotherhood Railway Carmen of America; J. F. McNamara, president, International Brotherhood of Firemen and Oilers; F. H. Fljozdal, president, Brotherhood of Maintenance of Way Employees; E. M. Harrison, president, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express, and Station Employees; A. E. Lyon, acting president, Brotherhood of Railroad Signalmen of America; M. S. Warfield, president, Order of Sleeping Car Conductors; James J. Delaney, president, National Organization Masters, Mates & Pilots of America; Wm. S. Brown, president, National Marine Engineers' Beneficial Association, International Longshoremen's Association; E. M. Hanison, chairman, Railway Labor Executives' Association.

Signed at WASHINGTON, D. C., *May 21, 1936.*

NOTE.—Agreement subject to approval of court with respect to lines in hands of receivers or trustees.

I want to repeat my former assertion that the above agreement was signed by the railway executives and representatives of 21 brotherhoods speaking for the railway employees of the country. Therefore, let me repeat again, it is not difficult to understand the indicated approval of the conference report on S. 2009 by all the brotherhoods.

In addition to the position indicated by the brotherhoods relative to the conference report, Labor, the weekly newspaper, published at Washington, D. C., in the issue of April 30, in bold type, informs their readers as follows:

BILL SEEKS TO GIVE "IRON HORSE" BREAK WITH COMPETITORS—PROVISIONS CLARIFYING LABOR'S STATUS IN ALL KINDS OF MERGERS IS DROPPED

(By Albert H. Jenkins)

Railroad legislation, frozen up in committees through the long winter, this week felt a spring thaw and began to move toward passage by Congress.

The so-called "key bill" proposes to put water carriers under Interstate Commerce Commission regulation, on an equal basis with rail and highway carriers. It also would create a special board to investigate Government subsidies to various kinds of transport, and to recommend changes needed to eliminate unfair advantages and provide a square deal for all.

This bill was passed by the Senate last year, in one form, and by the House in another form. Since then it has been in the hands of a conference committee headed by Senator BURTON K. WHEELER and Congressman CLARENCE F. LEA, chairmen of the Senate and House Interstate Commerce Committees.

CONFEREES AGREE

A few days ago WHEELER announced that the conference committee had agreed on a compromise bill and that it would be promptly submitted to the Senate and House for a final vote.

Both versions of the key bill contained provisions modifying the procedure followed by railroads in mergers and consolidations and providing additional protection for railroad employees affected by such changes.

All these provisions were left out of the bill finally agreed on by the conference committee. If it is passed by Congress, as seems likely, railroad labor will neither gain nor lose protection in mergers and coordinations. The situation will remain the same as it has been since the Supreme Court, in its recent decision in the famous Rock Island case, ruled that the I. C. C. has power to require railroads to compensate employees who lose their jobs or suffer other hardships as a result of consolidations.

PACT MAIN PROTECTION

In that case, and others like it, the Commission required railroads to give their employees compensation like that provided by the Washington job-protection agreement, which was negotiated by the standard railroad labor organizations with almost all the carriers.

The employees' main protection is the Washington agreement, but it is reinforced by the I. C. C. orders and the Supreme Court decision.

Labor is the weekly publication that is recognized as the mouthpiece for all labor organizations, and the above quotation clearly reveals their attitude in support of this legislation.

The people of my district up until this date have informed me in no uncertain terms that they are favorable to this legislation. Fifteen thousand railroad employees and their families in the Twenty-third District of Pennsylvania, with an annual pay roll of $25,300,000, are typical of the railroad groups throughout the Nation who have suffered for years because of Government subsidized competition principally in the form of inland waterways that have taken the bread and butter out of their mouths and threatened to reduce former prosperous communities to veritable ghost towns.

As one of the two practical railroad men in this Congress I am determined to keep faith with the rank and file of the vast army of railroaders and their families who, if this bill is defeated, will have a right to demand an explanation of these rumors of so-called collusion and high-handed tactics of those opposed to this legislation.

The Republican Opportunity

EXTENSION OF REMARKS

OF

HON. ANDREW C. SCHIFFLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

ARTICLE BY HON. WILLIAM H. VANDERBILT, GOVERNOR OF RHODE ISLAND

Mr. SCHIFFLER. Mr. Speaker, every well-intentioned American is deeply interested in the solution of the present perplexing problems of government. Likewise, all are interested in bringing our Nation from its chaos and uncertainty into an era of sound and progressive prosperity. None would seek to retreat and return to the days of the twenties or thirties. In 1940, benefited by the experiences of the past, we hope to lay the foundation for a better future. I believe the Republican Party is the instrument by which such can be accomplished. Broad and sympathetic views are essential to bring this about. An understanding of the problems of our Nation and the problems of our people and of each group is the foundation upon which such advancement must be built.

I believe this very well expressed in an article by Gov. William H. Vanderbilt, and which I ask to include as a part of my remarks. Such article is as follows:

THE WIDE HORIZON—THE REPUBLICAN OPPORTUNITY

(By William H. Vanderbilt, Governor of Rhode Island)

Occasionally, I run across a Republican—sometimes one high in the party's council—who is still thinking along the lines of 1932 and 1936, a man or woman who still thinks that with slight and grudgingly granted modifications the so-called good old days can be brought back, men and women whose attitude is that all of the Roosevelt administration—its objectives, its actions, and its methods—is wrong and that no matter what the President or any member of his administration may say or do it should be criticized and opposed.

I am a Republican and I believe sincerely that the best thing for the security, success, and happiness of the American people is to elect a Republican administration in Washington, but that if this attitude becomes the attitude of the Republican Party in the coming campaign, then a Republican will not be sitting in the White House in 1941.

Fortunately, this attitude doesn't reflect the feeling of either the rank and file of Republicans throughout the country, or of the vast majority of Republican leaders, but we must not forget that in politics it is the impression that the people get which counts. This impression does not always coincide with the facts in the case. It is, therefore, quite possible for a few persons in prominent positions in the party, themselves reactionary, to give the impression to the public that the entire party is reactionary, and, of course, our friends the Democrats are going to do everything in their power to spread that impression.

Let us, as a party and individually, be realistic about the present situation.

We might just as well realize now that the people of this country cannot be sold the idea that everything that President Roosevelt and his administration have done and all their objectives are bad, because that just isn't true.

Many of the objectives of the New Deal have been good. Many of the reforms were needed. Many of them should and will become a permanent part of our Nation and our Government. Many Republicans, unfortunately, seem to think that it is a sign of weakness to admit that a Democrat has ever done anything good.

Nothing that any one man or any one administration does is all bad or all good. People are not fooled by blanket condemnations of the New Deal and all its acts.

I believe that a majority of the people of this country feel that many New Deal objectives have been good, but they are tired of the methods of administration that have been employed. They are tired of the waste, the extravagance, the inefficiency, and the political browbeating that have been going on. They want a change. They want sound, efficient, economical Government; but at the same time they want to retain the good things which have been accomplished. They believe in the social-security program, unemployment compensation, old-age security, and other forms of public assistance. There are other things, such as the C. C. C. camps, which they want retained.

But the people want these programs carried on honestly, fairly, efficiently, and without political or other prejudice. I believe these programs of public assistance should be put on a permanent basis. They should be treated the same way as any other department of Government.

In 1936 the Republican Party went to the people with a platform consisting largely of destructive criticism of what had been done. In 1940—if we are to be successful—we must offer the people an honest, sincere program. We must point out what we believe to be the mistakes of the present administration and at the same time offer a definite correctiveness. I believe the opportunities and responsibilities of the Republican Party today are very great. We have a chance, if we are sound and constructive in our thoughts and our ideas, to lead this country into better times—times when people are happier, more contented, more prosperous.

I think that the feeling of millions of people in this country is well expressed in what a newspaperman said to me at the Governors' Conference in Albany last summer. He said that he had voted for Mr. Hoover and that when Mr. Roosevelt came along he thought he had something and had voted for him.

He said that in 1940, if the Republicans put up a sound and, as he described it, "middle-of-the-road man," he would vote for him, but that if the Republicans put up someone he considered to be reactionary he would vote for Roosevelt or anyone else who ran on the Democratic ticket.

By a "middle-of-the-road man" he did not mean a "wishy-washy" fence sitter. He meant a man who was sound and could do what has been described as consolidating the gains and liquidating the losses of the past few years.

Are We Heading for War?

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

RADIO ADDRESS BY HON. LYLE H. BOREN, OF OKLAHOMA

Mr. SPARKMAN. Mr. Speaker, under leave to extend my remarks, I include an address given over KADA, of Ada, Okla., and KGFF, of Shawnee, Okla., on April 22, 1940, by our able and distinguished colleague the gentleman from Oklahoma [Mr. BOREN].

In this connection, Mr. Speaker, I want to say that of the sincere advocates of peace in the House, none is more sincere and regular in his advocacy than the gentleman from Oklahoma, LYLE BOREN. He is always to be found working against those things that threaten to bring war and the insecurity of war and for those things making for peace and security. He pleads eloquently always for peace. In the present address he uses with much force the clear, simple, pithy but strong language characteristic of his addresses. It can be read with interest and with profit.

The address follows:

The nations of the world constitute a small community. Think of yourself as an individual living in a remote wilderness in a community of 92 people. The United States in its relationship to the world community is exactly like one person in that community of 92 people.

This community of 92 nations has all of the attributes of any community. A few are rich. The majority are poor. Some are large and strong; some are weak and small. A few wish to dominate, to rule, and control the affairs of the community, but the vast majority wish to live in peace and harmony. Most all want to live and let live. They want to be secure and they are willing to grant to every other citizen that same peaceful security.

In this community of nations, there are four who are outlaws. One is a braggart; the other is a busybody; another a gangster, and the fourth an insane fiend. There is no organized police system to control the depredations of these four and so each individual must protect and defend himself. What are these four doing to the community of nations? They have murdered five; they have kidnaped one; they have wounded three, and they are engaged in a fight to death against four others at the present time. Every other citizen in this small community of nations who is uncertain that he is strong enough to defend and protect himself against their aggression is in fear and trembling. We have had funerals for Ethiopia, Austria, Albania, Czechoslovakia, and Poland. We have seen Denmark kidnaped by the gangsters. Finland, China, and Norway are already in the hospital of nations. Sweden, Holland, Switzerland, Belgium, France, England, and many other countries, are within the terrorized area. Each fear what the next 24 hours may bring from the acts of the fiends gone mad with power.

Let us turn the searchlight on Stalin and Hitler.

Stalin is the embodiment of ignorance, tyranny and hypocrisy. This Godless fiend tramples ruthlessly on the liberties of man. Justice, reason, and mercy are all exiles from Russia. Liberty is banished and freedom put to death. Russia has the most detestable government that ever existed on the face of the earth.

It is impossible to estimate the infamy of this fiend. His gloomy insanity has sown the world with seeds of hate. He has put chains upon the thoughts, and manacles on the limbs of man. Think of Finland. Think of the tender and affectionate mothers in Finland; the sad and suffering wives; the trembling and loving children. Think of the hearts filled with weariness and pain, with agony and tears, because of him. I wish I had the genius to pay a fitting tribute to Finland.

Stalin is so cruel and heartless that my blood is chilled and my sense of justice shocked to think of him. Hate is abhorrent to my head and heart, but to think of the millions of innocent people who have been starved, deceived, robbed, and outraged within Russia and the millions more who have been made the prey of bomb and sword and death in Finland is the blackest and darkest page in the annals of time. All of the people of Russia are governed by falsehood, plundered by hypocrisy, the sport of death, and the food of fear. Their own Government is their worst enemy, and death is their only friend.

Hitler gained control of the German people through the promises of a demagogue, made in weakness, to be forgotten in power. I heard at one time where Hitler was greeted by a smile in a Czechoslovakian town, but the smile came only from the lips of scorn drawn back from the teeth of hatred. He has perverted and degraded everything he has touched.

It is impossible to conceive of a more thoroughly despicable, hateful, and arrogant being. He is without one redeeming feature. He has proven himself a false friend, an unjust judge, a braggart, a hypocrite, a tyrant, sincere only in hatred, jealousy, and vanity, false in promise, suspicious, infamous, and hideous.

How can the human intellect get upon its knees to the infinite absurdity of "Heil Hitler"? Thousands of volumes could not contain the crimes of Hitler. They could not contain the names of his victims. With blood and fire, with bombs and ruin, with crime and terror, he seeks to control the world.

If all of the bones of the victims of Hitler could be gathered together, they would rise higher than all the pyramids. He has covered the cheeks of the world with tears. In his warped brain, every possible crime has been plotted, every conceivable outrage has been perpetrated. His bestial heart is savage beyond description, merciless beyond conception. His infamies fill with their stench the nostrils of the world. With the heart of a fiend, he has tortured. With the clutch of avarice he has grasped. Pitiless as famine, merciless as fire, with the conscience of a serpent and the soul of hell, he has spread rapine and murder through the world. His head is filled with everything that is illogical, cruel, and hideous. I hate his insanity. I despise his tyrannical, supercilious, and absurd government.

This Gog and Magog wage an Armageddon against the people of the world. The shadows of these two insane fiends stalk across the world, and in their every footstep resound the echoes of fright, horror, and death. Even at this hour, the battles rage that strew the sad shores with wrecks of ship and the mangled bodies of men. Yet, there are those who believe we should tolerate communism here; that we should deal carefully with the German bund and gently with alien agitators of these perverted doctrines.

To entertain any thought of condolence for communism or nazi-ism, is utterly unsuited to the mind of a free people. These two doctrines fit together like the upper and lower jaws of a wild beast. The one a chopping block, the other an ax; the one a pestilence, the other a famine. They can grow only where education and religion are weak and where economic circumstance is bad. These doctrines have reason on its knees in Germany and Russia and they have trampled all sanity underfoot.

Let us remember that in Russia communism stands erect and is arrogant. In the United States it crawls and is abject. But the purpcse in both countries is the same, and that is the destruction of freedom and liberty. A man who believes in a doctrine that tolerates dictatorship cannot believe in human liberty or intellectual freedom. In Germany and Russia, no one is asked to think, but all are commanded to obey.

We cannot believe that there is anything good about Hitler or Stalin, that there is any truth in their words, or that they will recognize right or justice in any form. We cannot believe something that we know is not true.

Is Denmark better off for having submitted? It makes me think of a dove flying from hawks seeking safety in the nest of a vulture.

We have a war against nazi-ism and communism here at home, and it is imperative that vigilant citizenship stand guard against the invasion of these doctrines. Hitler and Stalin are the world's outstanding examples of demagoguery. We might well remember that the promises of demagogues are almost always forgotten in power. Time was when both Hitler and Stalin were beggars and tramps, armed only with the alms dish and fickle promise. Through every conceivable crime they have become gang chiefs, tyrants. They have persecuted to the exact extent of their power, and they always will.

Every country which has been destroyed by a blitzkrieg has first been attacked by an army of agitators, by a peaceful penetration of saboteurs, by a war of propaganda, and internal turmoil. This country, like the many which have fallen, is at war within our own borders with the forces of "isms" contrary to Americanism. Aliens and propaganda agents are in every possible way using organizations and groups to divide this country from within. The Nazi and Communist trick of internal division in a country has usually been followed by military aggression. Once a people is disunited in its thought and action, then comes blitzkrieg (the lightning strike of military aggression). Even this country carries in its womb the child of revolution begotten by alien agitators.

What does communism and nazi-ism mean to the people who embrace it? It means confiscation, exile, imprisonment, torture, and death. The words are synonymous with rape and murder.

National unity is, in a very real and deep sense, the fundamental safeguard of all democracy. We must, as a united people, keep ablaze on this continent the flames of human liberty and democracy. We are passing through a perilous time in this Nation. Agitators are busily setting group against group, race against race, class against class. The security of democracy in the face of these dangers depends on integrity, calmness, and cooperative wisdom.

Let's take our eyes off of Europe and direct our attentions to the problems at home. With group against group, class against class, we are in an era of strange bitterness. We are torn with class strife, burdened with debt, and bowed down by the weight of unemployment. If Europe is in a life-and-death struggle for freedom, America is also in a struggle for the maintenance of democracy.

The chaotic conditions abroad are, in a magnified sense, similar to the chaotic conditions in America. The social and economic forces which, through their mismanagement in Europe have brought a dictatorship, are the same social and economic forces which we are struggling to adjust peacefully at home. Freedom and liberty are at stake in the economic battles within this Nation, just as they are at stake in the battles of blood and iron on the continent of Europe. The greatest thing we can do to give democracy to the world is to make our Nation a demonstration of the integrity and success of democracy. America must meet this vital challenge at home before she is in position to lend assistance to democracy abroad.

We have enough to do at home. Let's mind our own affairs and let Europe settle hers. We have these same forces to combat at home. They are at work in our own country.

If you believe that America does not face the probability of war, your eyes are closed to the world circumstance in which the map of the world is frequently changed in an overnight maneuver of armed might. Our historical experience is unquestionable proof that America is not immune to contagion from the disease which ravages Europe.

We must not deceive ourselves. There are many inconsistencies between our Nation's actions and the avowed American neutrality.

The United States is already involved morally and economically in the world's war. We have sent, and are sending, everything but men to the war. We have not as yet sent a single soldier. All the other steps we have taken, but that last step we must not take. We cannot ignore the lessons of the last war, which certainly taught us that it was a short step between economic participation in the war and actual military participation. I have fought against entrance into the war in every sense of the word. I believe I am right. I think we should stay out completely.

We have taken every step but one and that one step, sending our sons to die on Europe's battlefields, must not be taken.

I cherish and honor the ideals that motivated our soldiers in the last war. They made the battlegrounds of the last war sacred, for every place that man has died for men is holy ground. Our memory can readily recall all that we lost in the last war, but is there anyone who can name one thing we gained or that the world gained by the war, as for that matter. The losses of the present war are paraded before our eyes and they are terrible to behold. We must not share those losses.

The claim has been made that evidence was found in the Polish state records where American ambassadors had guaranteed aid to the Allies. I have not felt confidence in all of our ambassadors, and I think it is probably through some of them that we are so dangercusly close to being involved in the war. I make no specific charges; I am not certain; but I do know that throughout Europe the question is asked on every hand, "When will America come into the war?" Mark you, the question is not "Will America come into the war?" but "When will America come into the war?"

The United States is already partly participating in the war. Our Federal Reserve system has become the banking agent for the Allies. We are already the supply base of the war. We are full participants in all the material and economic part of the war. What will be our next step? There is no next step, except military participation. Only the American Congress and the American people can keep our Government from taking that step. The American people must remain resolute, vigilant, and determined. I am speaking in the supposition that you would like to know the truth; that you do not want to close your eyes to keep from seeing the facts as they are.

We have the second biggest navy in the world, and yet, we are feverishly increasing its size. We are spending twice as much money this year for military purposes as we are for all agricultural programs. For every dollar that is spent to build a terrace, a drainage ditch, or an irrigation canal, $2 are spent for powder and bullets. For every dollar that is spent for a county agent, an agriculture college, an agricultural experiment station, the Soil Conservation Service, or all of the other needs of agriculture, $2 is spent for soldiers and forts.

We are spending twice as much for armaments as we are for unemployment. We are spending more on guns than we are on jobs. Can the people of America believe, in view of the stark reality of facts, that the experts advocating these expenditures are advocating them in the confidence that they will not be put to use? Do the people of America believe that the Secretary of War and the Secretary of the Navy are asking Congress to invest all of these millions in guns and battleships that will never be used? Why are they asking for more and more? There is just one reason. That reason is their fear that the United States is headed for war. If you were Secretary of the Navy and you knew that the United States was not going to war, you would not be trying to get the Congress to appropriate money for more boats to enlarge the second biggest navy in the world. Of course, we all want and we must have adequate defense.

I am certain that the majority in the Congress want to stay out of war. I myself have resolved never to vote to send one American boy to European soil. There is no circumstance, other than actual invasion of America, which could cause me to agree to any military action on the part of this country.

A little more than 20 years ago we put our men and material resources into a war to make the world safe for democracy. That was a grand ideal and I do not say that our efforts were a total failure, but I do say we took in too much territory. We did not make the world safe for democracy. It is very doubtful that even in this half of the world democracy is entirely secure. At any rate, it is my opinion that we must be satisfied with making America safe for democracy. We cannot force democracy on Europe. The only hope for a democratic Europe is for Europe to find its own way to democracy through the avenues of experience, understanding, and conviction. Let me say again, that I believe we must be satisfied with keeping America safe for democracy. I believe that America should keep her hands off of this war and her hands off of the peace to follow this war. I am absolutely opposed to meddling in this war and I am not in sympathy with any efforts to meddle in the treaties which will follow the war.

America must keep her sons at home. I am not willing to give one American life to Europe. I would not agree to trade the life of one boy for every battleship in England, every gun in France. Not one soldier, not one father, not one son—we must stay out of this war!

Farm Tenant Program

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

EDITORIALS FROM THE BIRMINGHAM (ALA.) NEWS AND THE MONTGOMERY (ALA.) ADVERTISER

Mr. SPARKMAN. Mr. Speaker, next week the House will take up for consideration the conference report on the agricultural appropriation bill. One amendment to be considered is that providing funds for continuing the farm tenant purchase program. When the bill was before the House, these funds were refused. The Senate added a provision for the funds to come from the Reconstruction Finance Corporation. By all means this amendment should be agreed to by the House in order that this worth-while program may continue.

Two very fine editorials have recently appeared in the Birmingham (Ala.) News and the Montgomery (Ala.) Advertiser in support of this amendment. They are as follows:

[From the Birmingham (Ala.) News of April 28, 1940]

SAVE THE FARM-TENANT PLAN

The question of providing funds for continuation of the farm-tenant purchase program is expected to come up for final action in Congress this week.

Unless the House of Representatives accepts the Senate amendment to the agricultural appropriation bill making provision for carrying on this vitally important program, one of the greatest and most hopeful undertakings ever started by the United States Government will be stopped in its tracks, and perhaps permanently ended.

This should not be allowed to happen. The blight of farm tenancy, affecting not only our Nation's agriculture, but all our national economy, is too big and urgent a problem to be ignored, even for 1 year.

Yet, unless the House changes its previous stand, the tenant-purchase system set up by the Bankhead-Jones Act will not be able to operate beyond the present fiscal year. The House failed to provide funds for this program when it passed the agricultural appropriation bill some weeks ago.

This omission was widely regarded as part of the House's "economy" drive. If it was, it was extremely poor economy—the penny-wise-and-pound-foolish sort of economizing. For under this program the Federal Government merely lends money on long-time, low-interest terms to enable qualified tenant farmers and sharecroppers to buy farms of their own. And the money is paid back to the Government by the farmers, so the loans are self-liquidating.

When the agricultural appropriation bill reached the Senate, Senator JOHN H. BANKHEAD, father of the plan, with the aid of other Senators, amended the measure to provide $50,000,000 for making tenant purchase loans during the fiscal year 1941.

The Senate did not appropriate the money directly. Instead, it authorized the Reconstruction Finance Corporation to lend that amount to the Farm Security Administration to be used for this purpose. Thus the Senate avoided increasing the total of agricultural appropriations in the pending bill for this purpose—although it did provide for some increases in other items in the measure. No one could say, therefore, that the Senate provision for farm-tenant loans was a blow at economy. The only direct appropriation made by the Senate in this connection was one of 5 percent of the amount involved for administrative expenses, which is only $2,500,000.

Tenancy, particularly in the South, is so widespread that the problem is one of the most serious before the country today. In the South approximately two-thirds of all farmers are tenants or

sharecroppers. It should require no argument to convince anyone that not only the farmers but the country as a whole would be better off if more farmers owned the farms they operate.

The Farm Security Administration, under the Bankhead-Jones Act, is promoting this desirable end by lending money to farmers for as much as 40 years at 3 percent interest to help them buy farms. Only well-qualified farmers are permitted to borrow, the applications for loans being passed on in every case by a committee of local farmers.

This year applications for tenant purchase loans were made by 133,000 farmers. Only 6,971 loans can be made this year. But as the program continues its operations will expand from year to year, and more and more qualified farmers will be aided.

No one need fear that this money is being wasted, or that the program will not be self-liquidating. The fact is that at the end of the first year of its operation $92,544 fell due on tenant-purchase loans, but under the provision for paying the money back faster if the borrower wished to do so, the total paid back to the Government in the first year was $152,779, or 165 percent of maturity.

This program has already proved a success in a few short years. It would be inexcusable not to continue it. The House ought to act without hesitation to save the farm-tenant program.

[From the Montgomery (Ala.) Advertiser of April 29, 1940]

SAVE FARM-TENANCY AID

The President recommended a $25,000,000 item in the Department of Agriculture appropriation bill for the continuation of the tenant-purchase program during the next fiscal year. This program is authorized by the Bankhead-Jones Farm Tenant Act, under which the Farm Security Administration makes loans to competent tenants and for the purchase of farms. This recommendation constituted a reduction of $15,000,000, or 37½ percent, under the appropriation for the current fiscal year.

In reporting the bill, the House Appropriations Committee eliminated all funds for the Bankhead-Jones farm-tenant program; and a vigorous effort to restore this item on the floor proved unsuccessful, primarily because the vote was taken late at night, while many of the Members were absent.

The Senate amended the bill to authorize the Reconstruction Finance Corporation to advance $50,000,000 during the next fiscal year for Bankhead-Jones tenant loans and to provide a direct appropriation of 5 percent of the amount for administration expenses. This amendment was approved by the Senate without a single dissenting vote.

This item of the agricultural appropriation bill probably will be referred back to the House for a vote within a few days.

If the House refuses to accept the Senate amendment, it would wipe out one of the most successful and important parts of the farm program. It would halt the Government's efforts to stabilize the small farmer on the land; at a time when the twin problems of tenancy and migration are growing more serious than ever before in our history.

The Senate amendment would not impose any burden on the Federal Treasury for these tenant loans and would involve only a very small appropriation for administrative expenses. All funds for the loans themselves would be advanced by the R. F. C. This procedure seems sound and highly desirable, since the loans are entirely self-liquidating. In fact, at the end of the first year of operation the borrowers actually had repaid 165 percent of maturities, since many of them were able to make substantial payments in advance. Moreover, every loan is secured by a first mortgage on real estate, which is conservatively valued both by Government appraisers and by committees of local farmers.

The Bankhead-Jones farm-tenant loan program has proved extremely popular with both tenants and landlords and has received wholehearted support from the press and from businessmen in farming areas. If the House refuses to accept the Senate amendment, it would destroy this program after 3 years of successful operation.

Employment Campaigns Sponsored by Veterans' Organizations

EXTENSION OF REMARKS

OF

HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

RADIO ADDRESS BY MILLARD W. RICE

Mr. GRANT of Alabama. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by Millard W. Rice, national legislative representative, Veterans of Foreign Wars of the United States, May 2, 1940:

Annual employment campaigns, first conducted during March 1938, as sponsored by the major veteran organizations, are designed to arouse more active interest in the employment of older persons, including veterans. Each of the first two campaigns greatly increased the number of veterans actively registered with public employment offices.

A wider range of qualified older men thereby became available to interested employers, thus resulting in many more suitable placements. The Public Employment Service is an ideal clearing house for employers who need qualified employees.

A survey conducted by the National Association of Manufacturers about 2 years ago showed that older workers, generally, are more experienced and dependable, and less likely to lose time because of sickness or accidents than younger workers. Older workers, however, find it more difficult to adapt themselves to new types of jobs.

New machinery has displaced more and more older workers. About 45 percent of all available male employables are over 40 years of age, but only about one-third of all employed males are over 40. This situation needs to be corrected by retraining these older workers for new jobs.

Some 1,200 bills have been introduced during this Congress to provide some form of pensions for unemployed older workers. The only alternative for pensioning unemployed workers is to give them self-supporting employment. Employable veterans would much prefer to have suitable, gainful, permanent employment rather than to have pensions. Jobs or pensions is the answer.

Federal pensions are being urged by the V. F. W. for all unemployable and disabled war veterans, but employable veterans, we insist, should have the chance to earn their living by suitable employment.

To all unemployed veterans, may I say that you will be doing a service to yourselves by becoming actively registered with the nearest public employment offices. To all employers of men, may I say that you will be doing a service to yourselves by extending employment to qualified veterans, whom you will find, generally, to be disciplined, loyal, cooperative, and productive, and therefore profitable. Employable veterans, if given the chance, will prove their worthiness as employees.

Frank Gannett

EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

RADIO ADDRESS BY HON. JAMES W. WADSWORTH, OF NEW YORK

Mr. O'BRIEN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Hon. JAMES W. WADSWORTH, of New York, over the Columbia Broadcasting System from Station WJSV, Washington, D. C., May 1, 1940:

Ladies and gentlemen, needless to say, I appreciate very highly the kindness and courtesy extended to me by the Columbia Broadcasting Co. in allowing me to address you for 15 minutes, or thereabouts, on some matters political which I am confident are important. In fact, they are so important that it is with a considerable degree of trepidation that I attempt to discuss them. Furthermore, I cannot contend that my judgment is infallible. Such as it is, I make bold to express it.

In the midst of a world torn with strife, from which we fortunately are free, the American people are concentrating their attention on the coming presidential campaign. No one will deny that our domestic issues are of primary importance and that their proper solution is vital to our future happiness and security. For more than 7 years we have lived under the New Deal and we are neither happy nor secure in our economic life. The fundamental theory underlying the New Deal has come to be pretty thoroughly understood. It means that if it is to reach its logical conclusion, government, concentrated at Washington, is to be supreme over the individual. The manner in which he shall earn his living, be it in humble or important pursuits, is to be planned for him and imposed upon him by bureaucratic decree. Already a supine Congress has handed over to the Chief Executive, who is the head of the bureaucracy, an extraordinary assortment of powers, the possession of which enabled him to do things which no President in all history has ever been authorized to do. The power over the currency, over the sources of credit, over radio communication, over agriculture, over commerce and industry generally, presents a picture so un-American as to startle the observer. Some of these powers may be exercised directly by the Chief Executive. Others may be and are being exercised through commissions and boards appointed by him and anxious to do his bidding.

Two major attempts at the seizure of power have failed—one when the Supreme Court packing bill was rejected and the other when the President's famous reorganization bill was defeated. Had those two measures gone through, the independence of the judiciary would have disappeared and the power of the Congress to legislate with respect to the structure of our Government would have all but disappeared. Coinciding with these attempts to transform our representative government into an imperial structure, supreme over all the land, we have seen the New Deal spending money with both hands, like a drunken sailor, siphoning it out across the country in fantastic sums, all in the hope that the people, elated by the evidences of right-and-left spending, will forget their birthright and acquiesce finally into becoming the subjects of government.

This has been going on for 7½ years, and, as I said a moment ago, we are no happier nor more secure in our economic life than we were at its beginning. Rather we as a Nation are in a worse condition for as a result we still have our unemployment unsolved, taxes heavily increased, enterprise and initiative cramped, billions of dollars lying idle in our banks, and, most menacing of all, a national debt of $45,000,000,000 staring us in the face. Obviously, we can't go on this way. The present situation and our prospects are terribly serious. And they must be understood thoroughly as we approach the coming Presidential and congressional elections.

The congressional elections of 1938 indicated very clearly that the people are awakening to a realization of the menace. As a result of those elections the Republican strength in the House of Representatives was almost doubled and the Republican Party came back into power in several of the great States. Today we have a closely welded and effective Republican minority in the House which, under the able leadership of Congressman MARTIN of Massachusetts, has been able to kill some of the more fantastic proposals of the New Deal. And we know further that the trend against the New Deal and its philosophy is still going on—a fact amply demonstrated in recent special congressional elections. So it is perfectly apparent that the Republican Party nationally is growing in strength, and that the people, awakened to what the New Deal means, expect the Republican Party to be the instrument of its overthrow. Indeed, the citizen has no other political instrument ready to his hand.

To be an effective instrument the party must be both courageous and wise. It must not compromise on fundamentals. It must not pussyfoot, even on small details. It must be forthright in its utterances, vigorous in its performances, and eternally vigilant in the guarding of our free institutions. This means, of course, that its platform must be courageous and sound and that its candidates must be of like timber.

Whenever two or more people gather together today they talk about the coming Republican performance and express the earnest hope that it will be creditable from top to bottom. And quite naturally they are talking about candidates. First, they are wondering if the President is going to run again. Thus far he has not seen fit to take the country into his confidence, despite the uncertainty and confusion which his silence causes. Speaking for myself alone, I hope Roosevelt runs. We would then have the issues clearly defined—the whole New Deal plus the third term. As a matter of fact, the philosophy of the New Deal with its huge concentration of power carries with it the breaking of the third-term tradition. The Executive is to be all powerful, and once in office is to remain there. According to the new dealers' way of thinking, why not?

As a matter of fact, the New Deal and the third term are natural partners, and I'd rather have this whole picture presented vividly to the country so that he who runs may read and understand. And, incidentally, I think the country would reject it, provided, of course, that the Republican performance is creditable.

The names of several men are under discussion in connection with the Republican Presidential nomination. They are good men, all of them—men of honor and understanding—men of good records, entitled to our respect. In giving my adherence to one of them I do not reflect in the slightest degree upon any of the others. If any one of the others were nominated I would support him, and so, I believe, would all the members of our party.

As some of you have learned, my adherence goes to Frank Gannett, of Rochester, N. Y., a neighbor with whom I have been well acquainted for many years and in whose character and abilities I have great confidence. And let me say this at this point: Mr. Gannett's candidacy is genuine. Most assuredly it is not put forward as a gesture or an attempt to stop some other candidate. Neither he nor his supporters have entered, directly or indirectly, into any sort of agreement which tends to deprive his candidacy of complete independence. This should be understood clearly. We who are supporting him are doing so because we are convinced that he would be an excellent candidate and an excellent President, competent to face one of the most difficult periods in our history. This is the sole reason for our support.

Without attempting to recite anything like a complete biography, let me tell you something about the man, his background, and his achievements. He was born on a farm situated in the hilly country of south-central New York—a farm literally on a hilltop. It wasn't much of a farm, and the family just managed to scrape along by the hardest kind of work. Hungry for an education, the youngster, on his own initiative, went to Cornell University, and, starting with scarcely a cent in his pocket, worked his way through college. It was a tough undertaking, but he did it. The president of Cornell at that time, Dr. Jacob Gould Schurman, took note of young Gannett's enterprise and ability and when the latter graduated took him to the Philippines as his private secretary. It will be remembered that Dr. Schurman was chairman of the American commission sent to the islands just after the insurrection to lay the foundations for its new government under American control. When he finished that job young Gannett returned to the United States and started in as a humble newspaper reporter. As a matter of fact, from his early days his ambition has taken him into and kept him in the newspaper field. He saved every cent he could scrape together and shortly purchased an interest in a small newspaper.

From that point he moved onward with really astonishing success. He worked long hours and upon occasions took big changes, sometimes to the alarm of his friends, but through it all his business judgment proved to be sound and the way he did his business was so constructive and so fair that his early friends and neighbors gave him their complete confidence. It may be said that this very confidence, which he earned in his early days, contributed greatly to his later successes. Advancing steadily and sanely in his chosen field, he is today the owner and publisher of the third largest string of newspapers in the country. His papers, all of them, are clean and decent and their policies are sanely progressive. At present he employs something like 4,000 men in his newspaper establishments. I am not sure that that makes him a big businessman or a small businessman, but big or small, I am sure that he is a good businessman. An important element in his success lies in the highly satisfactory relations which he has maintained with his employees. He has never had a bitter dispute with them. He has always met them half way, or more than half way. He has encouraged the unionization of his plants with the result that they are all organized. His men are genuinely fond of him. They appreciate his problems and he understands theirs. The grand result is that there has never been a strike. Indeed, it can be said of him that he is a model employer. Perhaps this springs in part from his early experiences when he was struggling to get an education and make a living.

It is not strange that a man of such a record of experience and success should take an interest in public affairs. He has done so for years, and far more than the average businessman has studied problems of government. At one time or another he has familiarized himself with the important issues that confront the country. In an effort to gain information he has traveled widely all over the United States and in Europe and South America. Wherever he has gone he has absorbed knowledge and has attempted to apply that knowledge in the solution of our present difficulties. At the same time he has sensed the direction in which this country has been traveling and has not hesitated to speak out about it. Being devoted to the American system he became thoroughly aroused at the menace that confronts it, and unlike many businessmen he did not hesitate to go to the bat.

When President Roosevelt attacked the Supreme Court and demanded legislation which would enable him to pack it, Gannett saw the danger instantly. He hurried to Washington, talked with men in the Congress, got a good picture of the situation, and, supported by the very earnest and sincere request of the late Senator Borah, went back to Rochester determined to get into the fight. And he certainly did so. With astounding energy he put together an organization, Nation-wide, to fight the Supreme Court packing bill. His messages of warning reached every nook and corner in the country. He aroused multitudes of people to a clear understanding of the issue. He marshaled the opposition into a mighty army which soon made its influence felt at Washington. The Supreme Court bill was defeated, and while I hesitate to indulge in comparisons, I do say that of all the men outside of public life, Frank Gannett contributed most to the defeat of that bill. And with that contribution he helped preserve the independence of our judiciary, the foundation stone of our free institutions.

He performed a like service with respect to the President's famous reorganization bill. He sensed in that measure that same intent on the part of the President to break down our system of checks and balances and to transform our Government into an all-powerful bureaucracy headed by a single individual. If Gannett had done nothing else, he is entitled to our gratitude for his achievements in these two instances, and to our admiration of him for having gone into this great battle utterly regardless of the consequences to himself. Not all businessmen can boast of a similar record.

Speaking of businessmen, here is one who knows where a dollar comes from, how it must be earned, and how it should be conserved for wise use. You can't make him believe that pump priming will restore prosperity any more than you can make him believe that a man can lift himself by his own bootstraps. You can't make him believe that debt and ever more debt is a healthy thing for either an individual or a government. You can't make him believe that legitimate enterprise should be choked off by punitive taxation or by dictatorial rulings of a bureaucracy.

He stands for our old system of free enterprise, under which every man is entitled to earn his living at his chosen occupation so long as he does not injure his neighbor. He believes in thrift. He has real respect for a savings account. He stands for the maintenance of these virtues, now so often derided, not merely because he knows they are sound from an economic standpoint, but he knows that a people encouraged to thrift and to enterprise is a free people. The one thing he dreads is that by discouraging these virtues our people shall become dependent upon government and thus ultimately lose their liberty.

Surely here is an example of a businessman who understands the fundamentals of our situation. Here is a businessman clean and straight, well informed, and not afraid to speak out. In all sincerity I submit that he is entitled to the serious consideration of every Republican as the party, acting through its national convention, selects its candidate for President.

Amendment of the Wage-Hour Law

EXTENSION OF REMARKS

OF

HON. MARY T. NORTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

LETTER FROM THE SECRETARY OF LABOR

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me today from the Secretary of Labor:

DEPARTMENT OF LABOR,
OFFICE OF THE SECRETARY,
Washington, May 2, 1940.

Hon. MARY T. NORTON,
House of Representatives, Washington, D. C.

DEAR MRS. NORTON: My attention has been called to the Buck amendment which was adopted yesterday by the House as an amendment to your bill, H. R. 5435. The Buck amendment would redefine the term "agriculture" which is now defined in section 3 (f) of the Fair Labor Standards Act.

One principal fault of Mr. BUCK's amendment is contained in the latter part of the first sentence in paragraph 4 which carries these words "or in the case of fruits or vegetables, as an incident to the preparation of such fruits or vegetables for market." It should be noted that except in the case of fruits and vegetables all handling, drying, packing, packaging, processing, freezing, and storing, in order to be exempt, is to be performed "as an incident to ordinary farming operations." But in the case of fruits and vegetables there is no such limitation. Therefore, the following operations and numbers of employees will be excluded from the protection of the minimum wage of 30 cents an hour and the maximum-hour limitations.

1. Handling, packing, grading, and storing of fruits and vegetables off the farm when done by either cooperatives, corporations, or individual processors	130,000
2. Drying, processing, and packaging of dried fruit	12,000
3. Processing of dried edible beans	10,000
4. Processing and packaging of nuts, including pecan shellers	15,000
Total	167,000

(Botanically a nut is regarded as fruit by the Department of Agriculture and would therefore come within the fruit and vegetable packing and processing exemption.)

Furthermore, the Buck amendment would also exempt, in the following numbers, employees engaged in cooperative canning and freezing and in the operation of improving and maintaining canals, reservoirs, and waterways used for irrigation:

5. Cooperative canning and freezing	20,000
6. Improvement and maintenance of canals, reservoirs, and waterways used for irrigation	8,000
	28,000
Total	195,000

This figure does not include scores of thousands of employees working in cooperative grain elevators, cooperative creameries, cooperative egg houses, cooperative poultry plants, cooperative livestock associations, and cooperative cotton warehouses, who would also be within the exemption provided by the Buck amendment. The forepart of the first sentence in paragraph 4 extends the exemption to the operations of handling, planting, drying, packing, packaging, processing, freezing, grading, storing, or delivering to storage or to market, or to a carrier for transportation to market, any agricultural or horticultural commodity provided that such service is performed "as an incident to ordinary farming operations." The Bureau of Internal Revenue, following the interpretation of the Committee on Ways and Means in its report on the bill (H. R. 6635) to amend the Social Security Act, has ruled that the quoted phrase includes the work of employees of a farmer or farmers' cooperative organization or group (Regulations 106, part 402, title 26, Code of Federal Regulations, 1940 Sup. Relating to the Employees' Tax and the Employers' Tax under the Federal Insurance Contributions Act).

This redefinition of agriculture should be read in connection with the definition of agriculture now contained in section 3 (f). Senator, now Mr. Justice Black, chairman of the joint congressional committee in charge of the bill which ultimately became the Fair Labor Standards Act, in opening the Senate debate on the bill, stated that it "specifically excludes workers in agriculture of all kinds and of all types. There is contained in the measure, perhaps, the most comprehensive definition of agriculture which has been included in any one legislative proposal.

"We have placed together in the bill definitions of agricultural work which have been fixed from time to time in other legislative enactments and in addition to that we have drawn liberally from Mr. Webster's definition of agriculture." (CONGRESSIONAL RECORD, original issue, July 27, 1937, p. 9895.)

In other words, section 3 (f), as now drawn, exempts all farm labor including workers engaged on the farm or working off the farm for the farmer and on the latter's crops.

In short, the Buck amendment, by the simple device of calling them agriculturalists, deprives vast numbers of industrial workers of the pittance of 30 cents an hour guaranteed them by the Fair Labor Standards Act. The Buck amendment thus incorporates in the committee amendments to the Norton bill some of the most drastic features of the so-called Barden amendments.

The hours exemptions provided in the Norton bill would grant each of the processing operations added to the agriculture definition by the Buck amendment all the flexibility that is needed from the hour limitations.

Another major fault in the Buck amendment is that it removes the child-labor restrictions contained in the act insofar as the above-listed thousands of employees are concerned. Section 13 (c) of the act provides that the child-labor provisions shall not apply with respect to any employee employed in agriculture while not legally required to attend school. Therefore, when the definition of agriculture is enlarged, as is proposed by this amendment, the existing prohibition against child labor in the operations enumerated above is thereby removed. Thus it would be possible to employ child labor in all fruit-packing plants and in many canneries, despite the fact that most of such plants are highly mechanized.

It is well known that migratory labor is used to a large extent in the packing and preparing of agricultural commodities for market, and it is generally recognized that the use of children of such migratory families is one of the most serious of the problems in connection with the migration of family labor. Any amendment which will completely remove the employment of these children from the protection now afforded them by the Fair Labor Standards Act is viewed with great concern by those devoted to the cause of the Nation's children and to the maintaining of the protective standards which Congress has already seen fit to establish.

Sincerely yours,

FRANCES PERKINS.

Job for a Magician

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

EDITORIAL FROM THE PHILADELPHIA EVENING BULLETIN OF MAY 1, 1940

Mr. MYERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Evening Bulletin of May 1:

[From the Philadelphia Evening Bulletin of May 1, 1940]

JOB FOR A MAGICIAN

Transfer of special funds to the general account in the State treasury to meet relief costs until the end of January, if that method is adopted at the legislature's special session, will merely dodge the question of how the bill is to be paid.

The Governor is definitely pledged not to increase taxes. His committee on State government has considered a shift in the relief load to local governments, though the executive himself has disclaimed such intention.

There is also a pledge to continue relief and a pledge to readjust the tax structure.

It begins to look as though tax readjustment will be a deceptive name for legislation that will boost taxes, but transfer part of the burden from present sources. In any event, somebody must pay more.

The other alternative—shifting part of the relief load—is even more alarming for Philadelphia. If such a shift is contemplated, the city ought to know it well in advance of next January, and Philadelphians ought to be apprised of the intention to load on them a heavier tax than the remainder of the State must bear.

The Governor needs a magician with a lot of white rabbits to extricate him from his predicament. But he brought it on himself by pledges to continue relief and at the same time cut taxes—pledges that obviously cannot be kept except by the device of indefinitely postponing the ultimate day of reckoning.

Control of Stream Pollution

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

[From the Philadelphia Evening Bulletin of April 23, 1940]

AN IMPORTANT AMENDMENT

Conservationists are keeping a watchful eye on the conference committee in Washington which is considering the Barkley anti-pollution bill.

With the Mundt amendment, added as the bill passed the House, the legislation is acceptable to them; without it, the measure becomes merely another spending measure, designed to accomplish no more than add to the already voluminous reports.

The amendment would forbid the creation of any new sources of pollution, either by sewage or industrial waste, and would permit suits to be brought in the name of the United States at the request of any State agency or health authority to abate pollution.

There has long been a tendency to talk at length about pollution, but an unwillingness to translate the talk into action. The Mundt amendment, while not meeting in full the aims of the sincere conservationists, is a step in the right direction and a definite gain in the cause of cleaner streams.

The Barkley bill with the amendment might provide the spur needed to get action looking toward the purification of any number of important streams.

Samuel D. McReynolds

MEMORIAL ADDRESS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1940

On the life, character, and public service of the Honorable SAMUEL D. MCREYNOLDS, late a Representative from the State of Tennessee

Mr. CARTWRIGHT. Mr. Speaker, I was born and reared, to the age of 12, in the third congressional district of Tennessee, represented for many years by the late Honorable SAMUEL D. MCREYNOLDS. The first Congressman I ever heard of was Congressman Moon from that district. My parents moved to the Indian Territory shortly before it blossomed into the State of Oklahoma, and when Oklahoma was divided into congressional districts I found myself in the Third District of Oklahoma. My grandparents, uncles, aunts, and cousins still live in the Third Tennessee District, which I visit often. Naturally, I have kept up with politics in that district, as well as in my own. I was pleased to see Judge MCREYNOLDS first elected to Congress years ago. His name already had been a household word with my relatives, who lived in his judicial district. Everybody had a profound respect for the judge, whether they agreed with him or not.

As I grew older in Oklahoma my ambition grew to be a Member of Congress also, and when I came here as a Member in 1927, Judge MCREYNOLDS was the first person I sought and asked for the advice which a new Congressman needs. The Judge, as he was affectionately known to all, very graciously gave me fatherly advice and a lot of form letters, which were very helpful to me. In 1935 we and our families journeyed to the Philippine Islands together and participated in the inauguration of Emanuel Quezon, the first President of the Philippine Republic. We became very well acquainted on that trip.

He became chairman of the important Committee on Foreign Affairs and an international figure. He was a very able representative, not only of his district, but of the United States. He had the friendship of men, the respect of women, and the tender love of little children.

In saying farewell to my friend and colleague, I do so with the solemn faith of the immortality of the soul and the increasing hope and faith that we shall meet again.

The poet has well said:

There is no death.
The stars go down
To shine upon some fairer shore,
And there in Heaven's jeweled crown
They shine forevermore.

Santiago Iglesias

MEMORIAL ADDRESS

OF

HON. ANTHONY J. DIMOND

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1940

On the life, character, and public service of Hon. SANTIAGO IGLESIAS late a Resident Commissioner from the Territory of Puerto Rico

Mr. DIMOND. Mr. Speaker, while it is a long way from Alaska to Puerto Rico, perhaps that is an additional reason why I, as Delegate from Alaska, may justly and properly pay a tribute to my late, great friend, Hon. SANTIAGO IGLESIAS, Commissioner from Puerto Rico.

Perhaps because we both represented constituencies living under local governments not yet attained to the dignity of statehood, and both in a way, in all relations with the Congress of the United States, had, to some extent, the common problems embodied in that unique status, I came to know and to appreciate the sterling character of Mr. IGLESIAS better and more intimately than most other Members of the House of Representatives.

In all of my relations with Mr. IGLESIAS—and we met and talked almost daily during sessions of Congress—I always found him concerned only for the welfare of the people of Puerto Rico, and never for himself. His every thought was, I believe, devoted to the promotion of the interest of the citizens of the United States whom he had been elected to represent in the Congress, and nobody who knew him can truthfully deny that while he was Commissioner from Puerto Rico, the people of that island had an able, high-minded, and devoted advocate in the National Congress.

Not alone in selfless devotion to duty was Mr. IGLESIAS admirable; he also possessed qualities of keen insight and sound judgment so vitally necessary in a member of a legislative body. Never, to my knowledge, did Mr. IGLESIAS follow the easy road that might lead to popular acclaim, when he thought that the true interest of his constituents demanded that another course be taken. All of which means that he had courage, not only the physical courage necessary to face a madman or an assassin, but the greater and the higher courage to furnish inspired leadership to his people, rather than take the easy course which might lead to temporary but unsound popularity.

In the death of SANTIAGO IGLESIAS the people of Puerto Rico have lost a champion of whom every citizen of the island might well be proud, and the United States, as a whole, has been deprived of the services of a man who was an ardent and an intelligent advocate at all time of the principles which underlie our constitutional form of government.

Carl E. Mapes

MEMORIAL ADDRESS
OF
HON. MARTIN J. KENNEDY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. CARL E. MAPES, late a Representative from the State of Michigan

Mr. MARTIN J. KENNEDY. Mr. Speaker, when CARL E. MAPES died suddenly in New Orleans on December 12, the country and the House of Representatives sustained a great loss. He was a splendid gentleman and a great American.

It was my privilege to have served on the same committee with Mr. MAPES. In his congressional work he was most conscientious and thorough. He was persistent in a gracious way and as a result of his efforts in committee and on the floor of the House much constructive legislation has been added to the statute books.

Representative MAPES was intensely partisan, but he never allowed himself to be influenced along party lines on any question affecting the welfare of his Government. He, a Republican, and I, a Democrat, differed on many questions of the hour but never on the fundamentals of good government.

His type is rare and his presence shall be greatly missed. He was a most devoted husband and father, a fine friend, and a conscientious public servant.

Peace to his ashes;
Honor to his memory.

Thomas S. McMillan

MEMORIAL ADDRESS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. THOMAS S. MCMILLAN, late a Representative from the State of South Carolina

Mr. JOHN L. McMILLAN. Mr. Speaker, it is with a feeling of sorrow that I endeavor to pay tribute of admiration and respect to the memory of my colleague and personal friend. I first became a great admirer of the late THOMAS S. MCMILLAN when he was speaker of the South Carolina State House of Representatives and while I was a student at the University of South Carolina. I was always interested in civil government and its procedure and always found my friend, THOMAS MCMILLAN, willing to answer any questions regarding legislation which was before the State legislature at that time. Since I have been a Member of Congress I found it necessary to call on Mr. MCMILLAN on numerous occasions for his valuable opinion on different legislation which was before Congress for consideration.

I feel that South Carolina has lost one of its most valuable statesmen and his presence and influence will be missed here in Congress for a number of years. Through his long continuous service and proof of his statesmanlike opinion on different legislation, he had won the respect of every Member of Congress and had been placed in an important post on the Appropriations Committee. I know that his influence on the Appropriations Committee has caused South Carolina to reap a number of benefits from the Federal Government that we people in the South are not accustomed to receive.

I had not been a Member of the House of Representatives very long before I found out that we people of the South had to fight for everything that we got from the Federal Government. We do not get anything because we are justly entitled to receive same, but, on the other hand, we have to fight for all we get for our section of the country. And my friend, THOMAS S. MCMILLAN, could always be depended upon to take the lead in fights which would benefit his district and the State of South Carolina.

Mr. MCMILLAN always had a smile and a cheerful word for everyone he met and no one loved his family and friends more than he, nor was more forgiving of those who differed from him in legislative matters. He was, in fact, a gentleman in every sense of the word—bold, fearless, and courageous, yet always kind, patient, and considerate of others, giving to every person the right to think and act for himself. I had the privilege of counting Mr. MCMILLAN one of my personal friends for approximately 25 years and shall always miss his cheerful smile and important advice on different legislation.

In the death of THOMAS S. MCMILLAN the State of South Carolina has lost one of its most capable servants; the Nation has suffered the loss of one of its most able statesmen.

John A. Martin

MEMORIAL ADDRESS
OF
HON. CLARENCE F. LEA
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. JOHN A. MARTIN, late a Representative from the State of Colorado

Mr. LEA. Mr. Speaker, under leave to extend my remarks I enclose the following resolution adopted by the Committee on Interstate and Foreign Commerce:

In the Committee on Interstate and Foreign Commerce, the United States House of Representatives, on the 30th day of April, 1940.

Resolved, That the Committee on Interstate and Foreign Commerce of the House of Representatives expresses its profound sorrow and the feeling of great loss in the death of our beloved colleague, the Honorable JOHN A. MARTIN. During his service as a member of this committee, Congressman MARTIN was conscientious in his attendance and most earnestly devoted to his duties. He was a very hard worker and a most vigorous champion of causes to which he committed himself. He had long been a student of transportation and especially of railroad problems, and his information on the subject was very comprehensive. His practical experience as a railroader during his young manhood enabled him to render the committee great assistance on many occasions. He had a rare sense of humor and a genial disposition which held the affection of even those with whom he differed sharply on questions of principle. He was intensely devoted to his country's welfare and did not spare himself in his public service.

The members of this committee who were associated with him will always remember him because of his pleasing personality and his sincere and intelligent service to his fellow man. Be it further

Resolved, That this resolution be entered in the records of this committee, and that a copy of same be sent to the family of Mr. MARTIN, with assurances of our deep sympathy.

CLARENCE F. LEA, *Chairman.*
ELTON J. LAYTON, *Clerk.*

Clyde H. Smith

MEMORIAL ADDRESS
OF
HON. FOSTER STEARNS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. CLYDE H. SMITH, late a Representative from the State of Maine

Mr. STEARNS of New Hampshire. Mr. Speaker, the sudden and unexpected death of CLYDE H. SMITH came as a great shock to his many friends, and especially to his

colleagues in this House, whose esteem and admiration he had won.

I can never forget the friendly welcome with which he greeted me as a newcomer to this floor, or the many little acts of kindliness and courtesy for which I was indebted to him.

His entire life was one of devotion to the service and welfare of his fellowmen, his State, and country. He rose from selectman of his own home town through various offices to that of Representative in Congress, a career which is a clear indication of his honesty, industry, and ability. As a member of important committees, especially that on labor, he never lost sight of the human needs that all legislation is supposed to serve.

This body has lost a devoted and honored Member, and it is with a deep sense of personal loss that I pay this small tribute to his memory.

Carl E. Mapes

MEMORIAL ADDRESS

OF

HON. CLARENCE F. LEA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1940

On the life, character, and public service of Hon. CARL E. MAPES, late a Representative from the State of Michigan

Mr. LEA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Committee on Interstate and Foreign Commerce:

In the Committee on Interstate and Foreign Commerce, the United States House of Representatives, on the 11th day of April, 1940:

Resolved, That the Committee on Interstate and Foreign Commerce of the House of Representatives expresses its profound sorrow and the feeling of great loss in the death of our most worthy and beloved committee associate, the Honorable CARL E. MAPES.

Throughout the many years during which he was a member of this committee the work of CARL MAPES was outstanding and an inspiration to the highest quality of public service on the part of all those who had the good fortune to be his fellow members on this committee. Earnest devotion to his highest conception of right was the governing force of his life. He was not only a man of sound judgment and broad understanding, but, more important still, he possessed great moral courage. His thorough study and unusual knowledge of the difficult subjects coming before this committee commanded the unbounded respect of his committee associates and were of incalculable value to the American people.

His genial disposition and his invariably kindly attitude even toward those who had occasion to urge views directly opposed to his own, caused all who knew him to have an abiding affection for him. The influence of the life and work of our beloved late colleague will continue to be felt by his associates who remain: Be it further

Resolved, That this resolution be entered in the records of this committee, and that a copy of same be sent to the family of Mr. MAPES, with assurances of our deep sympathy.

CLARENCE F. LEA, *Chairman.*
ELTON J. LAYTON, *Clerk.*

Samuel D. McReynolds

MEMORIAL ADDRESS

OF

HON. ED. V. IZAC

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1940

On the life, character, and public service of Hon. SAMUEL D. MCREYNOLDS, late a Representative from the State of Tennessee

Mr. IZAC. Mr. Speaker, my first assignment on coming to Congress was to a place on the Foreign Affairs Committee. There I found a chairman under whom I was to serve with a great deal of pleasure and benefit. Judge MCREYNOLDS, as we called him, was at once a fine southern gentleman and a most able and aggressive statesman. In the conduct of his office he proved to be a strong right arm of the administration in its efforts to uphold the dignity and prestige of the United States in the family of nations.

SAM MCREYNOLDS was a dominating character in the House of Representatives and one of democracy's most rugged fighters. Impatient with delay, intolerant of obstructive tactics, he never quibbled over nonessentials. He never temporized. He drove ahead with dogged determination to his objective. He was a most considerate chairman, and whenever some of his committee disagreed with his views on the legislation under consideration he insisted on granting a fair hearing with opportunity for the views of all to be recorded.

Our committee will miss SAM MCREYNOLDS. The House of Representatives will miss his energetic leadership. But those who lose most are the people of this country now denied the benefit of his ability in the broad field of international relations.

The Hatch Bill

EXTENSION OF REMARKS

OF

HON. EDWARD W. CREAL

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Friday, May 3, 1940

TEXT OF THE BILL

Mr. CREAL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of the Hatch bill as passed by the Senate at the present session:

An act to extend to certain officers and employees in the several States and the District of Columbia the provisions of the act entitled "An act to prevent pernicious political activities," approved August 2, 1939

Be it enacted, etc., That section 2 of the act entitled "An act to prevent pernicious political activities," approved August 2, 1939, is amended to read as follows:

"SEC. 2. It shall be unlawful for (1) any person employed in any administrative position by the United States, or by any department, independent agency, or other agency of the United States (including any corporation controlled by the United States or any agency thereof, and any corporation all of the capital stock of which is owned by the United States or any agency thereof), or (2) any person employed in any administrative position by any State, by any political subdivision or municipality of any State, or by any agency of any State or any of its political subdivisions or municipalities (including any corporation controlled by any State or by any such political subdivision, municipality, or agency, and any corporation all of the capital stock of which is owned by any State or by any such political subdivision, municipality, or agency), in connection with any activity which is financed in whole or in part by loans or grants made by the United States, or by any such department, independent agency, or other agency of the United States, to use his official authority for the purpose of interfering with, or affecting, the election or the nomination of any candidate for the office of President, Vice President, Presidential elector, Member of the Senate, Member of the House of Representatives, or Delegate or Resident Commissioner from any Territory or insular possession."

SEC. 2. Section 10 of such act of August 2, 1939, is amended to read as follows:

"SEC. 10. The provisions of this act shall be in addition to and not in substitution for any other provision of law."

SEC. 3. Such act of August 2, 1939, is further amended by adding at the end thereof the following new sections:

"SEC. 12. (a) No officer or employee of any State or local agency who exercises any function in connection with any activity which is financed in whole or in part by loans or grants made by the United States or by any Federal agency shall use his official authority or influence for the purpose of interfering with an election or affecting the result thereof. No such officer or employee shall take any active part in political management or in political campaigns. All such persons shall retain the right to vote as they may choose and to express their opinions on all political subjects. When used in the second sentence of this subsection, the term 'officer or employee' shall not be construed to include (1) the Governor or the

Lieutenant Governor of any State or any person who is authorized by law to act as Governor, or the mayor of any city; (2) duly elected heads of executive departments of any State or municipality who are not classified under a State or municipal merit or civil-service system; (3) officers holding elective offices.

"(b) If any Federal agency charged with the duty of making any loan or grant of funds of the United States for use in any activity in connection with which any function is exercised by any officer or employee to whom the provisions of subsection (a) are applicable has reason to believe that any such officer or employee has violated the provisions of such subsection, it shall make a report with respect thereto to the United States Civil Service Commission (hereinafter referred to as the 'Commission'). Upon the receipt of any such report, or upon the receipt of any other information which seems to the Commission to warrant an investigation, the Commission shall forthwith by registered mail give notice to any such officer or employee and to the State or local agency employing such officer or employee of the pendency of the charge, in which notice shall be set forth a summary of the alleged violation and of the time and place for a hearing upon said charge, at which hearing (which shall be not earlier than 10 days thereafter) either the officer or employee or the State or local agency, or both, may appear with counsel and be heard, whereupon said Commission shall determine whether any violation of such subsection has occurred. If the Commission determines that any such violation has occurred, and that such violation warrants the removal of the officer or employee by whom it was committed from his office or employment, it shall notify the appropriate State or local agency of such determination, whereupon such officer or employee or the appropriate State, or both, shall have the right to appeal from any such finding to the next term of the United States district court for the district in which such officer or employee shall reside; and the United States district courts shall have jurisdiction to hear and determine such appeal, and all proceedings therein shall be had in the same manner as is provided for appeals taken under section 39c, Public Law No. 696, of the Seventy-fifth Congress, approved June 22, 1938 (U. S. C., Supp. title 11, sec. 67c). No such officer or employee shall be dismissed as a result of such determination by said Commission, and no loan or grant shall be withheld until said appeal shall be finally determined. Pending final determination of any such appeal, any such officer or employee previously found guilty of a violation of this section shall stand suspended. If in any case the Commission finds that such officer or employee has not been removed from his office or employment within a reasonable time after such notification, or that he has been so removed and has subsequently (within a period of 18 months) been appointed to any office or employment in any State or local agency in such State, the Commission shall certify the fact to the appropriate Federal agency, which shall thereupon withhold from its contributions, loan, or grant to such State or local agency within such State a sum twice the amount of the annual salary of such officer or employee.

"(c) In determining the amount to be withheld under subsection (b) on account of violations of subsection (a), the Commission shall take into account the nature of such violations and the circumstances under which they occurred: *Provided*, That in no event shall loans or grants pledged by a State or local agency as security for its bonds or notes be withheld where such action would jeopardize the payment of principal or interest on such bonds or notes.

"(d) The Commission is authorized to adopt such reasonable procedure and rules and regulations as it deems necessary to execute its functions under this section. Any determination made by the Commission under this section shall be final and conclusive upon all accounting and other officers of the United States and all other persons.

"(e) The provisions of the first two sentences of section 12 (a) shall not apply to employees in an activity of a State or of a local agency not financed as to such particular activity in whole or in part by Federal loans or grants.

"(f) For the purposes of this section—

"(1) The term 'State or local agency' means the exeutive branch of any State, or of any municipality or other political subdivision of such State, or any agency or department thereof.

"(2) The term 'Federal agency' includes any executive department, independent establishment, or other agency of the United States (except a member bank of the Federal Reserve System).

"SEC. 13. (a) Excessive financial aid to any candidate for an elective Federal office is a pernicious political activity and is hereby declared to be illegal.

"(b) Excessive financial aid to any political committee or political organization engaged in furthering, advancing, or advocating the election of any candidate or political party nominees for a Federal office, or any committee engaged in furthering, advancing, or advocating the success of any national political party is a pernicious political activity and is hereby declared to be illegal.

"(c) Presidential Electors and the President of the United States for the purpose of this act are declared to be elective officers.

"(d) Any amount expended, contributed, furnished, or advanced by one person, directly or indirectly, in violation of this section in excess of $5,000 is hereby declared to be excessive financial aid.

"(e) Any person who directly or indirectly contributes more than $5,000 during any calendar year or for use in any one campaign or election, in violation of the provisions of this section, is guilty of pernicious political activity, and on conviction, shall be fined not less than $5,000 and also sentenced to the penitentiary for not exceeding 5 years.

"SEC. 14. No officer or employee of any State or local agency who exercises any function in connection with any activity which is financed in whole or in part by loans or grants made by the United States or by any Federal agency shall directly or indirectly coerce, attempt to coerce, command, or advise any officer or employee embraced by this section to pay, lend, or contribute any part of his salary or compensation, or anything else of value to any party, committee, organization, agency, or person for political purposes.

"SEC. 15. For the purposes of this act, persons employed in the government of the District of Columbia shall be deemed to be employed in the executive branch of the Government of the United States, except that for the purposes of the second sentence of section 9 (a) the Commissioners and the Recorder of Deeds of the District of Columbia shall not be deemed to be officers or employees.

"SEC. 16. The provisions of this act which prohibit persons to whom such provisions apply from taking any active part in political management or in political campaigns shall be deemed to prohibit the same activities on the part of such persons as the United States Civil Service Commission has heretofore determined are at the time of the passage of this act prohibited on the part of employees in the classified civil service of the United States by the provisions of the civil-service rules prohibiting such employees from taking any active part in political management or in political campaigns.

"SEC. 17. Whenever the United States Civil Service Commission determines that, by reason of special or unusual circumstances which exist in any municipality or other political subdivision, in the immediate vicinity of the National Capital in the States of Maryland and Virginia or in municipalities the majority of whose voters are employed by the Government of the United States, it is in the domestic interest of persons to whom the provisions of this act are applicable, and who reside in such municipality or political subdivision, to permit such persons to take an active part in political management or in political campaigns involving such municipality or political subdivision, the Commission is authorized to promulgate regulations permitting such persons to take an active part in such political management and political campaigns to the extent the Commission deems to be in the domestic interest of such persons.

"SEC. 18. No person or firm entering into any contract with the United States or any department or agency thereof, or performing any work or services for the United States or any department or agency thereof, or furnishing any material, supplies, or equipment to the United States or any department or agency thereof, or selling any land or building to the United States or any department or agency thereof, if payment for the performance of such contract or payment for such work, services, material, supplies, equipment, land, or building is to be made in whole or part from funds appropriated by the Congress, shall, during the period of negotiation for, or performance or furnishing of, such contract, work, services, material, supplies, equipment, land, or buildings, directly or indirectly, make any contribution of money or any other thing of value, or promise expressly or impliedly to make any such contribution, to any political party, committee, or candidate for public office or to any person for any political purpose or use; nor shall any person knowingly solicit any such contribution from any such person or firm, for any such purpose during any such period. Any person who violates the provisions of this section shall, upon conviction thereof, be fined not more than $5,000 or imprisoned not more than 5 years.

"SEC. 19. Nothing in this act or in said act of August 2, 1939, shall be construed to prevent any person employed by the State government, the municipal government, or any agency thereof, from becoming a bona fide candidate for any public office and engaging in any lawful political activity in furtherance of his candidacy in the event he takes a leave of absence without pay from his employment during the campaign.

"Nothing in this act or in said act of August 2, 1939, shall be construed to prevent any lawful political activity in an election and the preceding campaign at which there are no candidates on party tickets representing a party which polled votes for President in the last preceding national election; nor lawful political activity in an election and the preceding campaign respecting any issue not particularly identified with any National or State political party, such as revision of the Constitution of the United States or of a State; referendums; approval or disapproval of city or municipal statutes or ordinances; and other issues of similar character.

"SEC. 20. Nothing in this act shall be construed as in any way affecting educational, religious, eleemosynary, philanthropic, or cultural institutions, establishments, and agencies, together with the officers and employees thereof.

"SEC. 21. Nothing in this act shall prohibit any official or employee subject to its provisions from becoming a candidate or accepting a nomination for an appointive or elective office or position provided such official or employee shall not use his official authority or influence to secure such nomination or appointment: *And provided further*, That such official or employee shall resign from his office or employment upon receipt of such nomination or appointment.

"SEC. 22. Section 9 (a) of said act of August 2, 1939, is further amended by inserting after the words 'political subjects', in the ninth line of said subdivision (a), the following: 'and candidates.'

"SEC. 23. As used in this act, the term 'State' means any State, Territory, or possession of the United States."

Passed the Senate March 18 (legislative day, March 4), 1940.

Attest:

EDWIN A. HALSEY, *Secretary*.

Expenditures of Selected Federal Agencies, 1933–39

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 3, 1940

Mr. ANGELL. Mr. Speaker, it is conceded that a sound fiscal policy underlies the successful solution of our economic problems, including problem No. 1—unemployment. As a member of the House Conference on Unemployment, seeking a solution of this problem, I have caused to be prepared by the Legislative Service of the Library of Congress a compilation of expenditures of certain selected Federal agencies for the years 1933–39, both inclusive. This statistical information is important in considering these problems. Therefore I am asking permission to include them in an extension of my remarks. I have not been able to secure a detailed breakdown of the expenditures of the War and Navy Departments.

The compilation follows:

Expenditures of selected Federal agencies, 1933–39[1]

Agency	1933	1934	1935	1936	1937	1938	1939	Total
Department of Agriculture	$250,981,139	$630,674,495	$1,192,920,652	$1,048,966,193	$1,251,247,066	$921,591,840	$1,360,478,595	$6,656,859,980
Agricultural Adjustment Administration		289,055,029	711,819,103	532,201,971	169,861,474	57,807,125	308,654,972	2,069,399,674
Commodity Credit Corporation		2,811,950	136,420	96,852,286	24,348	66,966	108,030	100,000,000
Farm Security Administration		2,372,313	5,423,601	138,015,988	209,695,567	183,200,764	210,257,246	748,965,479
Federal Crop Insurance Corporation							9,256,405	9,256,405
Federal Surplus Commodities Corporation[2]				14,590,806	16,097,069	54,202,208	103,696,081	188,586,164
Rural Electrification Administration			16,821	1,402,554	8,911,025	15,192,719	37,767,381	63,290,600
Soil Conservation Service			10,339,590	24,846,927	33,151,321	27,772,748	34,577,152	130,687,738
Farm Credit Administration	103,653,911	369,456,098	154,369,876	[3]121,671,889	9,544,819	[4]4,491,166	[3]2,737,960	607,123,689
Department of Commerce	34,828,642	27,345,215	35,666,545	37,788,857	35,082,504	31,875,538	37,557,789	240,145,090
Department of the Interior	90,764,508	88,570,994	132,171,881	145,073,308	184,970,831	216,780,432	251,238,000	1,109,569,954
Department of Justice	44,125,368	31,735,975	32,810,381	38,624,047	39,623,957	43,249,902	48,668,904	278,838,594
Department of Labor	13,677,842	12,740,415	18,648,151	28,794,489	37,241,891	33,800,650	29,727,470	174,630,908

[1] Includes expenditures under the General Public Works program.

[2] Figures given are for obligations incurred in the given period.

[3] Excess credits, deduct.

[4] Allocations to the National Youth Administration as given in the hearings on the Department of Labor, Federal Security Agency appropriation bill for 1941, p. 565, are: 1936, $35,517,000; 1937, $65,600,000; 1938, $51,200,000; 1939, $75,100,000.

[5] Public Buildings Administration created by Reorganization Plan No. II, consolidating the Public Buildings Branch of the Procurement Division of the Treasury Department with the Division of Building Management of the National Park Service.

[6] Office of the Supervising Architect of the Treasury Department, prior to 1934.

[7] Includes salaries and expenses, public buildings in and outside the District of Columbia.

American Agriculture

EXTENSION OF REMARKS

OF

HON. THOMAS G. BURCH

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 3, 1940

ADDRESS OF HON. A. H. HOPKINS

Mr. BURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Hon. A. H. Hopkins, of Rocky Mount, Va., on April 17, 1940, at the annual meeting of the Franklin County National Farm Loan Association:

Last week I read a speech delivered by one of the candidates for the nomination for President, in which the speaker said, "To save America you must save the American farmer." Nine years ago I made a speech, in which I used this exact phrase. I believed it to be true then; I believe it to be true now; and this is the subject which I wish to discuss today. I shall not discuss this question from a political or partisan viewpoint for many reasons but principally for the reason that I attribute to the Members of Congress of both political parties a high-mindedness and patriotism too exalted to sacrifice the welfare of their country on the altar of political expediency. Some leaders of both parties seem to understand and appreciate the plight of the farmer; others, no doubt, with equally good motives, seem never to have understood the difficulties confronting the farmer or the ways in which agriculture is interrelated with industry.

I believe that the enactment of equitable farm legislation would be greatly expedited if each Senator and each Congressman knew from experience the price of corn and wheat in terms of sweat and labor.

The present program is violently condemned by some and vigorously praised by others. In my opinion, neither is correct. I think it must be admitted by the informed that the benefit payments, the conservation payments, the parity payments, the commodity loans, the subsidation of exports of surpluses, and purchases of surpluses for relief distribution, low in its rates, has not only saved thousands of farmers from being foreclosed off their farms but has greatly benefited the manufacturer, since every extra dollar the farmer earns finds its way back to the treasury of the manufacturer in exchange for needed clothes and machinery.

Those who contend that the present program is so nearly perfect that it cannot be improved on are, I think, equally in error.

Secretary Wallace, in his published statements, has stated that farm income is $2,000,000,000 under parity. The economists state that the prices of agricultural products are now 26 percent below parity.

There seems to be an ever-widening breach between labor and agriculture. Some pseudo statesmen contend that an increase in the price of agricultural products would accentuate the poverty in the cities, since the principal burden would have to be borne by labor who are already on relief and underpaid. This argument is dangerous for the reason that it can be made to sound so plausible

to those who refuse to take a panoramic view of the picture. It is a conviction of mine, a conviction supported by the almost unanimous opinion of the students of political science in our colleges that both groups should work in harmony; that labor and agriculture should be hitched side by side, and not back to back.

Both groups create our Nation's wealth. The interests of both are identical; their goal is the same; that is, to obtain and preserve for themselves that portion of the Nation's wealth sufficient to provide a living and a security for their family. Labor provides the principal market for agricultural products. The farm provides the principal market for the products of labor. As it is, the markets of both are stunted, and the conditions have produced a vicious cycle—poverty and hunger in the cities, poverty and distress in the country. If a system could be devised whereby there could be a fair and equitable exchange, then there would be no further need of those who labor in the cities being ill-fed and the farmers in the country being ill-clothed.

Some economists have prepared statistics to prove that if farm products could be placed on a parity with industry the farmers could buy and pay for a sufficient quantity of goods to provide work for the 10,000,000 unemployed laborers and that our national income would be increased sufficiently to wipe out our national deficit within 8 years. I do not vouch for these figures and this conclusion, but I am convinced that raising the price of farm products would react greatly to the benefit of both the laborer and the manufacturer.

I am convinced that we will have economic recovery when, and only when, legislation has been enacted which will restore a purchasing power to the farmers.

Time does not permit a detailed discussion of the many theories advanced and bills introduced designed to aid the farmers, and I am not bold enough to pretend that I have found a panacea for the Nation's ills. In 1933, after both the Democrats and Republicans in both the Senate and Congress enacted emergency legislation to save the banks, the insurance companies, and the railroads, they passed what is known as the Agricultural Adjustment Act, which reads as follows: "The goal of the Agricultural Adjustment Act is to restore the same relations between prices of agricultural products and prices of other products as existed in the pre-war period of 1910–14."

This act, it seems, came nearer meeting the universal approval of the leaders of both major political parties than any other subsequent legislation or any proposed legislation which has so far been advanced. The rules and regulations seem not only to have met the approval of the leaders of the farm organizations but it is conceded, I think, that the farmers derived greater benefit from the original act than from any of the subsequent acts. Before the enactment of this legislation our national income was forty-two billions. After the enactment of this legislation, and at the time the farm program was declared to be unconstitutional by a divided Court in the Hoosac Mills case, the national income had increased to seventy billions.

The late Governor Loudon, of Illinois, a great Republican statesman and one of the largest landed proprietors of the West, said that this legislation was not perfect, but that it was more nearly perfect than any proposed legislation which had been suggested; and further said that he thought it advisable for the States to put into operation the same plan and regulations which the Supreme Court had declared to be unconstitutional when administered by the National Government.

Many constitutional lawyers said, in view of the decision in the Hoosac Mills case, that no legislation could be enacted whereby agriculture could be placed on a parity with industry without doing violence to the Constitution, as interpreted by a majority of the Court. As to whether this conclusion is sound or not, I shall express no opinion; but I do say if legislation designed to restore to the farmers equality of opportunity cannot be enacted without violating the provisions of the Constitution, then the Constitution should not become a barrier.

For article V provides how amendments may be made. A study of the debates of the Constitutional Convention impels the conclusion that the founding fathers did not attempt to do more than to set forth certain basic principles, with the hope and expectation that future generations would possess the courage and the genius to adapt these principles as a living force, so as to give expression to the national will with respect to the national need.

The Government has been liberal, indeed, in rendering aid to the 10,000,000 unemployed in the cities and the millions of small farmers on the ragged edge of necessity. But no red-blooded American can be happy on a dole, and every able-bodied man yearns for the privilege of regaining the independence of working for himself in private industry, the dignity of providing for himself and family, and the opportunity for self-expression.

The passage from Matthew xxv: 42, "I was hungry, and ye gave me no meat: I was thirsty, and ye gave me no drink," is touching, indeed. But what touches the soul more deeply is the man who says to his Government, "I was strong; I was ambitious; I stood ready to serve my country in times of war and peace; and you gave me not the opportunity to feed my hungry children."

A totalitarian government may be sufficiently powerful and ruthless to survive, though it trample the rights and liberties of its people under its heel of iron. But if a democracy is to survive, it must not be callous and indifferent to the economic and spiritual needs of her people. If a democracy hopes to retain the loyalty and support of her citizens, it must be equitable; it must insure equal justice to all; it must strive to meet the valid objections of its enemies.

Let us not delude ourselves into a sense of false security; let us not, through a process of rationalization, embrace a false philosophy. Our knowledge of human nature and the soul of man warns us that every man with an empty cupboard and every man denied the right to seek his own little spot in the sun is a potential antagonist to the existing order.

We hear a great deal about regimentation. We read speeches and editorials; and, strange to say, we hear many farmers objecting to the rules and regulations of the farm program for the reason that they encroach on our liberties. This attitude on the part of the farmers, I think, has to some extent hindered recovery.

Now, as I have said before, while the records show that the farm program has proven of great benefit to the farmer, the program is not perfect and will never be fair to the farmer until agriculture is placed on a parity with industry. I am not contending that the rules and regulations promulgated by the Department are either necessary or proper; but I do say that, in my opinion, the argument with reference to regimentation and the surrendering of our rights and liberties has been greatly magnified, exaggerated, and overworked.

Liberty is a relative term. No one has ever had complete liberty. We think of the barbarian and cave man as having enjoyed complete liberty; but even with the cave man, the food he had laid up for winter was in danger of being confiscated by a stronger man or a stronger tribe; and under the regulations established by the most primitive tribes, limits were fixed beyond which one could not go. Under any righteous government, one's liberties must end where the rights of others begin.

All farm organizations were founded upon certain rules and regulations—that is, the giving up of certain rights and privileges in exchange for other rights and privileges—and those organizations have failed, not because the rules were inherently bad, but for the reason that the farmers were so isolated that enforcement of these rules became impractical. Businesses of almost every nature during the past half-century have voluntarily adopted certain rules more drastic than the farm regulations, which they believed to be for their mutual interest.

All through life we are giving up something for something else which we believe to be of greater value. The man who values respect and esteem of his neighbors must give up trickery, licentiousness, and inebriety.

The farmers who gained for us our independence gave up their comfortable cabins beyond the mountains, the association of their families, and joined the Continental Army; but if at Valley Forge they experienced the tortures of hell, when at Yorktown they got a glimpse of heaven. Their courage and their deeds had won for them the grateful reverence of posterity. Who can say but that the consciousness, the joy of having gained for America its independence did not overbalance and outweigh the comforts which they had given up? It seems to me that the Government not only has the right but the duty to define that limit beyond which our actions interfere with the rights and liberties of others.

A law is not to be condemned merely because it affects someone's rights or liberties. People's rights must necessarily be contracted or expanded so as to meet the exigencies of our changing civilization. The truth is most legislative acts affect in some way someone's existing rights. When our forefathers went west to battle with the wild beast and savage Indian, they were permitted to drive their oxen in the middle or on the left side of the road. Now the law has curtailed our rights, and we are required to drive on the right half of the road. But who could contend that this law has not established rights superior to the rights relinquished? Therefore, it seems to be that a law may be avowed as sound as the rights obtained overbalance the rights surrendered.

One of the major obstacles that stand in the way of industrial recovery is the refusal of so many industrial leaders to accept the fact as a fact that there has been a change in our national consciousness; that the cataclysm of 1932 marked the end of an era, the end of what the economists term "laissez faire" and others term "ruthless individualism." For whether this country be controlled by the Democratic Party or the Republican Party; whether some of us believe it wise or unwise, the laws, or the lack of laws, which made the manipulations of Insull and others possible, will never again be tolerated.

The moving finger writes
And, having writ, moves on;
Nor all thy piety and wit
Can lure it back again
To cancel half a line;
Nor all thy tears wash out
A word of it.

We frequently hear speeches and read editorials to the effect that special legislation will in some way destroy our ideals and undermine our Government. It was through special legislation that a tax was levied on agriculture for the benefit of industry that gave to industry its vitality, and this is the meat on which thy Caesar hath fed that he has grown so great. A Government which has levied a tax by way of tariff on agriculture for 100 years will not be desecrated by enveloping within its benevolent folds the farmer in time of adversity.

It seems both trite and hackneyed to say that agriculture has always been the most important industry of the American people, and that our farmers have been since the beginning and are now the bulwark of American democracy.

If you read the CONGRESSIONAL RECORD or Who's Who in America and tabulate the names of those who were reared on the farm I think you will be persuaded that what Cato said of agriculture is true of America today: "Agriculture produces the bravest men, the most valiant soldiers, and a class of citizens least given of all to evil designs." It is no mere accident that today five of the leading candidates for the Presidency were born and reared on a farm. There is something in the soil, something about living close to nature, that in some mysterious way ennobles the soul which the arts of language cannot describe.

"Nature and Song and God; thrice blessed is he who dwells
Where God in these works out His wondrous miracles."

The courage and loyalty to the farmers of America constitute an asset to this Government which is not surpassed by the material acquisitions of the industrial leaders. They have carried their burdens both in peace and in war; this record—a record seamed with fire and sealed with blood—entitled them not to special favors but to equality of opportunity. They would not deprecate their manhood by asking more; a government should not stultify itself by granting less. If you would save the Government, you must save the people who compose that Government. If the people are to be saved, they not only must be fed, but that vital spark which differentiates man from beast must not be trodden out. We must ever bear in mind that the strength of a nation is not measured by gold or material wealth but by the moral courage that breathes in the spirit of her citizens.

When we consider our material acquisitions, our scientific achievements, our contributions in the field of literature and in the field of statesmanship, our esthetic and spiritual values, and compare these with those of the other nations of the world, it seems to me that, even with all of our trouble, we have more to be loyal to, more to be thankful for, than any other people on this planet. We have traveled a long way since the stormy days of 1932, but we have not passed the crisis. Our democracy is still challenged as it has never been challenged before.

If the ideals and achievements of the past are to be preserved for posterity, if we are to leave the torch of liberty burning to guide the paths of those who are to follow, we who now occupy the stage must, uninfluenced by prejudice or political expediency, exert all of our physical energy and spiritual resources to coordinate and harmonize the divergent interests of this country to the mutual advantage of all.

When I was in college I read of Cato, the Roman statesman, who, believing that the future of Rome depended upon the destruction of Carthage, would end each speech, regardless of place or subject, with the phrase, "Carthago delinda est"—"Carthage must be destroyed." Believing as I do that the welfare of America, that the perpetuation of our liberties and our democracy depends upon the restoration of the purchasing power to the farmer, I would have every speaker proclaim from every platform, until its truth had burned into the consciousness of the American people, "Disparity must be destroyed."

Proposed Sugar Legislation

EXTENSION OF REMARKS
OF
HON. SAMUEL W. KING
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Friday, May 3, 1940

Mr. KING. Mr. Speaker, at this time I wish to discuss the situation with regard to sugar legislation, soon to be before the House.

When the quota system was first inaugurated by the Jones-Costigan Act as a substitute for the protective tariff to stabilize the American sugar market, Hawaii was allotted a quota that represented a substantial reduction from its established production. Furthermore, the seaboard refiners capitalized the distress of the domestic sugar industry to insert in the Jones-Costigan Act an entirely extraneous provision which limited the processing of sugar in Hawaii to the amount then being refined—about 3 percent of its production.

Had the tariff been continued as sufficient for the protection of the sugar industry, no restrictions on either the production or the refining of sugar would have been required. Domestic sugar producers would have competed among themselves for the American market within the protective wall provided by the tariff as the means of keeping out foreign sugars.

But the industry itself apparently preferred the quota system, with its excise tax and conditional compliance payments. To secure the support of the politically powerful eastern refining interests—historic enemies of the domestic sugar industry—this purely agricultural act carried as a rider an industrial provision denying to Hawaii and Puerto Rico the right to process their own products. The possibility of some decrease of employment in eastern refineries was used as a smoke screen behind which the refiners fought to retain their monopoly.

The Sugar Act of 1937 corrected the method of fixing Hawaii's quota, but further reduced the amount, mainly to give Louisiana and Florida a substantial increase, and retained the refining restrictions of the Jones-Costigan Act. The discussion in Congress over this feature, wherein the refiners again succeeded in having the domestic sugar industry pull their chestnuts out of the fire, is very illuminating. The distinction made between different parts of the United States was so indefensible that it was finally justified only as a necessary temporary expedient—to expire 10 months before the act itself. On that basis Congress accepted the provision, with an implicit assurance that it would not be reenacted.

The following quotations from the CONGRESSIONAL RECORD are pertinent to this point:

[CONGRESSIONAL RECORD of August 5, 1937]

Page 8307:

Mr. HOPE. Mr. Chairman, will the gentleman yield?
Mr. CRAWFORD. I yield to the gentleman from Kansas.
Mr. HOPE. Is not the reason the refiners are down here in agreement with the producers of sugar that they want to hitchhike on the producers' bill? They are trying to get a free ride out of a bill which was originally designed to protect the producer.
Mr. CRAWFORD. The answer to the gentleman's question is that you have in this bill a refined-sugar question, not a question that has to do with imported raw sugars.

Page 8315:

Mr. SCRUGHAM. Mr. Chairman, we should not enact any legislation which deals unjustly with any part of our country. If we leave in this bill the provision which prohibits Hawaii and Puerto Rico from refining the sugar they grow, we will have established as a permanent part of our legislative policy the principle that we can by law favor one part of our country at the expense of another.

I know a similar provision was contained in the Jones-Costigan Act. But it was put there largely as the result of the political influence of the eastern refiners. That was emergency legislation. This statute is in the nature of permanent legislation, and we should not commit this grave injustice to our Territories. * * *

These questions should be handled solely on their own merits. Nothing justifies treating any part of the country as a foreign nation and discriminating against it for another part. We know it is cheaper to manufacture cotton in Alabama than it is in New England, but no one would suggest that we prohibit Alabama by law from spinning cotton that she grows, in order that the New England manufacturers could manufacture it. The Secretary of the Interior, who has charge of the Territories, has taken a very clear and firm stand against this discrimination. I support his views heartily and believe it would be unjust and un-American to prevent sugar growers in the Territories from manufacturing in the Territories.

Page 8318:

Mr. WADSWORTH. Mr. Chairman, will the gentleman yield?
Mr. MCCORMACK. I am pleased to yield to the gentleman from New York.
Mr. WADSWORTH. I understood the gentleman to state that Hawaii is a component part of the United States, but nevertheless continental United States must look after itself, or words to that effect.
Mr. MCCORMACK. No; not look after itself. I said there are certain times when we must be practical and apply the rule of practical justice to the circumstances which confront us.
Mr. WADSWORTH. Am I stretching the gentleman's theory a little too far if I suggest that upon his theory the gentleman might be called upon some day to support a measure which would place a quota upon the production of cotton goods in South Carolina?
Mr. MCCORMACK. I do not see the relationship of the gentleman's question to the matter under consideration today. The gentleman is entering the realm of pure speculation, which is a realm the gentleman from New York very, very seldom enters.
Mr. WADSWORTH. It is a very practical question I have posed to the gentleman.
Mr. MCCORMACK. I do not see the relationship. The question is academic and speculative. I respect the fact the gentleman believes the question is practical if he asks it, but on this occasion I disagree with the gentleman.

Page 8320:

Mr. HOPE. I yield to the gentleman from Texas.
Mr. MANSFIELD. Mr. Chairman, insofar as tariff protection is concerned, is it not a fact that Hawaii and Puerto Rico share in tariff benefits, if any, to the same extent as the continental producer?

Mr. HOPE. They do. They share in these tariff benefits because they are a part of the United States, and for that reason they are entitled to have the same consideration in this bill to which every other part of the United States is entitled. [Applause.]

Page 8327:

Mr. MAVERICK. Mr. Chairman, I have heard a great deal this afternoon about the American farmer and the American producer. The truth of the matter is that, according to the Constitution of the United States, the man who produces sugar in Hawaii and Puerto Rico is an American producer, because those islands are each an integral part of the United States of America.

Hawaii and Puerto Rico, my friends—and we all agree to this—are under the Constitution of the United States. Their position is precisely that of the State of Texas. The State of Texas was annexed by the United States of America and became a part of the Nation; so were Puerto Rico and Hawaii.

What does this bill do in reference to section 207 (a) and (b)? It sets up a trade barrier against certain portions of the United States of America—Hawaii and Puerto Rico.

Page 8338:

Mr. DOCKWEILER. Mr. Chairman, I have spent the whole afternoon listening to the debate on the bill. I heard bandied about the word "Americanism this" and "Americanism that." I do not think I have to remind the East that the United States Government does not maintain a consular office in the Hawaiian Islands. It is not a foreign country. It is part and parcel of the United States just as much as Oklahoma Territory was before it became a State or just as much as New Mexico was before it became a State.

* * * * * * *

Mr. Chairman, there is an attempt in this bill to treat the Hawaiian Islands as if they were a colony. We operate under a constitution, as is known by all, which is a constricted document. We cannot hope under a constitutional form of government to discriminate against our possessions.

[CONGRESSIONAL RECORD of August 6, 1937]

Page 8433:

Mr. JONES. * * * Let me say that the position of the administration is this, that it is a matter of principle; that it will not affect much, during the life of this contract, two or two and a half years, the amount of sugar that will be brought in, but they are opposed to the discrimination against any group of American citizens living under the American flag. That is their position, and I want to state that the President has made it clear he is all for the beet growers and the cane growers, and wants them to have legislation. I think that most of you will realize that the great major objectives of this bill will remain the same, insofar as the American producers are concerned, whether these amendments are adopted or not. Then, too, even if my amendment is adopted, industry and labor will have the advantage of the other provision of the bill.

Page 8439:

Mr. HOPE. Mr. Chairman, let us keep clearly in mind the real issue that is involved in this discussion. The issue is not protection, because the findings of the Tariff Commission under two administrations have been to the effect that there is no difference in the cost of production for refining in the Tropics and in the continental United States. The issue is not labor, because in all these refineries in the United States less than 14,000 people are employed, and they receive an annual wage averaging about $1,005. If all the refined sugar which might be permitted to come into this country under this amendment came in—and it will not nearly all come in, I can assure the members of this Committee of that—it could not possibly displace more than one-third of these workers because it would be less than one-third of what these refineries are refining at this time. This is the extent of the labor issue.

The issue involved is not the issue of protection for the domestic producer of cane and beets, because, as I pointed out yesterday, the refiners who are opposing this amendment have for 40 years done everything they could to destroy the domestic beet-producing industry in this country. [Applause.] I cannot understand why those who are speaking for the domestic beet-sugar industry should allow themselves to be made the tools of the refiners, as is the case today.

Mr. CUMMINGS. Mr. Chairman, will the gentleman yield?

Mr. HOPE. Very briefly, for a question.

Mr. CUMMINGS. The gentleman asked a question; I wish to answer it. We are supporting it because they have repented and want to come into the fold. They should be allowed to do so.

Mr. HOPE. I am suspicious of deathbed repentances. All these refiners are doing is hitchhiking on a bill for the relief of the domestic producing industry.

Page 8448:

Mr. HARLAN. * * * Some gentleman said a moment ago that this is fair, that we are treating Hawaii and Puerto Rico the same, or better than continental United States. Mr. Chairman, let me tell you when we will be fair. When this Congress says to Ohio, when it says to Georgia, when it says to Texas that the manufactures they have in those States shall stay as they are today now, and henceforth forevermore, that they shall not expand, then such a bill as this will be fair. If in this same bill we should say to New York, or Ohio, or Michigan, where there are refineries, "You cannot expand your refineries, you have to take the same as Hawaii, take what you get," then it will be fair.

Page 8448:

Mr. MAVERICK. * * * the most pernicious lobby we have ever had in the United States is the sugar lobby. It has a long trail of indictments, corruption, and evil practices. The only benefit that this bill as it stands is to the refiners, and I say that if we want to do the thing that is just and fair and constitutional, we ought to adopt the Jones amendment, striking out the restrictions against Hawaii and Puerto Rico.

But suppose Hawaii does refine sugar, how are you going to stop it? It would be the same thing as Texas shipping refined oil or North Carolina shipping textiles, both in their own country. In other words, if we adopt the special restrictions, we are adopting a policy of making colonies out of a part of our own country. Certainly it would be an evil precedent.

Oh, they talk about refineries, and that it means lower wages for 14,000 workers, but let us think about legislating for 127,000,000 Americans instead. So I say to you, for the sake of honestly following our Constitution and doing what is plain right, let us adopt the Jones amendment. [Applause.]

Page 8458:

Mr. PETTENGILL. Mr. Chairman, it is entirely clear to me that President Roosevelt is right in this matter. The parts of the bill sought to be stricken out by the Jones amendment, which I shall support, attempt, by statute, to deny to an American citizen access to the American market. This is a violation of sound constitutional principle. It puts in reverse the historical development of this country for 150 years. It creates a precedent which will be seized upon in later years by those interested in commodities other than sugar. Those supporting the bill in its present form in behalf of sugar today will in the future be the victims of the precedent which they are creating.

It is probable that there was no single influence which had greater weight in 1787 toward causing our fathers to scrap the Articles of Confederation and form the Constitution of the United States than the tariff walls between the Colonies. The Court's opinion in Gibbons against Ogden was written by men who in their own lifetimes had experience with those conditions. In that case one may find this language: "If there was any one object riding over every other in the adoption of the Constitution, it was to keep the commercial intercourse among the States free from all invidious and partial restraints."

* * * It should be recognized that we are introducing a new principle in our commercial life—the principle of industrial quotas; the principle of denying to certain producers access to the American market which is granted to other producers. It is a denial of equal privilege and the equal protection of our laws. It is sectionalism, pure and simple, as the gentleman from New York [Mr. Wadsworth], the gentleman from Texas [Mr. Maverick], and the gentleman from Ohio [Mr. Harlan], and others have stated.

It may be a debatable question whether Hawaii or Puerto Rico should ever have come under the American flag. Nevertheless, they are here, and they are here by our invitation. We expected to gain certain advantages by reason of bringing them under the American flag and we must take the responsibilities that go with the advantages.

But however true this may be with reference to business with foreign nations, surely we cannot by statute discriminate against some of our own citizens in favor of others.

I am going to support President Roosevelt in this matter. I think he is absolutely right. We will rue the day we start a precedent in this country of denying any part of the American market to any American producer, wherever he lives under the Stars and Stripes. [Applause.]

Page 8463:

Mr. TOLAN. Mr. Chairman, if our Territories have cheaper labor than the Atlantic coast, that is no reason why they should be deprived of their right to manufacture their agricultural products. The wage and hour law will apply to sugar refining in Hawaii, and, if there is any reason why wages should be raised or hours lessened in Hawaii, the Federal Government will be able to do it. The labor question is a false issue and has no place in the consideration of this legislation.

It is interesting to speculate as to the amount that Japan, for instance, would pay if it could own the Hawaiian Islands. And yet those islands, after a century as an independent sovereignty, voluntarily elected to become part of our country under our solemn assurance that it would become an integral part of our Nation, and as such is entitled to fair and equal treatment.

Under this assurance the Republic of Hawaii turned over to the United States all its properties, the money in its treasury, its forts and public buildings, and more than a million acres of public lands. We not only did not have to pay for the Territory but we got the money in the treasury and all public properties. In addition, Hawaii has paid into the United States Treasury in taxes $150,000,000 more than Congress has expended upon it. We received the islands as a voluntary gift and have made a profit of $150,000,000 out of them.

Mr. Chairman, not only would it be a disastrous national policy for us to discriminate against Hawaii but I earnestly say that it

would be a gross breach of faith with her children—a violation of the trust under which she became part of our Nation. [Applause.]

[CONGRESSIONAL RECORD, August 12, 1937]

Page 8766:

Senator HARRISON. Mr. President, I ask unanimous consent to have printed in the RECORD a letter received last evening from the President of the United States with reference to the proposed sugar legislation. The letter was read to the Finance Committee this morning, and the committee took action after the letter was presented to it. However, I think the views of the President ought to be placed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
Washington, August 11, 1937.

Hon. PAT HARRISON,
United States Senate.

MY DEAR PAT: The amendment to H. R. 7667 adopted yesterday by the Senate Finance Committee has just been brought to my attention.

I am delighted to note that the committee recognizes that our Territories and island possessions are integral parts of the United States and cannot be discriminated against, and that the restrictions on refining in those Territories contained in H. R. 7667 constitute such a discrimination.

I regret that an examination of the committee amendment shows that it not only does not eliminate the discrimination but introduces a new and highly objectionable feature. The discrimination contained in H. R. 7667 is that sugar producers in Hawaii, Puerto Rico, and the Virgin Islands are prohibited from refining there the sugar which they are permitted to produce under the quota, while there is no similar prohibition on the other areas in the United States. The amendment, which places a refining quota on continental United States at a figure far in excess of the largest quantity of sugar grown there, merely perpetuates this discrimination.

The amendment proposes to limit by law the quantity of sugar that may be refined in various geographical parts of the United States. This introduces a principle of geographical limitations on manufacturing in our country which has no economic or social justification in this instance and would constitute a dangerous precedent.

Agricultural legislation, so desired by our farmers, should not be further delayed by the insertion in an otherwise acceptable agricultural bill of manufacturing restrictions. Their elimination would serve the best interests of our agricultural producers, who desire legislation at this session. If interested parties think there should be manufacturing restrictions on sugar refining, that can be embodied in a separate bill and be considered separately.

FRANKLIN D. ROOSEVELT.

[CONGRESSIONAL RECORD, August 19, 1937]

Page 9340:

Senator HARRISON. * * * The other amendment, and the most important one, was that which dealt with quotas on refined sugar from Puerto Rico and Hawaii. It will be recalled that in section 207 the House bill permitted about 29,000 tons of refined sugar to come in annually from Hawaii and permitted about 126,000 tons to come in annually from Puerto Rico. The Senate committee, as Senators will recall, in order to remove the charge that we were discriminating in favor of the American refiner as against the Puerto Rican or the Hawaiian, struck out all of section 207 of the House bill with reference to the quota or limitation on refined sugar from Puerto Rico and Hawaii and inserted a new section. We did not change the amount of refined sugar that might come in from Puerto Rico or Hawaii in the House bill, but we did say that we would freeze that limitation on the amount that might come in from those two islands, and that was at the height of production of refined sugar in Puerto Rico and Hawaii. They had never produced more refined sugar in those islands than the amount carried in the House bill and also carried in the Senate bill. We arrived at the figures of what the highest production of refined sugar had been in continental United States, and we placed that amount in the Senate amendment.

So in the conference there was quite a discussion as to limiting the amount of refined sugar coming in from Puerto Rico and Hawaii. Various suggestions were made—1 year, 1½ years, and so on. We finally agreed in the conference that the section permitting refined sugar to come in from Puerto Rico and Hawaii could continue until March 1, 1940. * * *

Page 9464:

Mr. JONES. * * * Most of you, I am sure, are familiar with the situation that arose; that is, the question of whether or not the bill should place any restrictions upon refined sugar coming in from Hawaii and Puerto Rico, in light of the fact that they are both under the American flag. It was contended that there was a matter of principle involved in that question. The conference group agreed to accept the House provision with a limitation. That is, sections (a) and (b) of section 207 limited the amount of refined sugar that might be brought in during the life of the bill in any one year to the highest amount that was brought in from any of those islands in any year prior to the enactment of the original act. The Senate struck out the entire section, including those provisions. The conference group agreed to take the House provisions with this qualification: That these limitations should apply until March 1, 1940, after which all restrictions are taken off of refined sugar from Hawaii and Puerto Rico during the remaining time of the operation of the bill, which is until December 31, 1940. In other words, for the last 10 months of operation of the bill, as agreed in conference, there will be no limitation on the amount of the refined sugar that may be brought in from Hawaii and Puerto Rico within their respective total quotas. We had a very difficult subject to work out, and did the best we could. I believe that is all I care to submit on the conference report, unless there are some questions.

[CONGRESSIONAL RECORD, August 20, 1937]

Page 9468:

Mr. HOPE. * * * I am strongly of the opinion that if we do not adopt this conference report we are going to end the session of Congress without any sugar legislation.

Mr. LANZETTA. Mr. Speaker, will the gentleman yield?

Mr. HOPE. Yes.

Mr. LANZETTA. In view of the President's statement, does not the gentleman think this bill will be vetoed?

Mr. HOPE. I have no opinion as to what may be in the President's mind with regard to this legislation. This bill meets at least in part the objections the President had voiced in connection with sugar legislation.

Mr. LANZETTA. Does not the gentleman think that practically the same discrimination which we complained of in the House bill is now in the present bill that the conferees have agreed to?

Mr. HOPE. No. I think there is recognition in this bill of the principle for which the gentleman has been contending. It is true that it is deferred, but still it is a recognition of the principle. The gentleman knows my position in the matter. He knows that I am in accord with his views on that particular question, and I say to him that I think this is the best possible bill that can be gotten at this time. I further think that this legislation is a matter of such great importance to the sugar industry in Puerto Rico, in Hawaii, and continental United States that all of us should support this conference report.

Despite the strong opposition to this barrier on interstate commerce, to this restraint on the economic development of America's Territories, both in the Congress and the administration, the Sugar Act of 1937 was finally approved by both Houses of Congress with the refining provision retained. Perhaps the implicit assurances referred to, that the provision would be dropped in future sugar legislation, was partly responsible for its passage. At any rate, when this measure came before the President, he signed it on very explicit assurances that the spokesmen for the sugar industry would not again combine with an agricultural bill any provision of this kind. I quote his letter in full herewith as pertinent to the present situation:

STATEMENT ACCOMPANYING H. R. 7667

The problem before me raised by the enactment of H. R. 7667—the so-called sugar bill—is that the bill, intended primarily to benefit the many thousands of farmers who produce beets and sugarcane and those who, at the place of production, refine the raw material into sugar, has been seriously impaired in its value by the inclusion of a provision intended to legalize a virtual monopoly in the hands of a small group of seaboard refiners.

I am primarily concerned with the interests of the domestic beet and cane growers and of the cane growers in the islands which are under the American flag and the cane growers of some of our close neighbors, such as Cuba.

So far as all of these growers, domestic and insular, are concerned, the system of quotas provided in the bill is, on the whole, equitable. From this, the most important objective of the bill, I have no reason to disagree.

The sole difficulty relates to a little group of seaboard refiners who, unfortunately, for many years were able to join forces with domestic producers in the maintenance of a continuing and powerful lobby in the National Capitol and elsewhere. This lobby has cost the stockholders of these refining companies millions of dollars and it has been wholly unnecessary so far as protection of the domestic beet and cane producers has been concerned.

It is with great regret, therefore, that I find that the Congress has accorded a status quo continuation of this seaboard refinery monopoly for 2½ years to come. The bill in this respect gives only one ray of hope—for it provides that this refining monopoly shall terminate on March 1, 1940, whereas the beet and cane producers' quota is extended to December 31, 1940.

Since the passage of the bill I have been given the following assurances by Senators representing the great majority of continental sugar producers:

1. That their primary interest in sugar legislation is to afford protection to the growers of sugar beets and sugarcane in all domestic sugar-producing areas of the United States, and when the Sugar Act of 1937 comes up for renewal they will endeavor to deal with the question of refined-sugar quotas in a separate measure.

2. That they recognize the fact that Hawaii and Puerto Rico and the Virgin Islands are integral parts of the United States and should not be discriminated against.

3. That when the refined-sugar quotas for Hawaii, Puerto Rico, and the Virgin Islands are terminated, they will endeavor to enact

legislation providing that minimum labor standards in sugar refineries in these offshore areas shall not be lower than the minimum standards in refineries on the mainland.

4. That in future legislation they will see to it that the American housewife is protected adequately.

I have received similar assurances from responsible leaders of the House of Representatives. In view of these assurances, therefore, I am approving the bill with what amounts to a gentlemen's agreement that the unholy alliance between the cane and beet growers on the one hand and the seaboard refining monopoly on the other has been terminated by the growers. That means that hereafter the refiner's lobby should expect no help from the domestic growers. That is at least a definite step in the right direction.

I hope that the next session of the Congress will consider repealing or shortening the clause which continues the refining monopoly to March 1, 1940; but even if Congress does not then act, the end of the monopoly is definitely in sight, and I sincerely trust that nothing will be done by the domestic growers of beets and cane to perpetuate it. The monopoly costs the American housewife millions of dollars every year, and I am just as concerned for her as I am for the farmers themselves.

FRANKLIN D. ROOSEVELT.

THE WHITE HOUSE, *September 1, 1937.*

The restrictions on the processing of sugar in Hawaii and Puerto Rico expired on March 1 last. The Sugar Act of 1937 itself expires at the end of this year. Therefore, with the end of the present session of Congress looming closer every day, there is some urgency for proposing and considering new sugar legislation on the part of those who desire the retention of the quota system as the best means for their protection.

But no bill so far introduced accepts the necessity for adopting a national rather than a sectional attitude toward this complex problem. The measures before the House Committee on Agriculture each treat the problem solely from the point of view of their proponents, without regard to other units of the industry. Those who desire additional quotas for the domestic industry would obtain such an increase in part at the expense of Hawaii, whose industry has already suffered two severe cuts. Others would elicit support for a continuing resolution by reenacting restrictions on refining in Hawaii and Puerto Rico as a sop to the power and influence of the refiners. I cannot hope to express my opposition to these proposals better than in the language used by the President in his letter to the chairman of the Committee on Agriculture, which I quote herewith:

THE WHITE HOUSE,
Washington, April 11, 1940.

DEAR MR. CHAIRMAN: Reference is made to your recent letters to the Departments of State, Interior, and Agriculture, requesting comments on the various bills with respect to sugar which were introduced in the Seventy-sixth Congress and are now pending before the House Committee on Agriculture. In accordance with your request, and since your committee is now holding public hearings on these measures, it is believed that you may wish to have at this time a summary of our views on the basic issues of public policy which are involved in this group of bills.

In reviewing the present sugar situation I have been gratified to note the great improvement in conditions that has taken place since the adoption of the sugar program 6 years ago. Domestic sugar producers are fortunately receiving incomes at approximately the parity level, and they are enjoying a large volume of production. The losses of sugar processors in the years preceding the program have been converted into profits; child labor has been greatly reduced; wages and working conditions for labor have been improved; and there has been brought about an important and greatly needed recovery in the market for our surplus products in the foreign countries from which sugar is imported into the United States. Furthermore, the world price of sugar has increased substantially.

I also find that under the existing provisions of the Sugar Act of 1937 domestic sugar producers and processors will receive price protection through the quota system for the full calendar year of 1940 and that domestic sugar-beet and sugarcane growers will receive benefit payments on their 1940 crops even though the marketings of the sugar may extend well over into 1941. The seaboard cane-sugar refiners are protected for an indefinite period against competition of Philippine refiners under terms of the Philippine Independence Act, and they will continue to enjoy quota protection from the competition of Cuban refiners for the full calendar year of 1940. The tax on sugar will remain in effect until July 1, 1941. Consequently, it seems clear that no sugar legislation is necessarily required at this session of Congress, although it might be advisable to extend the life of the Sugar Act of 1937 for an additional period through a joint resolution of the Congress.

In considering the questions raised by these bills, I find myself again confronted with the fact that the basic problem of good government inherent in sugar legislation is to balance, practically and fairly, the directly conflicting interests of the various groups of American citizens concerned; the producers of sugar and the producers of export commodities, the farmers, and the processors, the employers of labor, and the industry as a whole and consumers and taxpayers. These requirements of the general welfare indicate that at least three fundamental aspects of the major bills on sugar now pending before the House Committee on Agriculture should be given special consideration.

In the first place, several of the proposals would unavoidably bring about an impairment of the export market for surplus American agricultural and industrial products, and they would do so at a time when increased export outlets are so greatly needed. It is to be regretted that each increased acre of domestic sugar-beet and sugarcane production inevitably results in a contraction of our export markets in an amount equal to the value of the product of several acres of our principal agricultural crops. A decrease in sugar imports would, therefore, require an unnecessary and painful readjustment and contraction in our production of export commodities. It would also injure the economic status of other American republics to which we must look in increasing degree for enlarged outlets for the products of our own labor, land, and factories. It would strike a serious blow, particularly at the foreign marketing of such important surplus farm commodities of the United States as corn-hog products, rice, wheat, and cotton.

In the second place, some of these bills would discard the established basis of distribution of quotas among the various sugar-producing areas that was carefully developed by the Congress after considerable labor. In its report to the Congress in 1937 your committee stated that the quotas had been arrived at "after careful consideration of the history of production in each area and its present and future capacity to market." I believe that we all appreciate readily the natural desire of each producing area to enlarge its share of the market, but it would be most difficult to justify an abandonment of the existing distribution of quotas in favor of a new and arbitrary basis of allotments. It is also clear that a reshuffling of domestic quotas so as to discriminate against producers in the domestic insular areas would, under the special circumstances, hardly be a conscionable procedure. The people of the Territory of Hawaii and the possessions of Puerto Rico and the Virgin Islands are American citizens who compose some of these minority groups in our population, with local governments that lack the protection of statehood.

If this circumstance were not given adequate consideration, it would be possible to destroy by legislation the livelihood of our citizens in the insular parts of the United States through the enactment of discriminatory prohibitions against their products; and they would possess no legal power to take countermeasures in self-defense. Such a course of action, as I have pointed out on a previous occasion, would be tantamount to an imperialistic classification of citizens and a tyrannical abuse of minority rights that is utterly contrary to the American concept of fairness and democracy. Among the cases in point is the proposal to reinstate the former discrimination against the refining of sugar in the insular parts of the United States.

In the third place, the bills submitted to your committee include a proposal that would sacrifice the protection afforded consumers under existing legislation and substitute a sugar-price standard requiring a reduction in total quota supplies to consumers to a point that would enhance sugar prices beyond the level required to give a majority of producers full parity returns. One of the principal objectives of the sugar program is to assure producers and others fair and reasonable incomes; but after that has been done, further increases in price would place an excessive burden of public protection for the sugar industry as a whole on agriculture, industry, consumers, and taxpayers.

Under the existing circumstances, with sugar producers enjoying approximately a parity level of income and a large volume of production, with labor being benefited by improved wages and working conditions, with sugar processors making substantial profits, and with a gratifying increase in our exports to foreign sugar-producing countries, I am confident that the House Committee on Agriculture will not recommend any bill that would impair the foreign outlets for our surplus products, run counter to the good-neighbor policy, discriminate among various groups of domestic producers and processors, or increase the burden on our consumers and taxpayers.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

HON. MARVIN JONES,
Chairman, Committee on Agriculture, House of Representatives, Washington, D. C.

In view of the above statement, should the domestic sugar industry incur the risk of a veto and consequent lapse of existing legislation with no substitute except a moderate tariff, merely to preserve a restriction which every unprejudiced judge has condemned as unfair and un-American? Or should not the industry accept as its guide the principles of equity and justice so ably championed by the President, while at the same time preserve itself against possible disaster by supporting a simple continuing resolution with no complicating manufacturing restraints?

Hawaii has consistently cooperated with other units of the domestic sugar industry. It asks simply for justice, for equal treatment. I must oppose as well as I can the new un-American policy of making a distinction between "continental" and

"noncontinental United States" in evidence in some of the bills introduced. There is only one United States of America, of which Hawaii as an incorporated Territory is an integral part. Its people are American citizens, just as are the people of the mainland. All the burdens, responsibilities, and obligations of that citizenship rest on them as they do on your constituents.

As a practical matter the argument made in favor of limiting the refining of sugar in Hawaii as a protection to labor in eastern seaboard cities simply has no weight. For many years Hawaii sent no raw sugar to eastern refineries. More recently an annual average of about 300,000 tons of Hawaiian raw sugar has been distributed between several eastern refiners, no one of whom received a very large quantity. The loss of this supply would cause practically no decrease in the labor requirements of these refiners. Within the past 2 years the Hawaiian sugar industry, as a private arrangement, has contracted to supply one group of eastern refiners the amount heretofore distributed among many individual refiners. There can therefore be no justification for the effort to raise the labor issue as an argument to defend restrictions on refining in Hawaii, admittedly not justifiable as a matter of principle.

Legislation that would deny to Hawaii the same rights and privileges enjoyed by other Americans is obviously unfair and probably illegal. It could not possibly be considered if Hawaii were situated on the mainland. Then is its justification based on geography? Is it to be contended that there is an inherent right to preferential treatment enjoyed by American citizens on the mainland not shared with other American citizens?

This is a colonial policy—an imperial policy foreign to our American democracy, indefensible unless might makes right. It makes empty our boast of "equal justice under law." It substitutes two kinds of justice, one for "continentals" and one for "noncontinentals."

I believe too strongly in the sense of fair play of the American people, and in the sense of justice of their elected representatives, to think for a minute that either will relegate any group of American citizens to the status of "colonials" if the circumstances are clearly understood. I urge that sugar legislation, as well as all other legislation, be drafted in accordance with the fundamental principles of our democracy, of extending to all our people equal rights and opportunities.

Great Strides Made in Organizing Southern Workingman

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 3, 1940

ADDRESS BY RAY C. KIRKPATRICK, ASSISTANT ON LABOR RELATIONS, PUBLIC WORKS ADMINISTRATION

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Ray C. Kirkpatrick, assistant on labor relations, Public Works Administration, Federal Works Agency, before the Louisiana State Federation of Labor convention held at Shreveport, La., April 3, 1940:

I appreciate the opportunity of meeting with labor here in the deep South as the assistant on labor relations for the Public Works Administration. Mr. John M. Carmody, Administrator of the Federal Works Agency, and Col. E. W. Clark, Acting Commissioner of the Public Works Administration, extend to you their greetings and best wishes for the success of this convention.

It is a source of great satisfaction to me, a satisfaction I know is shared by you, to see the strides that have been taken in organizing the southern workingman as evidenced by the enthusiasm and progress demonstrated in this splendid convention. It is apparent that many of the obstacles that have presented themselves have been overcome by the hard work and splendid spirit of those engaged in accomplishing this organization.

I congratulate you on these efforts, for such organization, together with its attendant development, is highly desirable. Its benefits extend not only to you who achieved increased wages, shorter hours, and better working conditions; but also, far beyond you, to the community, State, and Nation. This organization of labor indicates that a great class, once lacking in means of presenting appropriately its needs and wants before the public, has now found an instrument through which it can exert its proper influence in society. Such organizing is an indication that our democracy has become more democratic, and that the public voice is now more coherent, as it expresses more comprehensively the aims and wishes of the people. The principle of unionism, in its broad sense, indicates that a great class of our society has banded together for mutual development. In the improving of this social class, a class that has been for too long unfavored, and to some degree oppressed, the social structure as a whole is stimulated and improved.

Labor spent centuries in securing recognition of this principle. Unionism has, until very recently, been automatically associated, in the public mind, with such terms as conspiracy, strikes, abuse, and violence. Few had realized or appreciated the true purpose of the movement. As a result, little recognition has until recently been given the labor cause in our legislative halls. In fact, it was not until 1932 that we obtained national leaders who were fully aware of the service organized labor could, and must, provide the Nation in assisting to adjust the many problems now resulting from our comp'ex society. In consequence of this new and sincere appreciation, however, there has been enacted more legislation favorable to labor since 1932 than in all the previous history of our Government.

You can all recall, I am sure, the national difficulties of this period. We were facing one of our great national crises. The story may be briefly told by reviewing a few statistics presented by the American Federation of Labor. Unemployment had climbed from 1,500,000 in 1929 to 3,216,000 in 1930. From there it rose steadily until, in 1931, the figure was 7,150,000. In 1932 there were 10,197,000 men without work, while in March 1933 a peak was reached when 13,689,000 wage earners were walking the streets seeking work. As a result, serious riots and disorders were widespread. Civil authorities had trouble controlling Americans desperate for bare necessities. Aroused from our smug assumption of superiority in everything, we were shaken by the necessity of facing the problem of feeding hungry millions, either through direct dole or by providing means whereby funds for necessities could be earned.

The situation was complicated by the ironical circumstance that there existed great excesses of all our staple commodities. As stated at that time by the late Will Rogers: "We got more wheat, more corn, more food, more cotton, more money in the banks, more everything in the world than any nation that has lived has had, yet we are starving to death. We are the first nation in the history of the world to go to the poorhouse in an automobile."

Faced with such a situation, the choice of the Government was clear. Some direct relief would be necessary to care for those in extreme need and for the unemployables, but more far-reaching measures had to be undertaken in order to adjust the disorganized economic machinery and to provide those seeking work with a long-range program of employment. Further, this employment must be of a productive nature, returning full value to the society that was providing it. Pauperism must not be encouraged or the national morale bankrupted.

There was adopted, therefore, a plan that long ago had been conceived, whereby such periods of depression were to be met by the initiating of a national program of public construction. The theory of the plan was that, in ordinary circumstances, public construction parallels a course charted by private construction, and there is a resulting competition between the two for labor and materials in good times and a common neglect of these items when difficult periods arrive. According to the plan, this process was to be reversed. In times of prosperity, no public construction not immediately necessary was to be undertaken, but projects were to be designed in such detail as to permit prompt construction. Upon the occurrence of a depression, a large construction program was then to be launched by public bodies throughout the country. By this means new pay rolls would be created at project sites, and old ones lengthened all along the industrial line because of multiplied material orders. There would result not only general relief to the distressed but also a needed impetus to the industrial machine adequate to accomplish the resumption of normal progress.

Applying this idea in 1933, the Government was faced with handicaps resulting from the fact that no planning for appropriate public works had been accomplished, with the exception of a program of Federal projects prepared by the Federal Employment Stabilization Board. As this new program must necessarily extend to non-Federal public bodies as well, the handicap of unpreparedness had to be overcome. This was accomplished by offering to applicants Federal grants in the amount of 30 percent of the cost of labor and materials in the project and long-term loans for the remainder of the money at a reasonable rate of interest. The amount of the grant was increased in subsequent appropriations to 45 percent of the project cost.

The plan worked very well. Thousands of schools, sewers, highways, and similar projects were soon under construction, with preparations being hastily made for many others. In all, 37,271 applications were submitted by public bodies requesting assistance in constructing needed and desirable civic improvements.

As a result, throughout the country, wheels began to turn, goods began to move, and men began lining up for pay envelopes, rather than swelling the lines at the relief agencies. In July 1934 there was a daily average of 657,200 men working directly on projects

financed by P. W. A. As the United States Bureau of Labor Statistics has determined that for every man-hour of work created on the site of a P. W. A. project 2½ man-hours are created in providing the necessary materials, we may safely assume that for this period work was generated by P. W. A. sufficient to employ a daily average of 1,643,000 men.

The energy of the program vitalized our entire industrial structure. The power of the movement may be demonstrated by the fact that, in 1934, 74 percent of the total national cement output was used in P. W. A. projects.

A pointed illustration of the functions of this agency may be given by reciting its accomplishments here in Louisiana. Under the non-Federal program 228 projects have been, or are being, constructed, at an estimated cost of $52,156,078. Of this sum $20,493,081 represents grants from the Federal Government. Among these are 138 educational buildings, 40 sewers and waterworks, and 50 other useful public improvements.

In addition to the above expenditure, under the Federal phase of this program there have been constructed in Louisiana 228 projects, at a total cost of $26,770,189. These funds have been entirely provided by the Federal Government. As a result of both the Federal and non-Federal phases of the Public Works Administration program, therefore, 456 projects have been constructed in your State estimated to cost $78,926,267.

There is no one here who is not now enjoying directly the benefits of some of these projects. All of you know that each one was built under careful supervision and is an asset to the State and community; all of you know that these projects were constructed under the normal contract method; and all of you know that the workmen employed on those projects received prevailing rates of pay and worked not in excess of 8 hours per day and 40 hours per week.

The P. W. A. is at the present time being liquidated. In the absence of additional legislation this program will be substantially completed next June 30. Consequently, it has been necessary to return applications for P. W. A. allotments on 117 Louisiana projects, desired and needed by the people of this State, estimated to cost $32,433,684.

There are those that feel that industry has responded sufficiently to carry on without the spark of further public spending. Others, however, see the need of continuing this agency. There can be no doubt as to the tremendous waste, in both experience and ability, that will result from the complete dismemberment of an organization through which 34,508 projects, estimated to cost over $6,000,000,000, have been constructed in a manner so efficient and free from favoritism as to win universal respect.

There are now pending in Congress various legislative measures sponsored by Senator WAGNER, Senator MEADE, Senator ANDREWS, and others, any one of which, if passed, will continue in some form the functions of this agency.

The outcome of these proposals is unknown, but whatever the future holds for P. W. A. those familiar with its record will be proud of its past. It has more than fulfilled expectations in its service to labor, industry, and the Nation.

Mattress-Making Demonstration

EXTENSION OF REMARKS
OF
HON. CHARLES L. SOUTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 3, 1940

Mr. SOUTH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter from Hon. Grover B. Hill, Assistant Secretary of Agriculture:

THE ASSISTANT SECRETARY OF AGRICULTURE,
WASHINGTON, *April 27, 1940.*

Hon. CHARLES L. SOUTH,
House of Representatives.

DEAR CHARLES: You are cordially invited to attend a mattress-making demonstration which will be conducted in the patio of the Administration Building, Department of Agriculture, commencing Monday, April 29, and lasting through Tuesday, May 7. This is one feature of the Department's program for increasing the domestic consumption of surplus cotton. The mattresses will actually be made in the same manner that they are being made in the States. A farm family will do the work of making the mattresses.

We would like very much for you to see this work, as it will give you an opportunity to know, at first hand, one of the methods that is being used to stimulate the use of cotton by people who need it. The cotton and ticking are made available under section 32 funds and the Department of Agriculture Appropriation Act, 1940. Under the program, any farm family whose cash income is $400 or less may qualify for a mattress, which they make themselves with the assistance of various agencies of the Department. To date the following States are making mattresses: Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, Missouri, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, West Virginia, and Virginia.

With kindest personal regards, I am
Sincerely yours,

GROVER B. HILL.

Mr. Speaker, I had the pleasure of visiting this display a day or so ago, and I was very much gratified and greatly encouraged by what I saw there, and by the information which was furnished me by the fine farm family, Mr. and Mrs. Charles W. Jones, and their two children, Dorothy, age 15, and Malcolm, age 11, of Brown County, Tex. The Joneses, who reside in my congressional district, have cooperated with extension-service agents in Brown County for 25 years and are volunteer local leaders in the mattress program.

All of us who have given serious study to the question of surplus farm commodities agree that the problem is one of underconsumption rather than of overproduction. For this reason, in the past few years there have been many campaigns to encourage the use of various articles, such as cotton hose, and so forth, and much has been said about the relatively infinitesimal quantity of cotton used in the manufacture of so-called woolen goods. The amount of cotton used in these ways is small indeed, in comparison to that utilized in the cotton-mattress program which is now being sponsored by the Department of Agriculture. At least 50 pounds of cotton is required for each mattress. Ten mattresses, then, dispose of an entire 500-pound bale of cotton, and at the same time a local want is supplied.

It has been definitely established that the greatest need for these cotton mattresses is in the sections of the country where a large surplus of cotton is produced.

Mr. Speaker, I want to urge that each Member of Congress, especially those from cotton-producing areas, visit this splendid display and lend their encouragement and endorsement to the program which is being carried on by the farm families themselves under the supervision and with the full cooperation of the Secretary of Agriculture and his Department in this constructive effort to reduce our burdensome cotton surplus.

President Justified in Placing Civil Aeronautics Authority in Department of Commerce

EXTENSION OF REMARKS
OF
HON. JOHN J. COCHRAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, May 3, 1940

RADIO ADDRESS DELIVERED OVER NETWORK OF NATIONAL BROADCASTING CO.

Mr. COCHRAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over the red network of the National Broadcasting Co.:

Ladies and gentlemen of the radio audience, as chairman of the Select House Committee on Reorganization, I have been asked to comment on Reorganization Plan No. IV, which includes the transfer of the Civil Aeronautics Authority to the Department of Commerce.

Reorganization of the executive branch of the Government has been demanded by every outstanding organization of businessmen in the country, and every platform of both of the major political parties for years has contained a paragraph pledging the party to bring about proper reorganization.

By reason of the position that I occupy as a member of the Committee on Expenditures in the Executive Departments ever since that committee was established, I have been appointed by the Speaker of the House to membership on every Select Committee on Reorganization in the last 10 years. My first service on such a committee was during the administration of President Hoover. I supported in committee and on the floor of the House a resolution delegating to President Hoover far more power on this subject than was ever delegated to President Roosevelt, or, in fact, any President in the history of the country by any reorganization plan.

When the Democrats secured control of the Congress in the last 2 years of the Hoover administration I became chairman of the Committee on Expenditures in the Executive Departments. After the defeat of Mr. Hoover in 1932 in the December session of Congress, he submitted a reorganization plan, and among his recommendations was the transfer of the work which had always been performed by the United States Army engineers in connection with rivers and harbors and flood-control projects to the Department of the Interior to be placed in the hands of civil engineers. Republicans and Democrats alike, as well as the great metropolitan newspapers of the country, opposed this plan. Hearings were held by the committee and, in the end, when Colonel Roop, Mr. Hoover's Budget Director, in response to my question, stated that in his opinion it would be for the best interest of the country if the incoming President, Mr. Roosevelt, was permitted to reorganize the executive branch of the Government, the committee promptly rejected the Hoover plan. Aside from this, I have supported every recommendation made by a President, Republican or Democrat, since I have been in Congress that had for its purpose the reorganization of the executive branch of the Government.

While there is a Nation-wide demand for reorganization, still, when efforts are made in this direction, invariably opposition develops from those who have a selfish interest. When the bill now known as the Reorganization Act of 1939 was under consideration, 20 independent agencies of the Government were exempted. In exempting these 20 independent agencies the Congress forbade the President from taking from they any of their activities. This handicapped the President in his efforts to regroup Government agencies. While the bill was under consideration in the House, and also in the Senate, an amendment was offered in the House by Mr. RANDOLPH, of West Virginia, and in the Senate by Senator MCCARRAN, of Nevada, to also exempt the Civil Aeronautics Authority. The amendment was defeated in both Houses. Therefore the President was absolutely within his right in making the recommendation that he had. Immediately following this recommendation there was an organized movement started to discredit the President's action. A number of outstanding pilots personally came to Washington and protested the abolishment of the Air Safety Board. They classified themselves as a "lobby to save lives." Probably no family in the United States is a more liberal patron of the air lines than the President's family. There is hardly a day that some member of his family is not traveling by air. Can anyone conceive that the President is not interested in air safety? While the President has submitted four plans providing for reorganization to the Congress, there has been practically no opposition to his recommendations with the exception of the proposal to place the Civil Aeronautics Authority in the Department of Commerce, which is included in plan No. IV.

This proposal has given rise to a great deal of criticism which, unfortunately, is based upon misinformation and faulty assumptions, but which, if permitted to go unchallenged, may carry some weight and tend to defeat the proposal. Therefore, it seems fitting to correctly state a few of the significant facts involved. The Civil Aeronautics Authority was created under the act of 1938. It consists of three agencies, the Civil Aeronautics Authority, an Administrator, and the Air Safety Board, consisting of three members.

Now let us see just exactly what the President proposes to do. In the interest of efficiency and economy, he places the Civil Aeronautics Authority under the Secretary of Commerce. In doing so he abolishes the Air Safety Board. Do not for one moment feel the President abolishes the functions of this Board. He does not, because he has no power under existing law to abolish functions. He transfers the work that has been performed by the Board to the Civil Aeronautics Board. What he does is to abolish two jobs, two members of the Air Safety Board. The law sets up three members for this Board, but there is one vacancy at the present time. The President says the Civil Aeronautics Board will be able to effectively carry forward the important work of accident investigation heretofore performed by the Air Safety Board. The present employees will be retained with the exception of the two Board members; the work of investigation will proceed, the only difference being that it will be under the jurisdiction of the Civil Aeronautics Board, rather than the Air Safety Board.

The President specifically provides in his order—I quote his language—"The five-member Board (speaking of the Civil Aeronautics Board), however, will perform its rule-making, adjudicative, and investigative functions independent of the Department." Thus you see the Board retains its independence, even though placed in the Department of Commerce. The Department will supply in the interest of efficiency and economy budgeting, accounting, procurement, and other office service. The Department has divisions for this purpose already functioning. Is there any harm in making use of them, thus saving money?

The law creating the Civil Aeronautics Authority did not specifically define the duties of the Administrator. In plan No. III the President clarified his duties. Let me read what the President said. I quote:

"CIVIL AERONAUTICS AUTHORITY

"I propose to clarify the relations of the Administrator of the Civil Aeronautics Authority and the five-member Board of the Civil Aeronautics Authority. The Administrator is made the chief administrative officer of the Authority with respect to all functions other than those relating to economic regulation and certain other activities primarily of a rule-making and adjudicative character which are entrusted to the Board. This will eliminate the confusion of responsibilities existing under the Civil Aeronautics Act and provide a more clear-cut and effective plan of organization for the agency."

Did you hear any objection to that proposal? No. On the contrary, the President was commended because the law did not specifically define the responsibilities of the Authority and the Administrator. The President in plan No. III separated rule-making and adjudicative functions from those of an administrative nature. By so doing he does away with the duplication of work that now exists in some instances.

Let us get back to the Air Safety Board. Every statement I make now I have confirmed. The principal duties of the Board is to make investigations of accidents. When they complete their investigations, they simply make a report to the Authority and, if warranted, make specific recommendations for regulations, and so forth. The Safety Board has absolutely no authority beyond investigation and the submission of recommendations. They have no power to make rules or regulations. Their duties end when they submit their report.

Now what has the Authority been doing? It has a separate investigating division. The inspectors of the Authority in connection with safety have, in the course of their duties, when an accident occurred, made an investigation of their own.

Here you have a situation where there are two sets of investigators, investigating the same accident, cooperating at times, up to a certain point, but when it comes to making the actual report of the investigation they are off on a separate tangent. You now have two reports. It it not clearly apparent that under the present set-up there is a duplication of effort at the expense of the taxpayers? If the President's order is approved, this will be eliminated, but there will be a thorough investigation of every accident as there is today.

I do not say the Air Safety Board has not functioned properly, but from its own statement before the Committee on Appropriations it shows they are in arrears over 1,000 accident dockets which have not been analyzed and acted upon by the Board. The argument that the activities of the Air Safety Board will not be continued under the proposed plan of the President is not based upon facts. The functions, as I stated before, cannot be abolished. The law must be carried out; the President or no public official has the power to refuse to do so. Just as long as the Congress provides funds for the operation of the law these functions will continue unless the law is amended.

In order that the public might fully understand Federal expenditures for civil aviation, let me say that during the present fiscal year the enormous sum of over $108,000,000 will be expended. This money comes from the taxpayers. It should be properly safeguarded. The sum warrants that the President be continually advised of the operations and he is setting up a plan now whereby he will get this information weekly from the Secretary of Commerce at Cabinet meetings. As it is, the organization is one of over a hundred agencies that has no representation at Cabinet meetings. Civil aviation is the fastest-growing industry in the United States today. It will continue to expand for years to come. Last December, according to the chairman of the Authority, America's total investment in civil aviation amounted to over $600,000,000 and this was growing monthly. It will soon be a billion-dollar investment if it has not already reached that figure. Does this not justify representation at the Cabinet meetings? Aside from this, civil aviation is closely related to national defense. At this very moment civilian instructors of the Authority are training Army Air Corps pilots in Army airplanes on commercial fields. It is a complicated problem, according to the officials of the Authority, which requires frequent conferences. This is a proper subject to be discussed at Cabinet meetings when the Secretaries of Commerce, War, and Navy are all present.

If another Government department is ever established—and I think the day will come when it is—it will be the Department of Transportation, with all forms of transportation—railroads, motor carriers, waterways, and air—under the jurisdiction of the Secretary who will be a member of the President's Cabinet.

The question as to the Assistant Secretary of Commerce, who would probably be directly in contact with civil aeronautics, has been discussed. The charge was made that neither of the Assistant Secretaries is sufficiently informed to assume this place. With this I do not agree, but only yesterday the President sent to the Senate the name of John Monroe Johnson, now an Assistant Secretary of Commerce, to be a member of the Interstate Commerce Commission. This creates a vacancy, and, while I have no information as to who will be appointed to this important post, I can certainly visualize the President selecting a man who will be well qualified in aviation. The opportunity is present, and the President will undoubtedly take advantage of it.

To defeat the President's proposal would be a distinct set-back for civil aviation. He realizes the importance of the problem by providing a set-up which advances rather than retards progress. When the public and Members of Congress realize just what he has done, they will condemn the efforts of the group, which has a selfish interest, to impede the advancement of this fast-growing industry. I thank you.

The P. W. A. Program

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 3, 1940

ADDRESS BY RAY C. KIRKPATRICK, ASSISTANT ON LABOR RELATIONS, PUBLIC WORKS ADMINISTRATION

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Ray C. Kirkpatrick, assistant on labor relations, Public Works Administration, Federal Works Agency, at the convention of the Pennsylvania State Federation of Labor, Pittsburgh, Pa., May 1, 1940:

It is a personal pleasure for me to have this opportunity of meeting the representatives of labor in Pennsylvania and seeing again President McDevitt, George Walters, president of the State Building and Construction Trades Council, and other old friends. I am representing the Public Works Administration as the assistant on labor relations. Mr. John M. Carmody, Administrator of the Federal Works Agency, and Col. E. W. Clark, Acting Commissioner of the Public Works Administration, have instructed me to extend their greetings to this great convention.

I desire to preface these few remarks by acknowledging my appreciation of the splendid cooperation that has been extended me and the Public Works Administration by organized labor in this State. We had a big job to do, and, in order to do it well, we had to have your help. The 1,589 projects that this Administration has sponsored in Pennsylvania are outstanding evidences of the extent of this help.

There have been many unusual features about the P. W. A. program, one of which is the method adopted in providing the relief for those unemployed. You can undoubtedly recall the social conditions of the 1933 period when P. W. A. was organized. It was estimated by the American Federation of Labor that between 13 and 15 million men were without work or regular income. As construction had dropped to one-third of its 1929 peak, the building and construction trades were among those labor groups most seriously affected. In approaching this problem, the newly elected administration supplemented the time-honored method of subsidizing industry from the top in the hope that help would trickle down to the needy wage earner. Through a gigantic construction program, a means was afforded of insuring the workingman an income. As wages are soon spent for necessities, the monetary turn-over, coupled with the tremendous necessary material orders, would stimulate industry from the bottom as well as the top, and result in genuine, far-reaching relief. The success of this phase of the program may be shown by the fact that during the 80 months following June 1933, P. W. A. has been responsible for material orders to the Nation's industries amounting to over $3,000,000,000, averaging about $39,000,000 per month. During the same time, over a billion and one-half dollars have been paid out in wages at construction sites.

Many other factors made this program attractive. Although based upon an emergency unemployment situation, it is, nevertheless, economically sound. In addition to the relief of workmen and industry, resulting from the employment provided for many hundred thousand men, there will remain after the program is completed thousands of socially desirable and socially necessary public works. The greater amount of the construction under the non-Federal phase of the program has been in the form of the 6,680 school buildings, 2,411 waterworks systems, 2,056 hospitals, and 1,524 sewer systems. Aid has also been rendered in the construction of those great nationally desirable projects such as the Grand Coulee Dam, Triborough Bridge, and your own $65,000,000 superhighway.

From June 1933 to March 1940 P. W. A. allotted funds for the construction of some 34,469 Federal and non-Federal projects, having a total estimated construction cost of nearly $6,000,000,000. It is worthy of note that these projects have been built under the normal contract method.

Although there is still unemployment and many still in need, there is no question but that this and similar measures have overcome the extreme distress and despair prevalent in the early years of this decade.

In a time when foreign armies are marching forth on missions of death and destruction, it should be a source of great satisfaction that we in America are engaged in constructing instruments to serve mankind. Whereas other armies are creating chaos and misery, our workers are contributing not only to their own well-being but also to national progress and security.

Organized labor has been a great help in administering this program, and every care has been exercised that labor should receive the recognition demanded in consideration of the part it has played in accomplishing the purposes of the program. An example of the attitude assumed by the Public Works Administration toward the labor movement is found in the fact that unions, along with agencies of the United States Employment Service, are the only sources from which employees can be obtained for P. W. A. projects. In addition, there is included in every contract under this program, those provisions with which you are familiar—guaranteeing, among other features, the payment of prevailing rates of pay; the right to organize and bargain collectively through employee-chosen representatives; and prohibiting persons from working more than 8 hours per day or 40 hours per week.

These provisions indicate, in a degree, the development of the labor movement. After centuries of struggle, the workingman is achieving his proper place in our national life. Under this great democracy labor has finally been awarded that recognition and understanding so necessary for the accomplishment of its purpose of emancipating the wage earner. The workingman is being given a greater opportunity to assist in directing the destiny of that America in the construction of which he has been such a dominant factor.

In my position as coordinator between the labor organizations, contractors, and the Public Works Administration, I have learned to appreciate the importance of cooperation of labor in undertakings of such magnitude as the P. W. A. It is, of course, entirely appropriate that we should thus have worked together, for in a general sense we have had common ends. The fundamental aims of the P. W. A. have been to assist those in need and, through this assistance, revitalize the industrial machine. In such a cause we expected organized labor as an ally and in our expectations we have not been disappointed.

Because of this program, $386,156,766 have been expended for construction in this State. Of this sum, an estimated 35.8 percent, or $138,244,122, has been paid to workmen for on-site employment. The United States Department of Labor Statistics, after an extensive study, has estimated that, for every hour of work created on a P. W. A. project, 2½ hours are created in those industries providing the necessary materials. It may be safely said, therefore, that as a result of the P. W. A. program in Pennsylvania approximately $300,000,000 has been paid in wages to labor. In consequence of this employment, you are now enjoying or will soon enjoy the services of some 1,589 projects approved by the people to be served and the P. W. A. as to construction, design, and utility.

There are those who feel that this administration has accomplished its purposes or that a furtherance of its purposes may be better attained by other means. That the people of Pennsylvania do not subscribe to this view is indicated from the fact that 914 Pennsylvania applications for projects estimated to cost over $288,000,000 have been returned to the applicants because of the lack of funds.

The P. W. A. is now in process of liquidation. In the absence of an additional appropriation, this construction program will be brought rapidly to a close. There are, however, now pending in Congress bills designed to perpetuate in one of various forms the purposes of this administration.

Although the future is unknown, we who have been associated with this organization are proud of its past. We are proud of the honest and efficient disbursement of over $6,000,000,000 of public funds. We are proud that a means has been determined whereby the Government may constructively aid the wage earners. We are proud that assurance has been received that organized labor will cooperate in carrying forward such a program.

National Institute of Government

EXTENSION OF REMARKS
OF
HON. ANDREW L. SOMERS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 3, 1940

ADDRESS OF HON. HENRY MORGENTHAU, JR., SECRETARY OF THE TREASURY

Mr. SOMERS of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Secretary of the Treasury Morgenthau before the National Institute of Government at Washington, D. C., Friday, May 3, 1940:

I am particularly pleased to be able to talk to you today, because I am in such hearty accord with the purpose of this series of meetings, which I understand to be education for democracy. I applaud the initiative and the public spirit of the leaders of the women's division of the Democratic National Committee in making this notable convention possible.

In considering your invitation it seemed to me that I might contribute most to stimulation of your thought on the problems of democratic government by talking to you about the money of the United States, and particularly about gold. I have chosen this subject because I think it is one in which all of you are interested; and it is one about which you may be asked a good many questions as the year proceeds.

One thing you will hardly need to be told about our monetary system; that is, that the American dollar is the soundest unit of currency in the world. Its value is unquestioned here at home and it is not questioned anywhere else in the world. It is a solid rock of strength and stability amid all the monetary confusion created by aggression and war. It is more than a domestic currency; it has become in the last few years more and more an international currency. People throughout the world who are driven by disaster and fear to hoard currency prefer to hoard the currency of the United States when they can get it.

We have tried through many means to facilitate stability in the currencies of the world. An outstanding example is the Tripartite Accord which we initiated in September 1936. In all, six of the leading democracies of the world have subscribed to the principles of that accord. Unfortunately the progress we were making in the field of international finance and trade has been interrupted by the cataclysm in Europe.

One of the most striking developments of these recent years has been the universal confidence in the American dollar as one of the very few certain things in a highly uncertain world.

Some of our citizens who admit the strength of the dollar and the world's confidence in our currency now suggest that confidence in our dollar has resulted in this country receiving too much gold.

During the last 6 years we have acquired about $10,000,000,000 of gold from abroad.

Why has so much gold come to the United States?

In the first place, we have exported many billions of dollars' worth of goods and services in excess of the amounts we have imported. Secondly, large amounts of foreign funds have come to this country to be placed and kept on deposit with our banks. Foreigners have sent their funds here for safekeeping because of the peace, stability, and security which this country enjoys.

Thirdly, foreigners have made large investments in American industries because they regard American business as a safe and profitable investment. Finally, Americans have been withdrawing their funds from abroad and liquidating their foreign investments in large sums because they prefer the dollar to any other currency.

It is for these reasons that we have had so large a favorable balance of payments; it is for these reasons that gold has come and is continuing to come to the United States.

Gold moves from country to country, not as a commodity but as a means of payment—the one final medium through which international settlements are made.

The continued acceptance of the gold that comes here is the only sound course of action open to us. There are, it is true, other courses of action theoretically possible, but they would all have disastrous consequences.

Take, for example, the proposal so frequently made to us that we stop buying gold. It has the charm of simplicity. All that we have to do is to issue an appropriate Treasury order. But let me tell you what I think would happen. Dollars abroad would instantly become very scarce and more costly, and the foreigner would find it much more expensive to buy American goods. For example, the British pound, the Canadian dollar, the French franc, the Dutch guilder would at once sharply depreciate. A chain of forces would be set in motion which would disrupt our trade, seriously discourage what remains of world commerce, and remove from world finance the strongest element of stability.

The cessation of gold purchases would have the following three immediate effects of great importance to us:

Firstly, the sale of American products in foreign markets would be made much more difficult. This would not apply so much to war materials, which foreign countries want so urgently, but it would hit hard our export of hundreds of agricultural and industrial commodities not vital to the conduct of the war. We would lose heavily in the very markets we will badly need when the war is over.

Secondly, there would result an immediate flood of imports of cheapened foreign goods, which would deal an even more serious blow to labor, industry, and agriculture in America. The very items which compete with our domestic products would deluge our home markets. Meat and dairy products, textiles, and hundreds of other articles would at once be subjected to greatly intensified competition from abroad.

Thirdly, Americans who have investments abroad would find that they had suffered substantial dollar losses overnight, just as foreigners with investments here would find that they had windfall gains overnight.

So you see this simple remedy is, in effect, a proposal that would completely disrupt our foreign exchanges and our trade and greatly increase unemployment in this country. And so with the other naive proposals which some well-meaning citizens suggest as a remedy for our accumulating gold stocks.

Shall we follow their advice and cut the price for gold? A moderate cut would be ineffective and a cut in price sufficiently large to have a significant effect on the gold inflow would introduce the same conditions as would follow prohibition of gold imports. This also would cause a serious decrease in our trade and a big increase in unemployment.

Shall we, as some have suggested, discriminate against certain countries in our purchases of gold? Such a policy would not even have the virtue of effectiveness. The active cooperation of practically the entire world would be required to prevent any one country's gold from entering the world's markets and reaching the United States. Obviously this would be impossible even in normal times, let alone at a time such as this. Besides, the value of gold is proportionate to its unqualified use and acceptance as an international medium of exchange. To limit its acceptance would mean to reduce its usefulness.

There is yet another alternative which has always been open to us. Instead of taking gold we could have granted credit. Americans could again have accumulated huge unsettled claims abroad. We have had experience with that system—extensive experience—in the decade that ended with the economic collapse of 1929. It is doubtful that Americans would want to repeat that experience.

For the excess of goods we shipped and for the dollar credits we granted we have taken gold in the last 6 years instead of promissory notes. The phrase "good as gold" still has real meaning in the world. I prefer the gold to pieces of foreign paper. I think most Americans agree with me.

Our gold policy is carefully adjusted to the realities of a complex world situation. There have been many glib suggestions for changing that policy. Examination of each of these suggestions has revealed, as in the examples I have mentioned, that in the effort to remedy fancied evils they would bring on real disaster.

Of course, should basic conditions alter, should we be confronted with new and unforeseen economic and political developments, the Government will necessarily take such action as will best protect American interests. It is to be prepared for such contingencies that the powers with respect to gold operations have been kept flexible. The Treasury is constantly observing, analyzing, and studying the course of events in their relation to monetary problems in which this country is interested. But nothing has yet appeared which would warrant any change in our gold policy.

There is only one sound way in which we can work to reduce the inflow of gold and to promote the return of at least a part of the wealth it represents to useful service in the lands from which it came. That way is to do everything in our power to contribute to the return of peace to the world and to encourage reconstruction and the restoration of normal trade. With the restoration of enduring peace and economic stability abroad, the gold problem will solve itself. Our great export surplus will drop—not because we shall sell less abroad but because we shall buy more. Foreign capital will be gradually repatriated—not because we drive it out but because it is attracted home by the reemergence of security abroad. Our investors will once again invest their funds abroad—not because of the scarcity of opportunity at home but because of greatly enhanced opportunities for sound and profitable investments in other lands. And finally our tourists will spend hundreds of millions more in foreign countries.

These are the developments which will automatically and gradually direct the flow of gold away from the United States. These are the developments upon which we must concentrate. We must concentrate on the promotion of further recovery here and peace and security abroad not in order to correct the gold situation, but because prosperity, peace, and security are in themselves the supreme ends of governmental policy. That their attainment will also solve the world's gold problem is only a byproduct, but an important one.

I should like finally to turn to the question of the continued usefulness of the gold we have and the gold we are going to get. This is a matter that is troubling some people.

Let me reassure you once and for all. As long as there are independent nations, and as long as there is international trade in goods and services, so long will it be necessary to settle international balances. Gold is the international medium of exchange par excellence. Its acceptability is universal; its utility as international money survives changes in economic systems. It is used and needed just as much by the freest democracies as by the most rigid dictatorships, as much by capitalist economies as by socialist economies. It is the refined instrument of international exchange of goods and services, as well as an essential ingredient in the more complex international financial transactions, an instrument that has functioned without challenge for hundreds of years. Every foreign country wishes it had more of it; no foreign country likes to lose any of it; all countries accumulate it as soon as they can afford to do so. And the fact that some countries find it possible to conduct their international trade without gold does not mean that they prefer to do so any more than people reading by candlelight do so, because they prefer candles to electricity.

Gold does not lose its value because some countries are forced to resort to clearing arrangements, barter, import controls, and other substitutes. All these substitutes are admittedly worse alternatives. They are methods of conducting trade and finance which will only be adopted when a country does not possess adequate gold holdings. Governments resort wholly to these substitute methods for keeping a country's balance of payments in equilibrium only during times of great and prolonged stress and instability, and only when for one reason or another they have been unable to prevent the loss of most of their gold holdings. All countries would like to have more gold, and the countries which have the least are, you will find, countries which are striving most to add to their gold holdings. They do so because they know that an adequate supply of gold promotes economic strength and furthers financial stability.

To be sure, if the political picture of the world should undergo a drastic change in the future, so that instead of 50 or 60 independent nations there should exist only one or two groups dominated by ruthless powers, then international trade and finance may

assume the character of domestic trade. There would cease to be independent monetary systems, as there would cease to be independent foreign policies. Balances between countries would be settled as balances between our States are now settled; that is, by transfers of deposits. Under such circumstances it might well be that gold would no longer be needed. But under those circumstances life would be so different that the possible loss in the value of gold would, I am sure, be the least of our troubles.

Certain governments may boast of the day when independent democracies will disappear. I, for one, have no fears that such boasts can be made good. I am as confident that gold will continue to be used as the medium of international payments as I am that the majority of nations will succeed in maintaining their independence. With the return of peace and of normal economic and political relationships, the present barriers to the free flow of goods, capital, and services will be gradually lowered, and gold will inevitably play its indispensable role in making that result possible.

One word more—the exchange we made and are making in return for gold is a good bargain for us. It has enabled us to increase employment and recovery. It has made possible the utilization of labor, capital, machinery, and resources that would otherwise have been idle. We have expanded our exports and encouraged our domestic industry. And, moreover, we have at the same time acquired the safest physical asset in the world.

There are some sincere people who have been disturbed by stories that this country had a monetary policy that threatens to cause loss to the Nation. If you meet such people I hope you will reassure them. You may tell them that the greatest and richest country of the world has the best and soundest monetary system and that there is no reason to fear that it will not remain sound.

We can feel entirely comfortable in the possession of a supply of gold with which we can meet future demands on our monetary system without any shock to our economy. We can be prepared also to play the part we ought to play in the reconstruction of the world that must follow the senseless destruction of war.

Antialien Bills Menace America

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 3, 1940

STATEMENT BY AMERICAN COMMITTEE FOR THE PROTECTION OF FOREIGN BORN

Mr. GEYER of California. Mr. Speaker, there has been much said throughout the Nation on pending legislation designed to embarrass aliens within their land. Since I believe any attack upon any minority group is dangerous, I am happy to extend a declaration by the American Committee for the Protection of Foreign Born. This declaration is signed by more than 200 prominent American citizens and as many organizations of the American people. The statement with the list of signers follows:

DECLARATION TO CONGRESS

The war conditions throughout the world today increase the danger of intolerance and prejudice against the foreign-born similar to those which culminated in the Palmer raids of 1920. Noncitizens are being dismissed from their jobs and are being intimidated by threats of discrimination, deportation, concentration camps, fingerprinting, and registration. The noncitizen is being wrongly blamed for unemployment, crime, espionage, and sabotage.

An attempt is being made to disrupt American organizations and to divert the attention of the American people from a thorough consideration of our domestic problems by blaming the noncitizen for our difficulties. America was discovered by immigrants. Our Government, our Constitution, and our customs were molded by immigrants. Our railroads, our factories, our roads, and our industries were built with immigrant labor.

A careful analysis of the antialien bills considered by the Seventy-sixth Congress and several State legislatures discloses that it is these bills that menace America and not the so-called alien. Every one of the antialien proposals would restrict the constitutional rights of all Americans, native and foreign-born, citizen and noncitizen, Negro and white.

The representatives of the American people in Congress and in the State legislatures must not be misled into adopting un-American proposals based upon the false charges and demagogic propaganda leveled against the foreign-born.

As Americans, we pledge to devote ourselves to defending the rights of the noncitizen and the foreign-born, regardless of place of birth, political, economic, social, or religious belief. We invite all those who believe in democracy to join with us in our efforts to preserve the principles of liberty and justice as provided in the Bill of Rights and in the Constitution of the United States.

SIGNERS

The following signed the above declaration: Josephine Truslow Adams, Louis Adamic, Dr. Thomas Addis, Dr. Janet Rankin Aiken, Sherwood Anderson, Brooks Atkinson, Emily G. Balch, Tallulah Bankhead, Margaret Culkin Banning, Harry Elmer Barnes, Dr. Charles A. Beard, Lewis Alan Berne, Mary McLeod Bethune, Rabbi Philip Bernstein, Alice Stone Blackwell, Dr. Franz Boas, Prof. Edwin Borchard, Ohio State Senator William M. Boyd, Dr. Ralph P. Bridgeman, Van Wyck Brooks, Prof. Francis J. Brown, Prof. Edwin Berry Burgum, Prof. Walter B. Cannon, Frank Capra, Prof. Haakon M. Chevalier, Prof. Edward P. Cheyney, Sarah Cleghorn, Dr. Henry Sloane Coffin, Dr. Ada L. Comstock, Edward Corsi, Howard Costigan, Dr. George S. Counts, Dr. Leonard Covello, Dr. Herbert Davis, Jerome Davis.

Also: Prof. John Dewey, Carl Van Doren, Prof. Dorothy Douglas, Dr. Harl Douglass, Prof. Leslie C. Dunn, Will Durant, Prof. Horace A. Eaton, Prof. Mildred Fairchild, Dr. Ernest Feise, Edgar J. Fisher, Osmond K. Fraenkel, Waldo Frank, Rabbi Solomon, B. Freehof, Donald S. Friede, Lewis Gannett, Prof. Christian Gauss, Dr. Frank P. Graham, Edward Everett Hale, Dr. Roswell G. Ham, Prof. Frank N. Hankins, Prof. Ralph S. Harlow, Prof. Benjamin Harrow, Ernest Hemingway, Donald Henderson, Prof. Melville J. Herskovits, Dr. Frank Ernest Hill, Sidney Hillman, Prof. Norman Hines.

Also: Charles H. Houston, Leo Huberman, Prof. Ellsworth Huntington, Fannie Hurst, Rev. William Lloyd Imes, Inez Haynes Irwin, Hon. Stanley Isaacs, Rabbi Edward L. Israel, Dr. Charles S. Johnson, Matthew Josephson, Rockwell Kent, Dorothy Kenyon, Prof. William H. Kilpatrick, Carol King, Prof. Otto Klineberg, Alfred Kroymborg, Prof. Oliver W. Larkin, Dr. John Howland Lathrop, Dr. Henry Smith Leiper, Dr. Emil Lengyel, Prof. Max Lerner, Dr. William Ellery Leonard, Dr. Eduard C. Lindeman, Johanna M. Lindlof, Robert Morss Lovett, Rev. Sidney Lovett, Max Lowenthal, Dr. J. A. MacCallum, Dr. Gerald Machacek, Dr. Henry N. MacCracken, Dr. Malcolm S. MacLean.

Also: Albert Maltz, Paul Manship, Utah State Representative P. S. Marthakis, Prof. Kirtley F. Mather, Prof. F. O. Mathiessen, Dr. Alexander Meiklejohn, Bishop Francis J. McConnell, Carey McWilliams, Dr. Paul Monroe, Prof. D. H. Mowrer, Prof. Gardner Murphy, Prof. Alonzo F. Myers, Dr. Reinhold Neibuhr, Judge Patrick H. O'Brien, Clifford Odets, Hon. Culbert L. Olson, O. M. Orton, Prof. Bernhard Ostrolenk, Prof. Ernest Minor Patterson, William Pickens, Francis A. Preveden, Prof. Max Radin.

Also: Dr. Walter Rautenstrauch, Frederick L. Redefer, Prof. Joseph S. Roucek, Dr. Harold Rugg, Charles Edward Russell, Reid Robinson, Rose Schneiderman, Adelaide Schulkind, Dr. Frederick L. Schuman, Prof. Vida D. Scudder, George Seldes, Prof. Harlow Shapley, Irwin Shaw, Dr. Guy Emery Shipler, Prof. George W. Simpson, Upton Sinclair, Vilhjalmur Stefansson, Prof. Bernhard J. Stern, Donald Ogden Stewart, Maxwell S. Stewart, Prof. C. Fayette Taylor, Prof. Robert K. Speer, Prof. Hans Otto Storm, Prof. Harold C. Urey, Oswald Garrison Villard, Mary Heaton Vorse, Dr. J. Raymond Walsh, Dr. Harry F. Ward, Prof. Colston E. Warne, Max Weber, Prof. Louis Wesinir, Prof. Philip Wheelwright, Rev. Wayne White, Thornton Wilder, Prof. Carl Wittke, L. Hollingsworth Wood, Dr. Mary E. Woolley, Dr. Max Yergan.

TRADE UNIONS

C. I. O.: United Automobile Workers of America, Packard Local, Detroit, Local 51, Local 174, Local 208; United Shoe Workers of America; Packinghouse Workers' Council of Chicago; New Jersey State Council, Steel Workers' Organizing Committee; New Jersey State C. I. O.; United Construction Workers' Organizing Committee; Farm Equipment Organizing Committee; United Federal Workers; Social Service Employees' Union, Local 19; Federation of Architects, Engineers, Chemists, and Technicians; American Communications Association; Furriers' Joint Council of New York; Cleaners and Laundry Workers' Union, Local 188B; United Cannery Agricultural, Packing, and Allied Workers of America; United Office and Professional Workers, Chicago, Local 16; C. I. O. Maritime Committee; Transport Workers' Union, Local 100; C. I. O. Women's Auxiliary; Pecan Workers' Union, Local 172, San Antonio, Tex.

J., Lithuanian Society; Lithuanian Literature Society, Chicago; Federation of Progressive Lithuanian Societies, Cleveland; Lithuanian Societies of Waterbury, Conn.; Lettish Workers Unity; German-American League for Culture; Comite Pro Democracia Cubana; Comite Femeninos Unidos de Ayuda Espana; Comite Pro Democracia Espanola; National Congress of Spanish Speaking Peoples, California; United Ukrainian Toilers; Jewish Peoples Committee; Jugoslav Labors Non-Partisan League, Ohio; Finnish Workers Federation; Czech American National Alliance; American Czechoslovak Foundation; Slovak and Czech United Organizations, Pittsburgh; Pancyprian Brotherhood; Greek Educational Spartacus Club; St. Sophia Greek Church; League for Protection of Greek Immigrants; Armenian Progressive League, New York District; United Hungarian Societies; People's Voice, Detroit; American Friends of the Chinese People; Slavodnahec, Pittsburgh; Serbian National Federation, Branch 166; United Croatian Societies; Radnicki Glasnik, Pittsburgh; Croatian American Womens Society, Union City, N. J.; Croatian Fraternal Union; Croatian Singing Society of New Jersey; United Istrian Societies; Polish National Alliance.

Accident and Health Insurance

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, May 3, 1940

ADDRESS BY HON. THOMAS C. HENNINGS, JR., OF MISSOURI

Mr. HENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I made before the Accident and Health Underwriters of St. Louis on April 23:

I am delighted to have the opportunity of discussing with you some of your problems, as they appear from the standpoint of one who is not a member of your profession, and to congratulate you upon the real contributions which you have made, and will continue to make toward the stability and prosperity of this great community in which we live. Your endeavors afford not only an unmistakeable index of business solvency, but of the social well-being and relative happiness of your fellow citizens, both from the standpoint of the welfare of the individual and society as a whole—the protection given by insurance is beyond estimate.

For centuries people have availed themselves of insurance as a mighty and never-failing instrument of cooperative self-help. Fundamentally, insurance is but another form of the cooperation of good neighbors. Today it is an indispensible instrument in the lives of thousands of our people—in the security of women and children and the home. It can be said of insurance what Lincoln said of government, "Its legitimate object is to do for a community of people what they need to have done but cannot do at all, or cannot do so well, for themselves in their separate and individual capacities."

In recent years, the American people have been on a mental migration, dissatisfied with old conditions and seeking new conditions of security.

Many a man does not own his own home any more. His possession is an insurance policy.

Scarcely any man can call his neighbors to raise his roof today. He pays a contractor cash and has to have financing to find the money.

Once old age was safe because there was something useful which men and women, no matter how old, might do to earn an honorable maintenance. That time is gone and some kind of organized old-age insurance had to be provided.

In the many perplexities of this modern world the individual turns, as he always has turned since the days of dimmest antiquity, to the collective security of the willingness of his fellows to cooperate through the use of insurance to help him and each other. When you think it through, at the bottom, most of the great protective statutes of today are, in essence, mutual insurance companies, and our recent legislation is not a departure from, but a return to, the healthy practices of mutual self-help of the early settlers of this great Nation of ours.

Every outstanding invention of the past century has contributed its quota to the list of accidents to be insured against—railway, motorcar, and airplane. Changes in social habits, the growing recognition of the importance of good health, the more human relations of employer and employee have all stimulated the movement to provide against the unforeseeable contingency of injury, permanent or temporary. With every invention of science has not only come new benefits but new perils to mankind.

In 1880 the first Employers' Liability Act was passed. The enactment of this legislation was followed by a rush of new companies formed to insure the employer's risks. In 1896 the Locomotives on Highways Act wiped out the law that made it necessary for any motor vehicles on the road to be preceded by a man carrying a red flag. Though this emancipating measure left the speed limit at 14 miles an hour, it at once created a demand for insurance against motorcar risks. This demand was further stimulated when in 1903 the raising of the speed limit to 20 miles an hour encouraged the advent of many more cars on the roads. The Workmen's Compensation Act of 1906 provided compensation in case of accident for every class of manual worker. Employers had to make provision by insurance for new liabilities.

Mr. Thomas A. Buckner, one of the leading insurance executives in the United States, testifying before a Senate committee in February of 1939, said that "the Government of the United States popularized life insurance during the last war as no number of agents could ever have done. There the Government quite properly insured the soldiers and the sailors, but they put a valuation on the life of men—young men without training, either mental training, perhaps, or any business experience. The Government put a valuation of $10,000 on that life, and he was urged to take the $10,000 insurance. That, of course, went all over the United States. The father of the boy, with perhaps a wife and other children to support, said, 'Well, if the boy is going to carry $10,000 for my protection, I am totally uninsured or rather underinsured.' It gave a great impetus to the business," said Mr. Buckner.

I have given this brief résumé of legislation and executive action as it has related to the insurance industry to point out a much-forgotten fact that to a great extent legislation has not been merely content to regulate accident insurance but has actually provided the demand for such insurance. In every instance government, through wise and disinterested enactments keeping pace with the social and technological developments as they have arisen, has been, not a harness and impediment to the development of the insurance industry, but a spur and a stimulus, opening up new worlds for the insurance business to conquer as new risks, brought about by social and economic change, have properly come under legal notice.

There has been much excited discussion in the insurance industry during recent months as to whether the Temporary National Economic Committee intended to recommend to this session of Congress legislation providing for Federal supervision of insurance or for some agency of the Government going into the insurance business. I can tell you unreservedly that the Committee never meant to consider recommendations with respect to insurance, and no member of the Committee ever suggested that either of these policies should be adopted or that any recommendation of that character should be made. I do wish to point out, however, that while the Nation's Business and other like periodicals, which pretend to have an almost clairvoyant knowledge of what is going on in the congressional mind, have alarmed and distressed thousands of people engaged in the insurance business with dire prophesies of a legislative witch hunt, strong arguments have been made by insurance companies themselves favoring Federal jurisdiction over the insurance business. In the instances of Paul against Virginia and the New York Life Insurance Co. against Deer Lodge, Mont., both cases were brought by insurance companies, which entered the courts for the purpose of trying to prove that insurance is a national business and should not be regulated by the State. In the Deer Lodge case, the New York Life Insurance Co. was at great pains to point out that the business of insurance was so national in scope, so interstate in character, that it should be relieved of State taxation and regulation. This is simply another instance where a small minority of a huge business, restive under State taxation and regulation, was perfectly willing to embrace the alternative of Federal jurisdiction, while the great majority of the business was supremely content with the status quo and viewed with the greatest misgivings and disapproval any change so sweeping in character.

Secretary Ickes has never been cuddled to the bosom of orthodox businessmen, but speaking of situations of the kind to which I

have just referred, he recently made a very cogent observation. "It was businessmen," says Mr. Ickes, "who originally persuaded the Congress that regulatory agencies were necessary to preserve the system of private enterprise for the majority of businessmen against the depredation of a minority."

"One set of businessmen, in the name of preserving the system of private enterprise, is always invoking against other businessmen the power of the Government.

"The immediate point is not what set of businessmen is right. The point is that what sets the forces of government, legislative or executive, in motion against one set of businessmen is practically always another set of businessmen invoking protection for free enterprise.

"When, therefore, a businessman is mad because government is "interfering" with his business what he is really angry about is another businessman because government, acting as a referee, has had to come to some decision between the two of them. The businessman who wins the verdict from the Government calls the result 'freedom.' The businessman who loses the verdict calls the result and the whole process 'interference.' You pay your money and you take your choice."

I cannot restrain a sense of admiration for the integrity and the blunt honesty of this statement by Paul Hoffman, president of the Studebaker Corporation of America, which he recently made before the Bond Club of New York, "I propose to give my views on what businessmen must not do. They must cease and desist from asking special privilege of any kind from the Government. If a businessman needs an umbrella to protect himself against the impact of competition he isn't a businessman; he is a political racketeer. When he requires special privilege, he is attacking free enterprise. It is an act of treachery and business suicide as well because special privilege is an invitation to governmental control. If we wish to pass down to our children our heritage of free enterprise under which America has become the greatest nation in the world, let us go to Washington for one purpose, and one purpose only, to insist that free enterprise be kept free in America."

Speaking for myself, I have no hesitation whatever in saying that my deepest conviction is that the solution of the Nation's economic troubles does not lie along the road of the further expansion of Government activity or competition by Government with private industry. My conviction is that the best service we can render to the people of the United States is to stimulate private enterprise to the uttermost. It is my conviction that any proposal for Federal jurisdiction of insurance could not receive an affirmative vote either in the committee or in the Congress. Finally, it is my conviction that the Federal Government is going to continue to be the friend and not the fuehrer of the insurance business in the United States.

The campaign of education which this meeting auspiciously opens is one of great challenge and one from which incalculable good will come. It is no mere happenstance that accident and health insurance has become of major importance in our national economy. One needs but to acquaint himself with the staggering tolls in money and misery—the bitter fruits of avoidable disease and preventable accidents, every year exacted from the people of our country—to understand the full import of what you are attempting to do.

About a century ago, the United States recognized that public safety and public economy, as well as the ideals of a democracy, demanded that an opportunity for an education be open to all. Today we are at the point of recognizing and making effective a greater opportunity for health and life.

Preventable sickness and death among children are still much too common. Tens of thousands die unnecessarily each year. Hundreds of thousands are crippled by disease or accident. Millions are left with scars which handicap them for their future lives. Much of this is a needless waste of young life and a blight on the families of the Nation.

On an average day of the year about 5,000,000 persons are disabled by sickness to such an extent that they cannot go about their usual work or other routine. Of these 5,000,000, about half get well, sooner or later, and resume their ordinary life; about half remain permanently disabled. Among those permanently disabled, nearly 2,000,000 are less than 65 years of age.

During the course of a year sickness and disability cost the American people nearly 2,000,000,000 days' absence from work, school, or household duties.

Not including individuals who are already permanently disabled, workers who are in the labor market lose a billion dollars or more each year in wages unearned because of sickness. Industry and the Nation as a whole suffer additional losses.

The costs of medical services exceed $3,000,000,000 a year.

Including the costs of medical and health services, the loss of wages because of sickness, and the loss of potential future earning power because of premature death, the Nation's bill for sickness and postponable death amounts annually to about $10,000,000,000.

The problems confronting you are large and urgent. Through preventable illness the Nation is being deprived of much of its potential vigor and well-being. Any program of action now contemplated in a war against the grim specter of disease must surpass all previous efforts of this kind and must be backed by public opinion, by civilian volunteers, by civic-minded organizations, by the schools and colleges. An adequate program must be national in its dimensions if it would come to grips with problems which are also national in their breadth and depth.

The promotion of safety is a primary job of the accident-insurance business. Unquestionably, rates have a very strong bearing on the amount of insurance sold. It is axiomatic that when rates are high much less business is written than when they are low. Prosperity is more abundant when superior products are sold at lower prices. Accident rates definitely affect insurance rates. If organized safety work had not been instituted many years ago in our highly complex mechanized Nation of today, the volume of insurance sold would be infinitely less because the rates would be practically prohibitive.

It is an interesting fact that due to the introduction of safety education in the grade schools in 1922, accidents among adults have tripled but fatalities to children of school age have decreased sharply. Safety instruction in the schools can be credited with saving the lives of 70,000 children during the years from 1922 to 1938. It is quite evident that your program of education must reach men and women of mature years who have grown haphazard and indifferent to the fierce consequences of avoidable accidents. Ninety-five thousand American citizens in 1938 died as a result of accidents. On the nonfatal casualty list were 8,900,000 of our fellow citizens. Of that number 330,000 were permanently crippled. The cost was $3,300,000,000. Is there a job to be done or not? It surely cannot be done by making speeches, passing resolutions, or holding conventions. No matter how intensely 130,000,000 people believe in accident prevention, accidents won't be prevented unless we have the common sense and determination to roll up our sleeves and put the machinery in motion to stop them.

It will require work and sweat, the humility to do the unspectacular job that needs to be done to decrease the spectacular aggregate of deaths and human suffering which is seriously sapping the resources of our Nation. For too long we have been living in an age of property economies, and it is high time that we recognize adequately the enormous importance of human life values and extend to them the same scientific treatment that has for so many years been applied to property values. One of your agents has said, "Looking over the insurance I had sold, the thought occurred to me of the estates I had helped to create, the financial burdens I had removed, the continuation of salaries I had guaranteed, and I suddenly realized that my compensation was more than dollars and cents." Here is a man who is doing his work with the social vision which has kept accident and health insurance on a voluntary basis in this country. It is men of his type who push back the possibility of compulsory accident insurance as it is governmentally operated in 26 of the European nations.

The business that lies before you, it seems to an entire outsider, is not simply to write this, that, or the other policy, but to educate the people of your community into the belief that poverty is not a necessary part of the modern state; that much of mankind's wretchedness can and must be eliminated if civilization is to survive.

In Europe today a gigantic struggle is in progress testing whether the democratic way of life can withstand the brutal impact of totalitarian armies and philosophies. All about us rage undeclared wars; all about us are acts of new aggression; all about us grow more deadly armaments. When one considers the appalling state of the world today, may we not rejoice in the peace and progress of America of which this council of citizens in St. Louis is splendidly symbolic. You have gathered here for an interchange of ideas on problems of vital domestic concern. That is in the best democratic tradition. Pitiable people in foreign lands everywhere are looking to America for the assurance that democracy can survive and succeed. The proof that we are the "last best hope of earth" however, does not lie in great armies and mighty battleships and submarines and air bases, vital as are all these. The proof lies in the good result of meetings such as this. It lies in the atmosphere of optimism, of determination, and of new challenge, evident here on every hand. It lies in the assurance of employment for those of our people who are able and willing to work. It lies in the sound minds and bodies of the men, women, and children of America. It lies in the reclamation and nurture of our natural resources. It lies in a never-ending war upon drought and flood. All these are the fortifications of democracy—the greatest bulwarks against the enemies of America, both within and without.

For the last decade we have gone through a great period of transition and of readjustment within our own borders. But whatever needed to be done, we have done without dictatorship, without conscription of labor, without confiscation of capital, without concentration camps, without a scratch on freedom of speech, freedom of the press, freedom of worship, or the rest of the Bill of Rights, without one single abrogation of the orderly processes of democratic government. And never before have the American people been so conscious of their interrelationship and interdependence—the sense of a common destiny and a common need of each other.

There are unquestionably darker days ahead across the sea. We may be the sad witnesses of the end of European civilization. No one may now foretell the outcome. May we not then be humbly grateful "that here on the western horizon, a star, once acclaimed, has not set and the strength of a hope and the shape of a vision, died for, and sung for, and fought for, and worked for, is living yet!"

Federal Bureau of Investigation

EXTENSION OF REMARKS

OF

HON. FRED A. HARTLEY, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, May 3, 1940

LETTERS FROM PATROLMEN'S BENEVOLENT ASSOCIATION AND SUPERIOR OFFICERS' ASSOCIATION, NEWARK, N. J.

Mr. HARTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

APRIL 10, 1940.

Hon. FREDERICK A. HARTLEY,
Representative, Tenth District, House of Representatives, Washington, D. C.

HONORABLE SIR: The Patrolmen's Benevolent Association of the Newark Police Department, at a regular meeting held at the Labor Lyceum on April 9, 1940, unanimously adopted the following resolution, and ordered the same entered on the minutes, with instructions that a copy be forwarded to the United States Senators for the State of New Jersey and to the three Members of the House of Representatives with constituencies in the city of Newark:

"Whereas the press of the United States has recently published statements made in the Congress which attack the law-enforcement methods of the Federal Bureau of Investigation of the United States Department of Justice and the Director of said Bureau, John Edgar Hoover; and

"Whereas it has been the experience of our organization to receive from the Federal Bureau of Investigation the fullest of cooperation in all matters affecting the enforcement of law and the apprehension of criminals: Therefore be it

"*Resolved*, That the Patrolmen's Benevolent Association of the Police Department of the city of Newark endorse unanimously the policies and practices of the Federal Bureau of Investigation and its Director and urge upon the Congress that the Bureau be encouraged and commended in its excellent work in the field of law enforcement."

Copies to Hon. W. WARREN BARBOUR, United States Senator for New Jersey; Hon. WILLIAM H. SMATHERS, United States Senator for New Jersey; Hon. ROBERT W. KEAN, Representative, Eleventh District; Hon. ALBERT L. VREELAND, Representative, Twelfth District.

Respectfully yours,

THOMAS E. DURKIN,
President, Patrolmen's Benevolent Association, City of Newark, N. J.

Attest:

EDW. J. SCANLON, *Secretary.*

APRIL 25, 1940.

Hon. FREDERICK A. HARTLEY,
Representative, Tenth Congressional District, N. J.,
United States House of Representatives, Washington, D. C.

HONORABLE SIR: At the regular monthly meeting of the Superior Officers' Association of the Newark (N. J.) Police Department, held on Wednesday, April 25, 1940, at the Newark Labor Lyceum, the following resolution was unanimously adopted and ordered spread upon the minutes with instructions to forward copies to the following members of the Congress of the United States: Hon. WILLIAM H. SMATHERS, United States Senator for New Jersey; Hon. W. WARREN BARBOUR, United States Senator for New Jersey; Hon. FREDERICK A. HARTLEY, Representative, Tenth District; Hon. ROBERT W. KEAN, Representative, Eleventh District; Hon. ALBERT L. VREELAND, Representative, Twelfth District.

"Whereas it has been published in the press of the United States that certain Members of Congress have attacked the methods and integrity of the Federal Bureau of Investigation of the United States Department of Justice and its Director, John Edgar Hoover; and

"Whereas the record of accomplishment of the said Federal Bureau of Investigation in the field of law enforcement, and their unfailing willingness to cooperate with and assist local law-enforcement agencies in matters of mutual interest, and to place at their disposal the entire resources of their organization in the detection and apprehension of criminals: Therefore be it

Resolved, That the Superior Officers' Association of the Police Department of the city of Newark, N. J., unanimously endorse the policies and practices of the Federal Bureau of Investigation and its Director, John Edgar Hoover, and express confidence in their ability and policies in the enforcement of law."

Most sincerely yours,

SUPERIOR OFFICERS' ASSOCIATION, CITY OF NEWARK, N. J.
THEODORE S. MCNALLY, *President.*

Attest:

J. J. SWEENY, *Secretary.*

The Detroit Negro Progress Exposition

EXTENSION OF REMARKS

OF

HON. RUDOLPH G. TENEROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 3, 1940

Mr. TENEROWICZ. Mr. Speaker, an event which seems destined to prove both unique and symbolic is to take place this month in Detroit.

Starting May 10 and continuing for 9 days thereafter, the city is to be the scene of an exposition of a type never before presented to the public. It is to be an exposition conceived, planned, and executed by members of the colored race, and promises to be broad enough in scope to constitute a Negro world's fair.

It is being dedicated to 75 years of the colored man's progress, and will mark, incidentally, an important anniversary in his history on the North American Continent—the seventy-fifth year since the adoption of the thirteenth amendment.

This exposition is to have dignity and breadth as a result of 2 years of careful work and planning. President Roosevelt has been invited to open it by pressing a button here in Washington, and many important public figures are to address its several sessions.

Exhibits will be assembled from every State in the Union in commemoration of the colored man's very considerable contributions to our science and culture, and, in addition, exhibits are to be on view representing Liberia, Cuba, and the Virgin Islands.

There is to be a Hall of Fame, portraying in stone and on canvas the great colored leaders of the past and the present, and white leaders will likewise be memorialized.

The fact that this exposition is being held in Detroit is in itself an interesting coincidence because of the part Detroit played in the old underground railway of the slave days.

To me there is something inspiring and deeply significant in this phenomenon. I am taking the liberty of mentioning it in the House of Representatives because I believe there is also a moral involved that is today particularly meaningful. My moral concerns itself with freedom and the fruits of freedom on this side of the ocean, as contrasted with the fast-widening "black-out" of freedom now eclipsing Europe.

I believe the Detroit event deserves widespread acclaim, because it will offer impressive evidence of the colored man's ability to account for his stewardship. I believe that it should forcefully reaffirm—if such reaffirmance is needed—that the colored man has found his place in the sun and is ready to maintain that place by dint of native genius, ambition, and a capacity for hard and painstaking work.

The Detroit exposition, I am informed, is to be followed later in the summer by a similar one in Chicago. It is clear that the colored man is profoundly aware of the importance of this anniversary and is proceeding to make it memorable by impressive observances.

The colored man can well be proud of the vast progress he has made under our free institutions in the past 75 years. And when I say "free institutions" I am well aware of the irony of that phrase as it applies to the colored man, who has never at all times and in all places been allowed to exercise his full constitutional prerogatives.

Nevertheless, making the best of such rights and opportunities as were available, he has moved ahead with swinging strides. He has proved himself a courageous philosopher and has demonstrated a superlative capacity for patience.

His progress during the past 8 years has been particularly noteworthy. Offered for the first time an honest share of representation in the councils of his Government, the colored man's fitness to sit in offices of high public trust has in scores of instances been proved conclusively by highly meritorious performances.

Throughout the past 75 years the colored man has always, when the opportunity was extended, shown an extraordinary awareness of the responsibility that goes with citizenship. He has proved himself a producer as well as a creator. During the past decade he has displayed admirable ability to adjust himself to the changing social-economic order. Chiefly and preeminently, however, he has proved himself among the worthiest of all the communicants who humbly worship in the temples of higher knowledge.

The Detroit exposition is to be primarily an educational undertaking. Thousands of colored persons will make the pilgrimage to Detroit on their own time and at their own expense for the enlightenment they hope to gain, for the self-betterment they hope will accrue. It will be a sober-minded and ambitious group who will travel, many of them from distant places, to take part in this event.

It is this essentially serious side of the colored race that has escaped many of us for altogether too long a time. They have always thirsted for improvement through education, but it was not until relatively recent times that book knowledge was possible to them except through stealth or through efforts involving superhuman self-sacrifice.

In the beginning few schools were built for the colored man, so he had to set about building his own. It is true that outside help was sometimes offered but mostly when this was the case it was help that the colored man himself had originally actuated or inspired.

In this connection it is with considerable pride that I will allude—parenthetically—to an ill-fated attempt on the part of the great Polish leader, Thaddeus Kosciusko, to bring education to the slaves of the post-Revolutionary period.

Kosciusko, in 1812, after his supreme efforts on behalf of American freedom, sensed prophetically that education was imperative if ever the colored man was to be fitted usefully into our form of society. He had been deeply disturbed by the abject helplessness of the slave class, and, being a man of deeds as well as theories, he decided to do something about the matter.

It was therefore on May 5, 1798—142 years ago this month—that Kosciusko wrote out a will—a copy of which is one of my proudest possessions—stipulating that a great tract of land owned by him in the vicinity of what is now Columbus, Ohio, be sold, and the proceeds be donated to the purchase and education of slaves. His friend, Thomas Jefferson, he named as executor.

The text of this will, which I believe will be of interest to many persons, is brief, so I will take the liberty to append it as follows:

I, Thaddeus Kosciusko, being just in my departure from America, do hereby declare and direct that should I make no other testimentary disposition of my property in the United States, I hereby authorize my friend, Thomas Jefferson, to employ the whole thereof in the purchase of Negroes from among his own or any others, and give them liberty in my name in giving them an education in trade and otherwise and in having them instructed for their new condition in the duties of morality, which may make them good neighbors, good fathers or mothers, husband or wives, and in their duties as citizens; teaching them to be defenders of their liberty and country, and of the good order of society, and in whatever will make them happy and useful. I make the said Thomas Jefferson my executor of this.

T. KOSCIUSKO.

It was through no fault of the great man, however, that this dream was never realized. Litigation was piled on litigation for 50 years, and then the estate was finally assigned to other beneficiaries by the courts here in Washington.

Always has the colored man had to hoe his own row, and, instead of being helped, all too often his arm has been jostled as he bent over his work.

Let us look briefly at his fight for education. Let us consider Booker T. Washington, who opened a road through the tall trees that boys and girls of his race might have access to the light of knowledge. It was only a few weeks ago that the Postmaster General of the United States went down to Tuskegee Institute, Alabama, to inaugurate the first-day sale of the Booker T. Washington stamp and there pay humble homage on the site where a great man had so nobly wrought. Mr. Farley marveled at Tuskegee's 130 buildings and voiced his tribute in a Nation-wide radio address before the 2,000 alert members of the student body.

"The Tuskegee idea itself is a heroic monument," Mr. Farley said, as he contemplated the miracle that a Negro, in the social and emotional turmoil of southern reconstruction, could establish a teaching institution which from the outset has consistently been educating colored youth for self-development and leadership.

Booker T. Washington had an affinity for the soil, and he taught his people their need for it. As an agricultural college, Tuskegee ranks with the highest.

Booker T. Washington will be honored in the Detroit exposition, as will such historically famous Negroes as Frederick Douglas, Sojourner Truth, and Philip Laurence Dunbar.

Honored also at the exposition will be Dr. George W. Carver, and I am not at all sure but that when the pages of later history are recorded his name might lead those of all the rest of his race. This wizard of the new science of chemurgy—this first and greatest of all chemurgists—will be present in person at the exposition, and present also will be a replica of the famous Carver Laboratory from Tuskegee Institute.

Like Booker T. Washington, this modern alchemist has also a strangely close affinity for the soil, and already he has extracted secrets from its flora that one day may revolutionize our whole economic order. The development of modern plastics is in no small measure due to the achievements of this colored Edison.

Here is a genius of the first order. Yet had he not been possessed of an indomitable will, his ravenous desire for higher knowledge might early have perished.

As a boy in his teens he worked his way through high school at Fort Scott, Kans., by taking in white folks' washing. Thus cramped for time, it took him 7 years to complete the course. He wanted to enter a college in Iowa and his application was accepted. He went North only to discover that the college admitted no colored students. But this man of destiny was not to be stopped, and he later completed his college work, first at Simpson College, in Indianola, Iowa, and later at Iowa State College at Ames.

Today many southern whites call Dr. Carver "the savior of the South." He is the first man who extracted paper from southern pine and not only from pine but from cotton stalks and tomato vines, from chinaberry and mulberry, from wisteria vines and the calladium. A full generation ago he was making synthetic marble from wood shavings.

He took the peanut apart, isolating each chemical component, and out of his work in the laboratory there grew a mammoth new southern industry that now puts $45,000,000 a year into the peanut farmers' pockets—$200,000,000 a year into the peanut business.

Not interested in money, he once turned down an offer of $25,000 to join Edison at the Menlo Park laboratory. Yet this man, who has created new industries in the South, and whose discoveries may one day lead the way in solving the unemployment problem, still wears tattered old clothes and shoes, and has not a red cent to his name.

Today the educational opportunities for the colored man have broadened out. Less discrimination is apparent in our universities than a half century ago, when Dr. Carver was sent away because his skin was black from the first Iowa college to which he applied for admission.

Today the colored man, through his intellectual accomplishments, has emphatically flouted the old canard that in the realm of the intellect he was biologically unfitted to compete with his white-skinned brother.

What Carver has done in science, what Cullen, Johnson, and dozens of others have done in the world of literary art, countless other colored men are certain to duplicate in the years to come.

The Detroit exposition marks a happy beginning. Its educational and cultural motives are in high keeping. I trust that it will be the precursor of a long line of periodic dramatizations of the colored man's manifest ability to think and to do.

Amendment of the Wage-Hour Law

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 3, 1940

EDITORIAL FROM THE DURHAM (N. C.) HERALD AND QUOTATION FROM EDITORIAL OF RICHMOND (VA.) NEWS-LEADER

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the Durham (N. C.) Herald of April 27, 1940]

WAGE-HOUR LAW ROW

The thing that stands out about the more-than-a-little confusion in the House over various sets of proposed amendments to the wage-hour law is that nearly everyone agrees the law has many rough spots that need to be smoothed out by amendment, but only a few favor the whole of any of the amendments offered.

No little of the debate is over the effect of particular amendments.

One group, for instance, insists that the so-called Barden amendments contemplate the removing of all workers in factories and plants processing agricultural products from provisions of the wage-hour law. Others answer no, the Barden amendments do no such thing. They simply clarify the law and liberalize it so that certain types of plants handling agricultural products can operate and continue to give jobs to people who otherwise will have no jobs.

There are several side controversies along that same general line, it seems.

We are less than convinced on more than one point, but it does seem to us that if we are going to have a wage-hour law at all it should be one applicable to the almost million workers who work in the various plants or factories commonly called processors of agricultural products. For they, any way we are able to reason, are entitled to protection the same as any other group, and if wages and hours in their field are low and long, there is where the law is needed. If wages are not low and hours not long, then the law doesn't constitute a problem anyhow.

Obviously there are cases and areas or type of operations that call for special treatment, especially as to hours. The folk who operate tobacco stemmeries say their problem requires more liberal treatment than is permitted under the law as it now stands. Other folk in other fields feel the same way, and perhaps with good reason. With them we do not propose to argue.

The central point is, it seems to us, that only where long hours and low wages obtain is there use for a wage-hour law, and if the law is to be amended to exempt industries and workers in that group, then why have a wage-hour law?

[Quotation from editorial appearing in Richmond (Va.) News-Leader, July 20, 1939]

In spite of the personnel troubles of the tobacco firms, particularly the small independents, the Federal wage standards have had a gratifying effect in Richmond. The incomes of more than 2,000 families here have been substantially increased. Scores of slum tenements have been abandoned for better living quarters. If reports are to be credited, the quality of work of the average stemmer has improved to a point that largely has compensated for the boost in wages. Further trial of the act among southern low-wage industries may mean the same happy experience for other communities that Richmond has enjoyed for the past year.

Poll Tax Limits the Vote

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 3, 1940

Mr. GEYER of California. Mr. Speaker, one of the favorite arguments of the upholders of the poll-tax system is that the mass of people in the South who are too poor to pay poll taxes would have no interest in voting even if there were no poll tax. They say that these underprivileged whites and Negroes are so lazy and shiftless and ignorant that the right to vote has no meaning for them at all. But there are plenty of people in the South who know this is not true and are not afraid to say so. Here is an editorial which appeared in the Knoxville (Tenn.) News-Sentinel on April 14, reading as follows:

John T. Moutoux, the News-Sentinel's Washington correspondent, today makes what we believe is one of the most powerful arguments ever made against the poll-tax requirement for voting.

Because Congress has faithfully redistricted the country once every 10 years, all congressional districts have pretty well the same population.

Yet, Mr. Moutoux points out the average vote in a congressional election in the districts where there is a poll-tax requirement for voting is 15,000. In districts where there is no poll-tax requirement the vote averages 87,000.

Mr. Moutoux further shows the vote in two congressional races last election. Representative EUGENE COX, of Georgia, comes from a district where there is the poll-tax requirement. Less than 2 percent of the population voted in the election in which he was chosen. Mrs. MARY T. NORTON comes from a district in which there is no poll-tax requirement. In her district more than 39 percent of the population voted.

Mr. Cox received 5,137 votes, enough for his election. Mrs. NORTON, who was also elected, received 89,287 votes.

We believe every News-Sentinel reader in Tennessee will want to read Mr. Moutoux's poll-tax article.

Some significant comparative statistics are given in an article by Fred Hixon in the Chattanooga Times for April 14; these figures prove that the poll tax has a definitely limiting effect on the so-called free vote. Excerpts from this article read as follows:

Tennesseans have only to look to a border sister State—Kentucky—for example as to the difference in the response the voting population gives on election day where there is a poll-tax barrier and where one does not exist. In Kentucky the poll tax is not a prerequisite for voting, while in Tennessee it is. These two States have practically the same total population and their peoples are of practically the same temperament and habits. Yet Kentucky polled over 900,000 votes in the 1936 Presidential election, while poll-tax ridden Tennesseans turned out slightly in excess of 470,000. Based on official census reports, Kentucky polled 68 percent of its population of voting age in the 1928 Presidential election, while Tennessee polled but 26.7 percent. And yet Tennessee's percentage is high compared with some of the other eight poll-tax States. In South Carolina, for instance, the percentage ran as low as 10.6 percent in 1928, but in 1932 it moved up to 18 percent, and up to 33 percent in Tennessee. In view of the economic issues involved in the 1932 election, there is little doubt that both in Tennessee and South Carolina the percentages would have jumped higher than they did had it not been for the poll-tax draw-back. But all of the Southern States reflected increases in their percentages in the 1932 election over the 1928 election. In North Carolina, for instance, 44 percent of its population eligible by age to vote participated in the 1928 Presidential election and 60 percent participated in 1932. North Carolina abolished its poll-tax barrier in 1920.

An editorial in the Birmingham (Ala.) Post on April 4 makes an outspoken comparison between Alabama and Ohio with respect to number of votes cast in the 1936 Presidential election. Excerpts from this editorial read as follows:

Because the poll tax is undemocratic, because it plays into the hands of the politician and political clique, resulting in a minority rule, and because, as a cumulative tax, it is particularly vicious in Alabama, we would like to see it eliminated. * * *

We believe the day will come when Alabama and other States still clinging to the poll tax will open their eyes to the fact that we are only hurting ourselves when we deliberately limit the number of qualified voters within our State borders. * * *

We cannot be very proud of Alabama's record when it is remembered that she cast only 274,347 votes in the last Presidential election.

Compare the above figures with the 3,000,000 votes cast by Ohioans, and it is easy to understand why Ohio eats at the first table in Washington. Or compare the Alabama vote with North Carolina's 840,000 and charge the difference largely to our disfranchisement through the poll tax.

No wonder some of our neighbors regard us as—er, "backward" shall we say?

The European War Debts

EXTENSION OF REMARKS
OF
HON. MARTIN L. SWEENEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, May 3, 1940

ARTICLE BY LINN A. E. GALE, SECRETARY, MAKE EUROPE PAY WAR DEBTS COMMITTEE

Mr. SWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I append an article published in the

April number of the magazine Ancient Wisdom, of St. Louis, Mo., by Linn A. E. Gale, secretary of the Make Europe Pay War Debts Committee. I sincerely believe that if the question of the war debts is constantly kept before the people of the United States it will minimize our chances of becoming involved in the European mess.

A somewhat silent but great American President of the United States, Calvin Coolidge, when pressed for his views on the war-debts question stated "They hired the money, didn't they?" We can say with President Coolidge, "Yes, and we demand payment now."

The article follows:

[From Ancient Wisdom for April 1940]

THE EUROPEAN WAR DEBTS

(By Linn A. E. Gale, secretary, Make Europe Pay War Debts Committee)

In an interesting and ably written article in the February Ancient Wisdom Prof. Stanley Rogers raises the question, Can we afford to allow Europe to repay the war debts? He answers his own interrogation in the negative after discussing several methods of payment.

Professor Rogers does not, however, touch upon the two means involved in the proposal of the Make Europe Pay War Debts Committee, its national chairman, Senator ERNEST LUNDEEN, of Minnesota, and its vice chairman, Senator ROBERT R. REYNOLDS, of North Carolina, and Congressman MARTIN L. SWEENEY, of Ohio. These two ways have commended themselves to thinking people throughout the United States and have been endorsed by various other Members of Congress. They are conceded to be methods that are both practical and equitable.

With respect to British and French war debts, it is proposed to have the British and French West Indies, also British Honduras and Berumda, ceded to the United States in part payment. With regard to war debts of Germany, Italy, and other European nations, it is suggested that the deposits of those governments in American banks be attached the same as bank deposits of individuals are attached to satisfy claims. Neither the British and French real estate in the Western Hemisphere nor the bank deposits of the other European countries would equal in value the sums due the United States for the past two decades, but the transfer of both the real estate and the deposits to our Government would constitute a substantial payment on account.

The potential value of the British and French colonies here to the United States is quite obvious. Some of the West Indian islands are distinctly valuable now. Others could become so if intelligently utilized. In a speech on the floor of Congress March 4 Senator REYNOLDS produced detailed tables showing the more important exports of these colonies, including sugar, rice, bananas, cocoa, tobacco, lumber, hemp, tomatoes, sponges, turtles, salt, molasses, cotton, asphalt, nutmegs, coffee, limes, and other products.

The usefulness of the islands as naval bases for the United States has frequently been stressed by authorities. Former Senator William G. McAdoo, who was Secretary of the Treasury under President Wilson, only a few weeks ago advocated locating such bases on West Indian islands. Many outstanding statesmen have taken a similar position.

When the recent incident occurred, of the seizure of American mail by British officials at Bermuda, it was frequently remarked that there would have been no such event if Bermuda had been an American possession. With war of unprecedented cruelty and bitterness raging in the Old World, it is plain enough that the ownership by any belligerent nation of Caribbean islands or other land on or off the coasts of the Americas is fraught with danger. At any time a crisis may arise in the West Indies that would be likely to ensnare the United States in the European strife, no matter how conscientiously we may seek to maintain a policy of neutrality and isolation. The peril of alien ownership of the lands in question is too great.

A sophistical and an unfounded counterargument has been put forward in the American Mercury of March by Tom S. Hyland in an article headed "No More West Indies!" Mr. Hyland rehashes various complaints about alleged mismanagement of the Virgin Islands and Puerto Rico by American officials, and cites this as proof that the rest of the West Indies would be a liability, not an asset. Some of his statements about poor administrative methods may be true, but they prove nothing whatever about the commercial worth either of the Virgin Islands and Puerto Rico which we now own, or of the other West Indian isles, Bermuda and British Honduras, which it is proposed that we take over. If the Virgin Islands and Puerto Rico have been mismanaged, it is all the more reason for expecting that American officials, profiting by experience, would handle the other colonies of the region successfully.

But to return to Professor Rogers' article: His explanation of the necessity of keeping international trade a mutual rather than a one-sided process is a sound one, and I have no essential difference with him on this subject. But that has no bearing on the logic of the proposition for part settlement of British and French war debts by cession of their lands in the Western Hemisphere to the United States. He has made no mention of this plan. I also agree with him that payment of the war debts in gold, goods, or services would not be altogether workable—except insofar as attachment of bank deposits in this country might be effected. This resolves the problem down to the solution favored by the "make Europe pay war debts" committee—cession of land in part payment of British and French war debts, and attachment of German, Italian, and other bank deposits in the United States in partial settlement of the obligations of those nations. As for the bank deposits, it is well known that they amount to heavy sums.

With Professor Rogers' contention that the European war debts to the American Government should be canceled because some of the money was wrongly used, because some of it stayed in the United States, and because American manufacturers to whom portions of the money were paid, sometimes exacted exorbitant prices and pocketed outrageous profits, I must take issue. Even if these claims were true concerning practically all of the loans, the fact remains that the European debtor nations still owe the American Government these obligations, totaling over $14,000,000,000. Nor can we forget that American citizens were victimized by profiteers, too, but their debts were not canceled.

It is not a question of how the money was spent. Neither is it a question of whether the money was partially spent in this country for goods needed by the borrowing nations. Nor is it a question of whether the borrowing nations got the worth of their money or were frequently "stung" in bad bargaining.

The crux of the whole matter is that the United States loaned over $14,000,000,000 to the empires of Europe; that it has not been repaid a single cent except the periodical payments of Finland on a principal that was sliced in two, and the small interest payments of Greece and Hungary; and that the United States is justly entitled to recover as much as possible of the loans, in real estate or cash, or both, regardless of whether the funds were wisely utilized, wasted, or squandered. After over 20 years of patience and self-restraint we have an undeniable right at this late date to demand the money or its equivalent or whatever may be obtainable of either.

An individual who sought to evade repaying a loan because he had lost the borrowed funds in foolish investments or had been swindled by unscrupulous merchants who charged him too much for his purchases, would meet with scant consideration in ordinary business circles. There is no reason why rich and powerful governments should attempt to wriggle out of repaying loans on similar pretexts. Still less so when it is reflected that the loans were expended for buying the machinery of mass murder, the tools of torture, and the devices for devastation that were employed in what is now conceded to have been the most imperialistic and indefensible war in human history—up to that time.

Finally, if the agitation for liquidation of the long-overdue debts of the first World War fails to recover a single penny in cash or a single penny's worth of acreage, it will have accomplished a most worthy result in the economy of the universe if, by reminding the American people of the financial losses which, on top of moral, mental, and physical losses, they suffered from what Scott Nearing so appropriately branded "The Great Madness," it lashes our citizenry into a stern determination that "It Shall Not Be Again!"

Scouting—American Way

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 3, 1940

Mr. BRYSON. Mr. Speaker, to commemorate the thirtieth anniversary of the founding of the Boy Scouts of America I include as a part of the permanent records of this Congress the following articles, which point to the achievements and objectives of the Boy Scout movement in America:

The Boy Scouts of America represent a cross section of American life. Enrolled under the banner of scouting are boys from large cities and from villages and farms, from seaport towns, and from the western plains. It speaks the universal language of boyhood. It rises above sects and creeds and social classes to unite the boys of America on the ground of common interest and common ideals. All of these boys have come into scouting voluntarily; they are Scouts because they want to be. In the melting pot of scouting they are fused, in spite of their different backgrounds, social relationships, and nationalities, into American citizens.

Character and citizenship—these are our goals. But these are not peculiar to scouting. Most organizations for youth aim for the same thing. There are, however, unique features in the Scout program which we feel justify us in the theme we have adopted for our thirtieth anniversary, The American Way.

THE BOY—INDIVIDUAL, PATROL, TROOP—IN UNIFORM

First, we have the boy himself—recognized as an individual and encouraged to develop his own initiative, self-reliance, and confidence, based on knowledge. Boys are organized into patrols—the smallest democracy. The patrol is the boy gang, led by a boy leader, "government of the people, by the people, and for the people."

The Scout wears a uniform so that whether he comes from a rich or a poor family he is just as good as the other fellow in true democratic fashion.

LEADERSHIP—TRAINED VOLUNTEER

The Scoutmaster and other leaders volunteer their services because they are interested in boys and take training to make their leadership more effective.

ACTIVITY—ACHIEVEMENT WITH RECOGNITION

Hiking, camping, outdoor cooking, fire making, signaling, tracking, and trailing—all these offer new worlds to conquer. Recognition is given for achievements, a badge that says, "This I have accomplished." Step by step along the scouting trail the Scout learns to take care of himself and be prepared to help others.

ORGANIZATION

The organization is as democratic as our Nation. Troops are sponsored by institutions which have representation on the local council and on the national council.

SCOUT OATH AND LAW—IDEALS OF SERVICE

Through the Scout oath and law, the ideals of service, scouting seeks to give the boy a wider horizon. There are chances for him to participate in service to the community, an opportunity to become a participating citizen. The twelfth Scout law emphasizes religion.

Over 1,000,000 Scouts each year are dedicated to the principles of reverence, of tolerance, of the Constitution of the United States. (Pp. 5, 10, 11, and 6, extracted from the thirtieth annual report section of Scouting Magazine, May 1940.)

In submitting the 1939 annual report of the Boy Scouts of America, Chief Scout Executive James E. West said:

Our theme for this our thirtieth anniversary, The American Way, takes on a deepened significance in view of events which are happening in the world today. Those who believe in Scouting and who have contributed to the record presented in the following pages can feel that they are making a contribution, not only to the Boy Scouts of America but to those things in American life which are distinctly our country's heritage.

Since the movement was first organized 30 years ago, 8,999,123 boys have had the joy and benefit of the Scout program in its various branches. Yet, as you review the accomplishments of the past year, I ask that you think of the vast army of boys who want to be Scouts and who cannot be because they have not the opportunity.

All these boys are going to have the right of voting and the responsibility of participating citizens. If we believe in America, America the beautiful, it is definitely our obligation to so organize, to develop such financial support, to become so skillful in our leadership that we make the Scout program not only capable of reaching a larger number of boys but more effective in influencing the character of those we do reach.

The record presented on the following pages touches only upon the high points of the past year. A complete report of the Boy Scouts of America, as presented to Congress, as required by Federal charter, may be obtained upon request from any Member of Congress—House Document No. 680. I do hope that all having leadership responsibility in the movement will secure and study a copy.

We are going forward into a great year. Our hearts have been stirred by the events of the past 12 months, and we have been led to a new appreciation of the importance of the training of youth. It is my hope that this report of what has been accomplished will increase the vision of everyone connected with Scouting and his desire to extend the vision of others, to the end that none of us will be content to rest on the record of the past year but will, with the spirit of crusaders, plan and organize so that in the years to come we may more approximately meet our obligations to the boyhood of America.

I have so often thought of the thousands of public-spirited individuals who have given of their time, thought, and energy to the advancement of the Boy Scout movement in America as a great group of unheralded, unsung builders of this Nation's future. To them—the Scout executives, the Scoutmasters, and all other officials of the Boy Scouts of America—I say this Nation owes a debt of gratitude; gratitude for the fact that by their work there has been instilled in the young manhood of this Nation an appreciation of American traditions and values.

And in expressing our gratitude we should not stop here, but also extend a vote of appreciation to the mothers and fathers of this Nation who have encouraged their sons to become a part of the Boy Scout program. These mothers and fathers are doing something great for their sons, who as Boy Scouts will have an opportunity to develop initiative, self-reliance, and confidence based on knowledge. They are also doing something great for this country which in future years will benefit from the kind of citizenship that is developed by these early years of preparation and training.

The Transportation Bill

EXTENSION OF REMARKS

OF

HON. ALFRED L. BULWINKLE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 3, 1940

LETTER FROM BROTHERHOOD OF RAILWAY AND STEAMSHIP CLERKS, FREIGHT HANDLERS, EXPRESS AND STATION EMPLOYEES

Mr. BULWINKLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

MAY 3, 1940.

Statement urging enactment of transportation bill, S. 2009:

The transportation bill, S. 2009, should be enacted into law at this session of the Congress. It proposes equality of treatment and regulation of the several modes of transportation.

I am opposed to referring the bill back to the conference committee, because this action will endanger enactment of the legislation at this session.

The interests of railroad and express employees, numbering 210,000, for whom I speak, will be improved by the enactment of this bill. Unregulated, subsidized water and motor-carrier transportation is taking a heavy toll of railroad employment and business. It is estimated that 180,000 railroad jobs have been lost because of present unfair, discriminatory transportation policies and lack of Federal regulation of these other modes of transportation.

There is no danger to railroad employment in this proposed legislation, but to the contrary, railroad employment should improve if the legislation is enacted.

GEORGE M. HARRISON,
President, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

The Wholesalers' Amendment

EXTENSION OF REMARKS

OF

HON. JOSEPH E. CASEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 3, 1940

Mr. CASEY of Massachusetts. Mr. Speaker, I am confident that not a single Member of this House who voted for the Fair Labor Standards Act and who will vote against any emasculating amendments to the Norton bill ever intended by legislative fiat to—first, discriminate in favor of the large integrated manufacturer, wholesaler, or retailer over the millions of independent operators in distribution; or, second, discriminate in favor of the serve-self distributors who achieve a low cost of doing business by eliminating jobs wherever possible over the job-giving merchant; or, third, discriminate in favor of a type of concern that will come into business after the 40-hour week has become effective next October on a wage scale based upon the minimum of 30 cents per hour over the long-time-established merchant whose cost of doing business has been automatically inflated and pyramided and his competitive position impaired simply because he was a generous payer of wages before the enactment of the Fair Labor Standards Act.

In practice, these are exactly the ugly results that are being brought about in distribution as the law now works. In fairness to ourselves and to the millions of small and independent factors in wholesaling and retailing, operating everywhere in this Nation of ours, Congress should right these wrongs and do so immediately before irreparable damage has been done.

I ask for careful consideration of the plight of wholesale service trades under the Fair Labor Standards Act and practical relief that can be secured through a simple amendment to the Norton bill that is not intended to nor will defeat the basic objectives of the wage-hour law.

First, I want to present to you the basic characteristics of the service wholesalers. There are about 175,000 wholesalers, operating in 1,833 cities. They service over a million and a half independent retailers. They employ more than a million people. They have an annual pay roll of over $2,000,000,000. The independent retailer vitally depends upon the efficiency and low-cost operations of independent wholesalers. If the services of these wholesalers are disrupted or their costs inflated unwisely by legislative fiat the independent retailers are stymied and their business is handed over to the large integrated distributors and the self-service type of distributor, both of whom operate in a way designed to require as few employees and as little labor as the consumer and the traffic will bear.

What were the employment conditions among service wholesalers before enactment of the Fair Labor Standards Act? (1) Rate of pay: In 1929, the average annual earnings of employees in manufacturing were $1,492; in retailing $1,312; and in wholesaling, $1,875. These figures are quoted from "Wholesale Principles and Practices" by Beckman and Engle and are based upon census compilation. (2) The official workweek of a typical wholesale grocery plant was 48 hours in 1938; the typical office worker was on duty 45 hours; the warehouse workers 48 hours; the truck driver 51 hours; and the median employee for the trade as a whole 48 hours. These are statistics gathered by research in statistical division of Dun and Bradstreet. (3) Working conditions: Dun & Bradstreet report (a) There was unusual stability the year around, (b) there was unusual stability of employee income, (c) lay-offs were negligible, less than one-quarter of 1 percent, (d) vacations with pay were accorded to 80 percent of the workers, (e) sick leaves with pay were accorded 75 percent of the employees, (f) the payment of a premium wage for overtime work was not customary. (4) Customers exempted: Customers of wholesalers are retailers, hospitals, charitable institutions, restaurants, hotels, railroads, steamship lines, governmental institutions, and so forth. All are exempt from the Fair Labor Standards Act and in most cases themselves operate 7 days per week. Naturally, they continue to demand full and instant service from wholesale supply houses which makes it most difficult for wholesalers to operate effectively within the 42- or 40-hour workweek. (5) Plight of wholesalers: The 44-hour week caused the typical wholesale grocer to pay time and one-half for 4 hours, the 42-hour week forces him to pay time and one-half for 6 hours and the 40-hour week will force him to pay time and one-half for 8 hours. This, mind you, despite the fact that even before the enactment of the Fair Labor Standards Act, the typical wholesaler already paid approximately three times the minimum wage set in the Fair Labor Standards Act. The wholesaler, from a meager 6 percent earnings on invested capital, cannot absorb these new costs from net. Competition will not permit him to add to the prices he charges if his independent retailer customers are to be kept competitive. He must either retire from business or go to a 5-day week while a new concern can come into the business after the 40-hour week is established at a legal but much lower rate of pay per hour. This newcomer can thus work customary hours of 48 hours with a considerably lower cost of doing business. In a trade operating upon incredibly small margins this factor may well be decisive. (6) The remedy proposed: The established wholesaler is not interested in the minimum wages and is not complaining about them. However, the short workweek is drawing his life's blood.

Therefore each of these wholesalers in the various trades has joined a united plea to us that we enact legislation at this session of Congress relieving him of the time and one-half penalty for overtime, with the understanding, of course, that he must and will continue to pay his already high scale of wages for each hour worked so that there will always be a check on him to avoid unnecessarily long hours.

My amendment relieving the wholesalers of the time-and-one-half-for-overtime penalty is so worded that the Administrator will be left with full power to delimit the term "wholesale establishment" so that only bona fide wholesalers may take advantage of the relief granted.

During N. R. A. days, the fresh fruit and vegetable wholesalers were assigned a 48-hour week and the grocers a 44-hour week. Wholesalers of some of the other trades adopted a 40-hour week. But it must be remembered that they accepted the 40-hour week in their codes because they were promised fair-trade-practice rules that they felt would offset the costs and disruptions of the shorter work week. Of course, the wage-hour law offers no opportunities for such an offset and upon all is imposed the flat 40-hour week. The amendment for wholesalers should be adopted. They are the type of individual business enterprises that the Government should keep hands off. Instead of interfering the Government should say "God bless you," for paying decent wages to over a million American citizens, and for treating them with the dignity and respect due them. How can I, Uncle Sam, assist?

Wildlife Resources in Oregon and Washington

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 3, 1940

REPORT OF THE FOREST SERVICE

Mr. ANGELL. Mr. Speaker, as a member of the Select Committee on the Conservation of Wildlife Resources, I have been giving consideration to the activities of the several departments of the Federal Government having to do with this important branch of our Federal activities. At a recent meeting of this committee the Forest Service officials gave a factual presentation of the work of that Department. I am particularly interested in region 6, comprising Oregon and Washington, in which my congressional district is situated. I ask leave, in an extension of my remarks, to include therein a portion of this report of the Forest Service, covering this region. It is as follows:

In an effort to improve further the wildlife estimates, this region asked each forest to map the boundaries of natural big-game ranges. These, in some instances, extend off the forest. On each range is shown the winter-concentration area, if any, and also the areas where game problems have developed to the point that some remedial action is necessary. Estimates are then made by ranges for national-forest land only and another figure is made for all land within the natural range. As additional information is obtained these range boundaries may be changed, but it is hoped that the divisions will serve as control units, if and when special control measures are necessary for any individual range. Following are brief comments on individual species:

Antelope are increasing rapidly, both on the forests and on outside lands. Oregon opened a 5-day hunting season and sold 275 permits. Two hundred and thirty-six animals were reported killed. Favorable seasons, protection, and improved watering facilities have aided materially in restoring this animal to its former range. The State of Washington has made a plant of 23 head, secured from the Sheldon Antelope Refuge.

The bear is not classified as a game animal in Oregon and is open to hunting at any time, except in Jackson, Josephine, and Klamath Counties. There is some urge to make them a game animal, but so far the objectionists have succeeded in keeping them off the protected list. Authentic information on grizzly bears is difficult to secure, as they are seldom seen by persons qualified to identify them. In Washington bears are classed as a game animal and their take is controlled by the game commission.

The winter of 1938–39 was very favorable for big-game increases of all species. In this region it is felt that the series of mild and fairly mild winters have been the greatest factor in the phenomenal increases of deer that have occurred on several forests. Some of the largest increases have taken place where the range was carrying a full capacity of domestic stock, which would indicate that livestock on the summer ranges, at least, is not affecting the increase of deer. The total increase shown amounts to 17,260 animals. This represents principally unconsumed increases throughout the region, but is partly influenced by surveys made on the Malheur and Fremont Forests. The increase has been general in every forest of natural mule-deer habitat.

Total figures for this region show a decrease of 1,400 in Columbia black deer. This does not reflect the true situation. The Siuslaw Forest has made a large reduction due to the previous estimate including the protective area of the forest instead of the national-forest land only. The Olympic likewise shows a reduction, due to

the inclusion of additional acreage in the national park. The remaining west-side forests show a slight increase. The general opinion now is that blacktail deer are again increasing.

The only whitetail-deer population of any size in this region is on the Colville Forest. This is a natural range for whitetail and is stocked by the original species. A few recent plants and remnant bands of the original whitetails that inhabited the lower Columbia and Willamette watersheds are still in existence. The Biological Survey has recently established a whitetail-deer refuge in eastern Washington and has placed a man in charge to study this important game animal.

Elk are quite definitely on the increase—not only are the numbers increasing but the animals are invading new territory each year. Only two Oregon forests, the Fremont and Umpqua, and the Chelan, Colville, and Mount Baker forests, in Washington, report no elk. On the Whitman and Umatilla forests, in Oregon, they are becoming a problem. Browse feed has been heavily utilized over the entire range and in some places eliminated. To relieve the situation in eastern Oregon, the game commission issued 500 cow permits and 376 cows were reported killed. This, together with 807 bulls from the same area, did not consume the year's estimated increase. The kill in the rattlesnake area on the Snoqualmie was reported at about 300. Because of light snowfall last winter, only a minimum of damage to agriculture crops was reported in this area. The opening of the season on either sex in this area has succeeded in scattering the elk into small bands and this has relieved the situation to some extent. It is possible, however, that some additional measures will have to be taken to remedy completely the situation.

The Washington Game Commission and the Forest Service have been much concerned about the small increase in mountain goats. Sufficient facts are not available to account for the condition. This season the commission has started a study which will involve constant observation of a large band of these animals for a full year.

There is some question now regarding the existence of the mountain sheep on the Wallowa forest. The Chelan forest reports on authentic information that a small band still exists along the Canadian boundary. They cross to the United States side occasionally in summer, but winter on the Canadian side in the breaks of the Similkameen River. Here they are subject to some winter hunting by Indians, but seem to be holding their own. Such a small band, however, is subject to extermination by an unusually severe winter.

Total fur-bearing animals for the national forests of this region, consisting of 11 miscellaneous species, are estimated at 187,550. Fur bearers have been overtrapped and their habitat has been changed in many places until the present population is only a fraction of the former numbers. Illegal trapping still exists in some places, especially of the more important animals, such as beavers. Law enforcement is difficult and public opinion, especially in certain localities, is not too favorable for protection. A greater consciousness in the public mind of the value of such animals is necessary to restore fully the fur animals to their remaining habitat.

A general increase in beaver is reported throughout this region. In Oregon the game commission made a Pittman-Robertson project of beaver transplanting and took over that phase of the work.

The marten, a valuable fur animal, has been seriously depleted in the past, but is showing some recovery on most forests.

Mink and otter, valuable fur bearers, do not seem to stand the drain of trapping and are decreasing over most of the region. Closure to trapping may be the solution and this action being recommended to the game department of both States. There is an indication that fur taking may have to be put under much closer control if the finer fur animals are to be maintained as a source of revenue in this region.

There is little change in badger population. A reduction in ringtail cats and skunks is indicated in Oregon, due primarily to a reduction in area considered on the Siskiyou and Siuslaw Forests. Skunks showed a sight increase in Washington. The weasel population shows an increase in both States, which is normal.

Estimates of game birds vary somewhat from the 1938 figures. In some cases the difference is accounted for by more reliable information, and in others the natural increase is indicated. As stated in previous reports to the committee, estimates of game birds and fur-bearers represent more or less an initial undertaking in an effort to take stock of these species in their national-forest relations. The figures, to begin with, are necessarily broad estimates, but are considered reasonably conservative.

Blue grouse are showing a general increase over the entire region.

Ruffed grouse frequent the creek bottoms and lower valleys. Because of this habit, they have suffered considerably from the encroachment of civilization. Oregon maintained a closed season, but Washington allowed hunting 4 days. A general increase is reported.

The foolhen is holding its own, with little change in numbers. The Chelan National Forest reports an indicated increase but is reserving statistics until they have more definite information.

The ptarmigan is one of those rare species that lives and dies away from the adverse influences of civilization. Their numbers are kept in check by natural enemies, and there is little change in numbers. An increase in numbers is indicated.

The State of Oregon, through Pittman-Robertson funds, has a project, which was operating this past season, to restore watering and nesting places for sage hens. This work consists of improving springs and watering places by fencing areas of one-half to 2 acres to exclude stock and game. The water, of course, is made available to the larger animals. A few sage hens still exist in eastern Washington, but not on any forest land.

There has been no material change in numbers or conditions affecting sharptailed grouse. It is protected in both States. Outside of the forested areas Washington sportsmen report a slight increase.

California valley quail have shown a marked increase, and on the Chelan Forest have invaded the forested areas much more than ever before. This may be due to the general drought condition. The mountain quail is found mostly in western Oregon and Washington in the lower valleys.

Hungarian partridge has shown a steady increase on most forests in both eastern Oregon and Washington. It is subject to complete changes in range, but the past mild winters and dry spring seasons have no doubt been instrumental in aiding its increase. It appears to be most abundant on the Wallawo and Colville Forests.

The Chinese pheasants seem to be more hardy and productive than the ring-neck in this region. Because of habitat, the national forests do not attract this fine game bird, and their numbers are unimportant on forest lands.

Predatory animals are considered to comprise bobcat, lynx, cougar, coyote, and wolf, which total 59,588. The estimates on other animals are 410 fisher and 20 wolverine. Through contacts with hunters, woodsmen, forest officers' records, and other available sources, it is felt that the estimates are as accurate as any obtainable under existing conditions, though admittedly not as good as desirable.

Some variations from the 1938 report on bobcats are shown. The principal difference is on the Willamette, where the estimate for lynx has been changed to bobcat. Some reports of deer kills made by bobcats are received.

The 1939 estimate for lynx represents a decrease of more than 30 percent over 1938. This is accounted for by correcting lynx estimates to bobcat on one or two forests where some confusion has existed as to the different species.

Due to bounty payments in Oregon there has been more attention directed to the cougar. Increases were reported in many sections of the region and more local hunters were in the field.

Wolves are very infrequent and many of those reported are believed to be coyotes instead of wolves. The estimates given are based on the best information obtainable and records of catches by experienced trappers.

MANAGEMENT ACTIVITIES

Wildlife control is gradually emerging from a period of restorative conservation to one of management, and the big problem of the Administrator is to change public opinion from one of strict conservation to that of controlled management.

Interest in wildlife administration is increasing in the public mind as publicity is given to the work that is being done. The number of hunters has increased only slightly, but the increasing public interest is manifested in magazine articles and newspaper releases, as well as sportsmen's organizations and individual inquiry. Both Washington and Oregon are making rapid progress in scientific investigations and management practices. While much progress in this field has been made there is still much to be accomplished.

Perhaps the most outstanding accomplishment of the year has been the completion of working arrangements between the Forest Service and the State agencies to facilitate and coordinate the accumulation of factual wildlife information and the administration of present functions.

SPECIAL BIG-GAME HUNTS

The State legislature in 1939 passed a law authorizing the hunting of antlerless deer in Grant County, Oreg., which included the problem area on Murderers Creek and large part of the Malheur Forest. Hunters were given special doe permits for $1 each and were required to check in and out of the area. The law provides for hunting antlerless deer in 1939 and 1940. The trial hunt was very successful from the standpoint of reducing numbers, but it is quite evident that the hunting effort in the State is not sufficient to reduce such overpopulation to a point in full proportion to the reduced carrying capacity of the winter range.

The following tabulation shows the results of the hunt:

Estimated population of area, mule deer	40,000
Number of hunters checked in	15,646
Number of deer checked out:	
Bucks	3,563
Does	6,397
Fawns	936
Total deer killed	10,896

The number of deer killed just about equals the estimated increase on that area for the past season. The doe season attracted approximately 6,600 more hunters than previous years, and the success was approximately one deer to $1\frac{1}{10}$ hunters. Considerable criticism was heard from those who do not favor an antlerless deer season, but the game commission is satisfied such a season was necessary. Because the take only equaled the estimated increase, the situation is not much changed from last year.

Much to the surprise of many sportsmen, only two minor accidents occurred in this area.

The issuance of 500 cow permits by the game commission increased the hunters in the elk territory. Approximately 61 per-

cent more elk were checked out than were recorded last year. The cow season was the major influence, although weather conditions were favorable for hunting, and more hunters were in the woods.

Comparison with previous years shows the following:

Year	Number hunters	Number elk killed	Success ratios
1935	2,761	692	1 to 4.
1936	2,945	547	1 to 5.38.
1937	2,970	634	1 to 4.68.
1938	2,717	734	1 to 3.7.
1939	3,022	1,211	1 to 2.49.

The break-down between cows and bulls for the 1939 season was 832 bulls and 379 cows. The success of the larger number of hunters was greater than in former years. This is due, no doubt, to the opening of the season on cows, and also to favorable weather.

The kill of 1,211 elk from an estimated population (1938) of 17,700, which includes the Umatilla, Wallowa, Whitman, Malheur, and Ochoco Forests, hardly scratches the surface as to reduction of the herd. The kill is less than 7 percent of the population and less than one-third of the increase estimated for last year. Elk are difficult to hunt in this area, where lodgepole thickets are numerous, and it is quite plain that the hunting effort is not keeping pace with the annual increase.

Last season the hunting of either sex on the Rattlesnake Game Refuge took out 1,006 elk. This was regarded by sportsmen and State authorities as too heavy a kill for the size of the herd. This year only bulls were legal kill, and the take was approximately 300, or about 10 percent of the estimated population. An increase of 20 percent may be expected during the mild winters experienced the past 3 years.

The total game killed by hunters in 1939 covered black bear; blacktail, mule, and whitetail deer; and elk in the number of 30,710.

The estimated number of game animals killed by predatory animals consisted of 50 antelope, 13,390 blacktail deer, 10,130 mule deer, 230 whitetail deer, 1,290 elk, 880 mountain goats, and 4 mountain sheep—a total of 25,974.

The region reports 83,200 big-game hunters, 13,030 bird hunters, with 9 fatal hunting accidents and 11 nonfatal. Nine hundred and eleven trappers were reported for the year.

Fishermen numbering 429,100 were reported on the national forests of the region for 1939.

In fish planting the Oregon Game Commission operates its own pack string and fish were planted by State men in most cases. The Forest Service has cooperated in the past to a great extent in this work but fire duty often interferes with planting schedules. The present system assures greater efficiency and better planting practices through proper coordination and timing.

The Washington Game Department is now planning on a similar arrangement. This will provide for an orderly, progressive planting plan. Forest Service pack stock will be used when and where they will facilitate the program. Likewise the State pack strings will be available, at times, for emergency fire duty.

Total fish planted in the region by the Forest Service were 2,713,000; the total planted by all agencies including the Forest Service were 23,378,500.

Water surveys were continued on three forests—the Fremont, Whitman, and Mount Hood. These will be turned over to the State as they are completed.

The State of Oregon has arranged for a technician to supervise the release of all fish this coming season and in addition will employ several men to make stream and lake surveys. Our plans are coordinated with those of the State so there will be no overlapping of work.

The Washington Game Department is making a special drive on this data and is securing some very valuable information. The Oregon Game Commission provided for catch records at Paulina Lake on the Deschutes Forest which is a heavy producer of game fish. The records so far show that the creel census method is valuable in determining the returns on plantings.

Stream improvements during the year were constructed, as follows:

Forest	Number of improvements by classes				Purpose
	Dams	Deflectors	Barriers removed	Other	
Deschutes	6	5			Creek opened to permit trout to run up from Lake of the Woods.
Rogue River					
Siskiyou			3		Beaver dams torn out so fish from Lake Ann could use stream for spawning.
Do			1		
Willamette			2		
Do			1	(1)	
Total for region	6	5	7		

[1] Dug 700 feet spawning channel.

Forest	Name	Size or capacity	Remarks
Check dams to raise lake levels: Ochoco.	Delintment Lake	15 acres	Size and type of dam: Earth fill dam 4′ x 10′ x 100′ will raise water level 1 to 2 feet.
Natural rearing ponds: Siskiyou.	Grayback	½ acre	Size and type of dam: 300 x 100 feet earth dam.
Holding ponds: Mount Hood.	Zigzag River	5,000	Concrete dam with spillway.
Fish ladders: Columbia.	Trout Creek	12″ x 18″ x 8′	
Fish screens:			
Deschutes	Cabot Lake		Loose rock filter to prevent loss of fish downstream.
Do	Round Lake		Do.
Do	Three-Creek Lake.		Do.
Do	Suttle Lake		2 roller screens.
Do	Todd Lake		Good rock filter.
Mount Hood	Olallie Lake		Rock and concrete weir. Removable framed screen inserts.

COOPERATION

The Forest Service in this region, through intimate contacts with field conditions and wildlife problems and needs, has naturally sought to take an advanced position in wildlife management practices such as stream and lake surveys, deer and elk studies, and beaver transplanting. The importance of game commissions is duly recognized and cooperation is a major consideration. In Oregon the State game commission was asked to take over the deer- and elk-checking stations with such assistance as the Forest Service could offer. Also it was asked to supervise all fish plants with such assistance as the Forest Service could extend in men and pack stock. Stream and lake surveys to improve fish planting plans were also taken up with the State, the Forest Service offering to continue assistance with the work to the extent of available funds. The State was requested to participate in future big-game surveys on the national forests. All of these suggestions have been accepted by the Commission and are now incorporated in the plans. The checking-station work was taken over by the State last fall, and it has hired a special man to handle fish plantings and water surveys and has now formulated plans to participate with the Forest Service in the elk and deer surveys in the spring of 1940. There is general recognized need for more scientific information and the State is laying plans to acquire such data. There has been set aside in the 1940 Budget approximately $35,000 to be devoted to scientific management and investigation. This will include game-bird and habitat surveys and creel, stream, and lake survey for planting fish and big-game census and control. Past experience has taught the need for having game counts on questionable areas worked out cooperatively with the State commission so that an agreement can be reached on the final results of such counts.

The State of Washington has taken a lead in scientific research, and where a problem is indicated an investigation will be made with such participation by the Forest Service as is needed to further cooperative interests. The Washington Sportsmen Council is a strong organization with considerable influence and represents nearly all of the sportsmen's associations in the State and has a splendid leadership.

Cooperative relations with the Biological Survey and the Bureau of Fisheries have been very satisfactory.

ACCOMPLISHMENTS

Plans and programs: Some of these have been covered in previous discussions. Among others may be mentioned the following:

Big-game studies: The special study on the Malheur was completed by O. T. Edwards and the report has been made available to those interested. Further work on this area is planned in cooperation with the Oregon State Game Commission to check on the results of the doe season opened on that forest.

Mr. A. C. Randle, of the Modoc Forest, region 5, completed a study on that forest which involved the migration of Oregon deer into California to winter. Because of heavily overused winter feed, winter losses are imminent when weather conditions become severe. To utilize a probable loss and to reduce numbers to avoid possible range problems, the Oregon Game Commission issued permits to take 500 does on the area. There were 488 permits sold and 360 does were checked out. This, together with 2,600 bucks killed, is an insignificant reduction from an estimated 20,000 deer that migrate across the State line.

The Washington Game Commission, after detailed investigation, opened the deer season on either sex in problem areas on the Chelan and Wenatchee Forests and two other places within the State. On the Chelan area the following were checked out: 134 does, 76 bucks, 97 fawns. The hunting season opened before fall concentration was noted, and the above kill (considered resident deer) amounted to approximately 20 per square mile. It was estimated the kill was about 95 percent of the resident herd. The object was to relieve the range for a larger herd that migrates to that area for winter feed.

The Washington Game Commission is making a detailed study of mountain goats on the Chelan Forest. Cooperation by the Forest Service is furnished as needed. The results of this study should be available next summer.

Sickle cell disease: Some concern has been felt over the possible results of this disease which has been found in blacktail deer on the west slopes of the Cascade Mountains. To locate and determine the occurrence of this disease each west-side forest has been requested to send in blood smears for examination. Samples from these forests have been submitted and examination was made by Dr. Howarth, of Oregon State College. With the exception of two or three samples, all have shown evidence of the disease. The greatest amount of sickling occurred in deer from the Rogue River and Siskiyou Forests. This office is maintaining a map showing the location from which each sample was taken and the result. Little is known here of how much effect this disease has on the animals, but because of subnormal increases in blacktail deer we are looking for any cause that may be contributing to that condition.

The Snoqualmie reports some disease in blue grouse affecting their toes and beaks. Specimens will be obtained and investigation made to determine the cause, if possible.

John Schwartz completed a survey of the Olympic elk situation and has submitted an excellent report. It is now in the process of being checked and will be available at a later date.

Forest	Name	Remarks
STUDY PLOTS		
Chelan	Deer Point	Deer and stock excluded.
	Gold Ridge	Stock only excluded.
Deschutes	Metolius deer study plot	Split rail enclosure 7 feet high.
Malheur	Canyon Creek Deer plot	Deer and stock excluded.[1]
	do	Stock only excluded.[1]
Wenatchee	Roaring Creek	1938 deer grazing sample.
	Stelico	1939 plots.
Willamette	McKenzie District, fenced enclosure.	Part of material cut. No fence built. Study of elk use on S. and G. summer range.
OTHER IMPROVEMENTS		
Deschutes	Bird Nesting Island	Construction of rock and dirt.
	Pumice Flat, antelope water hole.	To serve antelope in vicinity. Fenced to exclude domestic stock.
Fremont	Campbell Lake, sunken rafts.	Shelter for planted fingerlings.
Mount Hood	Spawning boxes	
Umpqua	Twin Lakes No. 1	Planting vegetation grasses and lily bulbs.

[1] Constructed 1935.

Beaver-trap planting: In 1939, 50 beaver were transplanted in 5 Oregon national forests, 33 of them on 2 forests being planted by the State.

In Washington 74 were planted on 4 national forests, of which 16 were planted by the State independently or by Forest Service cooperation. Some failures have occurred in past plantings due to an inadequate food supply. The Oregon Game Commission is continuing the beaver-planting project and some rehabilitation of stream banks is contemplated. The Washington Game Department has also made much progress in beaver rehabilitation, and especially in law enforcement. Definite information as to stream carrying capacity is needed to keep colonies within the limits of feed. Research, therefore, is much needed in this field.

Amendment of Federal Copyright Laws

EXTENSION OF REMARKS
OF
HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 3, 1940

TELEGRAM FROM UPPER PENINSULAR LIQUOR VENDORS ASSOCIATION

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

MARQUETTE, MICH., *May 2, 1940.*

Congressman FRANK HOOK,
Twelfth Congressional District of Michigan, Washington, D. C.:

Upper Peninsula Liquor Vendors Association, consisting of every licensee selling liquor for consumption on the premises in the Upper Peninsula, and having a branch organization in every county, urges your cooperation in drafting an amendment to Federal copyright laws which at present give unfair rights to American Society of Composers, Authors, and Publishers.

The Society of Composers, Authors, and Publishers has used the Federal law as a threat in order to collect tribute from every tavern owner in whose places their music is played, regardless of whether their performance was made with the knowledge of the tavern keeper or not. This law as it now exists amounts to a system of shake-down for the society and its lawyers.

We also urge that you encourage action already contemplated by the United States Department of Justice under the antimonopoly laws. Your replies will be awaited with keen interest by our members.

UPPER PENINSULAR LIQUOR
VENDORS ASSOCIATION,
JOHN FEGAN, *Secretary.*

Foreign Relations of the United States

EXTENSION OF REMARKS
OF
HON. JAMES A. SHANLEY
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, May 3, 1940

THE LANSING PAPERS, 1914–20

Mr. SHANLEY. Mr. Speaker, I am including in my remarks a document which has been recently published in the Foreign Relations of the United States, The Lansing Papers, 1914–20, volume I. The subject is so important today and the thoughts of the author parallel the events of the moment so much that I think it worth while to make the entire paper available for a wider public than would ordinarily have access to the formal documents.

The preface of volume I has this to say:

The documents contained in this and the following volume constitute an extensive selection from the large body of correspondence of Robert Lansing, former Secretary of State, which was secured for the files of the Department of State following Mr. Lansing's death in 1928.

These papers were, therefore, not available at the time when the volumes of Foreign Relations for the years 1914 through 1919 and the supplementary volumes on the World War and on Russia were compiled. A large number of the papers, however, seemed to have such great public interest that it was deemed desirable to publish these additional supplemental volumes. Although these volumes consist largely of papers received from the collection of Mr. Lansing, a certain number of closely related documents from other official sources, whose publication seemed desirable, have been included.

It ought to be a controlling and ever-present thought throughout the reading and study of these words of the author that our Government, in all of the solemnity of its official utterance, has enjoined on all of us "a strict and impartial neutrality." The indulgence—yes, luxury—of taking sides are both denied to us by the injunction of the President of the United States acting by and with the consent of the Congress of the United States in public act expressed.

Full well, however, does the President of the United States understand the impossibility of being neutral in thought. He did not make the mistake of President Wilson in seeking to close the mind against the unneutral thoughts of man. He understood that there may be subjective unneutral thoughts even though there are no outward manifested objective unneutral actions.

He understood Shakespeare's analytical delineation of man's temperament when the Bard of Avon asked:

> Who can be wise, amazed, temperate and furious,
> Loyal and neutral, in a moment?

An American can so long as he can cabin, crib, and confine this wisdom, this amazement, this fury, loyalty, and neutrality within his mind's ambit. He can fulfill then the outward duties and obligations of "strict and impartial neutrality."

DECEMBER 1, 1916.

Neutrality is a state which becomes increasingly difficult to maintain the longer it lasts. The government charged with its maintenance has no easy task, for as a foreign war progresses the citizens of the neutral country become more and more partisan in their sympathies and less just in viewing the impartial attitude of their own government. Neutrality—that is, a real neutrality—satisfies no one who supports the one belligerent or the other, so that they constantly criticize the attitude of the government and complain that it is failing to perform its duty.

When so tremendous a struggle is being waged as the present one, which is sapping the energies and eating into the very fiber

of the great empires of Europe, and when all nations the world over are affected, their individuals in neutral countries should become increasingly strong in their sympathies and desire earnestly the success of those powers whose cause they advocate.

And this partisanship is naturally more intense and more irreconcilable to impartiality in a Nation like ours which had drawn its blood from the various nationalities of Europe, which are now arrayed against each other in the most bitter and most desperate strife in the annals of history. It is natural that ties of blood should affect the sentiments and through the sentiments the individual judgment of the American people, and make of them sympathizers with the nation from which their ancestors came. We are still a young Nation in which national characteristics are in the making. We are only gradually absorbing the millions of people who themselves, or whose forbears left the lands of their nativity to find here refuge from oppression or opportunity to win the just reward of their industry. Comparatively few of our citizens have lost touch with the lands across the sea or do not feel the call of kinship and the sympathy which springs from pride of origin.

However intense may be the feeling which would inspire every American if this Republic was in conflict with another nation, it is not strange, when the United States is but a spectator of a war so great that it involves nearly all countries from which we have drawn our people, that every American should become a partisan under the impulse of relationship. Nor is it strange that the people of the United States, thus divided into partisan groups, view the policies of their Government with prejudiced eyes and are bitterly critical of any course of action which bears hardly upon the belligerents with whom they sympathize, complaining that the strict neutrality of the Government is unworthy of the United States in view of the great principles at stake in the war.

Thus this Government, striving to preserve a free and open mind toward both sides and to resist with equal vigor encroachments upon the rights of Americans by either, pleases no one, not even its own citizens, while belligerent public opinion is naturally hostile and contemptuous because the official attitude of this country does not coincide with the viewpoint which forms the basis of that opinion, judging of the merits of the conflict, which denies all justification to the enemy.

For two years and a half this Government has faced this situation and patiently endured the denunciations and invectives of partisanship at home and abroad. It has done this because it believed that its first duty was to the millions who had confided to it their welfare and their interests, and that the welfare and interests of this great people were served by keeping the United States at peace. But another duty has impressed itself more and more as the war increased in magnitude and the combatants became more desperate in their efforts to vanquish one another, and that was the duty to preserve one great nation in the world free from the terrible results of the World War, so that its energies might be devoted to the restoration of wasted resources, to the rebuilding of new enterprises on the ruins caused by the innumerable lives sacrificed and by the destruction of vast treasures.

Determined as this Government was to remain neutral because of its duty to the American people and its duty to the future of mankind, it realized that restrictions which had never been listed in actual war were introduced and put into practical operation. How these various changes increased the efficiency of the military and naval forces of the warring nations and how manifestly inadequate the old codes of warfare were and the accepted rules defining the relative rights of belligerents and neutrals became almost at once apparent. The whole magnificent system of international law applicable to a state of war, which had been constructed with such pains and toil, came tumbling to the ground in a few months. Only the foundation stones of principle were left on which to build temporary structures which would at least give partial shelter from the fury of the tempest which seemed to be sweeping every right from its former place in society.

Relying apparently upon the fact that many of the rules of conduct universally accepted were impossible of application because of changed conditions, the belligerents went further and violated other rules which would have been applied and ought to have been applied. These violations of established rules, some of which were possibly justifiable, but many of which were not, were seized upon by their adversaries as ample excuses for violations on their part. Thus every new breach begat another, which in turn begat another, until the standards of right, sanctioned by treaties and usage, were torn to bits, and the belligerents ignored more and more the former practices of nations at war.

In stating this situation and the positions taken by the warring powers I do not intend to condemn the course pursued by either side so far as they affect their respective rights. It is not the part of a neutral to sit in judgment or to compare the conduct of belligerents in carrying on hostile operations against one another. It is practically impossible for those having the administration of foreign affairs not to make such a comparison and not to form a judgment as to the justifiable character of violations of recognized rights, but it is, nevertheless, their duty to refrain from giving official sanction to such opinions or from in any way departing from the position of an impartial spectator who, while he may deplore the conduct of one combatant more than that of the other, remains silent and strives to keep the official mind of the government free from prejudice, even though the public opinion of the nation may denounce acts as beyond the pale of right or of humanity.

When, however, the acts of belligerent(s) seriously infringe the rights of neutrals, a neutral government cannot permit such acts to be passed over in silence. It is a duty, which a government owes to its citizens and for which it was established, to protest against such violations and to endeavor to prevent their repetition. Without passing upon the question as to whether new conditions have made certain belligerent acts, previously condemned, justifiable, or upon the question as to whether they are warranted by way of retaliation for alleged lawlessness on the part of the enemy, a neutral is bound to decide as to their legal character if they impair recognized neutral rights, and in reaching a decision it can only apply existing rules, even though they seem obsolete and insufficient.

It is obvious that, with the belligerent nations engaged in what they believe to be—and what indeed may be—a death struggle, a struggle in which they are determined to employ every means to weaken their opponents, a neutral government, seeking to preserve rights, has well nigh a hopeless task. What can be done to keep inviolate those rights? Appeal to the established rules governing a belligerent's treatment of neutrals? In the intensity of this extraordinary war the ears of belligerents are deaf or at least dull to neutral appeals, if they are convinced that they are working injury to their enemies. Threaten the offending government with retaliation? Would that have any more effect than an appeal to legality unless the threat was carried out? And if the threatened retaliation did not bear with equal force on both belligerents would it not be held with more or less reason that it was unneutral?

On the other hand, to threaten without putting the threat into operation would seem to be worse than useless. It would be humiliating and result in a loss of esteem in foreign lands and at home.

In this situation what course lies open to a neutral nation physically unable to give effect to a declaration that it will maintain its rights at all hazard? Is it wise to make such declaration with the possibility that it will accomplish nothing and only bring discredit upon the one that makes it? I do not believe the most optimistic opportunist would counsel such action. But if not that, then what? Do you not preceive the great difficulty of the problem and the perplexities which face those who have to solve it?

Viewed from every angle, is not the most sensible course for a neutral government to show patience and treat the warring powers as if the circumstances of the war had made them in a large measure irresponsible for their improper acts? If such a policy is adopted, a belligerent government must be frankly notified that its conduct is in flagrant violation of neutral rights, that its conduct cannot be forgiven or condoned, and that it will be held responsible for any resulting loss or damage. Of course, such a notification amounts merely to a reservation of rights to be determined at some later time, and probably will not have the effect of causing a belligerent to change its policy. But what else can a neutral government do if the nation itself is unwilling or unprepared to have its rights enforced by action? As a reservation of rights on which to found claims to be adjusted when the war is over, a representation of this sort is manifestly desirable, but as a means of improving a difficult or unpleasant state of affairs it will amount to nothing at all. This might just as well be admitted and understood so that hopes may not be built on so weak a foundation.

To guide the course of this Government with intelligence, it is necessary to look at the situation, not only from the point of view of the neutral but also from that of the participants in the struggle, and first let me say that the warring nations and their governments are wrought up to the highest pitch of nervous tension. They are desperate. One supreme purpose controls their conduct. It is to win the war. National independence is to them the prize of victory. To preserve that independence is the supreme motive. Put yourself in their place and then decide what regard you would pay to the rights of other nations, if to do so interfered with efforts to injure your antagonist. You might attempt to pacify a neutral, whose friendship you desired, by certain minor concessions, but would you cease in pursuing a practice which you considered essential in the least degree to gaining an advantage over your enemy unless that practice so seriously affected the rights of a neutral nation that its continuance would force that nation to enter the war as an enemy? I do not say that this attitude is right, but I do say that we ought not to be surprised that it is under present conditions the one taken by belligerents.

I think, too, that we should also accept as a logical consequence that a nation, obscessed with the idea that its life hangs in the balance, that it is engaged in a struggle for life, feels a natural irritation and is not as strongly impressed with the righteousness of its cause as are its government people. A belligerent government, straining every nerve to conquer on land and sea and in the air, putting forth herculean efforts and making tremendous sacrifices of life and treasure, is in no frame of mind to consider calmly and judically a request or demand by a neutral which, if granted, would seem to surrender some gain, be it ever so slight, over the enemy. It would be folly to expect a just and dispassionate discussion of a question in such circumstances.

Continue to put yourself in the frame of mind of a belligerent and then answer these questions: What does a government, whose people are dying by the tens of thousands for the sake of their country, care about a legal right of neutral property? What is the observance of law, however sanctioned by the world, compared to a nation's life? How much do commercial interests weighed against a possibly greater sacrifice of life by prolongation of a war? Answer these questions from the belligerent's standpoint and you will perceive very clearly the attitude of the governments of warring Europe in their dealings with the United States.

Can you in your heart blame them for their indifference to our legal rights or for their attempt to justify their illegal acts? Can

you blame them for making bitter complaints that we, as a people, are mercenary, selfish, and unsympathetic when we insist that our rights shall be respected, when insistence appears to be favorable to their enemies? They would not be human if they felt otherwise. We must accept it as a natural consequence of present conditions and deal with it as best we may.

The conditions are abnormal. Public opinion in the countries at war is abnormal. The state of mind and point of view of belligerent governments are abnormal, and the relations of neutral nations with those which are fighting are consequently abnormal. Manifestly the situations which arise cannot be treated in a normal way. This needs no evidence, the facts are two patent to require proof.

In spite of this temper of the belligerents, which is so essentially human, and in spite of these abnormal conditions which have presented a situation of the greatest delicacy in our international relations, there have been numbers of Americans who seem to have failed to comprehend the conditions or to apprehend the mental attitude of the peoples who are at war. Many of these Americans have been engaged in European trade or have industrial enterprises dependent for their materials on imports from belligerent countries. The personal interests of these people seem to have blinded them to the true state of affairs and to the national interests affected, which are so much greater than their own. They appear to have lost their sense of perspective, and to be unable to understand the reasons which have caused this Government to hesitate in peremptorily demanding that every neutral right previously admitted be strictly observed. They not only call upon the Government to protest and threaten, but numbers have insisted that it should go to extremes in defending their rights. The possible consequences of so radical a policy do not seem to worry them, possibly because they expect that the protests and threats will be heeded, which is further evidence of their failure to realize the situation.

I do not wish to judge too harshly those Americans who have maintained this attitude. Very likely we ought to expect persons, who are suffering financial loss while they see many of their fellow citizens prosperous as a result of the war, to resent bitterly the illegal conduct of the belligerents and to feel that the Government was willfully deaf to their appeals and was failing in its duty as their protector. I can understand their frame of mind. They honestly believe that all this Government has to do is stiffen its back and emphatically demand respect for the rights of its citizens, and the result that the belligerent governments, though they may bluster and fume, will submit rather than have the dispute become actually serious.

Of course, these complainants, however legally right they may be, have entirely misunderstood the temper of the belligerents. The Government, however, with a much wider horizon, and feeling responsibility for the general welfare, takes into consideration all the circumstances. It realizes that the belligerents have but one object and that they will subordinate everything to military exigency. It knows that the course which the complainants demand would aggravate the state of affairs already very difficult. You might as well try to drive with an ox whip a bull which has been maddened with the banderilleros and which stands in the ring with blood dripping from the colored darts, as to force in this way a belligerent to live up to rules which interfere with the necessities of the conflict.

Furthermore, a stern, unbending policy would close the door to all compromise, through which some measure of relief may be found. Of course, this Government cannot compromise a right, but the individual, who is suffering, may, as has been done in very many cases. And then we must look into the future and as a nation save out of this wreckage, with all its passions and hatreds, some friendships on which to build anew the normal trade and commerce between this country and the great European markets.

Why not look at this matter squarely and admit the truth? It is almost a certainty that none of the belligerent governments, which are infringing the neutral rights of Americans, is going to change its policies because of diplomatic pressure, however vigorous it may be, unless it is firmly convinced that this country intends to declare war if its demands are not complied with. Unless the United States is prepared to back up its threats with force, is it wise to make them? Does any American, who comprehends the situation and has the good of his country at heart, advocate such a course? And if it is adopted what would be the result? Would it tend to advance the honor and dignity of the United States, or would it have a contrary effect? Of course, even without the physical power to enforce its demand, a nation may be compelled, because of gross insult or wrong, to sever a friendly intercourse with another nation, and so invite more radical action; but to do so when the issue may be honorably avoided would be condemned by men who take a common-sense view of international affairs and do not permit selfish interests to influence their judgment.

A policy of moderation is never pleasing to those who mistaken, believe threats will be heeded. It is not pleasing to the unthinking element of the population who applaud vigor of language as evidence of national greatness and who consider it is patriotic to bluster and brag and abuse. But, for the matter of that it is not agreeable to the government which adopts it as the wise and sane course to pursue. It is a difficult policy, a policy of patience, a policy of extreme forbearance, which under normal conditions would be humiliating and incompatible with the dignity of a self-respecting nation.

But at the present time, when half the world sees red, when great empires are staggering under the sledge-hammer blows of their adversaries and exerting every effort to resist the onslaught, and when governments and individuals are laboring under intense excitement, common sense, as well as generous sentiment, demands that a neutral should not threaten a belligerent with radical action unless he changes his conduct when the neutral is convinced that no change will take place. Is it reasonable to expect that nations struggling for their lives will be willing to step aside and let a neutral pass when those nations are firmly convinced that their enemies would be benefited if they should do so? Ought not a neutral government to seek to give just proportion to its commercial interests in comparison with the great enterprise of war? Is not that the sensible, practical, and rational way of viewing the present situation and of dealing with the difficult problems which it presents?

A neutral in time of international war must always show forbearance, but never, since neutrality has been recognized as a legal state, have the patience and forbearance of neutrals been put to so severe a test as in the present conflict. The arbitrary and illegal conduct of the belligerents have very naturally aroused intense indignation. To curb the desire to resist this conduct to suppress the indignant feelings aroused, to remain cool and self-possessed under the great provocation—that is the difficult task which a neutral government has been called upon to perform in spite of repeated storms of criticism and abuse.

It seems to me that neutrality is like a slender cable stretched above a seething torrent of war. Along this swaying narrow bridge a neutral nation must walk from shore to shore, from peace to peace. It is no easy matter to keep one's equilibrium. With a long balancing rod weighed at either end with belligerent rights and carrying on his back the rights of the neutral he sets forth on his precarious journey. He bends a little to this side, then a little to that, recovers his poise, and cautiously takes a step forward. He hesitates; the cable trembles and sways; with increased care he again puts his foot out and feels it firmly fixed before he moves; the balancing rod dips dangerously first this way and then that; again he stops; again slowly advances.

This is the task of preserving neutrality as I see it reduced to physical terms.

The neutral must keep his eyes on the swinging cable which stretches away into the mists where lies the firm ground. He must not lean to either side. He must always move with extreme caution and with the certainty that the step taken will not destroy his balance and plunge him into the gulf. The roar of the rushing waters beneath must not affect his calmness; the dashing spray must not dim his vision. He must be prepared to resist the fierce gusts of passion and abuse which beat in his face. He must always look forward, not downward. Above all he must keep his head even though he is wet by the leaping red waves and though the cable grows slippery with bloody foam.

His goal is the distant shore of peace. To reach it without falling into the gorge where the raging flood of relentless war is engulfing millions of men and great nations are sweeping away the standards of life, the very foundations of civilization, is the supreme purpose of the nations which travel the difficult way of neutrality.

I do not think that I have overdrawn the perils and difficulties which beset a government striving to maintain its neutrality; I doubt if the picture can be overdrawn. With a just appreciation of the forces constantly exerted from within as well as from without to compel the abandonment of a policy of impartiality toward the nations at war, no true American will too harshly judge or be too ready to criticize publicly his own Government's conduct of foreign affairs, he will not be eager to believe that the Government is pusillanimous, and he will not be one of those who cannot curb their tongues but one who seek by abuse and ridicule to excite contempt and condemnation of the Government which they are bound to support.

Patriotism, real American patriotism, ought to restrain every loyal citizen from giving free rein to his passions and from open and hostile criticism of his own Government in any dispute with a foreign power, and especially if the dispute is of so serious a nature that it may result in a resort to arms. To impress a foreign government with the idea that the United States is a divided nation is to encourage that government to pursue a policy which may bring disaster on the Republic and force an issue which the American Government is seeking to avoid. To encourage a foreign government to continued aggression or to anger it so that it will not cease from aggression is an unpatriotic and disloyal act on the part of an individual citizen. The responsibility lies with the Government, and to place obstacles in its way is neither wise nor praiseworthy. It is not treason to do so unless a state of war exists, but it comes as near treason as any act can in time of peace.

Thus do I view the state of neutrality; a difficult state, in which a government is tried to the uttermost; a state, the preservation of which wins the favor of decreasing numbers the longer it exists; a state which invites greater and greater resentment from the people of a neutral nation as day by day more individuals are added to those who complain of rights violated and injustices perpetrated by the belligerents.

Even if a government succeeds in passing through the tempest and shielding the nation from the dread consequences of war, it cannot expect the plaudits of a grateful people. In the avoidance of conflict there is nothing to excite hero worship or to stir the emotions with patriotic fervor. There may be a flicker of thankfulness that the nation has been spared, but no outburst of rejoicing like a paean of victory. What praise is given will be given grudgingly, it will be mingled with complaints at the methods employed and possibility with regrets that the might of the nation was not exerted in behalf of one belligerent or the other.

So the restoration of peace will find the neutral government which has won a greater struggle than that waged on the battlefield, a struggle which has required the exercise of those traits of human nature which appeal least to the average man, the traits of patience, self-control, and forbearance.

It is only in the realization of duty performed and in the confident hope that history will some day do tardy justice, that those, upon whom lies the burden, will find a full recompense for having been faithful to the end and attained the gold in spite of every obstacle which has been placed in their way and of every influence which has sought to force them from the path leading to the peace and prosperity, which their countrymen have enjoyed as the result of their efforts.

Antilabor

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 3, 1940

Mr. HOFFMAN. Mr. Speaker, those who yell antilabor at all who would require of labor unions the same responsibility that is demanded of all other organizations are facing some rather embarrassing facts. Many have closed their eyes to the racketeering which of late has been flourishing in the labor organizations and which is now being given to the public by the press; actually, millions of dollars have been collected from the workers in the way of membership fees, dues, and special assessments, and much of the money has found its way into the pockets of racketeers—like Scalise, a convicted white-slaver with a salary of $20,000 per year; and Bioff now serving a sentence for pandering—who exist by creating prejudice against employers, levying toll upon the pocketbook of workers and through the failure of labor organizations to clean house.

Fortunately, publishers and editors throughout the country are aware of the situation and no longer hesitate to expose the rascals. In thus exercising their right of free speech, a safeguard which we should ever fight to maintain, these editors are doing a yeoman service to the cause of labor. The editors back in the sticks have not been deceived by the cry of antilabor and are stripping the mask from those whose only interest in the workingman is in the collection of dues. Note the following editorials, one by Harry H. Whiteley, editor, Dowagiac Daily News; another by William H. Shumaker, editor, Three Rivers Commercial; another by Harold S. Pringle, editor, South Haven Daily Tribune; and the fourth by Mark P. Haines, editor, Sturgis Daily Journal. They are but four of the many which have recently come in:

[From the Dowagiac Daily News]

Labor racketeering in the larger cities in which labor is organized by mobsters and gangsters and made to prey upon legitimate business and industry, presents a phase which the regular labor organizations have not shown any great amount of zeal in combating. Chicago and New York are not pretty pictures of this extortion. The leaders live in massive, expensive establishments like kings, while their dupes, either driven under the belief that they are getting some advantages through their forceful bargaining with those who want their services, or through fear of what will happen to them if they refuse to do the bidding of their overlords, put themselves into the ranks and accept the situation. This is done under cover of being regular divisions of organized labor and recognized as such by the central control bodies. So long as this gang management persists in organized labor ranks and the legitimate organizers do nothing to stamp it out, just that much longer will labor organizations be looked upon with a serious degree of suspicion by the public.

[From the Three Rivers Commercial]

LABOR BILLS

The House is giving some attention to widespread pressure for revision of the Labor Relations and Wage and Hour Acts. The administration would prefer to let both acts stand until the next Congress. But both are so faulty in so many respects that it cannot afford to overlook them.

The Labor Relations Act has been badly administered. The Labor Relations Board has consistently acted as grand jury, prosecutor, judge, jury, and executioner, in one of the most flagrant attacks upon American system of justice in the history of the country. It is incompetent, biased, and the tool of radicals that would overthrow the Government.

In practice, the truth about the Wage and Hour Act is coming out. It does protect some few people from exploitation, but its principal purpose is to force higher pay rolls on employers. This it does by reducing the time at which overtime pay begins, or compelling the use of more than one shift in industries which got along well enough with one shift working a fair week.

During the last session the act barely escaped repeal. It is creating unemployment and raising the price of goods at a time when conditions call for lower prices. It should be drastically revised, but the features protecting employees from distress pay and long hours should be retained.

The administration strategy is to make a show of revision in the House and then allow the bills to die in the Senate. That is expected to satisfy everyone. As a matter of fact, it will not satisfy the people. The administration may find out that it cannot head off revision. If so, it will be because the people demand that it do what it should do.

[From the South Haven Daily Tribune]

LABOR BILLS IN CONGRESS

The House is giving some attention to widespread pressure for revision of the Labor Relations and Wage and Hour Acts. According to news stories emanating out of Washington, President Roosevelt has hurried back from Georgia to exert administrative pressure to keep both acts intact, to continue them on trial for another year. Certainly he is aware of the enormous damage both acts have done in continuing unemployment and hindering industry from giving employment.

The Labor Relations Act has been badly administered. The Labor Relations Board has consistently acted as grand jury, prosecutor, judge, jury, and executioner in one of the most flagrant attacks upon the American system of justice in the history of the country. It is incompetent, biased, and the tool of radicals that would overthrow the Government.

Designed to bring harmony between employer and employee, the Wagner Act saw the inauguration of the bitterest period of industrial strife in the country's history. The public, as well as representatives of all groups in our economy, has registered its desire that the act be amended to reduce this strife to a minimum.

The Wage and Hour Act does protect some few people from exploitation, but in so doing is crippling all industry. No one complains about the elimination of sweatshops, long hours, child labor, and meager wages as paid in some parts of the country, but there is serious objection to forcing legitimate industries to absorb higher pay rolls by reducing the time at which overtime pay begins, or compelling the use of more than one shift in industries which got along well enough with one shift working a fair 48-hour week.

During the last session this act barely escaped repeal. It is creating unemployment and raising the price of goods at a time when conditions call for lower prices.

It behooves the ordinary citizen who wants to see industry and the country firmly back on the road to progress to protest the administration's strategy of making a show of revision in the House and then allowing the bills to die in the Senate. The administration should be informed that it cannot head off revision of these two troublesome acts. You can help by making your desires known to your Senators and Congressmen now.

[From the Sturgis Daily Journal]

MAYBE LEWIS HAS THOUGHT OF IT, TOO

When William Green charges John L. Lewis with planning to make himself dictator of the United States through a political revolution, it may be observed that it's a rival leader of labor who brings the accusation while the two are locked in a struggle to control a large section of the motor industry.

Nevertheless, the shot hits somewhere near home. For the title, "would-be dictator," fits Lewis like a glove. He is more than a ruthless boss of labor, determined to perpetuate his power in his own field.

With his delusions of grandeur would it be strange if Lewis now dreamed of the day when he would be boss of the whole country, seizing supreme authority by the same bulldozing methods that have marked his whole career?

There was at least some background for Green's accusation in Boss Lewis' recent implied threat of a third political party, a personally conducted organization composed of diverse elements in the population that he thought he could force to accept his leadership.

Nobody would put it past Boss Lewis to entertain such a preposterous vision of his own future greatness; to strike a pose before his mirror and see reflected the frowning figure of America's first dictator.

But he would be due for a rude awakening. The American people long ago took his measure. He will have to remain content with his present rank as America's troublemaker No. 1.

The requirement by the National Labor Relation Board, that employers against whom it has rendered adverse decisions must post "cease and desist" promises, has received a blow from the Circuit Court of Appeals in Richmond.

This court cannot believe that Congress intends to countenance N. L. R. B. orders prescribing, in effect, that a person who denies having committed an unfair practice must confess that he has been guilty. For "to inflict such a humiliating punishment is out of harmony with the spirit of our laws."

Many acts of the National Labor Relations Board have been out of harmony with the spirit of our laws and common, everyday justice. The Wagner Act gives it enough power, as everybody knows—much more than enough—but not satisfied with this authority it has proceeded to overstep all bounds of fair dealing.

Each day's developments give fresh emphasis to the imperative need for sweeping such a Board out of office and enacting a law which will prevent these gross invasions of ordinary human rights.

These editorials are typical of the feeling throughout the country. There is no doubt but that people generally are sympathetic to labor organizations. They believe in collective bargaining. It is just as true that the public demands that labor organizations free their membership of racketeers and insist upon legislation which will be fair to anyone who will be affected by it.

This can only be brought about by the abolition of the National Labor Relations Board and the amendment of the law.

Samuel D. McReynolds

MEMORIAL ADDRESS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1940

On the life, character, and public service of Hon. SAMUEL D. MCREYNOLDS, late a Representative from the State of Tennessee

Mr. SHANLEY. Mr. Speaker, SAM MCREYNOLDS guided the destinies of the Committee on Foreign Affairs through its earliest neutrality days. Under his chairmanship the first so-called Neutrality Act of modern times was placed on the statute books. He had, of course, previously given his name to the famous Johnson-McReynolds Act—Public, No. 151, of the Seventy-third Congress. Today, and for some days to come, this Nation will be concerned over the prohibition of financial transaction with any foreign government in default on its obligation to the United States. The guide, however, is still this act.

SAM MCREYNOLDS saw with great clearness the dangers of unwise legislation, and in many ways he anticipated the thought of the President of the United States on the impossibility of foreseeing events to warrant a too straitjacketed neutrality.

SAM MCREYNOLDS loved peace, though no man could give more than he in the call to service, were it his duty. He was a fighter in every sense of the word, but he knew, too, that "peace hath her victories no less renowned than war."

In his own valley, in the heart of the district that he loved so well and for which he gave every ounce of his devotion and loyalty, there is a fitting public monument. It will stand forever—ineradicable, permanent, yet so useful and so gigantic it will tower above the countryside—man-made, a Congressman's dream fulfilled.

For us outside that district there will be a spiritual memory of a great American.

John A. Martin

MEMORIAL ADDRESS

OF

HON. ED. V. IZAC

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1940

On the life, character, and public service of Hon. JOHN A. MARTIN, late a Representative from the State of Colorado

Mr. IZAC. Mr. Speaker, many of us who serve in the House of Representatives pride ourselves on being progressives or liberals or supporters of a government philosophy which teaches that the state was made for man and not man for the state.

The best example of this philosophy in action was the gentleman from Colorado whom we mourn today. JOHN MARTIN was an inspiration and a guide to those of us younger and less-learned Members of the House who have consistently striven to make more secure the lives and the liberties of the American people.

JOHN MARTIN was to me the Bill of Rights itself: If in doubt on a particular legislative issue, I knew I could with confidence follow my friend from Colorado.

In 4 short years it is not always possible to properly evaluate the qualifications and the character of a man, but I am sure of one thing: That JOHN MARTIN by his deep sincerity and his great human sympathy endeared himself to every one of us, his colleagues, and with his passing not only have we lost a friend, but the great cause of service to humanity has lost its foremost champion in the Congress of the United States.

The Transportation Bill

EXTENSION OF REMARKS

OF

HON. CLARENCE F. LEA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 3, 1940

Mr. LEA. Mr. Speaker, the conference report on the transportation bill, S. 2009, is to come before the House on next Thursday, May 9.

This bill has been the subject of consideration by the House Interstate and Foreign Commerce Committee since the 24th of January, 1939. Eleven weeks' hearings were had on the transportation problem. Every interested group in the United States was given an opportunity to present its viewpoint.

The Interstate Commerce Committee of the Senate has given a similar consideration to this measure. The bill passed by the Senate was a revision and codification of the Interstate Commerce Act, providing for the unified regulation of our domestic interstate carriers, including water carriers.

The House bill approached the subject from a different angle. It provided for changing the existing law by specific amendments and not by a revision of the whole Interstate Commerce Act.

The conferees agreed upon the House form of bill. There is little, if any, subject matter in the bill as agreed upon in conference that was not in either the House or the Senate bill. In the main the bill agreed on in form and subject matter follows the bill as passed by the House.

Certain subjects in the Senate bill, but not in the House version of the measure, are included in the conference agreement.

No important bill in recent years has had more searching attention than that given this measure by the conferees of the House. Prior to taking the matter up in conference we received many briefs on the two bills as they passed the respective Houses. We received an exhaustive criticism of both bills from the Interstate Commerce Commission.

The conferees on the part of the Senate were Senators WHEELER, TRUMAN, DONAHEY, WHITE, and REED.

On the part of the House: Representatives LEA, CROSSER, BULWINKLE, COLE of Maryland, WOLVERTON, HOLMES, and HALLECK.

With the very able, commendable aid of legislative counsel, particularly, of Mr. Perley and Mr. Mullen, digests were made of all briefs presented.

Every letter and communication was also checked before the conference report was agreed upon.

The legislative counsel presented us with a 400-page analysis which covered every section of the Senate bill and the House amendment. The conferees, in joint session, went over every controversial phase of the bill and joined in signing the conference report. The legislation proposed is fair and just to all carriers. It is sound legislation. It does not propose any magic remedies, or provide for subsidies or guaranties. It seeksto stabilize transportation and to provide for impartial regulation of all modes of transportation subject to the act.

NEW SUBJECTS

The principal new subjects taken from the Senate bill include an amendment of the short-haul provision of the Interstate Commerce Act. The principal effect of this amendment is to broaden the power of the Interstate Commerce Commission so that the Commission may require the establishment of joint rates and through routes where it finds that the route proposed is needed in order to provide adequate, and more efficient, or more economic transportation.

RULE OF RATE MAKING FOR RAIL CARRIERS

The rule of the present law which in substance provides that in fixing rates due consideration shall be given to the effect of rates on the movement of traffic is amended by limiting consideration of movement of traffic to the traffic of the carriers for which the rates are prescribed. This rule is made applicable, in separate provisions, to rail, motor, and water transportation.

MOTOR-VEHICLE EXEMPTIONS

The bill contains an amendment to the House bill which extends the exemption granted to motor vehicles controlled and operated by a federation of such associations.

INVESTIGATION OF MODES OF TRANSPORTATION

The Senate bill contained a provision providing for a three-member board of investigation and research to be appointed by the President with the advice and consent of the Senate to investigate the relative economy and fitness of carriers of various types for transportation service with a view of determining the service for which each type of carrier is especially fitted. This provision, modified in its terms, is included in the substitute bill. The authority of the Board is to continue for 2 years. It is directed to report the results of its investigation with its recommendations to the President, and to the Congress.

CHANGES FROM THE HOUSE BILL

Many of the changes made in the legislation since it passed the House were naturally of a clarifying or routine type. Many were of important but not of a controversial type. Certain changes are noteworthy.

FORWARDING CARRIERS

The bill, as it passed the House, by general language placed forwarding carriers within the regulation of the Interstate Commerce Commission. The Senate bill contained no similar provision. The House provision is dropped from the conference agreement.

The House conferees were friendly to this legislation but finally concurred in the action taken under which forwarding-carrier legislation is to be considered by both Houses with a view of working out practical legislation to take care of the transportation problems presented by the operations of such carriers. Regulatory bills for this purpose have been introduced in each House.

CONSOLIDATION PROVISIONS

The Senate and House bills contained provisions intended to facilitate consolidation of carriers. The Senate bill contained no such provision. This subject is hereinafter discussed.

EXPORT RATES

A provision in the House bill relating to export rates as related to agricultural and industrial products was also omitted from the bill and which subject is hereinafter discussed. The omission of the provisions as to the minimum rates permitted to be changed is also hereinafter discussed.

WATER-CARRIER EXEMPTIONS

Little change was made in the provisions of the House bill as affecting the exempted transportation of water carriers. The provision of the House bill granting exemption to the transportation of commodities in bulk by contract carriers by water in a vessel the cargo space of which is used for the carrying of not more than three such commodities was extended to apply equally to contract and common carriers by water.

LAND-GRANT RATES

The bill as it passed the House provided for the elimination of land-grant rates with certain limited exceptions. The conference agreement modifies these provisions by continuing the land-grant rates as to transportation of military or naval property moved for military or naval use, and the transportation of members of the military or naval forces when traveling on official duties. In other words, land-grant rates are confined to these specific purposes.

RECONSTRUCTION FINANCE CORPORATION ACT

The provisions of the House bill in reference to the Reconstruction Finance Corporation Act are modified by providing that the total amount of loans to railroads and purchase and guarantee of obligation of railroads shall not exceed $500,000,000. This bill does not provide, however, for increase in the aggregate amount of funds available to be loaned by the Corporation. Under the conference agreement, loans are to be based on full and adequate security and must be approved by both the Interstate Commerce Commission and Reconstruction Finance Corporation.

BRIDGES OVER NAVIGABLE WATERS

The provisions of the House bill in reference to bridges over navigable waters are omitted from the conference agreement.

MOTION TO RECOMMIT

Notice has been given that when the conference report comes up in the House a motion will be made to recommit it with instructions to the conferees to insist on the inclusion in the bill of the Jones amendment, the Wadsworth amendment, and the proposed amendment for dismissal compensation for employees.

Each of these two amendments attempts to inject Congress into rate making by arbitrary rules. Neither of these rules would operate in the public interest or for the benefit of the persons in whose names they are proposed. They are destructive of the rate-making control that must take into consideration all the circumstances involved in each particular case. Each of these rules, if enacted into law, would be burdensome to shippers and an unnecessary interference with our economic conditions that would be detrimental to business.

They are unneeded because their legitimate purposes are properly provided for under existing law and the bill as agreed upon in conference.

THE JONES AMENDMENT

The Jones amendment was offered on the floor of the House, without its previous presentation in the hearing or to

the committee considering the transportation bill. It reads as follows:

(1a) It is hereby declared to be the policy of Congress that shippers of wheat, cotton, and all other farm commodities for export should, under like circumstances, have substantially the same advantage of reduced rates as industrial products for export as compared with shipment of industrial products not for export, and the Interstate Commerce Commission is hereby directed to institute such investigations, to conduct such hearings, and to issue orders making such revision of rates as may be necessary for the purpose of carrying out such policy.

This amendment attempts to impose a rate-making rule in reference to the relative treatment of agricultural and industrial products when shipped to United States ports for transshipment to foreign destination. It in substance provides that such products, respectively, shall have substantially the same advantage of reduced rates when intended for foreign destinations.

The yardstick to be applied is not whether the rate is reasonable or just, or whether the rate is discriminatory or unduly prejudicial to any section or commodity. It ignores the different competitive or other conditions which may warrant a higher or a lower rate in the one case or the other, and requires export rates to be arbitrarily determined regardless of the different circumstances that may be involved as between the different products.

If a reduced export rate is given to one agricultural or industrial product, does this amendment mean that regardless of the need for a lower rate all such products, whether competitive or not, and whether on the same line or not, are to be placed on a common level of rates? If so, such an arbitrary interference with recognized principles of rate regulation would greatly disturb the economic conditions of the country.

Under the present law the Commission has the same jurisdiction as to rates for export as it has for domestic rates. It has authority to require that the rates shall be reasonable, nondiscriminatory, and nonprejudicial.

The Commission cannot require the carrier to establish a rate that is less than reasonable within the legal meaning of that term. If the carrier establishes a rate that is less than reasonable, he does so voluntarily and not by compulsion; but if he establishes a low rate, one that is legally less than reasonable, it may be protested by any interested party.

Most so-called export rates are established voluntarily by the carriers for the purpose of enabling our traffic to move so that it can meet foreign competition. Wheat or a manufactured product may be able to move and compete in the foreign market under a reduced rate, but not if compelled to move only under a higher domestic rate. The domestic rate may be reasonable and compensatory to the carrier, but it may not, under the law, be unjust, unreasonable, or unduly prejudicial to the shipper.

The reduced rate that is established to help open up the foreign markets to our products, whether industrial or agricultural, is not an injury to either agriculture or industry. In fact, it is a help to both.

The carriers can afford to carry some products on a relatively low rate if they can get reasonably compensatory rates on other products.

A merchant may sell sugar at a profit of 5 percent. On some luxury or semiluxury he may make a 100-percent profit. He does not attempt to do business on the common profit margin. If he conducted his whole business on a low margin alone, he would shortly be in the bankruptcy court.

Rail rates are fixed on the same general plan, and it is a policy followed throughout the civilized world.

The proposal contained in this amendment would serve no constructive purpose. If such a rule were put into effect, it would probably cause all reduced rates established to aid exports to be raised to the domestic level, with a consequent curtailment of the market for American products, which it is the design of the present transportation law to encourage.

Articles shipped to supply the domestic market are not in competition with articles shipped to the foreign market. The carrier would like to have the higher price on the article intended for export as well as on the article for domestic consumption. His motive in offering the reduced rate is to increase consumption of American goods and to get a haul that otherwise it could not get. A low export rate is not a discrimination against the domestic shipper.

If wheat is selling in Baltimore for $1 a bushel and in Liverpool for $1 a bushel, and we have surplus wheat for sale in the Liverpool market, it is no aid to the American wheat grower to bring about a situation which would deny him a reduced rate to the ports and therefore, compel him to pay a rate that might prevent the sale in Liverpool.

If an export rate is discriminatory or prejudicial between carriers or between ports or between competitive articles, the regular provisions of the present act provide a remedy. The proposed legislation in the conference report reinforces existing remedies. The present law permits equalization of rates between different points and gives different producing sections the advantage of the most available routes to market their products abroad. The injection of an arbitrary rule that would disturb existing routes as between points might itself cause an embarrassing situation.

In fact, most export rates have been made lower than domestic rates for the aid of different sections in giving them equality as between different ports.

Export rates are not confined to either agricultural or industrial products. I am advised by the Commission that relatively they apply as frequently to farm products as to industrial products. In most instances they are not rates required by the Commission, but voluntarily established by the carriers.

Many high-valued products are carried on a liberal margin which permits a liberal reduction in rate, if necessary to meet the export demands in order for the American products to compete in a foreign country. Domestic rates on some heavy products are frequently so low that no great margin of reductions can be made even though it were desirable to take our products into the foreign market. To establish an arbitrary standard that would apply the same rule of reduction as to each product under such dissimilar conditions could not be of any constructive value.

Labor costs are frequently less in foreign countries than in the United States. In order to sell, our product must meet that competition. The reduced export rate under which goods are carried at a very low margin helps to employ American labor and give a market for the American producer. Any arbitrary interference with the operation such as proposed would simply, in its primary effects, militate against our labor and our producers.

The bill, as agreed on in conference, reaches further than the existing law in attempting to prevent unjust discriminations. The undue prejudice and undue preference sections have been broadened to include regions, districts, territories in the prohibition against subjecting "any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever."

Agricultural commodities and raw materials are brought within the provision.

The present law directs the Commission to make adjustments in rates necessary to promote the freedom of movement of the products of agriculture, including livestock, "at the lowest possible lawful rates compatible with the maintenance of adequate transportation service." It is probably impossible for Congress to do more for the farmer with respect to freight rates than this bill provides for without injecting Congress in the field of rate making, a course without support of any responsible authority on rate-making problems. Arbitrary provisions that attempt to set up a special legislative rule unduly favorable to any particular group or class add inequality to improvidence in any attempt to legislate on a serious problem of the country.

The National Industrial Traffic League opposes the Jones amendment. It is declared to be an ill-advised attempt at statutory rate making and wholly unworkable. The report of the Interstate Commerce Commission condemns the amendment for similar reasons, including the administrative difficulties that its adoption would involve.

A basic error of the Jones amendment is its attempt to apply a common arbitrary rule to dissimilar situations.

Among the many briefs presented to the conference committee was a joint brief in behalf of the Southern Traffic League and North Carolina Traffic League. After discussing the Jones amendment it declared "It is wholly impossible of intelligent administration because of its unwieldiness."

WADSWORTH AMENDMENT

The House bill contained an amendment added from the floor as follows:

In order that the public at large may enjoy the benefit and economy afforded by each type of transportation, the Commission shall permit each type of carrier or carriers to reduce rates so long as such rates maintain a compensatory return to the carrier or carriers after taking into consideration overhead and all other elements entering into the cost to the carrier or carriers for the service rendered: *Provided*, That nothing in this paragraph shall be construed so as to affect the long-and-short-haul provision of section 4.

This amendment is the same as a provision that was included in the Senate bill, except the proviso. This amendment by its terms is proposed in order that the public may enjoy the benefit afforded by each type of transportation. The Commission is required to permit each type of carrier to reduce its rates so long as such rates maintain a compensatory return to the carrier, after taking into consideration overhead and all other elements entering into the cost to the carrier for the service rendered. It seeks to protect each type of carrier against low price rates of a competitor by compelling such competitor to charge rates which shall not be below the level defined in the amendment.

Manifestly the effect of the provision is to impose high rates to a degree that would prevent the shippers and the public from getting the benefit of lower rates that might otherwise be charged. In order to accomplish the purpose an arbitrary rule is proposed that ignores the different circumstances that should be considered in fixing rates for the various products offered for transportation. The value of the freight to be moved, the effect upon the movement of the traffic, the competitive situation as to the market to be reached, the low cost of the product to be moved, as elements to be considered in rate making, are all to be ignored. This presents the question, Is this a just standard to be applied in every case? Very much of the traffic that moves on our carriers today by rail, highway, and water moves at a lower price than that required by this proposed amendment. The amendment would not only require a rate which would cover overhead and all other elements entering into the cost to the carrier for the service rendered, but also a compensatory return which includes carrying charges and profit. If it were possible to put such an improvident rule into effect and enforce it, it would provide every carrier in the country with business on a profit-making basis. Thirty percent of the railroad mileage of the country now under custody of the courts, because of their inability to meet their current expenses, would be suddenly lifted into a state of profit earners. Thirty percent more of the roads, nonprofit making but still able to keep out of the possession of the courts, would find themselves in easy financial condition.

There is probably less than 15 percent of the passenger business done by the main-line rail carriers that pay fares sufficient to make the returns to the railroad that could be required by this amendment.

It is roughly estimated that the rails carry passengers at a loss of $100,000,000 a year more than income from such service. How would it be possible to raise passenger fares, haul the traffic, so as to make up the additional cost of $100,000,000?

As a practical proposition, the amendment, put into effect, would stop the movement of much traffic, further decrease the earnings of the railroads, reduce employment, and unjustifiably interfere with economic conditions that should be left undisturbed by legislation.

A large part of the wheat of the Rocky Mountain and western producers have materially lower rates than this amendment would permit.

Wheat, like many other heavy products, such as coal, sand, and gravel, are, in many instances, carried at a very low margin. How can wheat moving from distant farms and selling for 75 cents to a dollar a bushel afford to pay freight up to the standard permitted by the Wadsworth amendment? The value of the product when delivered permits no transportation except that which can be performed on a narrow margin above the actual cost without bearing its full percentage of the overhead. The carrier is better off to move such freight at a low margin and otherwise build up the community it serves than to refuse the product because it does not provide the income that this amendment requires.

The farmer, who is one of the distinct sufferers under present economic conditions, would be one of the primary victims of this amendment if Congress should be so improvident as to put it into effect.

Under the present method of making rates we have large areas blanketed into common rate levels in originating and destination areas. The area might be 800 miles across, but it is afforded a common rate level. The Wadsworth amendment might make the application in this blanket system of rate making very difficult. Our business and economic system is built up on this group plan of rates to a very substantial extent. The status of business institutions, the stability of our industries, are based upon this grouping of rate areas.

The administrative difficulties of this amendment, if put into effect, would make rate correction slow, expensive, and harassing. In order to get a change of even a minor rate in the face of protest would require the burden of proving the cost of transportation, including all overhead for each particular class and item. As there are many thousand items on the freight list of the country, we would have an involvement that could not make for constructive rate regulation.

After all the experience of this country and the rest of the world in rate regulation it should not be necessary to prove the unsound contention that all freight carriers should pay its full share of the total cost and contribute something to profit. Classification of commodities on that basis would be next to impossible with rates on many classes prohibitive.

A peculiar feature of the amendment is that it is especially directed against permitting the establishment of lower rates. It is the carrier who wants to make a lower rate who is put under the handicap and burden of justifying each rate or classification on the cost basis that this amendment affords.

Generally speaking, lower rates where not involving any unfair or destructive effect should be encouraged instead of handicapped.

Contemplate the difficulty of a railroad charging up the cost of track maintenance and determining relative cost to be charged to passenger trains and that to freight trains, or to a cubic yard of hats and to a cubic yard of beans.

Long delays and expense in adjusting rates to meet the changing necessity of the traffc movement unfairly divert and discourage business.

The Wadsworth amendment is totally unnecessary as a means of dealing with unjust rates, territorial or commodity discriminations. Complete machinery is otherwise provided in the transportation bill and in existing law for that purpose.

The bill provides for the fair and impartial regulation of all modes of transportation covered by its terms. It places all these types of transportation equally under the protection of the unified regulatory body. It protects each type of common carrier from unfair rate cutting by another carrier having higher costs by protecting inherent value of each type of transportation. The amendment, if adopted, would afford only a needless interference and burden on shippers and business without any practical justification.

Stability, flexibility, and the exercise of discretion are qualities that must be attained by just regulation and which are not possible under rules made in disregard of the practical problems with which they deal.

The Interstate Commerce Commission, after discussing the Wadsworth amendment, has declared that, in its judgment,

the amendment is both "unnecessary and undesirable." The Commission further states:

In our judgment, the provision in question is not necessary in order that the public at large may enjoy the benefit and economy afforded by each type of transportation. The requirement in the rate-making rule that the Commission give due consideration to the effect of rates on the movement of traffic by the carrier or carriers for which the rates are prescribed and also to the need in the public interest of adequate and efficient transportation by such carrier or carriers at the lowest cost consistent with the furnishing of such service, coupled with the admonition in the declaration of policy in section 1 that the provisions of the act be so administered as to recognize and preserve the inherent advantages of each mode of transportation, will afford adequate protection in this respect. If experience should show that further protection is needed, contrary to our expectation, Congress can then amend the act, but such a restriction as is now proposed is, we believe, both unnecessary and undesirable.

HARRINGTON AMENDMENT

The motion to recommit proposes that the conferees be instructed to insist on the inclusion in the conference report of the provisions adopted by the House in reference to consolidations with a substitute for the Harrington amendment to read as follows:

As a prerequisite to its approval of any consolidation, merger, purchase, lease, operating contract, or acquisition on control, or any contract, agreement, or combination mentioned in this section, in respect to carriers by railroad subject to the provisions of part I, and as a prerequisite to its approval of the substitution and use of another means of transportation for rail transportation proposed to be abandoned, the Commission shall require a fair and equitable arrangement to protect the interests of the railroad employees affected. In its order, or certificate, granting approval or authorization of any transaction referred to in this paragraph, the Commission shall include terms and conditions providing that such transaction will not result in employees of said carrier or carriers being in a worse position with respect to their employment.

Notwithstanding any other provision of this act, an agreement pertaining to the protection of the interests of said employees may hereafter be entered into by any carrier or carriers by railroad and the duly authorized representative or representatives of its or their employees.

It will be observed that this provision as a prerequisite to the approval by the Commission of any proposed consolidation of a carrier subject to part I, the requirement that a fair and equitable arrangement be made to protect the interest of the railroad employees affected.

It also requires as a prerequisite to the Commission's approval of the substitute and use of another means of transportation for rail transportation proposed to be abandoned, a fair and equitable arrangement to protect the interest of such railroad employees.

In its order approving any such transaction, the Commission shall include conditions providing that such transaction "will not result in employees of said carrier or carriers being in a worse position with respect to their employment."

A consolidation contemplates the general continuance of the service of a carrier but the possible or probable reduction in the number of its employees. The proposal that the Commission be authorized to require as a condition of its approval of a consolidation that fair and equitable arrangements be made to protect the interest of the employees is the same as was embodied in the House bill as reported to the House. It was adopted without any opposition in the House committee reporting the bill. It manifested the desire of the House committee to give fair and reasonable protection to employees dismissed by reason of consolidations.

The provision of the proposed amendment to require the Commission to make similar provisions in the case of the substitution and use of another means of transportation for rail transportation proposed to be abandoned, was not requested of the House committee during the hearings on the bill. An abandonment contemplates the determination of an enterprise and, therefore, the need of further employment.

Any substitute means of transportation for rail transportation that is abandoned requires a different kind of labor employment. The training and experience of the rail employee may not qualify him for the substituted service. A proper regard for faithful employees would suggest their retention in the service of the company for which they were qualified. To compel employment in the service for which they are not particularly qualified, if we can do so by law, involves an extension of Federal authority.

The question of dismissal wages to cover an adjustment period is quite different from providing for the permanent compensation on a regular employment basis for men for which the employer has no work.

If the third provision above referred to would require the Commission in every case of consolidation or abandonment to include terms and conditions providing that such transaction will not result in employees "being in a worse position with respect to their employment," this provision would largely nullify the discretion given the Commission as to the first two proposals. Under this provision the Commission must, without limit of time, require that an employee for whom the employer no longer has any need must be retained at the expense of the employer on a working salary basis or on a compensation basis totally equaling that which the employee received while performing useful service for the carrier.

This is a novel provision probably not heretofore written into any law in the United States. It would, by Federal law, impose on an employer the duty of indefinite if not a lifetime support of employees for whom he no longer has a job. It is entirely separate from retirement systems and unemployment insurance by which employees receive partial compensation based on disability or length of service, or age.

The advisability and practicability of this proposal must be measured in the light of its implications. If it is a correct national policy to apply to railway employees, it must be a correct national policy to apply to all employment.

Labor employment always involves the normal hazards of investment. In times of a great depression the investment hazard of the employer is great. If we add to the employer's hazard a liability of assuming the support of all employees when he ceases to have use for them, regardless of the amount of salary paid or the length of service for the employer, we would thereby create a new and very great deterrent to labor employment.

If we believe that this is a practicable system to adopt we should vote for it and then go home and convert the farmers of the country, the businessmen of the country, and the average laboring man of the country that this is a correct American policy of government. If this is a practicable plan of contributing to prosperity and progress then we have been missing an opportunity to aid Russia to take another step forward.

In the long run, under the American system of government, the welfare of the employee and the employer is linked together and cannot be disregarded. The one cannot succeed on the other's failure. As a long-time policy, labor's interest in employment is in securing a just reward for what it does rather than in a reward for what it does not do. In this generation we have learned to assume and respect many humane provisions to do justice and afford humane treatment to employees, but a policy so destructive to an employer as this proposal would in the end be a greater misfortune to labor than to the employers themselves.

Nearly 50 percent of the railroad's dollar goes to labor. A nonpaying railroad, while it continues to operate, is a good asset to the employee. It is little or no asset to its owners so long as it pays nothing.

A big purpose running through this transportation bill is as much for labor as for the employer. It proposes to unify regulation, stabilize the transportation industry, deal fairly with all types of carriers and shippers alike, and place the industry on a self-supporting basis. The end sought to be accomplished would not only alike serve employers and employees but the Nation as well.

HISTORY OF PROPOSAL

A brief recital of some of the circumstances leading to the proposed substitute is worthy of consideration.

The Committee of Six, appointed by the President to study and report on the transportation system, was composed of three representatives of management and three representatives of employees of the railway industry. They united in

support of the provision contained in the House bill. The bill filed pursuant to the recommendations of this Committee carried out their joint approval.

The representatives of the management and employees appeared before the Committee and urged the adoption of the provision included in the bill as reported to the House.

After the bill passed the House and before it went to conference the Supreme Court in the Rock Island case decided that the Interstate Commerce Commission has authority to prescribe as a condition of its order authorizing a lease of one railroad company to another that the employees of the lessor shall receive partial compensation for the loss which they may suffer by reason of their discharge or transfer as a result of the lease.

In that case the estimated savings by the transfer was estimated to be about $500,000 per year. The Commission made orders which would temporarily give the employees about $300,000 per year of the savings as an equitable arrangement for their protection. This decision in substance establishes the right of the Commission in consolidation cases to require fair and equitable provisions for dismissed employees of rail carriers for some reasonable adjustment period. The Supreme Court decision was, in effect, the establishment of the law in accordance to what the Committee had already included in the House bill.

When the bill came before the House the Harrington amendment was added from the floor preventing approval of any consolidation which would result in unemployment of the carrier's employees or the impairment of their existing employment rights.

This amendment was added to the provisions of the bill in reference to consolidation. These provisions were intended to facilitate consolidations and protect the employees who might lose employment thereby.

The provision of the House bill is within the power of the Commission as already cited by the Supreme Court.

When the matter went to conference the conferees considered the question as to what action should be taken as to the Harrington amendment, whether to modify it, place a time limit on it, or strike it out.

The conferees decided to make suitable provision for the employees within fair and reasonable limits. There was slight disposition to do anything else.

In the meantime a disagreement developed among railway labor as to the desirability and practicability of the Harrington amendment.

Among the interested labor leaders of prominence was Mr. A. F. Whitney, president of the Brotherhood of Railroad Trainmen. The conferees were led to believe that Mr. Whitney, and the groups which he leads, would be satisfied if the consolidation provisions of the bill, including the Harrington amendment, were stricken. This proposal seemed to come as near reconciling employees as any course available, and, though undesirable, was not destructive of the main purposes of the legislation. The conferees made a report striking the consolidation provisions from the proposed legislation according to conference agreement. Under date of April 29, 1940, the chairman of this committee received a telegram reading as follows:

CLEVELAND, OHIO.

Hon. CLARENCE F. LEA,
Member of Congress, House Office Building.

DEAR CONGRESSMAN: Please be advised that opposition Brotherhood Railroad Trainmen to Senate bill 2009 was based upon the consolidation section of the bill. Now that conferees have eliminated that section, the source of our opposition is eliminated. However, we shall continue our earnest effort to obtain legal protection for labor in consolidation and abandonment situations.

A. F. WHITNEY.

It will be observed that the telegram confirmed the previous understanding of the conferees—that opposition was based upon the consolidation sections of the bill. The sentence of the telegram, "Now that conferees have eliminated that section, the source of our opposition is eliminated," confirmed our understanding of the situation. The last sentence of the telegram stating, "We shall continue our earnest effort to obtain legal protection for labor in consolidation and abandonment situation," was construed in light of the fact that Mr. Harrington filed a separate bill proposing to deal with that situation.

Thereafter the chairman of our committee received a letter under date of May 1, 1940, signed by the heads of five brotherhoods, including Mr. Whitney and Mr. D. B. Robertson, president of Brotherhood of Locomotive Firemen and Enginemen. Mr. Robertson was a prominent member of the railway labor organizations who united with management in proposing the bill presented to the House, and which supported and was supposed to be satisfied with the provision for the benefit of employees as contained in the House bill.

The letter of May 1 stated that its authors—

> Are disappointed to learn that the conference committee which considered S. 2009 has stricken out of the bill the consolidation section as amended by the House; * * * in brief, there have been taken out of the bill the only provisions which were of direct benefit to the men actually engaged in operating railroad transportation equipment and facilities.

The letter proceeded to advocate recommitment of the bill and support of the proposal to be offered by the gentleman from New York [Mr. WADSWORTH]. As above indicated, the provisions stricken from the bill, against which complaint is now made, were eliminated with the suggestion and approval of Mr. Whitney.

Now the House is asked to reverse that action at the request of five leaders, one of whom was a member of the Committee of Six and once an active supporter of the House bill with its provisions for the protection of employees. The other was active in securing the elimination of the provisions on account of which complaint is now made.

I submit this situation for the consideration of the membership of the House.

Three main proposals as the ground of recommitment are suggested. The protection that Congress can legally and lawfully give to dismissed employees is confirmed by the authority of the Commission as decided by the Supreme Court.

The proposal to indefinitely place unemployed labor in a position no worse than when its employment ceased regardless of the length of service, the financial condition of the employer, or the need of employment is a fantastic proposal.

The other two alleged reasons for recommittal are so manifestly unsound and unnecessary, and so inept in their design to accomplish any useful purpose, that they have no legitimate place in sound, constructive legislation.

The whole set-up of the motion to recommit is surprisingly devoid of constructive value.

The motion to recommit should be defeated, and this important and useful legislation that represents so much painstaking, loyal, and constructive work on the part of the House made a part of the laws of the country at an early date for the betterment of our transportation system.

Mr. Speaker, in this connection, I offer the statement of George M. Harrison, president, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express, and Station Employees.

No man in railroad labor is of higher integrity, more substantial character, or better understands the problems of railway labor than Mr. Harrison.

STATEMENT URGING ENACTMENT OF TRANSPORTATION BILL, S. 2009

MAY 3, 1940.

The transportation bill (S. 2009) should be enacted into law at this session of the Congress. It proposes equality of treatment and regulation of the several modes of transportation.

I am opposed to referring the bill back to the conference committee, because this action will endanger enactment of the legislation at this session.

The interests of railroad and express employees numbering 210,000, for whom I speak, will be improved by the enactment of this bill. Unregulated, subsidized water and motor-carrier transportation is taking a heavy toll of railroad employment and business. It is estimated that 180,000 railroad jobs have been lost because of present unfair, discriminatory transportation policies and lack of Federal regulation of these other modes of transportation.

There is no danger to railroad employment in this proposed legislation, but, to the contrary, railroad employment should improve if the legislation is enacted.

GEORGE M. HARRISON,
President, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

Regulation of Public Service Corporations

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, May 6 (legislative day of Wednesday, April 24), 1940

ADDRESS BY GOV. CHARLES EVANS HUGHES BEFORE ELMIRA CHAMBER OF COMMERCE MAY 3, 1907

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Hon. Charles Evans Hughes, then Governor of New York, before the Elmira (N. Y.) Chamber of Commerce on May 3, 1907. The address deals with the problem of administrative law and the supervision thereof by the courts. The address will, I think, be a valuable contribution in connection with the pending legislation on that subject.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I did not come here tonight to join in a debate. It is entirely true that I had purposed to say some things in regard to the very measure about which my friend Mr. Stanchfield has spoken, and I shall not say any less, but perhaps something more. In distinction from my learned friend, I am here under a retainer. I am here retained by the people of the State of New York to see that justice is done, and with no disposition to injure any investment, but with every desire to give the fullest opportunity to enterprise, and with every purpose to shield and protect every just property interest. I stand for the people of the State of New York against extortion, against favoritism, against financial scandal, and against everything that goes to corrupt our politics by interference with the freedom of our legislature and administration. I stand for honest government and effective regulation by the State of public-service corporations.

Now, I am fully conscious, as is everyone who professes to have a modicum of intelligence, of the tremendous advantages which the country and every community in it have derived from the extension of our railroad facilities. Our communities would be lifeless, our trade would collapse, we would all be worse than dead, were it not for these opportunities of communication and these facilities of transportation. We honor every just effort to make these possible. We want every opportunity afforded to enable the people to move their produce and we want fair treatment to those who are engaged in this very necessary activity. Yet it is said that, despite the prosperity of the country and the great benefits that have been derived from the extension of our transportation facilities, there is a state of unrest; that there is a general condition of discontent throughout the country. Why? Is it because of extension of means of communication? Will anyone suggest to an intelligent audience that American citizens are in revolt against their own prosperity? What they revolt against is dishonest finance. What they are in rebellion against is favoritism which gives a chance to one man to move his goods and not to another; which gives to one man one set of terms and another set to his rival; which makes one man rich and drives another man into bankruptcy or into combination with his more successful competitor. It is a revolt against all the influences which have grown out of an unlicensed freedom, and a failure to recognize that these great privileges, so necessary for public welfare, have been created by the public for the public benefit and not primarily for private advantage.

There has been a determined effort through the State to make it appear that the chambers of commerce in New York and the businessmen composing those chambers of commerce are opposed to an effective scheme of State regulation of public-service corporations and opposed to the specific measure now pending in the legislature having that object in view.

I do not believe that the resolutions that have been passed reflect the sentiment of the businessmen of the State of New York. It would be most unfortunate were it so. There are undoubtedly many whose interests are directly affected, and who desire to maintain existing conditions and to enjoy unrestricted freedom in order that they may give rein to their own selfish purposes, who undoubtedly are frankly and consistently against the proposition. There are others who throw a sop to public opinion by saying that they believe in regulation and who then will contest with you any provision that promises effective regulation.

I heard a distinguished railway man the other night speak of the great difficulties under which railroads are now suffering, endeavoring to keep up with the extraordinary demands that are incident to our very rapid improvement and development in commerce. I sympathize with those difficulties. I sympathize with the operating man who lies awake nights trying to devise means by which he can improve traffic facilities. I sympathize with the great army of active railroad men who, under severe conditions, are trying to perform their duty. There is nothing antagonistic to them, or to anybody who desires to deal squarely with the public, within the four corners of that bill. This gentleman said, speaking for the railroads: "We want friendly cooperation; we want protection against aggression and injustice." And I speak for the people by saying: "So do we." That is what we want on both sides—friendly cooperation for just ends and protection against aggression and injustice.

I am amused at times at the phantoms that are conjured up by practical men whose experience should have taught them better. It is said that a commission with such broad powers would take active management of railroad corporations and practically oust their boards of directors. Imagine the situation of any such commission taking into consideration the vast variety of questions relating to the management of any one railroad corporation. Think of the great number of problems and complaints necessarily committed to any such commission, and then tell an intelligent American audience that any such commission could, if it wanted to, manage any railroad.

But what is important and vital to any scheme of regulation is this: That wherever there is an abuse the commission can put its finger on it and hear the evidence and determine whether or not the abuse exists, and if it does exist stop it, no matter in what department of management it may be. Why, you cannot do that unless you give power which in an emergency will reach any department of management, so that wherever an evil exists which the State ought to control and correct, the power delegated by the State to such a body can be exercised for its correction. That does not mean that any commission should displace the operating management of any particular property. It does mean that they should have the power to exercise control sufficient to correct abuses that might exist. Now, when we consider these matters in detail, you will find, and I have found, the railroad men sitting quietly down with you and talking it over. You take up one thing after another and they will say: "Yes; they ought to have power to do so." Suppose so and so? Yes; they ought to have power to do it, assuming that they start with the premise that the business of the public-service corporation is a public business. There are many who lay down that premise very glibly, never to remember it again; and who, having admitted to you that the management of the railroad is public business, forthwith will argue with you that it is their own private concern. But when you deal with a railroad man who fairly and squarely meets you, you will find that he will agree that these powers are needed, supposing that abuses exist which would call them into action. The other night I was talking to such a gentleman, and when we got through, the practical result of all was this: I said to him: "What you really want is a chance to go to the courts?" And he said: "Yes; that is all there is about it." That seemed to be the main point. A chance to go from the commission to the courts.

I have the highest regard for the courts. My whole life has been spent in work conditioned upon respect for the courts. I reckon him one of the worst enemies of the community who will talk lightly of the dignity of the bench. We are under a Constitution, but the Constitution is what the judges say it is, and the judiciary is the safeguard of our liberty and of our property under the Constitution. I do not want to see any direct assault upon the courts, nor do I want to see any indirect assault upon the courts. And I tell you, ladies and gentlemen, no more insidious assault could be made upon the independence and esteem of the judiciary than to burden it with these questions of administration, questions which lie close to the public impatience, and in regard to which the people are going to insist on having administration by officers directly accountable to them.

Let us keep the courts for the questions they were intended to consider. When questions of property rights are involved—the constitutional right to hold property and not to be deprived of it without due process of law is involved; when, under the guise of regulation or authority to supervise railroad management, there is an assumption of arbitrary power not related to public convenience; when there is a real judicial question—let the courts have it and every good citizen will stand aside and hope to see it decided fairly and with even-handed justice.

When you deal with matters of this sort, you may be sure that there will be a variety of questions, which, whatever the fact may ultimately be proved to be, can, by astute lawyers, be said to involve such judicial matters, and there will be abundant opportunity for review of everything that should be reviewed. But to say that all these matters of detail which will be brought before the commission—matters requiring men to give their entire attention to the subject, to get their information in a variety of ways, to have hearings of those interested, and to deal with questions from a practical standpoint—should, at the option of the corporations, be taken into court, is to make a mockery of your regulation. And, on the other hand, if that policy should succeed, it would swamp your courts with administrative burdens, and expose

them to the fire of public criticism in connection with matters of this description, from which I hope they will be safeguarded.

You must have administration, and you must have administration by administrative officers. You cannot afford to have it otherwise. Under the proper maintenance of your system of government, and in view of the wide extension of regulating schemes which the future is destined to see, you cannot afford to have that administration by your courts. With the courts giving a series of decisions in these administrative matters hostile to what the public believes, and free from that direct accounting to which administrative officers are subject, you will soon find a propaganda advocating a short-term judiciary, and you will turn upon our courts—the final safeguard of our liberties—that hostile and perhaps violent criticism from which they should be shielded, and will be shielded, if left with the jurisdictions which it was intended they should exercise.

Now it seems to be regarded as a very serious thing that my successor might remove the commissioners I appoint. I do not share the fears of my friend, because the experience of the past has taught us that the only safety of democratic government is responsible government. If you put men in a position where they cannot be reached and are not compelled to be accountable, you put a premium upon incompetency, you put a premium upon political interference, and set the people at bay. Do you want these commissioners elected? Some might say "Yes." I say that is not the way to get really responsible government but rather diffused responsibility; to prevent unity of administration, to break up a system of accountability which would be found to answer the purpose. If you apply it in that case, why not through the whole administrative field? Voters would not know the qualifications of the men for whom they were voting, and they would have no opportunity to test their qualifications for this administrative position or that. There is one safety for the voters, and that is to say to the man who is elected Governor, just as the owner of a business would say to a man he puts in control of that business, "You run this business and I will hold you accountable for it." Pick your man and get the right man and hold him directly accountable to the people. Say to him, "You whom we can watch—you with reference to whose selection public sentiment in the first instance has the largest play under our system—you run the business and we will see how you run it."

We have had a recent illustration. Eighteen months ago the whole country, and you might say the whole world, was shocked by the revelation of corruption in those institutions which we deemed strongest and which we supposed to be officered by the most honorable and efficient managers. It was a business that constituted a sacred trust and affected the savings and securities of thousands of homes throughout our State. And when it appeared that those who were trusted were faithless, when it appeared that these funds had been used for extravagant, corrupt purposes, that bookkeeping had been deceptive, that vouchers had been improper, that all the safeguards which go to maintain proper administration had been neglected, a great outcry went up from the people of the State and the people of the United States. They said: "This thing must stop." And that was in a business under governmental control. That was in a business under a control designated by statutes which pried into the very life of every department of activity. It was a State department in the hands of those who could walk into offices, take accounts, examine books, put officers on oath, and make reports. It was a business put under severe regulations because of its high importance—and these things happened. What a farce it all was. And the people of the State knew it.

When I went into office some 8 months or so after the laws had been enacted which resulted from that investigation, there was practically the same conditions of affairs that had existed in the course of the insurance investigation, and the very men through whose negligence and connivance all these things had taken place were there as the trusted and confidential advisers of the superintendent. It was an intolerable situation. No business manager would have stood it. There was no personal question involved. It would have been much more agreeable to me to leave it alone. But it was there, and it was my duty to endeavor to put the department upon the best possible basis of efficiency to protect the interests of the policyholders, and I sought to do it.

Now, that is an illustration of the situation where places are created which are removed from any direct accounting. No removability except by the Senate means incompetent and inefficient administration, and in the long run political administration. I do not care who is Governor, in the long run the one safeguard of the American people is responsible government with power adequate to meet the responsibility and accountability to the people for the exercise of that power.

Now, we want in these measures, as in other measures, to be just; but, we want to be effective. We cannot have any power that is not susceptible to abuse. There is not a single State officer who has power enough to do his duty but could be guilty of a serious abuse if he neglected his duty.

In your mayor and in your Governor, and in others entrusted with administrative powers, you must repose confidence. And, if these men really stand, not in some secluded nook, protected by some statute passed without due regard to the public interest, but directly before the bar of public opinion, in the long run the people will get their due. And my policy in this measure, as in every other measure, is simply to see to the best of my ability during my short term that the people get what they are entitled to receive.

The National Institute of Government

EXTENSION OF REMARKS

OF

HON. PRENTISS M. BROWN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, May 6 (legislative day of Wednesday, April 24), 1940

ADDRESS BY PRESIDENT ROOSEVELT TO DELEGATES

Mr. BROWN. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by President Roosevelt from the south portico of the White House to the delegates attending the National Institue of Government, conducted by the Women's Division of the Democratic National Committee, on May 3, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Two months ago I was told that there would be a meeting of women interested in or affiliated with the Democratic Party, with the objective of studying and discussing the processes of our form of government. It was expected that there would be not more than 100 of them who would come to Washington and I suggested that they come to my Executive Office in order that I might shake their hands individually and have a little informal chat with them.

Three weeks ago my wife told me that the enthusiasm was so great that five or six hundred might come and we shifted the party to the East Room in the White House.

By 10 days ago the gathering had grown into a pilgrimage, with the result that if you tried, the three or four thousand of you could not all get into the White House at the same time, and if I were to start shaking hands with you now you would still be passing in line long after dark.

This amazing and splendid outpouring does my heart good because it proves, first of all, that there is tremendous enthusiasm for a continuation of liberal democratic government in the United States and also because it shows an honest wish to gain further knowledge of government.

May I add, too, that the thought which I have expressed on several previous occasions—that while in the past 7 years your Government has put into practical effect more constructive legislation for the average man, woman, and child of the Nation than in any similar time in our history, the greatest ultimate long-range gain of these years lies in the increased knowledge of what government is all about, the increased discussion of broad problems, and the increased recognition that the people of this country are entitled to a government which constantly thinks in terms of the people's needs.

We are coming to differentiate between fact and fiction. That in itself is a step in advance. We do not fall as easily as in older days for glittering generalities, for specious promises. We say in an election year to candidates for President and Vice President, and to would-be Senators and Representatives, "quit condemning each and every act of this administration and tell us just how you would change the laws if you were in power."

"You say you would balance the Budget—you who oppose present policies—don't tell us that you would appoint some new committee or board to make recommendations. The Budget is an open book. If it is to be balanced you can do it in one of two ways or by a combination of both. You can levy new taxes, or you can cut appropriations. If you choose the former, what kind of taxes do you propose to levy? If you propose to cut expenditures, which ones will you cut and by what amount? Will you, in these critical days, lop off a billion dollars from our national defense? Will you in these critical days lop off a billion dollars for the care of the needy unemployed? Will you curtail expenditures for old-age pensions or unemployment insurance? Will you abolish the Securities and Exchange Commission and turn their functions over to the stock exchange? Will you end the Civilian Conservation Corps and the National Youth Administration? Will you destroy, by withdrawing appropriations, the soil conservation and tree planting program of the Government?"

I recognize the horrid dilemma that questions of this kind are going to put certain types of candidates into in the coming 6 months.

Whoever the nominees of the two major parties are, I firmly believe that the real question, the honest question, the fundamental question on election day is going to be this: "Do you wish to employ for your bus-line chauffeurs who wrecked the previous bus line for driving the old busses into the ditch or going to sleep at the wheel, or are you going to continue the present policy of employing active, wide-awake chauffeurs who are inspired with the thought that their duty is to be polite to the passengers and see to it that they reach their destination in comfort and complete safety?"

I am confident that your common sense, your enthusiasm, and your deep understanding of the problems of the day will go far to keep the American people on the right road in this year of grace, 1940.

Civil Aeronautics Authority and Air Safety Board

EXTENSION OF REMARKS

OF

HON. JAMES F. BYRNES

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, May 6 (legislative day of Wednesday, April 24), 1940

STATEMENT BY THE PRESIDENT

Mr. BYRNES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by the President of the United States with reference to the Civil Aeronautics Authority and the Air Safety Board.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

APRIL 30, 1940.

Since the transmittal of Reorganization Plans Nos. III and IV a flood of misinformation has engulfed those sections dealing with the Civil Aeronautics Authority. Much of this has fallen of its own absurdity and needs no comment. This morning, however, we saw a group of well-intentioned people staking out an exclusive claim to a so-called lobby to save lives.

The implication that we are not interested in saving lives, which is certainly contradicted by the record of our progress in civil aviation during recent years, compels me to restate in simple terms the basic features of the reorganization plans affecting the Civil Aeronautics Authority.

I might say here that everybody is for the abstract idea of reorganization in the interest of increased efficiency and economy. However, there is a rather discouraging collapse of enthusiasm when concrete propcsals are made. In selfish protection of their own special interests we always find particular groups who hitherto favored reorganization arising in protest.

As it now stands there are three agencies—the Civil Aeronautics (five members) Authority, the Administrator, and the Air Safety Board—all autonomous groups, none of them represented at the Cabinet table. The inherent problems confronting them were intensified by friction, particularly within the Air Safety Board. For 5 months the Administrative Management Division of the Budget Bureau made a study, at my request, of the operation of the Authority. It became obvious that a change was imperative if we were to continue to move forward in civil aviation. Here, in simple summary, is the proposal:

1. Despite handicaps, the Federal program for civil aeronautics has now achieved a stature and an importance which justify bringing this program more closely into the Federal family. The proposal will place it within the framework of the Department of Commerce where it will have a closer relationship with the important reporting services of the Weather Bureau and the essential air navigation chart service of the Coast and Geodetic Survey. More than that, it will provide representation at the Cabinet table for a program of basic significance to our national transportation and our national defense. Present world conditions make the merit of this phase of the proposal obvious.

2. The present five-member Authority, which has received such widespread praise, remains as an independent Civil Aeronautics Board performing the basic regulatory functions. It will continue to appoint and control its own personnel and submit its own budget.

3. Certain of the Authority's functions are transferred to the Administrator to eliminate a blind spot created by the failure of the Civil Aeronautics Act of 1938 to carry out the intenion of Congress to distinguish clearly between the functions of the Administrator and the Authority.

4. The function of investigating accidents is transferred to the Civil Aeronautics Board which, unlike the present Air Safety Board, will not be helpless to take positive steps toward preventing the recurrence of accidents. Unlike the Air Safety Board, the Civil Aeronautics Board will have the power to prescribe air-safety rules, regulations, and standards, and to suspend or revoke certificates after hearing. Not only does this continue the present independence of accident investigation, but it also makes possible prompt translation of findings into corrective action.

5. Not only are we advancing the cause of air safety by these changes but we will also realize appreciable savings. Several highly paid positions on the Air Safety Board will be eliminated and other economies made possible.

Mr. Justice Black

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, May 6 (legislative day of Wednesday, April 24), 1940

RADIO ADDRESS BY JUDGE SAUL A. YAGER

Mr. LEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio discussion of the record of Mr. Justice Hugo Black which should make every Senator proud of his vote to confirm that Justice.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening, ladies and gentlemen, this is Saul Yager once again bringing you both sides of the news.

In the hope that one of our metropolitan newspapers would sooner or later comment upon the subject of my broadcast, this evening, I have purposely refrained, up until now, from dealing with it.

On February 12 of this year—Lincoln's birthday—the Supreme Court of the United States handed down a decision which will go down in history as one of the strongest reaffirmations of the democratic system of tolerance and equality. The importance of the decision does not rest alone in the principles which it announced. That Justice Hugo Black wrote the opinion is as newsworthy and epic-making as is the opinion itself.

The facts of the case were quite simple. An elderly white man had been found murdered in a small town in Florida. Using a type of law enforcement not altogether uncommon in some localities, a large number of suspects, white and colored, were arrested and questioned at length by the local authorities. A few of them were held for prolonged questioning; and the four Negroes who were finally convicted of the crime were questioned continually for an entire week—day and night. During this time these Negroes were denied the opportunity to consult with their friends or relatives or to engage legal counsel. There was evidence that they were subjected to physical violence and continual threats. All ordinary civil rights were denied them. Finally, in hopeless desperation and fear of their lives the Negroes agreed to confess; and they were convicted and sentenced to death. The Supreme Court of Florida sustained the conviction and an appeal was taken to the Supreme Court of the United States, which reversed the case.

Justice Hugo Black, speaking for a unanimous Court, reaffirmed the faith of those who wrote into the Constitution the fourteenth amendment; that is, that no man shall be deprived of life, liberty, or property without due process of law. Justice Black wrote thusly, "To permit human lives to be forfeited upon confessions thus obtained (he is now referring to the third-degree methods used by the local officials) would make the constitutional requirement of due process of law a meaningless symbol." He continued, "Due process of law, preserved for all by our Constitution, commands that no such practice as that disclosed by this record shall send an accused to his death."

Mr. Justice Black saw in the tactics adopted by the local officials a technique of persecution not altogether unknown in certain parts of the world today. He pointed out, "Today, as in ages past, we are not without tragic proof that the exalted power of some governments to punish manufactured crime dictatorially is the handmaiden of tyranny." He went on to say, "The rack, the thumbscrew, the wheel, solitary confinement, protracted questioning and cross-

examining, and other ingenious forms of entrapment of the helpless or unpopular had left their wage of mutilated bodies and shattered minds along the way of the cross, the guillotine, the stake, and the hangman's noose."

And Justice Black recalled the historical setting and wrongs which called into being the uncompromising guaranty of the Bill of Rights. He said: "Tyrannical governments had immemorially utilized dictatorial criminal procedure and punishment to make scapegoats of the weak, or of helpless political, religious, or racial minorities. * * * And a liberty-loving people won the principle that no man's life, liberty, or property be forfeited until there had been a charge fairly made and fairly tried in a public tribunal free of prejudice, passion, excitement, and tyrannical power. Thus," he went on to say, "as assurance against ancient evils, our country, in order to preserve 'the blessings of liberty,' wrote into its basic law the requirement, among others, that the forfeiture of the lives, liberties, or property of people accused of crime can only follow if procedural safeguards of due process have been obeyed.

"No higher duty, no more solemn responsibility, rests upon this Court," said Justice Black, "than that of translating into living law and maintaining this constitutional shield deliberately planned and inscribed for the benefit of every human being subject to our Constitution—of whatever race, creed, or persuasion."

Had this opinion been written by any other member of the Supreme Court it would still be a notable decision; but since its author is Justice Black it is doubly significant.

Two and a half years ago the press of the United States, including our own metropolitan newspapers, condemned, in no uncertain terms, Justice Black's appointment to the Court. His one time affiliation with the Ku Klux Klan became the rallying cry for those who predicted that upon the Court the Justice would be prejudiced against minority rights—that he would be an advocate of bigotry and a defender of tyranny.

The opinion to which I have referred has proven beyond any doubt that such expressions were not only uncalled for, but that in the recent words of President Roosevelt, their authors owe Mr. Justice Black an apology. As a matter of fact, one of the leading newspapers in the East, the Philadelphia Record, which denounced the Justice's appointment, said, editorially, the day after the opinion was written: "A great hue and cry was raised over the fact that Black had once been a Klansman. This paper joined in that denunciation of him." And then the editorial continued, "We have since regretted it. No man in whom race prejudice remained could have written the ringing opinion that Black did, upholding equality before the law."

Besides this public and unqualified apology, the Birmingham (Ala.) News, in appraising the opinion, said: "This is one of the great Supreme Court opinions of our time and it stamps Hugo Black as a liberal Justice of the highest status." The New York Times, whose Washington correspondent, Arthur Krock, led the vanguard in the denunciations of Black's appointment, praised the opinion and Justice Black, editorially. It reminded its readers that when Justice Black spoke of protecting the poor, the ignorant, the numerically weak, the friendless, and powerless he reaffirmed on behalf of the United States Supreme Court a policy of standing on guard "with flaming sword over the rights of everyone of us."

The evidence of Justice Black's defense of civil liberties, as a member of the Supreme Court, is not confined to the Florida case to which I have referred. In February 1939 he wrote an opinion setting aside the conviction of a Negro who had been sentenced to death in Louisiana. In that case Black said: "* * * when a claim is properly asserted * * * that a citizen * * * has been denied the equal protection of his country's laws on account of his race, it becomes our solemn duty to make independent inquiry and determination of * * * [the] facts * * *" because, said the Justice, "* * * equal protection to all is the basic principle upon which justice under law rests."

In the short time that Justice Black has been on the Supreme Court, he has made an outstanding record as a jurist. Only a few months after he had taken his place upon the bench, the Court, by a divided opinion, sustained the right of the United States to tax members of the Port of New York Authority on the ground that the officials of the authority were not performing functions which were essential to the existence of the State. Although agreeing with the result of the majority opinion, Justice Black in a specially concurring opinion criticized the attempt of the majority of his brethren to differentiate between essential and nonessential government services. He contended that there was nothing in the Constitution which would prohibit all State employees paying Federal income tax. It was only a few months later that the Supreme Court, in another case involving the same question, adopted, for all practical purposes, the view of Justice Black.

Again, in May of 1938, the Court held unconstitutional an Indiana gross income tax as applied to sales made in other States and foreign countries by an Indiana corporation. The majority of the Court said that the tax was an impediment to interstate commerce and was, therefore, unconstitutional. Black dissented from the majority ruling. And, on January 29, 1940, the Supreme Court of the United States upheld the New York sales tax on the very grounds which Justice Black had urged in his dissenting opinion in the Indiana case.

In February 1938, Justice Black, writing a lone dissent, urged that the Montana law instead of the so-called Federal common law should be followed in a trial of an insurance case in a Federal court. A few months thereafter the Court reversed a 150-year-old precedent, which had permitted the Federal courts to disregard the common law of a State, and adopted the view which Justice Black, standing alone, had had the courage to urge in his prior dissent.

It was again only a few months after Black had taken his seat upon the Court that he and Justice Reed dissented from an opinion in a complicated case involving the liability for fraud of the agent of a surety company. A few weeks ago that Court again, for all practical purposes, adopted Justices Black's and Reed's previous dissenting opinion.

As the Washington Post recently pointed out, "Few members of the Supreme Court have ever seen their dissents become the law of the land within so short a time." It went on to say that if Justice Black "quit the Court tomorrow he would leave a record distinguished enough to make an historian wonder what caused the spasm of hysteria which swept so much of the press and of the Nation in the late summer of 1937."

The St. Louis Post Dispatch, one of the most outspoken critics of the Black appointment, recently characterized him as, and here I quote, "an influential thinker and craftsman."

In an article on the Supreme Court of the United States in a recent issue of Life magazine, the editors commented thusly: "Only a handful of the 80 Justices who have served on it—Marshall, Story, Taney, Holmes, among the dead—could be called great men. But nearly all of them have risen in some measure to the challenge of their great responsibility." The editorial continued, "A current case in point is Justice Hugo Black, President Roosevelt's first and widely damned as his worst appointee, who is winning informed respect for his earnestness and intense awareness of the impact of changing social-economic conditions on the law." And the editorial concluded, "He may take his place with the great Justices of history."

I see that my 14 minutes are up, so until next week at this time, good night.

Thomas Jefferson

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, May 6 (legislative day of Wednesday, April 24), 1940

SPEECH BY MR. HOMER MAT ADAMS INTRODUCING THE PRESIDENT AT JEFFERSON DAY DINNER ON APRIL 20, 1940

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD the speech delivered by Mr. Homer Mat Adams, president of the Young Democratic Clubs of America, introducing the President of the United States at the Jefferson Day dinner in Washington on April 20, 1940.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, Mr. President, distinguished guests, and Young Democrats of America, today is National Young Democratic Day. Throughout the States and Territories young democracy is assembled to honor our country's first young Democrat, Thomas Jefferson. Liberal in thought, progressive in action, and courageous in expression, he fought for the rank and file of the American people.

Before reaching his thirtieth birthday, Thomas Jefferson was chosen Governor of Virginia. At the age of 33 he drafted the Declaration of Independence, and while still a young Democrat he fought for and had enacted into the Constitution of the United States, the Bill of Rights.

Through these dinners honoring his memory, we hope to fire the interest of youth in progressive government. In keeping with this spirit, it is appropriate that this day, in 1940, we enjoy the privilege of hearing from the man who personifies the ideals of Jefferson, who has kept the Bill of Rights as an active force of protection for the American people, whose life embraces a continuous struggle to keep government looking forward and moving forward—it is my extreme pleasure, ladies and gentlemen, to present to you the President of the United States.

Civil Aeronautics Authority and Air Safety Board

EXTENSION OF REMARKS

OF

HON. JAMES F. BYRNES

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, May 6 (legislative day of Wednesday, April 24), 1940

LETTERS FROM THE ATTORNEY GENERAL AND THE DIRECTOR OF THE BUREAU OF THE BUDGET

Mr. BYRNES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from the Director of the Bureau of the Budget to Robert H. Hinckley, Chairman of the Civil Aeronautics Authority, and a letter from the Attorney General to the Director of the Bureau of the Budget, both relating to the Civil Aeronautics Authority and the Air Safety Board.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

EXECUTIVE OFFICE OF THE PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D. C., May 2, 1940.

Hon. ROBERT H. HINCKLEY,
Chairman, Civil Aeronautics Authority,
Washington, D. C.

MY DEAR MR. HINCKLEY: If Congress takes no adverse action on Reorganization Plans III and IV, the effectuation of these plans will require that the Director of the Bureau of the Budget, subject to the approval of the President, determine the necessary transfers of funds. In view of the limited time available and because of certain questions arising out of the complexity of the Civil Aeronautics Act, the Bureau of the Budget has consulted with the Department of Justice in order to establish a sound basis for the distribution of the available appropriation balances of the Civil Aeronautics Authority. The Attorney General has agreed to the following interpretive statements concerning the civil aeronautics provisions of the two plans:

1. Plan III centralizes in the Administrator, who is hereafter to be known as the Administrator of Civil Aeronautics, those functions that are essentially of an administrative character as distinguished from those relating to economic regulation; the prescription of safety standards, rules, and regulations; and the suspension and revocation of certificates after hearing. Thus, in addition to the functions now vested in the Administrator by the Civil Aeronautics Act of 1938, he will be responsible for the administration of the Civilian Pilot Training Act of 1939; the issuance and amendment of airman, aircraft, and air-carrier certificates; emergency suspension of certificates; the registration of aircraft including the recordation of conveyances; the enforcement of safety rules, regulations, and standards; and the control of notification as to hazards to air commerce.

2. Plan III divests the Authority of all control it now has over the personnel and expenditures of the Administrator.

3. Plan III leaves the Authority with all the functions described in title 4 (air carrier economic regulation) of the Civil Aeronautics Act; such of those functions described in title 5 (nationality and ownership of aircraft), and title 6 (civil aeronautics safety regulation) as relate to the prescription of safety standards, rules, and regulations, and the suspension and revocation of certificates after hearing; and the functions vested in the Authority by section 205 (a) and title 10. In connection with the suspension and revocation of certificates, it should be noted that a waiver of a hearing would not operate to deprive the Authority of its jurisdiction.

4. In performing air-safety work, the Administrator will be bound by the rules of the Authority and the extent of his administrative discretion will be entirely dependent upon the rules so prescribed.

5. While the Administrator may submit recommendations to the Board as to safety rules, regulations, and standards, it is anticipated that the Board will have adequate technical facilities for arriving at its own independent determination as to the soundness of such recommendations, and for developing such material on its own initiative.

6. In order to eliminate the existing confusion in terminology, plan IV provides that the present 5-member Authority shall hereafter be known as the Civil Aeronautics Board, and employs the term Civil Aeronautics Authority merely as an over-all designation for the Administrator of Civil Aeronautics and the Civil Aeronautics Board.

7. Plan IV transfers to the Civil Aeronautics Board all functions now performed by the Air Safety Board.

8. In performing its functions, including those mentioned above, the Civil Aeronautics Board will be entirely independent of and in no way subject to control by the Department of Commerce or the Secretary thereof. This independence is specifically referred to in two separate paragraphs of plan IV.

9. The requirement in plan IV that the Board report to Congress and the President through the Secretary of Commerce provides for the routing of such documents through the Secretary so that he may have an opportunity to examine them and append such comments as he may wish to make. This provision does not imply that the Secretary may in any way delete or revise the reports and recommendations of the Civil Aeronautics Board.

10. In providing that the routine management functions of the Board shall be performed under the direction and supervision of the Secretary of Commerce through such facilities as he shall designate or establish, plan IV is designed to prevent the uneconomical duplication of such facilities by the Board, the personnel of which will be relatively small. This provision is not intended to divest the Board of its authority to appoint and control all of its personnel, to authorize expenditures, or to determine and support the Budget estimates that are submitted to the Bureau of the Budget. As stated in the President's message, its purpose is to make available to the Board, in the interest of efficiency, departmental services in connection with these functions.

11. The Board is left with full authority to make its contacts with other agencies of the Federal Government and with State and foreign governments. It is reasonable to assume that the Board will make the necessary arrangements with the Secretary of Commerce so as to coordinate such contacts with those made by the Administrator and thereby minimize duplication of effort.

12. Those functions of the secretary of the Authority which relate to the maintenance of dockets and the keeping of minutes cannot be regarded as routine management functions and will, therefore, remain directly under the Board.

13. Plan IV obviously contemplates that the Board will have its own legal and other technical facilities. Any other interpretation would be in direct conflict with the independence which is to surround the Board's determinations.

14. In connection with the investigation of air accidents, the Board, pursuant to the statutory prescription of the duties of the present Air Safety Board, will furnish the Administrator of Civil Aeronautics with copies of any reports or recommendations that relate to the functions vested in the Administrator.

15. The compromise of civil penalties for violations of titles 5 and 6 becomes a function of the Administrator, since it must be regarded as an integral part of the responsibility for the enforcement of these provisions. On the other hand, the Board will have the power to make compromises involving violations of title 7.

16. As contrasted with the Civil Aeronautics Board, the Administrator will be under the direction and supervision of the Secretary of Commerce.

I feel certain that this interpretation is in full accord with what was envisaged by the President in submitting the reorganization proposals to Congress. Identical copies of this letter are being sent to the Secretary of Commerce and the Administrator of the Civil Aeronautics Authority.

Yours sincerely,

HAROLD D. SMITH, *Director.*

OFFICE OF THE ATTORNEY GENERAL,
Washington, D. C., May 2, 1940.

Hon. HAROLD D. SMITH,
Director of the Bureau of the Budget,
Washington, D. C.

MY DEAR MR. DIRECTOR: I have examined your letter of this date to the Secretary of Commerce in which you set forth your interpretation of the provisions of Reorganization Plans III and IV relating to the Civil Aeronautics Authority, and I agree with the conclusions reached by you.

Respectfully,

ROBERT H. JACKSON,
Attorney General.

Government and Business Can Cooperate

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 6 (legislative day of Wednesday, April 24), 1940

ADDRESSES BY THE ATTORNEY GENERAL, MR. HENRY I. HARRIMAN, AND SENATOR MEAD

Mr. MEAD. Mr. President, I ask unanimous consent that there may be published in the Appendix of the RECORD ad-

dresses on the subject Government and Business Can Cooperate, delivered by the Honorable Robert H. Jackson, Attorney General of the United States; Mr. Henry I. Harriman, former president of the Chamber of Commerce of the United States; and myself on the occasion of the Democratic Forum held at the Riverside Stadium, Washington, D. C., on the evening of May 3, 1940. This notable forum was sponsored by the Woman's National Democratic Club as a feature of the National Institute of Government, conducted here last week by the women's division of the Democratic National Committee.

This forum proved to be a successful and enlightening program. The Honorable MARY T. NORTON, chairman of the Committee on Labor of the House of Representatives, served as moderator; and Mr. Felix Morley, editor of the Washington Post, summarized the discussions from a nonpartisan, independent viewpoint.

Mrs. Curtis Shears, under whose chairmanship the meeting was conducted, pointed out that it was the hope of the women's division of the Democratic National Committee that similar forums might be organized throughout the States as fact-finding groups dedicated first and foremost by its sponsors to the principles of peace, unity, and cooperation.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY ROBERT H. JACKSON, ATTORNEY GENERAL OF THE UNITED STATES

I once knew a smart lawyer who always took his well-to-do clients to court dressed up in their old clothes. He thought that got sympathy from the jury. I recognize the same tactics in some of the smart lawyer candidates who are trying to dress up their political contributors in old clothes to get the sympathy of the voters this fall. It must be annoying that just as they all joined in a calamity chorus picturing their contributors in rags and patches, along comes the news about the profits of leading corporations for 1939.

I hold here the April 1940 business letter of the National City Bank. They cannot say that is New Deal propaganda. It tabulates the profits for 1939 of 2,480 companies representing all major lines and having capital, surplus, and undivided profits of more than $55,000,000,000. The year's profits on this capital were at an average rate of 6.2 percent. That average reflects the worst as well as the best. But the average profit of manufacturing corporations alone was 8.5 percent, of public utilities it was 6.9 percent, and of trade corporations 11.3 percent.

Now, I would like to hear these candidates say what they think these corporations ought to earn if 6 percent to 11 percent represents ruin. What rate of profit do they think our economy can afford to pay these corporations and what is a fair rate of profit with interest rates at their present level and employment and national income down?

If these gentlemen said that, in spite of this general prosperity, there were specific lines of industry that are sick and need attention, I should agree with them. If they said that the concentration of wealth in the United States has proceeded to a point where the prosperity of the big corporations listed on Wall Street does not indicate an equal prosperity throughout the country, again I should agree. And if they were to say that underlying this corporation prosperity are serious economic and social problems, such as unemployment, again I should agree. But to contend that business in the United States is "on dead center" as one of the candidates put it last night, or that the Government is destroying American business, or that there is no prosperity in this land, is little short of ridiculous. The administration's enemies in the past 7 years have predicted in America more ruin to business and to our form of government and to our society, than has actually happened in Europe. The public has again and again found their predictions false. And their claim that American business is in ruins will likewise be found false and those who are making such exaggerated claims are doing business no real service.

It is one of the syndicated fables of the opposition that this administration is hostile to business.

The fact is that the most extensive effort ever made by any administration at cooperation between business and Government was undertaken by this administration when it passed the National Industrial Recovery Act. That authorization of self-government for business was sponsored before congressional committees by my opponent on this platform tonight, Mr. Henry I. Harriman, then president of the United States Chamber of Commerce, as well as by the administration. Moreover, a similar effort to establish self-government and to overcome the demoralization of the petroleum industry, and another for the same purpose in the bituminous-coal industry were sponsored by this administration. These measures constituted the greatest experiment in self-regulation and self-control ever offered to American business. Every one of these ventures was destroyed by businessmen who instituted lawsuits that were argued by business lawyers and decided by a court that certainly was not a part of the New Deal. Whether these endeavors, on a permanent basis, were wise for the country as a whole is arguable, but they offered to businessmen a chance to get together among themselves and write their own ticket—and American business missed the boat.

I should suppose that the most important need of a successful business would be customers. The great collapse of 1929 was destructive to private business because it destroyed millions of its customers. A laborer out of work, a farmer with his farm under foreclosure, a home owner with his property advertised for taxes, a citizen who has been cheated of his savings by stock salesmen, or who has had his savings wiped out by bank failure, is not a first-class customer. To restore the purchasing power of these people, which would again put them in the market as purchasers of useful commodities, has been one of the most persistent and most costly efforts of this administration. Through emergency work relief, through public buildings programs, through home owners' loans, employment insurance, and old-age benefits this administration has struggled not only to keep their bodies and souls together but also to save these people as customers of business.

After the businessman has customers, his next most important need is enough capital to carry on his trade. No administration in the history of this or any other nation ever made available to private enterprise such an amount of capital to restore the banking and transportation systems, and to provide working capital for manufacturing enterprise. And it has been furnished at a very low rate of interest. This Administration has not only provided business with customers, but also with the capital to meet their demands.

But it is charged that the Administration is hostile to business, because the Government is regulating this or controlling that business. Unfortunately, the nature of the competitive business struggle is such that the Government has to arbitrate between different groups of businessmen. Practically every regulation that has at any time been imposed on American business has been championed by one group of businessmen to protect itself from the exploitation or oppression of another group.

It was the businessman as a shipper who demanded protection from the businessman as a railroad operator and obtained the creation of the Interstate Commerce Commission to regulate rates and stop rebates and discriminations. It was the businessman who obtained the creation of the Federal Trade Commission to protect him from the unfair trade practices and unfair competition of other businessmen. It was capitalists and investors in American business who demanded a Securities and Exchange Commission to bring truth into the securities business. It was the businessman who bought electric power and the investors who bought electric securities who demanded the regulation of the public utilities holding companies. I am unable to recall a single antitrust prosecution that was not instituted on the complaint of businessmen who sought protection against competitors who threatened them with injury or destruction. Nothing would be more disastrous than for the Government to cease these activities and let business be governed only by the principle of dog-eat-dog.

Some businessmen, admitting all of this, point out the National Labor Relations Act, the wage and hour law, and the policy of high wages and maximum welfare for labor as evidence of hostility to business. We still have stone-age mentalities who think that the way to lift business is to keep labor down.

The fact is that American industry is geared to supply a high standard of living, and if the American people are unable to maintain a high consumption of food products and of manufactured goods, American industry will fail. A Chinese coolie labor system in this country would give our industrial giants cheap labor, but it would destroy the market for their goods. The only customer worth his salt to American business is the one who demands the American standard of living. This administration has been determined to maintain those standards and to arm the laboring forces of the country with such weapons as collective bargaining, so that they may themselves defend their living standards. I know that this is for the good of American labor and I believe it is equally good for American business. A low-wage policy or sweatshop hours may mean temporary profits to a few greedy men, but their general establishment would break down American business just as certainly as it would break the heart of the American workman.

The campaign of 1940 can be a constructive one if those who are complaining of present legislation will state frankly and honestly what they propose to repeal and what they propose to enact. Why not say what changes they propose to make in the law requiring truth in the sale of securities or regulating the stock exchanges? Why not tell us what they propose to do with the Labor Relations Act or the Wage and Hour Act? What their antitrust policy would be? How much profit will they want for the great industries before they will be willing to support old-age pensions or relief for the unemployed?

It will take more than a parade of old clothes to make this country believe that this administration is hostile to business, when we can go into every community of the Nation and point to banks and industries that would not be operating today except for its loan of capital. It will take something besides epithets to convince the long line of customers, who can patronize American business only

because the Government has come to their rescue, that the President is trying to destroy prosperity. But we cannot, and no decent government ever can, accept the proposition that everything is legitimate if only it makes somebody a profit. Every person who believes, as I do believe, in a system of free private enterprise, knows that Government must take steps to keep it free and keep it within the rules of the game. And business itself—legitimate business that wants to thrive on a fair margin of profit and to pay a decent wage and to compete in the market with other businessmen on a decent basis—knows that business and Government not only can cooperate and must cooperate, but that they have cooperated to an unprecedented extent in the last 7 years.

ADDRESS OF HENRY I. HARRIMAN

In these troubled times of wars and depressions it is of infinite importance not only to our own country but to the entire world that the United States maintain a sound and solvent economic system based upon the continuance of free business enterprise, equal and fair economic opportunities for all, and the preservation of the full rights of individual liberty which are guaranteed to the people of the United States in the Bill of Rights.

Totalitarian governments have invariably arisen because of mass misery, and want and hunger have been the impelling motives which induced men to give up their individual liberty for the essential "pot of porridge." It was indeed a wise man who defined democracy as "liberty plus groceries" and an astute person who said "You cannot eat individual initiative," and I am a firm believer that the only way in which the American people can permanently preserve their liberties is to so adjust their economic system that privation and want shall not stalk through a land which has all of the essential raw materials, the labor, the capital, and the technical skill to give an abundance to its entire people. To do that without establishing a totalitarian government, without giving up the economic system under which the United States has grown great and powerful, and without surrendering our individual liberties requires the closest cooperation between American business, American labor, American agriculture, and the Government of the United States.

We are continually asking the question, "What kind of a world will emerge from this period of economic distress and war? Will it be one that people will enjoy living in, a world in which human freedom is respected and the energies of men turned anew to the arts of peace? Or will it be one wherein old and tested ways of economic and social life struggle vainly against the upsurges of new forces?"

No one can, of course, answer these questions categorically and we cannot prophesy whether calm wisdom or blind hate will dominate the era of reconstruction which lies ahead; but these things are certain: (1) That we are living in a world of economic and social interdependence which represents, in many respects, the flowering of centuries of gradual development; (2) That human liberty cannot be preserved if the profound distress, resulting from economic disorganization, continues; and (3) That the wisdom of men must be mobilized to prevent the continuation of this distress. There is indeed no such thing as a final plan for human happiness. The best that we can do is to build wisely from the experience of the past and to recognize, as Dean Pound has said of the law, that our economic life should always be stable but never static.

Thus far I have spoken in generalities. May I now specifically outline my views as to the way in which business and government can cooperate. In the period of our national life when the Nation was growing up, when the rich lands of the West and the South were being settled, and when our railroads, our utilities and our great industries were being constructed, there was work for every man and woman who desired to labor. In this period of growth there was not the degree of mechanization or centralization of industry which exists today and our people were not so interdependent one upon the other. There are still great and unexplored frontiers in science and technology and daily the ability of man to produce more is increasing; but all of this means a greater interdependence of each group and each individual upon other groups and other individuals. This is the first thing that business must recognize in our ever-changing economic world and it must recognize as a corollary that because of this greater interdependence there arises the need for the social insurance of the individual against the three great hazards of life—sickness, unemployment, and old age. It may well be true that the laws which have been passed to give this security are not in all ways wise, and that they may require change and amendment. To this end government and business should quietly and dispassionately cooperate.

Again business must recognize that labor is entitled to the untrammeled right to organize or remain unorganized as it desires and have a ceiling for its hours and a floor for its wages. In the two nations of Europe, England and Sweden, which, until the war enjoyed the greatest degree of prosperity, this right has long been recognized, and many employers in these two countries said to the American commission which studied labor relations abroad, that they could not understand the need of a Labor Relations Act or a Labor Relations Board as the problem which the Board was created to adjust did not exist in their countries. I personally feel that many details of our present labor acts are unwise, and that the administration of them has not been entirely unbiased, but I do say to American business that if it asks Congress to correct these acts it should, at the same time, lessen the need of such laws.

Finally, I think that American business must recognize the right of agriculture to a just reward for its labor. This country cannot be half prosperous and half depressed; and industry cannot hope to prosper when agricultural prices are at or near the levels of the early thirties. We may, indeed, doubt the wisdom of many of the features of the agricultural laws which are now on the statute books, but we cannot deny the need of a prosperous agriculture.

Thus far I have spoken of certain mental attitudes which business must have if it is to seek cooperation with government, to wit, that it must recognize the need of social insurance against unemployment, sickness, and old age; that it must admit the inherent right of labor to organize or remain unorganized as it may desire, and that it must acknowledge that agriculture is entitled to a fair reward for its effort.

Now may I speak briefly of what government must do if there is to be free and full cooperation between business and government. First, it must recognize wholeheartedly the desirability of our present system of free business enterprise, and it must not permit the entry of government into competition with industry. Proper and limited regulation of business to protect the public interest is admitted by business but it does not approve the degree of regulation exercised by many boards and commissions and it does not and cannot grant the desirability of the Government entering large fields of enterprise which would otherwise be carried out privately. Second, government must appreciate that free enterprise can only be carried on if it has the spur of profits, not meager profits but large profits, to compensate for its many and inevitable losses. This means tax adjustments which will encourage the spirit of enterprise, even of adventurous enterprise. Our railroads, our utilities, and our great industries were built by venturesome men who made much and lost much, and I say to you frankly that if you desire to kill private enterprise and prevent it from creating jobs for the unemployed, don't levy losses upon enterprise and then deprive it of compensating profits when they are made. Any effort to limit the profits of industry to 3 percent or even 6 percent in the face of its inevitable losses is to sound the death knell of private enterprise and to herald the advent of state socialism.

In the welter of criticism which business, with some reason, levels at the present administration, I am frequently asked what I have to say in defense of the New Deal and of the Roosevelt regime. The present administration came into power in the midst of the greatest economic crisis which this country has ever gone through. Its banks were closed, at least one-third of its workers were unemployed or on reduced pay, cotton was selling at 5 cents a pound, corn at 10 cents a bushel, and wheat at four bushels to the dollar. Under these circumstances, fully one-third of the local taxes of the country were not being paid and there were many in all ranks of life who wondered whether recovery was possible without a change in our form of government. The first great achievement of the administration was the restoration of confidence to all classes in the land. With a smile and with supreme confidence in the future of America, the President caused the country to take heart. I was in Washington in those days and I heard no voice raised in opposition to the great effort which the President was making to rebuild the confidence of the people.

As a part of this effort came many laws to prevent the continuation of the downward spiral of business. I have but to recount the various banking laws which were passed which enabled the banks of the country to reopen with ample capital and with assurance to depositors that they would not lose their deposits, the Home Owners' Loan Corporation, which prevented the foreclosure of hundreds of thousands of mortgages on homes and a similar act which preserved the ownership of farms, both acts providing for new mortgages on a sound basis of real value. There was also passed a Securities and Exchange Act, designed to place under proper regulation the exchanges of the country and to prevent a recurrence of the orgy of speculation which flowered in the closing days of the last decade, and the various agricultural acts which provided for the conservation of soil, the removal from cultivation of much submarginal land, the insurance of crops, and the temporary regulation of supply to demand in the basic agricultural crops. In this connection, may I say that I do not believe in the appropriation of huge funds from the Federal Treasury for the benefit of any particular class of our people (although it may be justified as an emergency measure) and I am confident that other ways can be found to assure the farmers fair or parity prices for the portion of their product which enters into domestic consumption. These are only a few of the emergency acts which were passed for the protection of the people of the United States in the early days of the present administration and there are few businessmen who do no approve the basic principles underlying these laws.

The second important achievement of the present administration was the passage of laws permitting the negotiation of Secretary Hull's reciprocal trade treaties. The Secretary will, in my opinion, go into history as one of the really great Americans of this period. He saw clearly that science and technology had wrought the world into one economic whole, that a policy of isolation could not continue, that trade barriers must be reduced, that international trade was a necessity, and that foreign trade meant not merely selling abroad but also buying from other nations. There are few in busi-

ness who do not approve of these treaties. While I am speaking of Secretary Hull's achievements, may I also refer to the President and his earnest efforts to amend our former Neutrality Act which forbade the sale of arms and ammunition to belligerents before the outbreak of the war. I was in Berlin in March of 1939 and talked with many prominent Germans and I can say to you without any hesitation that if Congress had amended the Neutrality Act before the outbreak of the war and if it had been generally known that the great industrial resources of America would be at the command of the Allies, to the extent of their ability to pay, there would have been great hesitation on the part of Germany to precipitate a war. Germany knew she was prepared; she knew that in many respects her industrial machine was far superior to that of France and England, and what she really feared was that if war came American industry would supply a large quota of aircraft and ammunition to the democracies. Unfortunately, that assurance was not given by America until after the present great tragedy was under way.

Another real achievement of the administration was the passing of the various social-security laws. There are three great tragedies of life—sickness, unemployment, and old age—and the Security Act was designed to lessen the hardships of these two last calamities. European countries had moved in this direction long before our acts were passed, and, while business may not approve all of their provisions, I do not think there is any thoughtful businessman who would wish to abolish old-age or unemployment insurance. May I add that I hope the problem of sickness insurance, both through public and private effort, will not be too long delayed.

The Federal Housing Administration has done a most excellent task in stimulating the construction and improvement of small dwellings. Its mortgages are sound, its construction is well supervised, it has put much idle capital to work, and it has given employment to many thousands. Business approves the F. H. A.

Finally, may I refer to the courage of the Department of Justice in attempting to enforce our antitrust laws not only to prevent monopoly in business but also to stop rackets in the realm of labor. We should have honest and untrammeled competition in business, and equal freedom for labor. Anything which tends to unduly restrict output or to check the advance of technology, thereby making possible a higher standard of living, is against the real spirit which has made America great.

The administration has not balanced the Budget, it has not limited the growth of the national debt, it has not solved the problem of unemployment, but it has accomplished many excellent reforms, of which I have mentioned a few, and I would prophesy that if a Republican administration follows a Democratic administration in 1941 few of the basic principles of New Deal laws will be changed. Whoever is elected President in 1940 will desire many changes in the details of these laws and many alterations in their methods of administration, but he will not desire the repeal of these acts or a major set-back to the social reforms which have been enacted in the last 8 years. We are living in a period of evolution, and if we evolve wisely our period of evolution will not become an era of revolution.

If business and government will each recognize the few principles which I have outlined, if they will stop calling each other names, and if each will cultivate a spirit of real friendship for the other, then that indefinable something which we call patriotism when it relates to the Nation, and confidence when it relates to business, will be reborn, cooperation will become a reality, our present system of democratic government will not be replaced by the totalitarian state, and private enterprise will continue to bless the Nation in the future as it has in the past. How can I better close than by quoting from Daniel Webster, who said in one of his great addresses:

"Let us develop the resources of our land, call forth its powers, build up and preserve its institutions, promote all of its great interests, maintain its Government, and see whether we also in our day and generation may not perform something worthy to be remembered."

ADDRESS OF HON. JAMES M. MEAD, OF NEW YORK

I am pleased to participate in this program so appropriately dedicated to an improved understanding of the problems which confront both government and industry. This is an appropriate occasion to discuss the gains that we have made, and to take stock of the responsibility that we must assume.

Under the disturbing circumstances of today, when the civilized world is being torn asunder through the rush of armaments and the disaster of war, we have increased reason for meeting on common ground.

Our unemployment problem is another reason for the practice of the democratic way. Cooperation and harmony between industry, labor, and Government is now a real necessity. Neither political considerations, nor self-seeking aggrandizement must be permitted to thwart and to obscure the requirement for a united national front.

Labor and government have enjoyed a pleasant relationship under our present liberal leadership. Labor has proven a mighty force in the advancement of effective governmental means to insure the economic and social well-being of our people.

Our present government, on the other hand, has dissipated the barriers that kept political agencies in the past functioning for the few.

It has legislated and administrated for social and economic security. It has sought a wider diffusion and distribution of wealth, while adhering to a continuation of the capitalistic system, with its profit motive.

A government that gains its authority from the consent of the people must respond to social demands and economic pressure. These forces, operating in every community, advocated by every unemployed and underpaid worker, by tenant farmer and sharecropper, assert themselves in our legislative forums, and very properly so.

Labor was obliged to look to the Federal Government because this modern age brought problems too complex and too widespread for the independent agencies of labor alone to conquer.

Unemployment became our major problem 10 years ago. The increased efficiency of man-made labor-saving machines; the enlarged productivity resulting from mass production; the unwholesome labor practices on the part of a few industrialists; the continued exploitation of children in industry; and the unfairness which developed with large-scale employment of underpaid women workers presented problems for government to consider. The Fair Labor Standards Act is our answer to sweatshop-employment conditions.

The right to organize into unions and the right to bargain collectively for improved working conditions became an increasingly difficult effort.

This was not completely a struggle between labor and industry, for the great majority of industrial leaders likewise recognized that their security was at stake. They recognized that the few unscrupulous exploiters of labor were polluting the very springs of democracy, and that wise, judicious, governmental supervision was the only answer.

And so, the Federal Government carefully paved a pathway on which labor might travel with safety and assurance; on which industry might find protection and comfort; and where true democracy in the Nation's business enterprises might function.

Democratic cooperation could follow labor organization. That pathway is marked with a series of outstanding legislative achievements. The Social Security Act, the Wage and Hour Act, the Wagner Labor Act, the provision of job opportunities on programs of public works—these and other accomplishments are the milestones that mark that happy highway, that pathway which the New Deal pioneered.

The foundations on which we have built during the past 7 years, and the legislative structure that we have raised, are here to stay.

We recognize that, when experience indicates that defects are marring the smooth application of the actual operation of these laws, and when it is indicated that the rights and privileges of either employers or employees are being unfairly affected, then we must, in mutual cooperation, unite in helpful and wholesome readjustments.

But the alterations that may be made shall not destroy the philosophy which inspired and which now underlies these measures.

Yes, labor and government have enjoyed a mutuality of purpose during these recent enlightened years of liberal Federal administration.

Labor is interested in an economic balance, in a national economy that will give stability to business, in decent employment opportunities for our workers, and in a reasonable prosperity for agriculture.

That, too, is the attitude of liberal, progressive government.

It has been said that labor has achieved its greatest gains under this administration. That is certainly true in spite of implications advanced by some who are either motivated by partisanship or by an unwillingness to accept the modern-day obligation of government and business toward the security and well-being of the masses of our people who must subsist on the fruits of their daily toil.

All of the advances which we have been able to make during these 7 eventful years, and which have served to bring about a kindlier atmosphere in which both government and labor may progress, are affirmative, positive, constructive steps.

We are not looking backward any longer. We are facing the sunshine of a new day. We are on the march to a higher standard of living.

It is not sufficient to say that we are on labor's side or that labor is on our side. Rather, let us say that we are together and that we share common, constructive views. We are on democracy's side.

Labor, since the beginning of the industrial system, has surmounted many obstacles, and it has tasted both the bitterness of defeat and the sweetness of victory.

But down through the years it has clung steadfastly to the banner of progress in government.

For the past 7 years, under the leadership of the outstanding liberal of this day and age, the President of the United States, we have carried that banner. We are not going to lay it down, nor are we going to permit any vitiation of the cooperation and fraternalism that have been developed between government and labor.

We who subscribe to progress in government are not blind to the unsolved problems that remain with us.

We know that there are still unemployed in our Nation, we know that a threat to our peace is in the air, and we know that there are unfriendly subversive influences within our shores.

These are major considerations with which our Government must deal during the next few years while the world crisis of the early forties is at hand.

We know that we are not going to master these problems by turning our backs to them. The solution rather will lie in a continued attack on domestic insecurity and instability, upon the intelligent rearrangement of our domestic affairs, and upon measures designed to insure peace.

We are going to improve on the enlightened formula which we now follow. We are going to banish joblessness and insecurity. In the enactment of social security, the wage and hour law, the Wagner Labor Act, the child-labor law, and the Public Contracts Act we have laid the mudsills for the superstructure in the soil of our country.

We are well along on that program now. With peace as our objective, with domestic tranquillity our most earnest endeavor, and with a continued solicitation of cooperation and harmony between Government, business, and labor we shall, under progressive leadership, accomplish the high resolve that has thus far activated this administration.

America's Duty to the Future

EXTENSION OF REMARKS

OF

HON. HENRY F. ASHURST

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, May 6 (legislative day of Wednesday, April 24), 1940

ADDRESS BY J. EDGAR HOOVER

Mr. ASHURST. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject America's Duty to the Future delivered by J. Edgar Hoover, Director, Federal Bureau of Investigation, before the New York Federation of Women's Clubs, Hotel Astor, New York City, May 3, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In modern times, the Nation has not witnessed a more significant and important development of civic spirit than is found in such organizations as the Federation of Women's Clubs, which I am proud to address today. When things go wrong in the business, social, and political world, women are among the first to suffer. From them usually comes the first inspiration to improve conditions which might otherwise become chaotic. Thus my message to you today concerns the welfare of that place where womankind rules supreme—the home—and the happiness, the peace, and the security which should surround it.

Our present position of national prominence did not result from accident. As a nation we became great through thoughtful planning for the future and through an invincible determination to translate those plans into action. The time has now come when we must plan anew, otherwise hordes of schemers with fantastic ideas that sprang from unworkable and alien philosophies from abroad will eat away the otherwise firm foundations upon which our Nation is built. Vile and vicious forces are today seeking to tear our America asunder—killing freedom, ravishing justice, and destroying liberty in the name of transplanted totalitarianism. The one achievement above all others which America must preserve is that of good citizenship. By this I mean a preservation of our democratic institutions, freedom, liberty, respect for country, and better government through the efforts and will of all our people.

Without a superior stalwart national citizenship, everything is insecure. The ideas which international propagandists would foist upon us are the very antithesis of American citizenship. Churches have been closed by the mere whim of a dictator; the members of the clergy have been humiliated. As has been the case in other lands, homes can be wrecked, businesses ruined, jobs lost forever, and personal security relegated to fearful outrages of secret police more criminal than even the worst murderers they can accuse.

Some of our dangerous gangsters have come from foreign shores. The worst of these, however, are not the murderers or racketeers. Far more dangerous are those who advocate revolution under the disguise, as the Communist spokesman, Earl Browder, put it, "We are the Americans and communism is the Americanism of the twentieth century." Such masqueraders have not as much respect for constituted authority as does the average robber, highwayman, or murderer; at least the latter admit their crimes and, in many cases, accept their punishment as just and due. Those who would subvert liberty meanwhile shout most loudly for the protection of the Constitution while seeking to destroy its sacred guaranties. There is no such thing as liberty unless it is liberty under law.

A great many false notions of liberty are now quite common, due to plausibly worded propaganda designed by the seducers of our liberties to mislead Americans. This they will never do, because the heart and soul of America, once aroused, is unconquerable.

This has been demonstrated time and again. Until recent years the kidnaper thought that all he need do to enrich his coffers was to snatch the body of some defenseless child or adult and then collect his ransom. In this he was successful until Congress, acting upon urgent appeals, authorized the F. B. I. to function under laws designed by a farseeing Attorney General.

How many kidnapings occurred before that time no one knows. Any figure at best would be an estimate, because victims then were afraid to speak up, facing inevitable gangland vengeance. But we do know that since 1932, 179 cases of kidnaping have been reported to the F. B. I. and 177 of these cases have been completely solved. Thus the kidnaping menace that once was a nightmare in every home in the land has come to be a thing of the past, because an aroused people determined that kidnapers must no longer operate with impunity.

The same applies to the bank robber, whose vicious plunderings have been reduced to a faint echo of past activities. The same is true of the extortioner and organized gangdom in general. These vicious forces are fearfully conscious that they are no longer at liberty to rob, plunder, and steal, because the American people have decreed against their invisible empire.

However, the notion is prevalent in too many communities that liberty means, "Do as you wish as long as you don't get caught." That is why 4,067 serious crimes are committed every 24 hours. That is why a human life is sacrificed on crime's altar ever 44 minutes, and that is why a robbery occurs every 9½ minutes, a larceny every 36 seconds, and a burglary every minute and a half.

Because the misdirected energy and perverted teachings, we have in the F. B. I. today, the fingerprints of some 5,000,000 persons who have been arrested for an offense more serious than a traffic violation. Before this year comes to a close, approximately 1,000,000 persons will have heard the clanging doors close behind them as they enter jails, prisons, and reformatories, and all because they had not been properly schooled in the true meaning of liberty.

Because of misinterpretation of liberty, often deliberately brought about by inciters of violence, the Nation is paying a crime bill which in 3 years would equal our national debt. Hence, every decent citizen should rededicate himself to a furtherance of liberty in its truest sense, defined by our democratic traditions. There is only one way to insure liberty to all peoples. That is by a firm adherence to justice, such as has been provided and established in our American heritage, and in our Constitution which we must preserve for the future at all costs.

America's duty to the future demands that the cherished principles of liberty be preserved for all time. We can do this best by striking at the forces which assail liberty—the lawless, the thoughtless, and the exponents of totalitarian serfdom and slavery.

We must and shall cope with this effort to enslave us through perversions of the truth. The first line of defense is the home, with its all-important atmosphere of expectations and fond hopes for the future and the training so necessary to develop future generations of Americans.

Modern law enforcement has demonstrated its ability to cope with the hardened criminal, but at best that is only first-aid treatment. The only permanent cure lies in killing the infectious and deepseated germs of lawlessness with a thorough prophylactic, which is best administered by proper home training and environment.

Sinister forces of the underworld, with totalitarianism, constantly seek new places to work their evil. Youth, more youth, is sought for this purpose. We must inoculate our young against such treacherous germs. This means proper home training, proper precept, and proper example. We can prevent more crime in the high chair than in the electric chair, whether that crime be against property or against our Nation.

Youth must be told about the slime and dirt that infest the underworld. Dishonesty is one common denominator found in all criminals. It must be met with the daily teachings of the virtues of honesty. In teaching honesty, you are also teaching Americanism. You are piercing smoke screens of falsehood and subterfuge thrown up by enemies of America, one of which insists—to quote a resolution of the Communist Party—"More revolutionary novels and short stories especially based on American life must be issued for the youth."

The corruption of our youth by subversive activities is a violation of our American liberties and is an attempt to lure us into the fear, the injustice, and the slavery of totalitarian barbarism. And this is so regardless of the high-sounding names of hypocritical "front" organizations. Our greatest asset is intellectual freedom. Our worst menace is intellectual debauchery, which is as rotten and untenable as the filth from which it springs. Certainly we have a right to inquire into the character of our children's education. We have the inalienable right to see that they are taught the true principles of Americanism and nothing else. If young Americans are to be educated for the future, parents must accept

the responsibility of seeing that this education is properly given for a better and safer Nation.

What are you doing to make your child recognize his good fortune in being an American? Are you teaching him a respect for his country and its institutions? Does he respect the American flag as a symbol of liberty? Does he respect honorable forces of law and order? Have you compared his plight with that of boys and girls in other lands? Do you take him to the shrines of great Americans and tell him their glorious histories? Does he go to Sunday school and church, and is he taught that he is responsible to God rather than to some spouting dictator whose insane ego denies even the power of the Deity and charges that religion is the opiate of the people?

A flood of vilification has recently been loosed upon all things American by scandal sheets which espouse the cause of foreign "isms." We must counter with a constant program of education, designed to penetrate this thinly veiled and slimy propaganda. We are a peaceful people, and we want no part of the terrible turmoil and sickening strife that is going on across the seas. Let us not be blinded, however, to the necessity of preparedness for any emergency.

We of the F. B. I. have not been spared from the sting of vicious, anti-American propaganda cleverly designed to blind the eyes of otherwise sincere and conscientious citizens. We have been charged with having created an American Ogpu or Gestapo. Let's get at the truth of what is behind a lot of such untrue and utterly malicious statements.

I charge that the most vicious "smear" campaign which is being directed against the F. B. I. is a part of the working program of various anti-American forces, the basis of which is to undermine public confidence in the law-enforcement bodies of America and thus weaken the defenses of our internal security.

And I want to emphatically state that my remarks are not directed at any individual who sincerely criticizes the F. B. I. from a constructive viewpoint. I do say, however, that the Communist charge that there is the slightest desire in the F. B. I. for an Ogpu or a Gestapo is nothing but blustering ballyhoo designed to cover their own Trojan horse activities. The Communists hope that with the F. B. I. shackled, they can proceed without interference as they go their boring, undermining way to overthrow our Government.

You must learn to judge people by what they think. These totalitarian tricksters are the very first ones who would introduce un-American, violent, murderous types of spy systems into our country. They desire to break down true law enforcement in every part of America under the guise of the protection of alleged civil liberties so that they may, in turn, destroy the very things that they pretend to revere. Then, they seek by a type of confidence game to steal away your liberty, your home, and your constitutional rights to life, liberty, and the pursuit of happiness.

In proof of this, I say to you that under constitutional safeguards as they now stand, it is utterly impossible for such a thing as an Ogpu or a Gestapo to exist in America. Let us look, for instance, at the Federal Bureau of Investigation. I am merely the Director of this Bureau's activities under laws enacted by Congress; I have no right, no desire, and no means of being anything else.

The F. B. I., like all Federal bureaus, must present its report of activities and justify its work, for the purpose of securing appropriations, once each year. To do this, its record must be presented, not only before the public, but first, to the Attorney General of the United States, the Nation's chief law officer, who certainly would not favor the setting up of an Ogpu or a Gestapo.

From the Attorney General, the facts concerning the work of the F. B. I. go each year to the Budget Bureau, where each item is carefully scrutinized. From the Budget Bureau, the reports and estimates covering the F. B. I.'s activities go to the White House, where they are reviewed by the President of the United States. From the White House, the estimates and reports are sent to the Appropriations Committee of the House of Representatives, where the Director of the F. B. I. must explain every major item and the reason why it has been entered in the estimate for appropriations. The various items of the appropriation are then considered on the floor of Congress by Members of the House of Representatives before being forwarded to the Appropriations Committee of the Senate for review. The estimates then must be considered on the floor of the Senate. It is utterly ridiculous for the foreign ism advocates to charge that with these annual executive and legislative reviews of the work of the F. B. I. it could develop into anything resembling an Ogpu or Gestapo.

When these poisoners of American opinion tell you that an effort is being made to instigate an Ogpu or a Gestapo, they infer that every system of representative government has failed and that it is time for some other kind of government to come along and take over. That kind of governmental procedure is the perverted, subversive, serpentine type of nonrepresentative totalitarianism from lands of viciousness.

These perverted people scream about the denial of civil liberties in this country, although nowhere on earth is there less liberty, civil or of any other nature, than under the foreign governments they so vociferously champion. It has been proven time and again that they have every civil liberty which possibly can exist, that they possess in America more honest safety in life, liberty, and the pursuit of happiness than in any other nation in the world. And when their rights allegedly are violated, the courts of a free land are open to them. Their rights are as closely guarded here in America as the rights of subjects are defiled in the countries whose views they espouse. Therefore, what these people want is not civil liberty. They already have that. They are demanding, under a pretense of misapprehension, and deliberate falsehood, nothing more nor less than licentiousness—the right to take what they will of our possessions and our traditions and defile them as they please. They want the right to rule when, in many cases, they are not even citizens. These people are seeking to accomplish by propaganda what other aggressors usually do by force of arms, because they know they could not at the present resist the real force of Americanism which is found in this Nation.

It is America's duty to perpetuate a heritage that will continue to be a beacon light of freedom and equality to oppressed peoples the world over. Likewise, there is a present duty to evaluate the "front" organizations that exist by the score, designed to carry on destructive activities.

We should awaken to the fact that as soon as one "front" organization is exposed another springs up to carry on the program of scuttling America.

We must ever be on the alert to protect our democracy from the bacteria of barbarism. We need to stand firmly and fearlessly on democratic principles and upon no other foundation.

Our task requires patience and forbearance. It requires the faith of our fathers and the courage of present-day pioneering. We must know and respect and fight for only one ism—Americanism.

The motivating spirit of America must ever be justice. We need have no fears, so long as justice reigns. May we consecrate ourselves to this sacred cause in order that the stars and stripes may reign supreme and that our Nation may retain its supremacy as the exemplification of true democracy.

Banking System for Small Business

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 6 (legislative day of Wednesday, April 24), 1940

ADDRESS BY PETER R. NEHEMKIS, JR.

Mr. MEAD. Mr. President, I ask unanimous consent to have published in the RECORD an address by Mr. Peter R. Nehemkis, Jr., special counsel, Investment Banking Section, Securities and Exchange Commission, delivered on the 2d instant before the Kiwanis Club of Newark, N. J.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The small business enterprise is one of the Nation's most important employers, producers, and customers.

We have in this country about 2,400,000 business units. Of this number more than 90 percent are small—that is to say, they have assets of less than $250,000. Big business constitutes only 1 percent of the business population. Almost half of the Nation's gainfully employed have jobs in small business establishments. Despite the inroads of bigness, we are still a nation of small enterprises.

But small business is important to the country for other reasons than that it constitutes the largest body of employers and producers.

Small business also performs a unique service for the American consumer; it is the small-business man who is responsible for much of the versatility of product and service, which, despite standardization, is still highly valued by the consumer.

Nor can we afford to overlook the vital importance of small business to big business. It is frequently stated that the development of a new large business creates many new small businesses; it is less commonly recognized that without the existence of small enterprises it would be difficult for the large units to function. The large enterprise relies heavily upon smaller, independent units for the processing of a wide variety of machinery and products that are indispensable to its output and the distribution and sale of its product.

Perhaps the clearest example of the dependence of big business upon little business is the automobile industry. Without the small pattern and parts concerns the assembly lines of General Motors and Ford could not move, and without the network of dealers and distributors the great automotive factories would be paralyzed.

But there is still a further aspect to the relationship between big and little business. It is from small business that large business grows: Some of our largest and most important enterprises have emerged from "basement" or "backyard" origins. The classic example is, of course, the Ford Motor Co., which started operations with a cash capital of $28,000. It is sometimes useful to recall that Frank Woolworth started business with a stock of goods worth $200.

Nor should we overlook the highly significant fact that small business is the proving ground for large business. The radio was experimented with in homes and lofts long before it was put on the market by R. C. A. The plastic industry—one of our fastest growing new industries—had its origin in numerous small concerns which were later absorbed by the large units. I need scarcely remind this audience that the giant electrical industry was born only a few miles from Newark in the laboratories of Thomas A. Edison.

Moreover, because it is small, little business can adapt itself to changes in the business environment more quickly than can big business. You will all recall, in this connection, the huge expenditure which was required for the overhauling of plant and equipment to bring out the first model A Ford car. Now contrast this situation with that of two partners who own a small feather concern. They are being crowded by competitors. They decide to go into the manufacture of shuttlecocks used in the game of badminton. There are no boards of directors which have to be consulted; no battery of lawyers to advise on the effects of the proposed change; no special consultants to render reports upon the change in sales policy involved; no tax experts to report on how the change in business will affect Federal, State, and local taxes; and so on. Small enterprise may have less hull than the full-rigged corporation, but, like the racing yacht, it carries a greater spread of sail, has a lighter draft, and can change its course more swiftly. The ability of small business to change its plant without undue disruption of operations helps to explain the amazing vitality of the small enterprise in the competitive struggle. Such factors, among others, contribute to the varity of product which enables the small concern to serve a shifting market and profit by changes in style and varieties of demand.

For these and other reasons, it is of the utmost importance that we should have in this country a continuous growth of new and healthy small businesses. Since 1927, in relation to population, the number of business units has been declining. In 1935, there was a thinner "business population" than at any time during this century. During these years, the heaviest mortality has unquestionably occurred among the smaller business units and especially among the individually owned concerns, which are by far the most numerous. It is gratifying to note, however, that the downward trend stopped in 1935 and that the "business population" has been increasing steadily.

II

A major difficulty experienced by small business in recent years has been its inability to obtain adequate funds for its operations.

What kind of financial aid does small business require? What are the obstacles which stand in the way of its obtaining adequate financing?

By far, the most essential financial requirement of the small enterprise is for equity capital. But small business cannot obtain equity capital because it lacks direct contact with the sources of capital supply.

The major source of equity capital for small enterprise has always been the wealthy individual who was familiar with the business, its management, and the locality in which it operated.

Today, angels for small business are scarce. Your moneyed individual feels that the speculative profits are not worth the risk; he prefers to play safe and put his money in tax-exempt Government securities.

Where else can the small-business man turn for equity capital? Certainly, not to the investment banker. The investment banker cannot afford to underwrite the securities of the small concern whose name is not known beyond its own community. And besides, the amount of capital involved is usually too small to yield a profit if, indeed, it can cover flotation costs at any reasonable rate of commission.

There has been a great deal of newspaper discussion and feeling among small-business men that the Securities and Exchange Commission has been responsible for the inability of small businesses to obtain equity capital. In my opinion, this attitude is not based on fact.

The Commission has done everything within its power to reduce the costs of registration to the lowest level compatible with its duties under the Securities Act. It has provided for various exemptions from registration with respect to issues below $100,000. And for issues of intermediate size—for which there is required the filing of a full registration statement—special concessions have been provided. In order to reduce the cost of registration, the Commission has reduced the amount of information required from the small business concern.

Some of you may not be familiar with the fact that the Commission has established a special unit within its Registration Division for the purpose of aiding prospective registrants and advising them and their representatives on problems arising in connection with their registration statements. This unit has been utilized largely by small-business men.

The high cost of flotation of small issues—over and above the cost of registration—has been of major concern to the Commission. Studies prepared by the Commission's staff show that, among registered issues with expected proceeds of less than $1,000,000, the cost of flotation amounts to about 20 percent of the proceeds for common stock, about 16 percent for preferred stock, and about 7 percent for bonds.

An important fact, which is often overlooked in discussions of this problem, is the heavy compensation absorbed by the underwriters and other distributors of securities. For stock issues of less than $1,000,000, between 80 and 90 percent of the total flotation costs has consisted of compensation paid for underwriting and distribution. For bond issues of similar size, 70 percent of the flotation costs have been absorbed in such compensation. Other expenses, also not attributable to registration under the Securities Act, constitute a considerable portion of the remaining costs. While it is difficult to estimate precisely the additional cost of selling small issues resulting from registration under the Securities Act, it appears that such extra cost is not in excess of about 1 percent of the gross proceeds; in fact, there is reason to believe that it is nearer one-half of 1 percent.

It is not the alleged cost and delay of registration which is responsible for the small volume of unseasoned equity issues. A more significant factor—again frequently overlooked—is the inability of the small issues to find purchasers.

An analysis of 700 small-security registrations shows that, 1 year after the effective date of the registration, over one-third had not sold any of the securities registered. This means that over 200 such issues, fully registered and ready for market, could not find a single purchaser in the year following effective registration. This would appear to indicate that, in the words of Chairman Frank, and I quote, "The obstacles standing in the way of the successful flotation of issues of small and particularly unseasoned enterprises are to be found in places other than the requirements of the Securities Act."

In the final analysis, the small business enterprise has never utilized—and in all probability will never utilize—the machinery of investment banking or the security markets. Statistics of the Bureau of Internal Revenue show the average assets of the small corporation to be $47,000. Plainly, the corporation with total assets of less than $250,000 is not the kind of enterprise which can be financed profitably by the investment banker or whose securities are suitable for trading in the public markets.

To say that the registration requirements under the Securities Act are a deterrent to the flow of capital to small business is plainly without any foundation. Issues of less than $100,000 are exempt from registration. In my opinion, it is extremely doubtful whether many of the 253,000 business corporations with average assets of $47,000 or the more than 2,300,000 small business establishments in this country will ever have occasion to raise capital in such amounts as to require registration.

With the wealthy individual disinclined to place his funds in the small enterprise, and the capital markets largely closed to small business as a source of equity capital, what other avenues are open?

The commercial bank? The answer, as you are all aware, is "No."

Now the commercial banker has been subjected to a great deal of criticism for not aiding small business. In general, the attitude of small business toward the commercial bank is summed up in the remark of the businessman who said: "If your business is in shape for a bank loan, it doesn't need one."

At the possible risk of incurring your displeasure, I want to take issue with some of the extreme criticism which is being directed against the commercial banker. In my opinion, such criticism is not only unjustified but is based on a failure to recognize the responsibility of the banker to his depositors, as well as the inherent limitation of commercial banking as a medium for supplying small business credits.

In the first place, not all small-business enterprises have difficulty in obtaining bank credit.

The heart of the problem has always been (and continues to be) that sizable groups of small-business men whose concerns are not so firmly established and whose personal resources are not so great as to be able to satisfy the credit standards of commercial banking. Those businesses which experience difficulty in obtaining bank credit generally fall into one of two groups: (1) That group of older enterprises whose liquid and capital assets have been dissipated through the depression years and whose credit facilities have been cut off through the shut-down of more than 15,000 local banks; or (2) that group of younger enterprises, still in the early stages of development, which have not yet either accumulated sufficient liquid and fixed capital or have been unable to establish permanent credit relations.

While there are in these two groups a considerable number of businessmen who may have a legitimate complaint against the commercial bank, by far the greater number cannot obtain bank credit on the basis of the existing credit standards and lending techniques of the commercial banks. To constitute a good credit risk, an enterprise should be profitable. But, if the enterprise is expanding rapidly, the probabilities are that it will be short of capital and the equity will be thin. The likelihood is also present that the tangible assets will be special-purpose plant and equipment of negligible value on an auction basis.

The position taken by the commercial banker that the funds at his disposal belong not to him but to his depositors and therefore can be loaned only to individuals and enterprises whose assets and future prospects make repayment certain, is fundamental to sound banking practice. Faced with this responsibility, the commercial banker is compelled to find that the assets or business prospects of a considerable proportion of the smaller enterprises in his community are such as not to warrant bank credit.

Furthermore, in discussing this problem, we should be perfectly candid and recognize that under our system of banking, the commercial bank cannot be expected to supply the need for equity capital. In making long- or even intermediate-term loans, a bank must consider not only the nonliquid and unmarketable character of the assets which it will have to hold, but also the additional element of risk which will be involved, such as an adverse turn in the business cycle; or a change in the management; or a new development in technology which may even wipe out the borrower's business.

Moreover, the extension of small business credits requires special skill and facilities which are largely lacking in the existing commercial banking system. The growth in the average size of commercial banks, the spread of branch banking, and the closing down of thousands of small unit banks, has resulted in a situation in which bank officers no longer have the same intimate knowledge of local management and enterprises, which their predecessors possessed. The earlier generation of bankers were largely businessmen; they either owned or managed the local banks. Through their own personal business experience, they were intimately acquainted with business needs and business management. Today, by and large, this group of bank officials has been supplanted by a personnel which has risen from the ranks; they are primarily bankers rather than businessmen. This newer type of bank manager is disposed to pay greater attention to the static elements of assets and liquidity than to the dynamics of growth and expansion. As a result of this gradual shift in banking personnel, the commercial banks have largely lost their intimate contact with the business activity of the community. And most of them have not yet substituted for this loss of personal contact the kind of machinery which can achieve the results which were obtained earlier.

Prior to the recent banking crisis, when the local banks were usually owned and managed by the community's substantial citizens, it was not uncommon for the bank to have among its own stockholders the responsible backers of those local enterprises which enjoyed bank credit. Hence, to a considerable extent the ultimate cushion of risk for the bank as well as the enterprise, rested upon the same individuals. Today, this picture has changed. During the banking crisis, this cushion of risk became impaired. Local bank stockholders and directors were compelled to draw heavily upon their own resources to make good assessments on their stock and to protect the solvency of their banks. Frequently, they had to make good on the double liability which was attached to their stock. To no small extent, the banking crisis served to undermine the financial standing of those individuals upon whose credit loans had formerly been made. Local business enterprises which had formerly constituted good risks were, therefore, seriously affected. And those enterprises which had never enjoyed satisfactory banking relations now found that it was even more difficult to establish them.

While many local banks have returned to their traditional lending practices, or have endeavored to meet the problem through the establishment of personal loan departments, and the Government, through the Federal Reserve banks and the Reconstruction Finance Corporation, has also attempted to alleviate the situation, the void has not been filled completely.

The successful financing of small business requires that loans be made to a large variety of unrelated enterprises and that there be many different loans in each classification. In the absence of such diversification, solvency is placed at the mercy of business uncertainties in a restricted field. Most commercial banks, as presently operated, lack the special skill and facilities for the supervision required in handling of a large variety of small business credits.

Although this sector of small business is not being favored by the commercial bank, it does obtain credit. Today, the banker for small business is the accounts-finance company, the personal-loan company, the factor, the trade creditor, and other private lenders.

These intermediary lenders have largely supplanted the commercial bank in the financing of small business. The commercial banks, on the whole, do not appear to be concerned with the competition of these "retailers" of credit. By financing the accounts-finance company, the factor, the personal-loan company, and the trade creditor, the commercial bank engages in profitable operations without directly assuming the risk, expense, and responsibility of handling an enormous number of unrelated and widely scattered transactions.

The phenomenal growth of these intermediary financing institutions shows that credit can be extended successfully to small business if an appropriate credit machinery is utilized. Such a machinery has been developed by these intermediate lenders. They, rather than the commercial bank, have developed "mortality tables" expressly designed for the financing of small business. The successful experience of these financing agencies is due largely to their having employed such techniques and methods as (a) pooling of risks; (b) routine procedures for appraisal, accounting, and servicing; and (c) establishment of schedules of charges appropriate to each class of risk as well as individual risks.

These "retailers" of credit, through their ability to organize the multiplicity of small transactions into aggregates, and to graduate financing charges and terms in accordance with the special requirements of each individual industry and client, are able not only to attract equity capital but also to tap the credit of banks and the capital markets—sources of capital supply to which small business individually has no access.

While small business is obtaining its credit to an increasing extent from these intermediary bankers, the cost of such credit is considerably in excess of the cost of bank credit. The small enterprise which utilizes this medium of credit is, therefore, placed at a disadvantage in relation to those of its competitors who are able to obtain bank credit or utilize the capital markets. Moreover, since this field of credit extension is largely unregulated, practices vary widely and abuses are prevalent.

III

The technique developed by these "retailers" of credit offers a solution to the problem of financing small business.

I think the time has come when small business should have available to it a banking system designed to serve its special needs as effectively as the existing financial institutions serve the requirements of big business.

Various proposals in this direction have been advanced by Members of Congress. Certain of the measures which have been proposed for the provision of more adequate long-term and intermediate credits for small business recognize that the commercial banks cannot undertake this type of financing without additional mechanisms for the distribution of risk, for guidance to banks unfamiliar with the handling of small-business credits, and for extensions of credits which local banks are unable to provide.

Senator JAMES MEAD has proposed legislation for the creation of an Industrial Loan Corporation which would utilize the existing machinery of the Federal Reserve System.

The proposed corporation would utilize the 12 Federal Reserve banks and their 24 branches. It would finance small and intermediate businesses through the acquisition of the obligations of such enterprises, or the purchase of preferred stocks, notes, etc. The corporation would also make loans or make loans in cooperation with local banks or guarantee loans made by the banks directly. The basic principle underlying this proposal is that of Title I of the Federal Housing Act, which covers loans made by banks for modernization of residential dwellings. This proposal utilizes the existing banking system, but endeavors to overcome some of its deficiencies in the handling of small-business credits.

To overcome the deficiencies of the commercial bank and to fill up the void in capital and credit facilities for small business, Mr. Justice Douglas, when he was Chairman of the Securities and Exchange Commission, proposed the establishment of a capital credit banking system.

Last week, Chairman Frank addressed the Kiwanis Club of Cleveland on this very subject. He there proposed that there be established a system of regional finance companies. In each of the Federal Reserve districts, there would be set up a financial institution, the common stock of which would be owned by private persons in the district. The Government would invest in their preferred stocks, but such preferred stock would have little, if any, voting power. These institutions would purchase the common stocks of local enterprise. The institutions would not make loans—they would supply equity capital. In short, the institution proposed by Chairman Frank "would be a sort of speculative finance company or investment trust."

It is believed by those who have given serious consideration to this problem that the special and varied financial services required by small business and its need for long-term capital, particularly equity capital, can be met only by the creation of a new financial machinery organized on a regional and functional basis.

Capital credit banks, under this machinery, would purchase equities in small business enterprises and would extend credits at costs sharply below present levels. Such a system of banks would be able to harness to it the trade and business experience of those members of the community who are familiar with the enterprises in their localities. A movement in this direction would go far in restoring the personal banking which was characteristic of earlier times. Credit extensions would again be based on the dynamic factor of growth and expansion as it was in the past.

However, it cannot be emphasized too strongly that merely to reduce the cost of credit or to make the supply of capital more abundant, will not solve all of the small-business man's problems.

Obtaining credit and capital facilities are a necessary first step; in addition, small business also requires that its functions and activities be improved. It must be enabled to possess, in its field, the operating and developmental efficiencies which large business enjoys through expert accounting, managerial, operating, and capital techniques. Small business should have available to it a systematic informational and research service comparable to that furnished to the farmer by the Department of Agriculture

or which big business enjoys through its own research facilities and the Department of Commerce.

Just as the credit and marketing problems of the farmer have been dealt with successfully through the establishment of a system of land banks, intermediate credit banks, commodity credit agencies, so, too, the capital and credit problems of small business can be solved successfully if they are broken down into manageable elements and special solutions provided for their distinctive requirements.

Address by President of Norwich University at Unveiling of Painting of Admiral Dewey

EXTENSION OF REMARKS

OF

HON. WARREN R. AUSTIN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, May 6 (legislative day of Wednesday, April 24), 1940

ADDRESS BY JOHN MARTIN THOMAS

Mr. AUSTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. John Martin Thomas, president of Norwich University, on the occasion of the unveiling of a painting of Admiral George Dewey at Manila Bay, by Rufus Fairchild Zogbaum, presented to the State of Vermont by Mr. Bartlett Arkell, at the State House, Montpelier, Vt., May 1, 1940, which was Dewey Day.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Norwich University is proud to have part in the placing in Vermont's beautiful statehouse the most famous painting reminiscent of the American victory at Manila on May 1, 1898. The figure on the bridge of the *Olympia* is that of our most illustrious graduate. We have not forgotten to do him honor. Every year for 42 years we have celebrated Dewey Day, seeking to imbue our cadets with his courage and his noble-souled devotion to his country and to inspire them with the example of his magnificent achievement. In years to come Norwich cadets, with thousands of students from other schools, will come to this statehouse to receive to their hearts from Zogbaum's art the conviction of America's might and greatness which Dewey's guns at Manila spoke to all the world.

It has been said many times in modern years that textbooks of history should have less to say of wars and battles and soldiers and more about the activities of all the people in the arts and industries of peace. There need be no quarrel with that sentiment if it means that the emphasis in history should be upon advances due to intelligence, man's conquests of nature and achievements of the mind and spirit of man in literature and art, in government, education, and industry. We do not wish to teach our children that war is the only field in which a man may achieve greatness or render patriotic services to his country or, indeed, that war is anything else than the last resort of a nation threatened by loss of its honor or destruction of ideals and principles which it holds dearer than life.

But the history we teach our children should be a true and faithful record of the past. And it is a sure fact of the years of the past that in the maintenance of liberty, in the preservation of values both material and spiritual dearly acquired by the toil and sacrifices of those who have gone before, the soldier has been called upon to do his duty. History which omits or slights brave and glorious deeds of arms is not true history, certainly not of the United States which was born in war and saved through war to be one nation.

In telling the whole truth of American achievement and progress there must be included many deeds of valor in which men fought with weapons of death. To these Vermont has contributed at least two, Ethan Allen's capture of Ticonderoga and George Dewey's victory at Manila Bay. Both are part of the story by which we nourish our love of our country and our pride in her strength and greatness. The former the children of these mountains can never forget, and, if in the lapse of years, the memory of the latter should tend to grow dim, the genius of Zogbaum now placed permanently in this shrine of Vermont liberty will awaken afresh the heart stirrings of that glorious day when a Vermont boy revealed to the world that America was not only permanent master of her own great continent but a power to be reckoned with to the far corners of the earth.

It is true that "peace hath her victories, no less renown'd than war." But the victories of peace, for the most part, are not dramatic. They cannot be made eloquent of courage, of death-defying determination, of holy zeal for maintenance of honor and of right, as are the deeds of men when they look death in the face and give their all for victory.

For most of us life is largely repetition of ordinary duties, tending to the commonplace. We have few great moments and face no crises which call for our utmost in courage and the will to win. In the monotony we are inclined to forget the stature of our humanity, the powers latent in our souls waiting for some supreme duty to call them forth.

It needs some great book or drama, or some picture like this of Zogbaum with the reeking guns, the belching funnel, and the fearless figure in the mastery of command on the bridge, to send the red blood of courage and aspiration coursing through our veins. You cannot stir like inspiration with the story of Thomas Davenport inventing the electric motor, nor of Thaddeus Fairbanks constructing a platform scale, nor of Jacob Estey designing a reed organ, though all of these were noble Vermonters and their works were highly useful. It still needs the soldier to call forth the heroic so that even the dullest feel the summons, and such will be the high usefulness of "Admiral Dewey at Manila Bay" in all the coming years.

Norwich University is especially proud to have this picture here because it proclaims in superb art the justification of her principles maintained in utmost fidelity since Alden Partridge first proclaimed them 121 years ago. Captain Partridge invited students to Norwich to receive a sound education, with instruction fundamental to the various professions, including engineering, while at the same time they fitted themselves for service to their country in case of need. He was himself a farsighted man. He introduced physical education into his program long before others recognized its necessity, he abandoned the stereotyped classical curriculum and gave his cadets a choice of subjects 50 years before Charles W. Eliot, and he anticipated the Army's Reserve Officers' Training Corps by a full century. Likewise, he encouraged his students to be farsighted, to anticipate a definite calling in civil life, but not to be unmindful that the Nation might have need of a citizen army with competent trained officers.

His watchword was "be ready." His eyes were turned, not to the educational traditions of the past, but to the needs and possibilities of the future. For more than a score of years he traveled far and wide through the country, assembling "conventions," as he called them, and urging his fellow citizens to look forward, and to shape the education of their schools to the preparation of men to do the work of this mightily expanding Nation and to defend her in case of need.

The Partridge spirit was still strong at Norwich when George Dewey enrolled as a cadet in 1851. During his 3 years in the old South Barracks he not only learned the discipline and the fundamentals of military science but he also acquired the trait of looking forward and being ready for whatever might come.

It was this trait which won the Battle of Manila Bay. Military history has no more striking example of victory through long-continued, careful preparation than Dewey's great triumph. In the first place, he was not in command of the Asiatic squadron by accident. He sought the responsibility and worked for it, gained the approval of Theodore Roosevelt when he was Assistant Secretary of the Navy, and persuaded Senator Redfield Proctor to intercede for him with President McKinley. Having gained the assignment he had every ship in his fleet in perfect condition long before war was declared. He spent days and weeks in gunnery practice under all kinds of weather conditions. As hostilities neared he laid in a sufficient supply of coal and other supplies. He summoned the American consul from Manila that he might have complete information of the Spanish Fleet and coast defenses. When he put out from Mirs Bay on the *Olympia* for the 600-mile voyage to Luzon he was ready—completely ready.

Dewey's information was that the Spanish Fleet would await him at Subig Bay, where batteries had been newly installed. Reconnaissance by the *Boston* and *Concord* failed to find the enemy at Subig. It was learned later that Admiral Montego actually had sailed to Subig Bay, but finding that the batteries sent there a month before had not been installed, he returned to Manila Bay. In projecting the battle on the 3-day voyage from Mirs Bay to Luzon, Dewey must have had the situation at Subig in mind. His actual plan of battle, therefore, when he found the Spaniards under the batteries of Cavité and within range of the guns at the port of Manila must have taken shape while he was steaming into action.

Dewey's report to the Secretary of War is a marvel of conciseness, even for a military man. "The squadron then proceeded to the attack, the flagship *Olympia*, under my personal direction, leading, followed at distance by the *Baltimore*, *Raleigh*, *Petrel*, *Concord*, and *Boston*, in the order named, which formation was maintained throughout the action. The squadron opened fire at 5:41 a. m. While advancing to the attack, two mines were exploded ahead of the flagship, too far to be effective. The squadron maintained a continuous and precise fire, at ranges varying from 5,000 to 2,000 yards, countermarching a line approximately parallel to that of the Spanish Fleet. The enemy's fire was vigorous but generally ineffective.

"At 7:35 I ceased firing and withdrew the squadron for breakfast. At 11:16 a. m. I returned to the attack. By this time the Spanish flagship and almost the entire Spanish fleet were in flames.

At 12:30 p. m. the squadron ceased firing, the batteries being silenced and the ships sunk, burnt, and deserted."

George Dewey obeyed his orders to search out and destroy the Spanish Fleet. You will pardon the boast that he first learned to obey orders at Norwich University. He had not learned at home and that was the reason his father, Dr. Julius Y. Dewey, enrolled him at Norwich. Tradition has it that young George tipped over the family buggy and nearly drowned the horse attempting to ford the Winooski River instead of going around by the bridge. George Dewey further learned obedience at the United States Naval Academy, and still more under Farragut on the Mississippi during the Civil War. His 33 years of conscientious and able service in the Navy were all a further preparation for those few magnificent hours of action in Manila Bay. But it was Norwich which gave him his start. Therefore the school of his youth joins with all citizens of our State in heartfelt thanks to Mr. Arkell for his most gracious deed in presenting to Vermont his canvas which immortalizes the victor of Manila Bay. May it serve the youth of Vermont as the legend of Drake's drum serves to keep alive unconquerable spirit in the sailor lads of England.

"Call him up the deep sea,
Call him up the sound,
Call him when you sail to meet the foe—
"Where the old flag's flying
And the old trade's plying.
They will find him ware and wakin'
As they found him long ago."

James A. Farley and the Presidency

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, May 6 (legislative day of Wednesday, April 24), 1940

ARTICLE BY HAROLD BRAYMAN

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Harold Brayman entitled "Colorful Jim Farley Looms Large in Demo Presidential Picture," published in the Chattanooga (Tenn.) News-Free Press of April 20, 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Chattanooga (Tenn.) News-Free Press of April 20, 1940]

IF NUMBER OF FRIENDS MEANS ANYTHING, COLORFUL JIM FARLEY LOOMS LARGE IN DEMO PRESIDENTIAL PICTURE

(By Harold Brayman)

WASHINGTON, April 20.—Postmaster General James A. Farley has taken it on the chin for other people's mistakes more than any other official in the New Deal administration. In the early Roosevelt years, his uncomplaining willingness to take the blame, whether he deserved it or not, made his name, for a while, the synonym for everything that is wrong in politics, but as the 8 years approach an end he emerges as probably the member of the cabinet who, at least in Washington, is more respected than any other except Cordell Hull.

And as to friends, there is nobody, not even the President, who has so many as Farley. But while the President's friends are offset by many who have an equally fervent hate for him, there are very few people who hate Jim Farley. In spite of 7 years which have brought him a great deal of political grief he is still "Sunny Jim."

Let no one discount the influence of Jim Farley in the Democratic convention, for his friends are where they count—in the political organizations in every city and State in the country. Ninety percent of the delegates are chosen by those political organizations, and when it comes to a hard decision, many years of friendship for and favors from Jim Farley are going to count heavily.

THE MACHINE TYPE

Farley is no pretender. He admits openly that he is the machine type of politician, but he insists that he plays the game squarely, and so far as is known in all his long experience no one has ever caught him playing it any other way. Such a skillful smearer as Huey Long tried hard and continuously to get something on Farley.

Long discovered that Farley had a business in which he was interested, a firm called the General Builders Supply Co., in New York, which sold gypsum and other similar supplies. It was inconceivable to Huey that a politician could have a business and not be using his political influence to get contracts for his company. Huey tried his best to get a congressional investigation of Farley, but the committee which considered his investigating resolution looked into the subject and decided there was nothing to investigate. The five Republicans on the committee were with the Democrats in a vote of confidence in the personal honesty of "Big Jim."

Farley is about the only influence in the last few decades of a political generalissimo who has come through unbesmirched. Much of the respect for Farley is based fundamentally on the fact that he came up through the Tammany route and came clean.

He was born in 1888 at Grassy Point, N. Y., in Rockland County just above New York on the west side of the Hudson. His father kept a saloon and died when Jim was 10. His mother took his father's life insurance and bought a grocery store. Jim worked in the grocery store and went to high school.

After high school Farley went for a year to the Packard Commercial School and got a job as bookeeper. But his interest was in politics. He had an ambition to be State senator, a job which he actually skipped on the way up. His first attempt at public office was when he ran for town clerk in Grassy Point. It was a Republican town, and there were 700 voters. Developing a technique which he has never discarded, young Jim went to see personally, every one of those 700 voters. He was elected.

PICKS RIGHT HORSES

There did not seem to be much future for a Democrat in Rockland County, but Farley tried his best. He never missed a wedding or a funeral. And he went on being town clerk of Grassy Point until he was 30, when he thought he was strong enough in the county to branch out into State politics.

He picked out a New Yorker as a likely comer and started booming him in Rockland County for Governor. The year was 1918. The name of Farley's man was Alfred E. Smith. That fall Smith was nominated and elected. Farley had picked the right horse.

He won for himself a seat in the assembly, the majority of which was Republican, but lost it the next year because he courageously voted for repeal of the State prohibition enforcement act, although he knew that vote would be very unpopular in his district. Repeal was carried by 1 vote. His action was purely one of principle, because Farley in all his life has never taken a drink or smoked.

After this he was given a political job by Smith as port warden of New York. It paid $5,000 and didn't overburden Jim with duties. But eventually Smith found out about its meager duties and abolished it. He found out from Farley.

But Jim's real start in politics came from a job which everybody advised him not to take because it would ruin him. There had been a scandal in the State athletic commission and Smith wanted Farley to go on the commission and clean up the prize-fighting racket. The job paid no salary.

After a short time he decided he would have to become chairman of the commission to get anywhere. He won over Commissioner Muldoon and told Chairman Brower straightforwardly of his plans. One day when Brower was absent from a commission meeting Muldoon and Farley elected Farley chairman.

CLEANED UP BOXING

"It has been decided to rotate the chairmanship," Farley blandly announced. But Farley stayed on until he went to Washington. Whenever the subject of rotation was brought up he would just smile and say, "The rules have been changed. We have decided not to rotate the chairmanship any more."

As chairman of the boxing commission he had an insatiable desire for passes which he showered on his friends and those whom he wished to make his friends until somebody referred to it as a "pasteboard blizzard."

On one occasion when Jim had been notably demanding, Tex Rickard said to him: "Jim, you give me back the 'Annie Oakleys' and I'll give you the fight."

But by 1928 when there was a vacancy in the secretaryship of the Democratic senate committee, Al Smith had Farley appointed, because he not only had cleaned up boxing but knew everybody in the State who was worth knowing. In the meantime he had built up a fairly good building-supply business.

That is the way "Genial Jim" came up eventually to the chairmanship of the State Democratic committee which made him the natural preconvention manager for Roosevelt in 1932.

The technique which Farley worked for F. D. R. was as follows: First, he sent out to a list of 10,000 political leaders all over the country a roster of the New York State Democratic organization, carrying at the top, "James A. Farley, chairman." This was just to identify himself.

PERSUASIVE LETTERS

He followed this a few days later with a tabulation of the vote of New York since 1918, a tabulation showing that Roosevelt carried 42 out of the 57 up-State counties in 1930, whereas Smith had never carried half a dozen of them. These rural, Protestant, Republican areas are not unlike the Middle West in their political leanings. Letter after letter followed this up, each trying a new persuasion. Then along came an Elks' convention, fortunately out in Seattle. Jim went, stopping in 19 States out and back.

On that trip he saw as many as possible of the 10,000 people he had been working on, and many others besides. Each night he

called in a stenographer and dictated the names and nicknames of those he had met, whether they were married, and how many children they had, and their home addresses which he took out of the telephone book.

When he returned to New York he spent a week dictating and signing from 6,000 to 7,000 letters to each of these people and in each one he had some personal reference to convince the recipient that this was no form letter. The only form thing about it was a line in each about "magic in the name of Roosevelt." He called each man by his first name and he signed all the letters, in green ink, "Sincerely, Jim." That was the beginning of a series of 10 or a dozen letters to each of these people, all selling Roosevelt.

Ever since that time he has kept up the letter writing. He receives more mail than a Hollywood movie star, more than any other official except President Roosevelt, and more than the President from people of importance. He writes more letters than anyone else. His average is over 200 a day. He never misses a congratulation, a condolence, an anniversary, or an offer of help to a Democrat who has been elected to office. He does it so extensively that he has been referred to as "Jim, the Penman."

BIG HEART INSIDE

This, coupled with an uncanny ability to remember names and faces, and a big heart inside him, is the secret of all Farley's friends. There is not a city in the United States in which he does not have a friend in politics on whom he can call, and in most the number is from 10 to 100. He is said to know about 10,000 individuals by their first names. If friends in the right places can make a man President, Farley ought to be a strong contender.

Farley's long-distance telephone calls are enormous. There are dozens of them every day. He never misses an opportunity to keep in contact with those he knows. If he takes a trip by automobile he stops at every post office, sometimes to the great discomfiture of a surprised postmaster.

He makes speeches in great profusion, accepts every speaking invitation he possibly can. He does it not because he likes to make speeches but because it pleases somebody to have him accept the invitation and because it affords him the opportunity to meet many new people and shake hands with them. And to every new one whose name he remembers (which is most of them) goes a letter when he gets back to Washington.

He used to feel a little hurt when newspapermen hinted that there was a Charles Michelsonian or Eddie Roddan quality in his speeches, but he doesn't mind any more. Once when he protested that such a story was "hitting below the belt" the correspondent replied: "Jim, your belt is so wide we can't tell where it begins or ends."

One of Farley's fundamental qualities is loyalty. Once he gives his word, he keeps it, at no matter what sacrifice, and once he gives his loyalty it is hard to break, although in recent months it has frequently been placed under heavy strain by President Roosevelt.

TAKES MANY RAPS

All during the early days of the New Deal, Farley took so many raps that he was always a little bruised. It began with patronage. President Roosevelt wanted to hold it up until he got his emergency legislation through Congress. Thousands of people, at the depth of the depression, were clamoring at Farley's door for jobs. For 3 months he had to hold them off against his own will and take the brunt of their inability to understand why he would not move faster.

When the job distribution did begin, then the high-minded new dealers all began pouring out their vitriol on Farley for putting somebody in the Government except Harvard Law School graduates. Farley never winced, but it was the system as much as he which was at fault.

In the 1938 New York mayoralty election, President Roosevelt thought it would be a good idea to run Joe McKee on a Recovery Party ticket against La Guardia, but when it was apparent that McKee would be beaten the White House let it be known that it was taking no part in the election and it was all Jim Farley's doings.

When the air-mail contracts were suddenly canceled in 1934, the White House announced it. How much advance notice Farley had is disputed. A few days later, when it was apparent that public reaction had turned against this because of the loss of life by Army fliers carrying the mail, the White House blandly asserted that President Roosevelt would not interfere with Postmaster General Farley's decision to cancel the contracts. Farley took it without a murmur.

One mistake was his, although others were the beneficiaries. When he saw new commemorative stamps rolling off the presses, the boxing commissioner's love of passes arose in him, and he, knowing that President Roosevelt, Secretary Ickes, and several others were ardent stamp collectors, thought it would be nice to autograph a few sheets and send to them. So he purchased the sheets and started to do this. The perforations made it difficult for him to write. So he told the help to get him a few sheets which had not yet been run through the perforator. He sent these around, not being a philatelist himself and not realizing what he was doing until one of the sheets was sold to a stamp house which announced its existence and that it had insured the sheet for $20,000.

LOYALTY NEVER SHAKEN

With the ingenuity that made the Government over a million and a half dollars, Farley destroyed the value of the sheets he had given to high officials and friends by putting similar ones on sale at the philatelic agency at face value. Stamp collectors bought them to the tune of $1,663,717. In spite of his neat extrication from a wholly innocent mistake on his part, Farley took a lot of blame rather than those who accepted the stamps, knowing what valuable prizes they were getting.

Nevertheless, through all this his loyalty was never shaken. It is other things which have placed it under strain. Farley was deeply hurt when he spent nearly an hour with President Roosevelt the morning the Chief Executive sent the name of Hugo L. Black to the Senate for confirmation as Supreme Court Justice, and was never told of the appointment, but had to read it later off a news ticker.

He is fundamentally an organization man and was hurt again when President Roosevelt embarked upon the purge campaign of 1938. He told the President frankly he would have none of it, and when he finally did accompany Mr. Roosevelt, under great pressure, on the trip through Maryland (and then only because he did not think Senator TYDINGS had played fair with him) he was the most unhappy man on the trip.

But perhaps he was most deeply hurt by events in the Presidential campaign. Jim Farley would frankly like to be on the ticket in 1940. He thinks he has earned it. He feels it keenly that the Corcorans and the Jacksons are closer to the President's confidence than he.

CATHOLIC RELIGION

But the greatest distress of all came to him when Ernest Lindley's column, quoting the President as having told a southern Congressman that Farley was disqualified by his Catholic religion, went unrepudiated by the White House for almost 3 weeks. At the end of that time the damage had been done and the denial was not effective.

It was soon after that that Farley, who has never been for a third term, if it could be headed off, embarked on a course of parallel action to that of Vice President Garner.

He announced that his name would be presented to the convention which rather definitely committed him against a third term up to the time of the convention. It did not commit him, if Roosevelt is nevertheless nominated, to withdraw support, which few people think he will do.

Retaliation and reprisal are not in Jim Farley's soul. After the 1936 election returns were in he made his famous "no reprisal" comment. Many keen observers believe that if President Roosevelt had followed the Farley hunch he would have had an easier time through his second term.

If people criticize him, he usually answers softly, if at all. After the first Jackson Day dinner, Norman Thomas assailed the whole procedure.

"It seems incredible," said the outraged Socialist, "that 1,300 people would pay $100 for a $2.50 dinner to listen to Jim Farley and watch him eat."

DEPARTMENT PAYS OFF

"Anyhow," Jim answered, "he didn't say watch Jim Farley and listen to him eat."

Looking back over his 7 years as Postmaster General, chairman of the Democratic National Committee, and chairman of the New York State Democratic Committee, all of which places he has held tenaciously, Farley takes justifiable pride in his handling of the Post Office Department.

This chronic loser in Government activities has been put in the black, perhaps permanently, and yet the employees regard Farley as a good Postmaster General. It's hard to find a mail carrier who doesn't think well of Jim Farley, or one who doesn't believe the Department is better run now than it used to be.

All in all, Washington likes Jim Farley, too, and respects him for the qualities of character he has shown. He never fails to observe his code.

Walter-Logan Bill

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, May 6 (legislative day of Wednesday, April 24), 1940

ARTICLE BY ERNEST LINDLEY

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mr. Ernest Lindley, appearing in the Washington Post of May 3, 1940, entitled "The Lesson of New York."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of May 3, 1940]

THE LESSON OF NEW YORK

(By Ernest Lindley)

ON WALTER-LOGAN BILL

Two years ago there was an interesting sequence of events in New York which may be illuminating to both the advocates and the opponents of the Walter-Logan bill.

The New York Constitutional Convention—controlled by the Republicans—adopted an amendment providing that decisions of State and municipal administrative agencies should be subjected to review in the State courts, not only as to law, but as to facts. The argument for it, like that for the Walter-Logan bill in the House of Representatives, was largely hue and cry about checking rampant bureaucracy and guaranteeing a government of laws, not of men.

The New York amendment was much milder than the Walter-Logan bill. It made, or seemed to make, however, one serious breach in the customary relationship between administrative agencies and the courts. This was in the "substantial evidence" rule. By this practice the reviewing court goes into the facts only far enough to satisfy itself that the administrative agency had "substantial evidence" for its order or decision. It does not attempt to weigh each and every fact and try to reach its own appraisal. It recognizes that the experts in the administrative agencies are better equipped to do this.

The "substantial evidence" rule is supposed to protect the citizen against arbitrary action while enabling the facts to be ascertained in the most efficient way. Whether it always does is another question. The point is that the New York constitutional amendment seemed to breach this rule. The Walter-Logan bill has a somewhat similar provision.

The New York amendment also subjected to judicial review a number of administrative decisions which are not now reviewable. Like the Walter-Logan bill, however, it exempted a number of agencies for no reason except that they were able to bring the political pressure to obtain exemptions.

Unlike the Walter-Logan bill, the New York amendment did not provide for judicial review of mere rules and regulations issued by administrative agencies. Nor did it contain other hamstringing features to be found in the Walter-Logan bill.

Mild as it was, this is what happened to the New York amendment:

Both candidates for Governor opposed it. Thomas E. Dewey said "It would permit a judge to interfere with and delay the effective administration of the laws of the State."

Both candidates for United States Senator opposed it. Edward Corsi, the Republican candidate, called it "vicious."

Frederick Crane, a Republican, at that time chief judge of the New York Court of Appeals—for years the most distinguished judicial body in the United States next to the Supreme Court—opposed it. Other eminent jurists opposed it.

Mayor LaGuardia said: "It is the most outrageous, disgraceful thing ever done. This is a real threat. In Germany they do it with a brown shirt, but here they are doing it with a black robe. It is a vicious threat to orderly administrative government."

The Association of the Bar of the City of New York opposed it. (It has also condemned the Walter-Logan bill.) Among the leaders of the New York bar who opposed the constitutional amendment were John Foster Dulles, of Sullivan & Cromwell; Thomas Thacher, former Federal judge and Solicitor General of the United States; Arthur A. Ballantine, former Under Secretary of the Treasury; and many other Republicans—not to mention Democrats.

The New York Times attacked the amendment on the ground that the courts were in danger of superseding administrative agencies, a role for which they were not fitted.

The State Federation of Labor condemned it as "utterly and completely vicious."

When this amendment was explained to the people of the State, the mild case of hysteria whipped up at the constitutional convention was dissipated. At the polls, in November, the judiciary amendment was defeated more overwhelmingly than any other proposed amendment to the Constitution. The vote was 1,362,424 to 574,299. (There were other parts to this amendment, but the controversy centered on the judicial-review section.)

If the New York amendment was a vicious menace to orderly government, the Walter-Logan bill is several times worse. It was put through the House by hue and cry with very little regard for its practical effects.

There was a sequel to the New York controversy. It focused attention on the need for changes in administrative procedure to assure the citizen protection against arbitrary action. This need was recognized by many opponents of the amendment, just as it is by many critics of the Walter-Logan bill. Governor Lehman appointed a commissioner to investigate the problem. This investigation parallels that now being made for the Federal Government by an Attorney General's committee, under the chairmanship of Dean G. Acheson, a distinguished leader of the bar.

The Acheson committee will submit a full report in the fall. Whether or not it agrees with all the recommendations, Congress will then have the factual basis for legislation.

If the Senate does not fall prey to hysteria, the Walter-Logan bill will be beaten or pigeonholed. Judging from the New York experience, the overwhelming majority of the Members of Congress who feel that reforms in this field are necessary should have no difficulty in explaining to their constituents why it is wise to wait until the problem can be dealt with intelligently and carefully.

Silver Purchase Program

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 6 (legislative day of Wednesday, April 24), 1940

ARTICLE FROM THE CHRISTIAN SCIENCE MONITOR

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article on the silver-purchase program which has a bearing on the bill now under consideration. The article, by Mr. H. B. Elliston, is taken from the Christian Science Monitor of May 3, 1940.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, May 3, 1940]

THIS CHANGING WORLD—SILVER BUYING—TOWNSEND BILL UP BEFORE THE SENATE; WOULD STOP THE PILING UP OF THE WHITE METAL FROM FOREIGN SOURCES—EFFECTS IN THE FAR EAST

(By H. B. Elliston)

For several years the senior Senator from Delaware has been fighting a battle in behalf of common sense. JOHN TOWNSEND is his name and his "Mein Kampf" is the repeal of silver buying from foreign countries, whereby Uncle Sam has been piling up a huge hoard of the white metal for use unknown. The Senate is now considering his repealer.

What has turned attention to the problem of late is that silver buying confers a gratuitous subsidy on Japan. This has added insult to injury for the Chinese, not to mention the susceptibilities of antiaggression Americans.

The injury to China was caused by the initial effects of America's silver purchase act. The buying became law in 1934. It was authorized after silver Senators from Senator Borah down had contended that American buying of silver would add immensely to the purchasing power of the Chinese. The implication was that this added Oriental purchasing power—"half the purchasing power of the world"—would mean a fill-up in the demand for American goods. This is how the argument was worded: "Silver will go up in price as the result of the American demand, and then the silver stores of China, the only great country left which uses silver as money, will feel a corresponding lift in value." What actually happened, however, was just the reverse. China's purchasing power, instead of being increased, was crippled severely, as was pointed out at the time by the opponents of the Silver Purchase Act.

The explanation of this reversal of silverite prognostications is easily understandable. China's use of silver as money meant that whenever the country had balances due from the rest of the world it accepted them in silver, just as gold-standard countries like the United States accept balances in gold. Now China for scores of years back has had an incoming balance in its international accounts. China, in consequence, was a creditor nation. How much metal the Chinese had absorbed down the years since the New England clipper ships sailed for Canton loaded with Spanish "pieces of eight" I don't know. No one does; but the hoard must have been immense.

The American silver-buying program forced up the price of silver from 45 cents an ounce to 80 cents. Logically, therefore, Chinese silver stocks went up correspondingly in value. But the American buying program at the same time forced up the value in China's silver money of Chinese goods and of course of foreign money. As for the goods, the lift in price made it that much more difficult to sell China's goods abroad. As to foreign money, Chinese immigrants abroad had to offer more money in the countries where they lived with which to buy the same amount of Chinese money. What was the result? Obviously that fewer Chinese goods were sold abroad and less immigrant money was received; so that China changed from being a creditor to being a debtor. And that meant that China no longer received silver in payment for balances but had to send out silver in meeting deficits.

For what happened then we might go to a Chinese authority, K. P. Chen, best-known Shanghai banker, who several years ago described China's monetary plight in World Trade, organ of the International Chamber of Commerce. He said:

"Now on account of this purchasing plan, not only was monetary stabilization denied China, but the nightmare of civilization, the depression, came to fall upon China as its prey. The rise of the silver price brought in its wake, as far as China was concerned, falling prices, shrinkage of currency, destruction of industries and business, a greater deficit in the Government's budget, and increasing chaos in society."

Consequently, the Chinese were persuaded to take remedial action. In Mr. Chen's words, China was "compelled to recognize the fact that in order to stabilize its currency and to avoid national bankruptcy, it must go off the silver standard." The country, in other words, simply stopped using silver as international money and went on a nonmetallic standard in 1935.

This was the injury to China caused by America's Silver Purchase Act. The insult came when Japan invaded China in 1937. Japan then fell heir to most of China's silver stocks. I mean, of course, Japan got the kind of dubious inheritance that comes from mere possession. Even the reserves held by the Chungking Government, according to a recent issue of the London Financial News, have been "largely exhausted." Accordingly the Japanese have been collecting the metal and exporting it to London for sale to the world's great buyer, Uncle Sam. In this way the Japanese have been enabled to obtain the dollars wherewith to buy a lot of their war materials from America.

How much importance the Japanese attach to this silver traffic is attested by the Japanese-British negotiations. The Japanese have demanded that the metal held in the Chinese banks in Britain's Tientsin concession shall be handed over. The dispute has hitherto seemed to be British-Japanese. But there would be no dispute if Uncle Sam weren't standing in the background as the willing buyer.

Since 1934, it has been argued that the Silver Purchase Act is one of the most foolish in American legislation. Such a description now finds fairly general recognition. One may lament that the recognition has been delayed until America has bought itself a white elephant of costly dimensions. But it's better late than never to wake up to a foolish policy. And the fact that, besides adding to the stature of a white elephant, the silver buying is helping to subsidize war-making Japan should help the movement headed by Senator TOWNSEND, of Delaware, to purge the statute books of it.

America and the European War

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 6 (legislative day of Wednesday, April 24), 1940

EDITORIALS FROM THE WANDERER AND THE LUTHERAN COMPANION

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the RECORD two excellent editorials, one from the Wanderer of the issue of May 2, and the other from the Lutheran Companion, of the issue of April 25.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From The Wanderer of May 2, 1940]

CARDINAL O'CONNELL URGES AMERICA TO STAY OUT OF WAR

An unequivocal plea for American neutrality was made by Cardinal O'Connell, archbishop of Boston, who declared before the diocesan Congress of the League for Catholic Women that "we want no part in this muddle of a row in Europe."

Warning against paid propagandists who are talking to audiences in this country trying to justify "the horrors of the madhouse" on the other side of the ocean, Cardinal O'Connell said:

"We have the greatest sympathy for the people of all lands. We are Catholic, and as Catholics we belong to the children of the whole world. We are sorry for any horror that comes to any race or flag, but we cannot make the same mistake we made in the other war. To go around the world trying to right every wrong, that is too preposterous. Just because we are sorry we don't intend to make the same mistake again—if we can help it.

"We must keep our minds cool. These propagandists resort to falsehoods and lies to raise our emotions, our sympathies. Do not pay any attention. Our Government should see to it that we are kept at peace. It is a terrible situation, but it is not making it better to do something over there and perhaps do the wrong thing."

[From the Lutheran Companion of April 25, 1940]

CHURCH AND PEOPLE LOSERS IN WARFARE

Who will win the war in Europe? That question is being heard today on every side. The whole world is watching with mingled emotions the terrible drama which is daily unfolding across the Atlantic. History is in the making and mankind is becoming conscious of the fact that stupendous issues for the future are hanging in the balance. The course of empires is being determined by the grim struggle which is growing more deadly every day.

Who will win the war? We do not have the gift of prophecy and would not even venture an opinion. But we are sure of one thing—it will not be the people.

Charles Benedict, writing in the Magazine of Wall Street, characterizes the present war as "a struggle for power—political, industrial, and financial—and not for democracy," and a writer whose views are accepted by such a publication ought to know what he is talking about. Moreover, he is quite definite in his conclusions that, whatever happens to anyone else, the great financial barons of Europe are assiduously protecting their own interests. Note, for instance, this significant statement:

"Combined English, German, and French control of industries still exists. Not a few have questioned the failure of the Allies to bombard the Krupp works, within striking distance of the Maginot line—and the amazing situation wherein necessary war materials and other goods were shipped to Germany via Belgium is another instance."

It might be added here that perhaps this is another reason why the belligerents have chosen to make neutral soil their battleground. There is, of course, a distinct advantage in bringing the actual fighting zone as far away from the scene of vital German, British, and French investments as possible, particularly the industries of the "Merchants of Death."

Mr. Benedict then concludes:

"Power and wealth will change hands among the big fellows in Europe. The little men who shed their blood will lose everywhere."

But it is not merely the "little men" who will lose. The church and Christian civilization will also lose. We know already what the church lost in the first World War, and it has been losing ever since.

A continued struggle between the great nations of the world will undoubtedly provide fertile soil for every movement antagonistic to Christianity. Atheistic communism and the spirit of absolute nationalism are threatening to undermine the church everywhere. Because of the widespread poverty and social distress that will inevitably follow in the wake of the present disastrous conflict, anything can happen. One thing is certain—the present situation bodes no good for the Christian church. The enemies of Christianity will be only too ready, as usual, to place the blame at the door of the church. We may expect at any time to hear the hue and cry that was raised at the close of the first World War: "Christianity has failed!"

The recent tragic developments in northern Europe have aroused bitter resentment throughout the world. At the beginning of the conflict in Europe it was not difficult to find much to blame on both sides. Thinking people throughout the world could see much justice in Germany's demands for a revision of the Treaty of Versailles. By the ruthless invasion of Denmark and Norway, however, Chancellor Hitler has forfeited all claim to the sympathy of neutral nations. He has revealed himself as an unscrupulous seeker of power who does not hesitate to trample upon the rights of inoffensive and peace-loving people when such a course serves his purpose.

It is conceivable, therefore, that the rising tide of indignation over Hitler's methods may tempt the Church once more to compromise in its opposition to war. The time may not be far distant when ministers of the gospel in this country will again be urged to "present arms" and to become preachers of hate.

That is why it is so urgent just now that every Christian should proclaim unceasingly to all men that the love of Christ is the only power that can bring peace and unity to this sin-cursed world. War will never solve the world's problems; it can only multiply the woes and miseries of mankind, and especially of the common man who must always bear the burdens and sorrows of war. We would shudder if we could see clearly the financial, industrial, and social conditions in Europe after this conflict. And as for the fate of the Church, only God knows what the future may bring.

Therefore the duty of the Church in this hour of crisis should be clear to all who know the Spirit of Christ. Christianity is a religion of peace. Let the Christian Church be faithful to the message it has received from its divine Head—the Prince of Peace.

Sale of Planes to Allies

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, May 6 (legislative day of Wednesday, April 24), 1940

ARTICLE FROM THE WASHINGTON TIMES-HERALD

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an

article which I clipped recently from the columns of the Washington Times-Herald, entitled "Arnold Defends Sale of Latest Planes to Allies. Says It Will Result in United States Having Best Aircraft of Any Army."

General Arnold very ably defends our recent decision to permit the Allies to buy our planes, for the very plausible reason that it will help the aircraft industry in this country. There being no objection, the article was ordered to be printed in the RECORD as follows:

ARNOLD DEFENDS SALE OF LATEST PLANES TO ALLIES—SAYS IT WILL RESULT IN UNITED STATES HAVING BEST AIRCRAFT OF ANY ARMY

INDIANAPOLIS, April 28.—Disclaiming any desire on the part of the United States to profit by the misfortunes of the warring empires in Europe, Maj. Gen. Henry H. Arnold, chief of the Army Air Corps, tonight defended the policy of selling the latest and fastest types of war planes to England and France.

General Arnold spoke at a dinner given by Raymond J. Kelly, of Detroit, national commander of the American Legion, in celebration of the Legion's eighth annual aerial round-up of memberships.

FULL-SCALE LABORATORY

"We would be unwise," said General Arnold, "if we failed to realize that the war in Europe is a full-scale laboratory in which our fighting planes can be service tested under war conditions at no cost to us.

"It is a fair exchange. Our foreign customers get the planes they require when they need them, and our aviation industry is built up with foreign capital to a proper size and our air force is equipped with combat planes incorporating the latest features necessary to make them efficient fighting machines.

"I can say without the slightest reservation or hesitancy that our new release policy on military aircraft has not and will not delay the revitalization of our own air arm.

UNITED STATES TO SURPASS ALL

"It will promote the industry, and at the end of the 2-year augmentation program for the Army Air Corps will provide planes superior to those found in the air forces abroad. Our air force, though not so large as those of the warring nations, will, plane for plane, be superior to any of them.

"Military observers are now generally agreed that air transportation and air operations played an important part and may have been the controlling influence in the conquest of Ethiopia, the overthrow of the Republic of Spain, the conquest of Austria and Czechoslovakia, in the partition of Poland, in the rape of Finland, and, only this month, in the invasion and occupation of Denmark and Norway.

"In all its tests to date, air power has demonstrated completely that warfare has truly moved into the third dimension; that no longer can any army or any navy operate successfully without the cooperation of air forces, nor can sea and land battles be won without the protecting shadow of an effective air force."

THREE HUNDRED MILLION DOLLARS SPENT

Virtually all of the $300,000,000 appropriated by Congress for expansion of the Air Corps has been spent or obligated, General Arnold said. By June 30, 1941, he added, the Air Corps will have 3,000 airplanes of the latest type, 4,500 officers, and 45,000 men. From 200 to 225 trained pilots are being trained every 6 weeks.

Federal Bureau of Investigation

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 6 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM THE WASHINGTON STAR

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from today's Washington Star under the heading "F. B. I. Exonerated."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Star, May 6, 1940]

F. B. I. EXONERATED

Attorney General Jackson's report absolving the Federal Bureau of Investigation of misconduct in the much-publicized arrests of 11 persons indicted in Detroit for Spanish Loyalist recruiting activities is thoroughgoing and convincing. The report, submitted to Senator NORRIS, of Nebraska, who had been disturbed by vociferous charges of "third degree" tactics made by self-styled defenders of civil liberty, should dispel all doubts from the mind of the Senator as to the way the F. B. I. handled the disputed cases. As Senator NORRIS had said that he would be content to have the investigation made by the civil liberties unit of the Department of Justice, rather than by a congressional committee, it may be assumed that the findings of Henry A. Schweinhaut, head of the unit, will close this unfortunate matter—from an official standpoint.

But it may be assumed safely, at the same time, that certain communistic groups which have shouted loudest about the alleged brutality of J. Edgar Hoover's G-men will not be quieted by facts. It is too much to expect that these radical agitators will drop their apparently planned campaign to smear an organization which is making it increasingly difficult for foreign agents, including those supported by Moscow, to violate American neutrality, espionage, sabotage, and sedition laws. These elements would seek to make a mockery of civil liberties by using them to cloak subversive and criminal activities of "Trojan horse" character. It is but natural that these agitators should resent the inquisitiveness of Mr. Hoover's G-men. That the effort to undermine public confidence in the F. B. I. will be continued along other fronts is taken for granted.

The general public will not be deceived by this smoke screen of baseless allegations and abuse which Communists and bundsmen alike are endeavoring to throw up between themselves and the F. B. I. The record of the G-men is the best answer to such attacks. As Mr. Jackson pointed out in his letter to Senator NORRIS, not one F. B. I. case has been reversed by an appellate court because of "third degree" or other improper treatment of prisoners. The Attorney General is convinced that the F. B. I. is a stanch protector of civil rights. As such, the Bureau should be given every encouragement in its important work. And, incidentally, it would seem wholly unnecessary to create any superagency, such as the proposed Neutrality Laws Unit, to supervise a job that is being done fairly and fearlessly under the existing set-up.

The Cost of War in General

EXTENSION OF REMARKS

OF

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, May 6 (legislative day of Wednesday, April 24), 1940

ARTICLE BY CARNEGIE PEACE LIBRARY

Mr. BONE. Mr. President, within the past few days the Carnegie Peace Library, of Washington, D. C., has prepared for circulation one of the finest articles I have ever seen on The Cost of War in General. It is so valuable a contribution to the sum total of knowledge upon this subject that I think the people of the country ought to have it so far as it is possible to disseminate this knowledge to them through the CONGRESSIONAL RECORD. I therefore ask unanimous consent that the article be published in the Appendix of the RECORD. I am not certain that it may not in a very small degree transgress the rule about the length of articles, though I am not certain of that; but I sincerely hope there will be no objection to it on that account. It is certainly worth presenting to the American people.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE COST OF WAR IN GENERAL

COSTS HARD TO ESTIMATE

It is difficult to appraise the real cost of war. A recital of the figures of war debts only serves to conceal the truth. On the purely material side, the best we can do is to ascertain the extent of the loss of new capital and the amount of depreciation of the existing industrial equipment of the national resources of a nation. On the human side, we can determine the number of casualties, but it is impossible to measure the different values to the community of those who are killed. A genius lost involves an immeasurable cost viewed in national terms. * * *

THE PEACETIME BURDEN OF WAR

The costs of war are always with us. In peacetime the nations are preparing for future wars and paying for past wars. In order to compare the figures in various countries, the fiscal year 1930 is taken. In that year the net expenditures of the United States

Government totaled $3,976,141,651.26. Of this total, expenditures due to war, past or future, were:

Army and Navy (military functions only)	$719,089,000
United States Veterans' Bureau	597,375,000
Public debt:	
Principal	623,894,100
Interest	656,000,000
Total war expenditure	2,596,358,100

It appears from the above figures that in the fiscal year ending June 30, 1930, 65.2 percent of the total expenditures of the Government of the United States went to pay for war, past or prospective. In the same fiscal year the State Department of the United States received $14,794,945.68 the cost of the normal transaction of our business with other nations was one one-hundred-seventy-fifth of the cost of past and future wars. Preparing for future wars alone cost this country, in 1930, more than 48 times as much as the peaceful, normal conduct of international relations through the State Department. In 1930 the total expenditure of the League of Nations, including the World Court, the International Labor Organization, an installment on the new building, and all of the other agencies and activities of the League, amounted to 25,338,935 gold francs, or $4,890,414.46.

"Estimates of the present total annual world expenditure upon armaments range between 4 and 5 billion dollars * * *." Taking the lowest estimate, $4,000,000,000, a single investment of 5 percent, or one-twentieth of the sum spent each year in preparing for war, would provide an adequate permanent endowment for the League of Nations on a much larger scale than at present. (From The Costs of War, by D. Elton Trueblood, Philadelphia 1934.)

WHAT HAVE OUR WARS COST?

No reliable estimates have been made of the costs of wars prior to the Civil War. There are, however, official estimates of the direct costs of the Civil, Spanish-American, and the World Wars. But to the direct costs of war must be added continuing costs, interest on war debts, and payments to war veterans. Indeed these continuing and indirect costs in the long run are far greater than the costs of the hostilities themselves.

CIVIL WAR

The direct cost of conducting the Civil War was $3,328,000,000. The interest on the Civil War debt, which ran for a period of about 26 years, was $1,572,000,000. But by far the greatest item of cost resulting from the Civil War is the payment of over $8,000,000,000 in pensions to Civil War veterans and their dependents from 1865 to 1939. In other words, the Civil War pensions have cost nearly twice as much as the war itself, plus interest on the Civil War debt.

SPANISH-AMERICAN WAR

The Spanish-American War is linked with other military expeditions, and engagements, the Philippine, Moro, and Boxer expeditions. The War Department estimates the cost of these military activities at $592,000,000. The cost was met by about $382,000,000 in additional taxes and by $200,000,000 in borrowed funds. The debt resulting from the Spanish-American War had all been retired by June 30, 1904. The interest on the Spanish-American War debt was about $47,000,000. Up to June 30, 1939, $1,405,000,000 had been paid out in Spanish-American War pensions. Pension payments are already twice the cost of hostilities.

WORLD WAR COSTS

To date our part in the World War has already cost us about $57,000,000,000. * * * The direct costs of the World War to June 30, 1921, were $24,135,000,000. The loans to the Allies have cost us (to June 30, 1939) $6,860,000,000. We loaned the Allies $9,610,000,000 of which only $2,750,000,000 had been repaid to June 30, 1939. * * * The interest on the war debt (to June 30, 1939) is $14,383,000,000. * * * World War veterans and their dependents have received $11,736,000,000 in pensions and other benefits from June 30, 1918, to June 30, 1939. * * *

War costs have gone up considerably since the last World War. In 1916 the most expensive battleship cost about $15,000,000, whereas a modern battleship costs about $75,000,000—five times as much. Airplanes and cargo steamers show a similar increase in cost. Armies are more heavily mechanized than in the last war and this adds greatly to war costs. It is not unlikely that if we were drawn into another war, similar to the last World War, the cost would be doubled. (From Can We Afford Another War? by John C. Gebhart, 1939, pp. 1–2.)

Let us suppose that an intelligent inhabitant of the planet Mars should look across space to see what is happening on this Mother Earth. What would his impressions be? He would see a world in which expenditure for military purposes is now three times as great as it was just previous to the outbreak of the World War in 1914. He would see some 8,500,000 men under arms, and he would see more than $7,000,000,000 being spent in 1937 on armaments, if the old gold basis be accepted, or some $12,000,000,000 if the new devaluated gold basis be used. These colossal figures are to be compared with $5,800,000,000 spent in 1936, with $4,300,000,000 spent in 1932, when the last futile conference on disarmament was held, and $2,500,000,000 spent in 1913. These, we are assured, are minimum figures based on peace-footing expenditures—if that cynical adjective can mean anything—and are but a fraction of what actual war expenditures would involve. This observer from Mars would also be surprised to see that there is a wholly new kind of international war which is most destructive and alarming. Its battles are fought on the field of economics and the social order, and its disasters, while not immediately accompanied by the shedding of blood, are just as fatal to prosperity and to peace as if blood were shed. (From introduction to the annual report of Nicholas Murray Butler, director of the division of intercourse and education, for the year 1938. In Carnegie Endowment for International Peace. Yearbook, 1938, p. 43.)

THE EXTENT OF WORLD REARMAMENT

The average annual total expenditure by the seven great powers, Great Britain, Germany, France, United States of America, Italy, Union of Soviet Socialist Republics, and Japan, during 1908–13 was £376,000,000. In 1929 the total expenditure by the same powers was £595,000,000. During 1939 Great Britain will spend nearly £650,000,000. Germany spent in 1929 less than £34,000,000. During the past 6 years Germany's budget has not been made public, but in his speech to the Reichstag on September 1 of this year Hitler said that Germany had spent over ninety milliard reichsmarks during the past 6 years. The expenditures in the year 1933–34 and in 1938–39 were as follows:

	1933–34	1938–39
Great Britain	£93,500,000	£326,600,000.
Germany	671,000,000 reichmarks	Figure not given.
France	12,324,300,000 francs	11,064,300,000 francs.
United States of America	$544,400,000	$1,009,000,000.
Italy	4,823,800,000 lire	6,363,400,000 lire.
Union of Soviet Socialist Republics.	1,547,300,000 rubles	26,044,000,000 rubles.
Japan	872,600,000 yen	1,246,800,000 yen.

Thus every nation increased its annual expenditure on armaments except France. The Union of Soviet Socialist Republics increased eleven times. The total expenditures by all nations in 1913 was approximately £450,000,000. Today it is no less than £3,500,000,000. (From Some Economic and Social Effects of Rearmament, by Col. David Carnegie. In International Affairs (London) November–December 1939, vol. 18, pp. 784–785.)

Once upon a time a war could be fought for comparatively little money. The American Revolutionary War of 1775–83 is estimated to have cost less than $50,000,000; the United States Civil War, a sanguinary 4-year struggle, cost the Federal Government $6,000,000,000. The Franco-German War of 1870 involved an expenditure of $2,000,000,000, including the indemnity that the victorious Germans imposed upon France. But the days of inexpensive war making are gone forever. At the height of the World War, the combatant nations were spending $113,000,000 a day in cash—to make no mention of the destruction of property values and human life. It cost $25,000 to take a life in the World War, and a total of 9,000,000 lives were taken. By the time the nations of the world settle the last bill incurred in the Great War, they will have paid—if they ever do pay—the fantastic and dumbfounding sum of $500,000,000,000. (From The Ledger of Mars by Henry M. Robinson. In The Rotarian (Chicago) November 1936, vol. 49, No. 5, p. 7.)

EDITORIAL NOTE: That a realization of the cost of war acts as a powerful deterrent to those contemplating hostilities cannot well be doubted. The entire question of the cost of war—economic costs, direct and indirect, the human suffering involved, and the general setback to civilization—could, however, hardly be discussed adequately within the confines of a single article. * * * A rather brief examination of the literature revealed more than 300 volumes bearing on this general subject of war costs. (From footnote to The Price of War, by Frank G. Dickinson. In the Annals of the American Academy of Political and Social Science, September 1934, p. 166.)

In the annals of the office of The Assistant Secretary of War the fiscal year 1939 stands out as the most active in its peacetime history. Procurement of military supplies made necessary by the argumentation and acceleration of national defense, as urged by the President and as authorized by the Congress, reached a new peak. The War Department spent more money for equipment—approximately $450,000,000—than the total money expended for the prosecution of the War with Spain. That the future may hold prospects of even greater activity in this office may best be illustrated by the fact that funds appropriated for the ensuing fiscal year, 1940, permit expenditures for fighting equipment alone of the sum of $373,267,832. (From Report of the Secretary of War to the President, 1939. Washington, 1939, p. 15.)

THE COST OF THE WORLD WAR, 1914–18

Conclusion: In conclusion, an attempt may be made to bring together the scattered data of this study into one final comprehensive picture which shall show the total cost of the war. The direct costs were estimated at $186,000,000,000. The indirect costs are now seen to have amounted to almost as much more. The com-

bined direct and indirect costs are set forth by the principal items in the following table:

Direct and indirect costs of the Great World War

Total direct costs, net		$186,233,637,097
Indirect costs:		
Capitalized value of human life:		
Soldiers	$33,551,276,280	
Civilians	33,551,276,280	
Property losses:		
On land	29,960,000,000	
Shipping and cargo	6,800,000,000	
Loss of production	45,000,000,000	
War relief	1,000,000,000	
Loss to neutrals	1,750,000,000	
Total indirect costs		151,612,552,560
Grand total		337,846,189,657

The figures presented in this summary are both incomprehensible and appalling, yet even these do not take into account the effect of the war on life, human vitality, economic well-being, ethics, morality, or other phases of human relationships and activities which have been disorganized and injured. It is evident from the present disturbances in Europe that the real costs of the war cannot be measured by the direct money outlays of the belligerents during the 5 years of its duration, but that the very break-down of modern economic society might be the price exacted. (From The Direct and Indirect Cost of the Great World War, by Ernest L. Bogart, New York, 1920, p. 299.)

From our entry into the war to the end of the fiscal year 1921 this country spent, through Federal, State, and local governments and private agencies, very nearly $40,000,000,000 on war demands of one sort or another, of which possibly thirty-five and one-half billions was on account of the World War, and the rest mainly pensions to veterans of former wars and the normal peacetime outlays of military and naval establishments. Of the thirty-five and one-half billions some thirty-two billions represented outlays of goods and services by the national economy as a whole, and not mere fiscal transfers such as payment of interest on the public debt to our own citizens. These wartime dollars may be thought of as roughly equivalent in buying power to post-war dollars of 1922–28. About half of this effort was concentrated in the calendar year 1918, constituting more than one-fourth of our national income in that year. (From The Costs of the World War to the American People, by John M. Clark, New Haven, 1931, pp. 281–282.)

STATISTICAL SUMMARY

1. The war cost the United States considerably more than $1,000,000 an hour for over 2 years.

2. The direct cost was about $22,000,000,000, or nearly enough to pay the entire cost of running the United States Government from 1791 up to the outbreak of the European war.

3. Our expenditures in this war were sufficient to have carried on the Revolutionary War continuously for more than 1,000 years at the rate of expenditure which that war actually involved.

4. In addition to this huge expenditure nearly $10,000,000,000 have been loaned by the United States to the Allies.

5. The Army expenditures have been over $14,000,000,000, or nearly two-thirds of our total war costs.

6. During the first 3 months our war expenditures were at the rate of $2,000,000 per day. During the next year they averaged more than $22,000,000 a day. For the final 10 months of the period, from April 1917 to April 1919, the daily average was over $44,000,000.

7. Although the Army expenditures are less than two-thirds of our total war costs, they are nearly equal to the value of all the gold produced in the whole world from the discovery of America up to the outbreak of the European war.

8. The pay of the Army during the war cost more than the combined salaries of all the public-school principals and teachers in the United States for the 5 years from 1912 to 1916.

9. The total war costs of all nations were about $186,000,000,000, of which the Allies and the United States spent two-thirds and the enemy one-third.

10. The three nations spending the greatest amounts were Germany, Great Britain, and France, in that order. After them come the United States and Austria-Hungary, with substantially equal expenditures.

11. The United States spent about one-eighth of the entire cost of the war, and something less than one-fifth of the expenditures of the allied side. (From The War With Germany, a Statistical Summary, by Leonard P. Ayres, chief of the Statistics Branch of the General Staff. Washington, 1919. pp. 135–136.)

COST OF THE WAR

It is difficult to estimate the cost of the war, even apart from interest on debt, pensions, and other permanent charges which war always leaves in its wake. Exclusive of debt operations and postal disbursements from postal revenues, the total expenditures of the Government, from April 6, 1917, to October 31, 1919, by which time the overseas troops had been returned, was over $35,413,000,000; of this total, $11,280,000,000, or nearly 32 percent, was met by taxes and other minor ordinary receipts. The expenditures, given above, include the amounts loaned to foreign countries. If this be subtracted, the disbursements for the purposes of the American Government, during the war period under consideration, was $26,007,000,000; and on that basis the proportion met out of tax receipts and revenues other than borrowed money was over 43 percent. (From Financial History of the United States, by Davis R. Dewey. 12th ed., New York, 1939. pp. 510–511.)

THE PRICE OF WAR

The World War, which lasted 1,565 days, was the bloodiest and costliest war that had ever been fought. During the conflict about 65,000,000 men were mobilized and forced to participate, for a longer or shorter time, in the economically unproductive activity of organized destruction. Of these men, about 9,000,000—1 in 7—died in action or of wounds. Approximately 22,000,000—1 in 3—were wounded, and of these 7,000,000 were permanently disabled. A number of the wounded died within a few years after the war as a consequence of their disabilities, while many shell-shocked or gassed veterans continued to lead tortured existences. More than 5,000,000 men were reported "missing" after the war. More than twice as many men were killed in battle during the World War as in all the major wars from 1790 to 1913 together, including the Napoleonic wars, the Crimean War, the Danish War of 1864, the Austro-Prussian War, the American War between the States, the Franco-Prussian War, the Boer War, the Russo-Japanese War, and the Balkan wars. Two-thirds of the men mobilized and two-thirds of those killed were on the Allied side. (From The World Since 1914, by Walter C. Langsam. New York, 1936, p. 87.)

PEACETIME COSTS FAR EXCEED ACTUAL WORLD WAR EXPENSES

Sixty billion dollars for one war, and still the total rises. Those dollars represent the cumulative cost to the American people of their fight against Germany and her allies. * * * Actual fighting occupied 1½ years after April 6, 1917. A technical state of war continued for another 2½ years. Sixteen years of peace followed. Yet the cost in dollars goes on. Calvin Coolidge estimate that before the balance finally is struck the World War costs to the United States will reach $100,000,000,000. Scarcely $20,000,000,000 have been used to battle more than 7 years of depression. In none of these war calculations is there a reckoning of the human cost—the most important calculation of all.

THE DIRECT HUMAN COST

* * * Fifty thousand four hundred and seventy-five American soldiers and sailors killed in action or dead of wounds. Another 234,300 were wounded. This was the direct human cost. * * *

THE PEACETIME COST

First, there were the postwar loans to the Allies, amounting to about $12,000,000,000. Second, there was the interest to be paid on the billions of debt. This interest represents the wages on the loans made to the Allies. Its total—unpaid—amounts to about $10,000,000,000. Third, there were the peacetime payments to this country's wartime soldiers and sailors. These payments have amounted to nearly $12,000,000,000 in the past 16 years. Their total will rise to uncertain proportions in the future. * * *

VETERANS' BENEFITS CONTINUE

The third group of peacetime costs goes on regularly month by month. This group of costs shot up sharply when veterans were allowed to take payment on their full bonus in 1936. Now that cost runs along evenly in the form of benefits for disabled veterans, hospitalization for 20,000 veterans, and pensions for widows and orphans. Experience shows that these costs tend to remain large many years after a war ends. * * * Then, in addition, there are indirect costs that are incalculable. (From Twenty Years After, in the United States News, April 5, 1937, p. 1.)

Yet our own outlay had been and was to continue to be a perfectly enormous sum. It is sometimes represented that this country made a profit out of the war. Nothing could be further from the truth. Up to the present time our own net war costs, after allowing for our foreign-debt expectations, are about $36,500,000,000. To retire the balance of our public debt will require about $7,000,000,000 in interest. Our Veterans' Bureau and allied expenses are already running at over $500,000,000 a year in meeting the solemn duty to the disabled and dependent. With what has been paid out and what is already apparent it is probable that our final cost will run well toward $100,000,000,000, or half the entire wealth of the country when we entered the conflict. (From address of President Coolidge at the observance of the tenth anniversary of the armistice, Washington, November 11, 1928.)

THE COSTS OF THE WORLD WAR

We do not know and can never know the full costs of the World War; of any war. The history of post-war Germany sketched in this short study leads to no other conclusion. * * * It is in this sense that we have ventured, in the course of this study, to indicate how much of Germany's post-war burden was a result of the war and how much, comparatively, was due to what it paid on reparation and treaty accounts. The former was about four times as much as the latter. * * * The only comprehensive effort to cover this whole field was that of the Economic and Social History of the World War, published under the auspices of the Carnegie Endowment for International Peace, for which I have had the responsibility of direction and editorship. * * * The mas-

ters of Nazi Germany, thinking to liquidate the Treaty of Versailles, have thrown Europe back into the maelstrom of war costs from which it has been struggling to escape ever since 1919. (From What Germany Forgot, by James T. Shotwell, New York, the Macmillan Co., 1940, pp. 121 and 131.)

THE ESTIMATED COST OF THE EUROPEAN WAR, 1939—WAR APPEARS MOST COSTLY IN HISTORY

The cost sheets of Europe's war are convincing bankers and Federal officials that it will be the most expensive conflict in history.

Great Britain already is spending at the rate of $9,600,000,000 a year. That amounts to 40 cents of every dollar its citizens earn. On a population basis it would equal a $27,000,000,000 annual budget for the United States, more than double that of any of the high-spending depression years. * * *

The French costs are a little lower than those of Britain, but still are high enough to wrench the souls of thrifty French taxpayers. France is spending at the rate of $7,400,000,000 a year, which would be equivalent to $23,000,000,000 for the United States. * * *

German costs are largely a matter of conjecture. The best estimates at which experts can arrive, however, produce the rounded conclusion that 60 cents of every dollar earned in Germany is being spent by the state.

Figures from Russia and Finland are hard to get. Nor is any over-all figure available for neutral spending. Belgium and the Netherlands, each with less than one-fourteenth of the population of the United States, are spending $300,000,000 to maintain their armed neutrality.

Sweden, with a population half a million less than that of Ohio, is spending $475,000,000 this year, half of it to keep from being swept into the maelstrom. (From statement by Associated Press. In Washington Post, March 13, 1940, p. 5).

COST OF WAR

The present war costs the nation £6,000,000 per day, but alongside the astronomic figures of modern war costs, the bills for the great wars of the past look like a tip. The American War of Independence cost £120,000,000, the Crimean less than two-thirds of that. The Boers cost £223,000,000. Twenty years of fighting to get rid of Napoleon Bonaparte cost £604,000,000, a terrifying sum then, which William Pitt dealt with by introducing Britons to income tax.

In 1914 the national debt stood at £650,000,000. By 1920 that figure had become £7,527,000,000. Four years of modern war had multiplied by more than ten thousand the accumulated debt of a century and a half.

The cost of war in 1914 has been estimated at £1,000,000 a day. By 1915 it had risen to £3,000,000 a day—a third of the national income, and by 1917 to £7,000,000 a day.—Condensed from the Belfast Telegraph. (From Current History (New York), April 1940, p. 11.)

UNBEARABLE COSTS

In the concluding chapter of Capt. Lowell M. Limpus' recent book, Twentieth Century Warfare, it is stated that in Caesar's time it cost only 75 cents to kill a man. During the Napoleonic wars, as a result of modern methods, the cost had gone up to $3,000 a man. In the American Civil War it had risen still further, to about $5,000. Then came a still more rapid mechanization, and in the World War the cost was at approximately $21,000—dead, 8,538,315; expense, $180,000,000,000.

Now—even if there should be real fighting on the western front—it is estimated that the cost per death will be in the neighborhood of $50,000. So, as Captain Limpus puts it, it will cost as much to kill a single poilu on the Maginot line as it would have cost Pompey or Marius to dispose of 50,000 foemen.

And considering a normal war on a large scale, what do all these figures add up to? What do they total? That should be obvious. They total bankruptcy for mankind. Nothing more, nothing less, exactly that. (From the Sunday Oregonian of March 17, 1940. In the Appendix of the RECORD, p. 1594.)

CASH COST OF WAR SET AT $100,000,000 DAILY

Additional to this are the huge uncomputed losses in the fields of property, arms, and commercial revenue. Available data indicates that Germany, heading the list, may have spent $12,000,000,000 for war by the end of its fiscal year next March; Great Britain, its dominions, and colonies, at least $5,262,000,000; and France, using a calendar-year fiscal period, at least $2,194,758,000 by the end of 1939.

The $100,000,000 figure was computed on the basis that by the end of March Germany and the British Empire supposedly will have spent $17,262,000,000 for a war that began 211 days earlier, on September 2, or $81,800,000 a day. By the end of December, 120 days after the start of hostilities, France will have spent $2,194,758,081, or $18,200,000 a day, which brings the total to $100,000,000 a day. (From the Christian Science Monitor, November 18, 1939, p. 1.)

ANOTHER WAR HELD RUINOUS FOR AMERICA

The cost to the United States of entry into another World War would very likely be double the cost of the last World War and would result in a "lowered standard of living for generations to come," it is estimated in a somber study of modern war costs (Can We Afford Another War? by John C. Gebhart, director of the National Economy League). The league, which is identified with very conservative political opinion here, suggests that the annual expenditure for direct war costs alone probably would amount to $30,000,000,000 as compared with $15,000,000,000 for the war in 1917–18; and that the public debt, now near the legal limit of $45,000,000,000, might well reach $70,000,000,000 to $75,000,000,000 in the first year and pass $100,000,000,000 in the second. (From the Christian Science Monitor, November 13, 1939, p. 5.)

THE INFLUENCE AND RESULTS OF WAR

REVERSED SELECTION

The people who will live in the years to come get none of the glory for which rulers wage war; they, at least, are innocent; they are at the mercy of the past, which did not consult them; but they must pay. * * * war not only demands a price in life, even of the victor, but the life which war demands is always the strongest and fittest, and healthiest and best. * * * None of the champions of war, who declare that peace corrodes and ruins nations, have thought about the matter deeply enough to learn that the argument they quote is the most fatal of all to their own horrible creed. For the truth is that war involves what real students of this subject call reversed selection—in which the best are chosen to be killed, and the worst are preserved to become the fathers of the future. (From The Long Cost of War, by Caleb W. Saleeby, in War and the Breed, by David Starr Jordan, Boston, 1915, pp. 223–225.)

THE LOST GENERATION

Fourteen years ago nearly a whole generation perished. In July 1916 most of the men who today would be in the seats of power in business, politics, literature, were wiped out. They were obliterated before the wall of steel. But Great Britain is only now beginning to realize that loss in all its bitterness. For now the time has come when we want those young men who today should be in the fullness of their powers and their maturity to help us out of our difficulties. We are sighing in vain for the men whose lives we recklessly used up in the awful slaughter of those weeks. In the House of Commons the old men remain enthroned. The men who sat on the front benches in 1914 are there still.

In business it is the same; the directors' rooms are occupied by old men. There is not a single railway company where the average age of the directors is not well over 60. Our industries are stagnant, not a little because they lack the lubrication of youth. The country is suffering from Methuselahs in business. Every profession tells the same tale. In literature our prophets are the same as in Edwardian days. There are no rivals to Shaw, Galsworthy, Wells, and Bennett. That splendid generation that would have succeeded them was blotted out as if it had never been. As Cassius said of Rome, "We have lost the breed of noble men." It is discernable even at the bar. Twenty years ago the law courts echoed with great voices.

No great new figures have emerged out of journalism. Everywhere postwar problems are being grappled with by men with the prewar mentality. It is not surprising that we are making so little progress to their solution. (From The Lost Generation, by Maj. H. L. Nathan; in the Nation (London), August 2, 1930, p. 555.)

WAR SHOCKS TO EUROPEAN COMMERCE

The international trade of the world in 1913, adding imports and exports, amounted to thirty-seven thousand nine hundred millions of dollars. In the preceding generation the world's trade had been growing constantly and fairly steadily, at a rate of increase of about 3.3 percent a year. If this rate had been maintained during the period 1913 to 1924 the total trade of the world in the latter year would have amounted (measured by the same standard, the dollar of 1913) to fifty-four thousand millions. Measured by this standard its amount was actually thirty-seven thousand and seventy millions. International commerce had not yet recovered in 1924 its pre-war volume. It fell below the figure which might have been anticipated, had normal growth continued, by some seventeen thousand millions of dollars. (From War Shocks to European Commerce, by Clive Day. In Foreign Affairs, New York, July 1927, vol. 5, p. 633.)

HOW THE MONEY COSTS MIGHT HAVE BEEN SPENT

According to the best statistics obtainable, the World War cost 30,000,000 lives and $400,000,000,000 in property. In order to give some idea of what this means, just let me illustrate it in the following: With that amount we could have built a $2,500 house and furnished this house with $1,000 worth of furniture and placed it on 5 acres of land worth $100 an acre and given all this to each and every family in the United States of America, Canada, Australia, England, Wales, Ireland, Scotland, France, Belgium, Germany, and Russia. After doing this there would be enough money left to give each city of 200,000 inhabitants and over in all the countries named a $5,000,000 library, a $5,000,000 hospital, and a $10,000,000 university. And then out of the balance we could still have sufficient money to set aside a sum of 5-percent interest which would pay for all time to come a $1,000 yearly salary for each of an army of 125,000 teachers and, in addition to this, to pay the same salary to each of an army of 125,000 nurses. And, after having done all this, we could still have enough left out of our $400,000,000,000 to buy up all of France and Belgium and everything of value that France and Belgium possess; that is, every French and Belgian farm, home, factory, church, railroad, streetcar—in fact, everything of value in those two countries in 1914. (From A Leading American Socialist's View of the Peace Problem, by Victor L. Berger. In Current History, January 1928, p. 471. Reprinted in CONGRESSIONAL RECORD, January 13, 1928; and the introduction to the Annual Report of the Director of the Divison of Intercourse and Education,

1934. In Carnegie Endowment for International Peace Yearbook, 1934, p. 43.)

The cost [of war] to the world approximated $250,000,000,000. If we placed this staggering sum into peacetime circulation we would not now have millions of unemployed, plus the direct loss of 50,000 men and approximately 250,000 casualties. Well could we rid ourselves, with this vast sum, of the slums of our great cities, the misery and poverty that go with them. Well could we multiply our opportunities of education and culture, through better and larger institutions of learning. Well could we afford, not one, but several airports in every large city. Well could we rid ourselves of the inadequate highways, narrow streets, and the constant congestion in every city, large or small. Well could we multiply our airways, expediting the transportation of mail, people, and merchandise to and from every hamlet in this country. Well may we remember the forgotten statistics of the World War. Seventy-four million men mobilized, 10,000,000 killed, 3,000,000 maimed, 19,100,000 wounded, 10,000,000 disabled or incapacitated for the balance of their lives, 9,000,000 orphans, and 5,000,000 widows. In view of these startling facts, who could wish for our participation in another world war? (From the Cost of War, by Capt. Eddie Rickenbacker. In CONGRESSIONAL RECORD, October 2, 1939, vol. 86, pt. 2 (Appendix), p. 116.)

Speech Delivered to Christian Mobilizers

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

ADDRESS BY HON. J. THORKELSON, OF MONTANA

Mr. THORKELSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech I delivered to Christian Mobilizers March 4, 1940:

Mr. Chairman, ladies, and gentleman, I am pleased to be here tonight, on the invitation of Mr. McWilliams, whom I recently had the pleasure of meeting in Washington.

Many New Yorkers have called on me in Washington, and I am always glad to converse with them, for they seem to have an entirely different viewpoint from people in other localities. This is no more than should be expected, for New York is indeed a cosmopolitan city.

Mr. McWilliams, from my observation, is one of those stanch Americans who believes in the principles of this Republic, and it is those principles, and the manner in which they are abused, that I shall discuss here tonight.

No doubt many of you have read statements in regard to my position on national and international matters, which I shall discuss this evening, but let me first tell you a little about myself so that we will be better acquainted.

I am not a stranger in the city of New York. I sailed out of this port more than 45 years ago, when there was one bridge across the East River. I have been a sailor, captain of oceangoing ships, and navigator. I am still a doctor of medicine, surgeon, pilot of aircraft, and a plain businessman. In all these occupations, I have learned to give and take, and now, as a Member of Congress, I draw upon this training in the performance of my duty, to serve as I have all my life—the people and the Nation.

As a sailor and officer in the United States merchant marine, Navy, and Naval Reserves, much of my life has been subjected to strict discipline, a training which I have not forgotten today. As a doctor of medicine, I have learned to evaluate and conserve life, and as a surgeon, to estimate risk and proceed on my own responsibility. As a pilot of aircraft, I have learned to fly my ship, each of us interdependent upon the other. As a businessman, when hard pressed for capital, I have found it best to convert deficits to profits by reducing operative costs, and to employ such earned profits for expansion of the business, in order to increase income.

Professors who now run the Government call this a return to the "horse and buggy" days, but it has worked successfully for over 2,000 years. The New Deal educators who have been running the Government successfully into debt for the last 10 years do not believe in all the established principles. To those new teachers everything looks rosy and a big national debt is a mountain of joy. They simply glory in it and others seem to take pride in this Mount Nova of debt. In further recognition of this, Congress has granted permission to the President to issue medals for outstanding civilians in the Government, and I wonder if this mountain of spending is to embellish the medal.

No doubt many of you are familiar with the esteem in which I am held by the communistic press, for I am sure they have been more than attentive. To those who have formed an opinion from these publications, let me say that I am opposed to all who are engaged in subversive destruction of this Government, no matter who they are or where they are.

I grant everyone considerable latitude in expression, but I believe it is generally true that it is of little purpose to hurl invectives, for such action is often a boomerang that strikes back at those who take such liberties.

I am, as I hope to disclose here tonight, a plain American citizen, who asks for no greater privilege than to subscribe to the same fundamental laws that govern the majority. I am what you may call old-fashioned, for I still believe that we, the people, are the supreme power in this Republic, and that Congress, or our Government, is elected to serve and not to rule the people—yes; the people who have unselfishly labored from generation to generation to build this magnificent structure that we call our home—these United States of America.

We have now reached the point where this Nation no longer can be pushed or pulled by factions or organizations, each of them having a different idea of how things should be done. We must begin at some known point, and what could be better than those sound principles which are set forth in the Constitution of the United States?

It is not my intention to bore this audience with a so-called dry discussion of a subject that may appear to some of you more or less academic. But I realize that the Government of this Republic is not understood by a great number of people, and if you do not understand your own Government, it is useless to accuse anyone of destroying it. For that reason I shall now discuss the early formation that led to the drafting of the Constitution of the United States.

Suppose we now assume that all of our people believe in the principles as set forth in the Constitution of the United States. What would be the result? The result would be a united, patriotic Nation, composed of patriotic and loyal American people. It is upon these principles that all Americans must unite, and those who cannot do so must be looked upon as problem groups by their own selection, unassimilable, and therefore anti-American.

Let us now for an illustration compare the people of a nation to a pyramid. The base represents the plain or common people, and the apex the titled or the rich people. We have in such picture not only a contrast of society levels but also a picture of the "haves" and the "have nots."

A nation, of course, is composed of many social groups, which I shall not discuss tonight. For illustration, and to serve my purpose, I shall divide the people into two political groups, the "right" and the "left," each forming a distinct type of government.

The "right" is an imperialistic or autocratic government, composed of the titled and the rich people, ruled by a king who wields the power over the people through the armed and policing forces. The "left" is a democracy composed of the masses, ruled first by an oligarchy, and then by a dictator, who wields absolute power over the people by secret police, the military, and the firing squad.

Both types of government are undesirable, and they will, as they swing to the extreme right or left, become unbearable to the people over whom either type rules.

Russia provides examples of both types. Under the Czar, the Russian Government was an imperialistic despotism. Under past dictators, the Russian Government has been a democratic despotism, or a democracy. Of these two types, neither is desirable but the more pernicious is the present Russian proletarian despotism, for it appears to have forgotten Christian principles in government.

For the past 20 years, the dictators of Russia have paved their road to power with the bodies of innocent men, women, and children. All of them have maintained their positions by liquidating those who have oppcsed them. We, the people of America, object to both types of despotic government. We have suffered from an autocratic despotism, and we dread a proletarian despotism.

The founders of our country had lived under tyrannical masters, and were well acquainted with aristocratic and autocratic despotisms. It was with this knowledge fresh in mind that they set to work to organize the first Government of the United States.

The first attempt was a failure, for the Articles of Confederation did not establish balance or unity, but left each of the Thirteen States independent and free, with little responsibility to the Central Government. The Articles of Confederation, while forming the basic principles of the Constitution of the United States, was in reality nothing more than a mutual-defense pact among the Original States. I quote articles 2 and 3:

"ART. 2. Each State retains its sovereignty, freedom, and independence and every power, jurisdiction, and right which is not by this confederation expressly delegated to the United States in Congress assembled.

"ART. 3. The said States hereby severally enter into a firm league of friendship with each other for their common defense, the security of their liberties, and their mutual and general welfare, binding themselves to assist each other against all force offered to or attacks made upon them, or any of them, on account of religion, sovereignty, trade, or any other pretense whatsoever."

It is therefore clearly evident, after reading the Articles of Confederation, that the draftsmen had two definite objects in mind:

First, that each State retain its sovereignty, freedom, and independence; second, that the United States, through their representatives, should control the Federal Government. The manner in which this was to be accomplished is set forth in article 5 of the Articles of Confederation:

"ART. 5. For the more convenient management of the general interests of the United States, delegates shall be annually appointed

in such manner as the legislature of each State shall direct, to meet in Congress on the first Monday in November in every year, with a power reserved to each State to recall its delegates, or any of them, at any time within the year and to send others in their stead for the remainder of the year.

"Each State shall maintain its own delegates in a meeting of the States and while they act as members of the committee of the States.

"In determining questions in the United States in Congress assembled, each State shall have one vote."

It is quite evident that the gentlemen who wrote these paragraphs into the Articles of Confederation had the same thing in mind when they wrote the Constitution of the United States, for in it provision is also made for State representation in the Senate of the United States and for the withdrawal of such representatives when they violate their obligation by misrepresenting their State.

The States, after operating under the Articles of Confederation for 9 years, found the instrument incomplete, and to correct the error and provide a balanced Government they called the Constitutional Convention in Philadelphia, May 1787. In regard to the work which had been accomplished, Washington said:

"I conceive, under an energetic General Government, such regulations might be made and such measures taken as would render this country the asylum of pacific and industrious characters from all parts of Europe—a kind of asylum for mankind."

Of the many governments that have ruled nations throughout the ages, our Government as formulated in the Constitution is the best, for it blends the better elements of the two major types. It is not an aristocracy and it is not a democracy, but it is, instead, a democratic Republic in which the people, by electing the government of each State, provide an instrument of their own choice—the State legislature—with power to select two men to represent the State in the Senate of the United States. In this manner the party in power and the State legislators, in a certain sense, sponsored and put their stamp of approval on their United States Senators. This procedure of selecting Senators established State control of the United States Senate. It was through this representation in the Senate that the 48 United States, through their elected Members in the Senate, directed the Federal Government in its international relations and national administration.

After reading the Constitution, it is clearly evident that the entire Federal Government is subservient to the Congress of the United States. Congress, in transferring its power to the executive and other Federal departments, reversed this wise provision of the Constitution by unconstitutional dispensation of its delegated powers. The Executive and all executive departments, through their chiefs, are directly responsible to the Senate. The Senators are responsible to their State governments, and the Senate is responsible to the United States of America. That intent was clearly evident in article 2 of the Articles of Confederation and in the Constitution of the United States.

Ladies and gentlemen, I contend that State rights and direct State representation and equal suffrage in the Unied States Senate were abolished when the seventeenth amendment was adopted. I charge that this drastic change removed balance and destroyed our Government, as set forth in the Constitution of the United States.

To prove my assertion, I quote:

"Art. IV, sec. 4. The United States shall guarantee to every State in this Union a republican form of government." And—"Art. V. * * * No State, without its consent, shall be deprived of its equal suffrage in the Senate.

It is my desire to call attention to the fact that a republican form of government and equal suffrage in the Senate cannot be abolished except by unanimous consent of all the States, because the 48 States, according to article IV, section 4, guarantee these rights to themselves and to each State in the words:

"The United States shall guarantee to every State in this Union a republican form of government."

Since adoption of the seventeenth amendment, there has been no State suffrage in the Senate, and, therefore no legislative balance. It was State influence and control in the Senate that provided balance in the Federal Government, and that was destroyed when this amendment was adopted. There is a technical question involved in the adoption of this amendment because of the wording in the Constitution, as already expressed. If the adoption of this amendment was not ratified unanimously, there is a possibility that it is now null and void.

It should be clear that if we continue operation under the seventeenth amendment the Government will in time swing entirely to the left, and we will then have a true democracy in its real meaning. To this I believe every patriotic American will object, and if we fail to provide correction by restoring States' rights, the final result will be revolution. Americans will never submissively kneel to a dictator.

Looking back, I can only reach the conclusion that the founders of our Republic were fearful of imperialistic domination. They had experienced that in the countries from which they had emigrated, or from which they had been expelled for political or other causes. It was for their own protection that States and State governments were designated to represent the aristocratic element in our Government, and that the State legislators were given power by the people to select two Senators to the Senate of the United States.

With the same foresight, the founders provided, in article I, section 2:

"The House of Representatives shall be composed of Members chosen every second year by the people of the several States."

The wisdom of the rule for electing Members to Congress was apparent, for the people themselves controlled the election of all public officials. They controlled the United States Senators indirectly, through their own State governments, and they controlled the Members of the House of Representatives by direct election.

In this manner, the two Houses became a check upon each other, establishing a finer balance in the Government, one for the direct interest of the State and its people, and the other for the direct interest of the people and the State. To provide a still better balance, two special powers were granted to the Senate and two to the House of Representatives. The Constitution provides that the Senate shall approve treaties and Presidential appointments, and shall conduct hearings on impeachments of public officials.

The Constitution provides that the House of Representatives shall appropriate all moneys, and shall prefer charges of impeachment.

The wisdom of this arrangement is apparent, for the powers of controlling the purse strings and removal of public officials by impeachment were left to the House of Representatives, whose Members are elected every 2 years. The people and the State can therefore elect new Representatives every 2 years, who will increase or decrease spending and impeach public officials. This power is entirely within the reach of the people in each State every 2 years.

As I pointed out before, the seventeenth amendment penalized the people and no one else, for the Senators are now, like the Representatives, elected by direct vote, leaving the President with greater powers and the State without representation in the Senate of the United States.

In discussing this subject, I find that many people have forgotten that the States at one time were represented in the Senate of the United States, and that States' rights and representation in the Senate were abolished when the seventeenth amendment was adopted. This lack of interest may be forgiven in the younger generation, but it is certainly inexcusable in older, matured people. It is difficult to account for this indifference toward the Government, for surely no one can be blind to the eventual outcome. Let us not forget the words of Washington, "Despots arise on the ruins of public liberties."

While discussing the loss of State representation and State control of the Senate, I often encounter this observation: "Do you recall the corruption in the United States Senate before the adoption of the seventeenth amendment? Do you remember how many Senators were bribed by the vested interests, and that frequent Senate scandals were largely responsible for this change in our Government?"

My answer, of course, is "Yes." I do remember, and I admit that conditions were, to say the least, disgraceful. But would you, if one or two houses in your town were burning, set fire to the whole town to prevent future conflagrations? Or would you extinguish the fire and remove fire hazards?

Do you believe we were justified in destroying States' rights and State representation in the Senate of the United States, in order to eliminate a few corrupt Senators? Do you not believe it would have been a wiser plan for the State legislatures to recall these traitors, and treat them as common criminals?

Before adoption of the seventeenth amendment, each State through its representatives in the Senate directed the Federal Government in the interest and for the general welfare of the United States. Today the reverse is true. Each State is now seeking aid from the Federal Government in its own interest, with little consideration for the United States.

Our ancestors moved forward and carved the Nation you see. We are sitting and whittling the structure away.

The States, however, cannot escape responsibility, for money borrowed by the Federal Government must be repaid by industries, business, and people within each State. When the Federal debt and our currency are repudiated the people again pay through the losses they will sustain in investments and savings. The point to bear in mind, however, and one that should be of interest to everyone, is that the international bankers, designated on the Treasury balance sheet as "interests outside of the Treasury and the Governors of the Federal Reserve banks," will not sustain any loss, for they own and control over $15,000,000,000 in gold now stored in the Treasury of the United States and, in addition, many of the Nation's larger industries. So it is for us "Heads they win, tails we lose."

This national debt should be of interest to every State in the Union, as their own representatives in Congress propose large appropriations for Federal spending. Agriculture and industry alike should bear in mind that money borrowed by the Federal Government on States' credits, when loaned to foreign governments, becomes a weapon of destruction to agriculture and industries in the United States. The truth of this may be found in restricted and regulated crop production and in the steadily increasing surplus of farm produce.

Unemployment springs from closed food-processing plants, stagnant business, and idle factories, all of which can be charged to unsound administration trade policies. It is this planned destruction of farming and manufacturing that Congress should stop before it destroys our Nation's industries.

Expression on this subject must come from the electors of the Congressmen who voted for this legislation, and in the future it is imperative that each State give the most serious consideration to

the ability and patriotism of those chosen to serve in the Nation's Congress. It is only by the most careful public selection of candidates in primary elections and the united support of them in the general elections that we will remove anti-American influences from our Government.

For the benefit of those who blindly follow the dictates of political parties I shall quote the first President and ask you to pay particular attention to what he said more than 140 years ago:

"I have already intimated to you the danger of parties in the State, with particular reference to the founding of them on geographical discriminations. Let me now take a more comprehensive view and warn you in the most solemn manner against the baneful effects of the spirit of party generally.

"This spirit, unfortunately, is inseparable from our nature, having its root in the strongest passions of the human mind. It exists under different shapes in all governments, more or less stifled, controlled, or repressed; but in those of popular form it is seen in its greatest rankness and is truly their worst enemy.

"The common and continual mischiefs of the spirit of party are sufficient to make it the interest and duty of a wise people to discourage and restrain it."

"It serves always to distract the public councils and enfeeble the public administration. It agitates the community with ill-founded jealousies and false alarms; kindles the animosity of one part against another; foments occasionally riot and insurrection. It opens the door to foreign influence and corruption, which find a facilitated access to the Government itself through the channels of party passion. Thus the policy and the will of one country are subjected to the policy and will of another."

These are cold facts, spoken by President George Washington in his Farewell Message, when, after two terms in office, he voluntarily retired as President of the United States.

His words are as true today as they were then, and the wisdom of his advice is evident as we observe the evils rampant in both major political parties.

I want you to understand that I have no greater respect for political parties than the esteem in which they were held by the first President of the United States when he said:

"The alternate domination of one faction over another, sharpened by the spirit of revenge natural to party dissension, which in different ages and countries has perpetrated the most horrid enormities, is itself a frightful despotism. But this leads at length to a more formal and permanent despotism. The disorders and miseries which result gradually incline the minds of men to seek security and repose in the absolute power of an individual, and sooner or later the chief of some prevailing faction, more able or more fortunate than his competitors, turns this disposition to the purposes of his own elevation on the ruins of public liberty."

May I call attention to the fact that our Government differs from others and is unique in that the Constitution of the United States is an instrument by which the people delegate certain administrative powers to the Federal Government.

The powers delegated are so clear that little or no disagreement should arise in interpretation, yet evasion and misinterpretation of the Constitution are the actual causes for the condition in which we find ourselves today.

In our Republic the people are the supreme power, and the Constitution is the body upon which our Nation depends for life. The people should elect Members to Congress who will "preserve, protect, and defend the Constitution" with the same care that a skillful surgeon employs in protecting the life of his patient. For an incompetent Congress will, by ignoring the Constitution, destroy our Nation as effectively as an incompetent surgeon destroys the life of his patient when he ignores the principles of surgery.

I want to call your attention to the preamble and its relation to the Constitution, for observation leads me to believe that little or no consideration is given to this part of the document, either by Congress, the Supreme Court, or by the people themselves:

"We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

Suppose we rearrange the preamble in the following manner:

"We, the people of the United States, ordain and establish this Constitution:

"1. In order to form a more perfect union—

"2. Which will establish justice;

"3. Insure domestic tranquillity;

"4. Provide for the common defense;

"5. Promote the general welfare; and

"6. Secure the blessings of liberty to ourselves and our posterity."

I believe it was this that the founders had in mind when the Constitution was drafted.

This should now be plain, and as questions arise before the legislative, the executive, and the judiciary branches of the Government or before any Government department or employee it is only necessary to ask these questions: Will this act on my part perpetuate a perfect Union? Will it establish justice? Will it insure domestic tranquillity? Will it provide for the common defense? Will it promote the general welfare, and will it secure the blessings of liberty to ourselves and our posterity? If you are in doubt, or if the answer is "No" to one or more of these six questions, the matter under consideration is unconstitutional and therefore not allowable except by special permission of the people, as set forth in article V.

It would be interesting to know how much of the legislation now written into the law is unconstitutional. There is much of it, I am sure, and for that Congress alone is responsible. Article I, section 1, says:

"All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives."

This paragraph is plain, and states without quibbling that all legislative powers granted in the Constitution shall be vested in Congress and no one else. This is only just and proper, for there is no provision in the Constitution which gives Congress the right to transfer any part of its own powers to any person or department. In spite of the fact that our Constitution states that "all legislative powers herein granted shall be vested in Congress," transfer of powers to the Executive and other departments is a common occurrence and will, if continued, make Congress obsolete.

In article I, section 8, the people give orders to Congress. These orders are not vague, but are, instead, very explicit. I shall quote the first paragraph:

"The Congress shall have power to lay and collect taxes, duties, imposts, and excises; to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States."

After reading this it is evident that the founders were not entirely satisfied that we would understand the importance of the preamble, and to fortify this declaration they repeated in section 8:

"Congress shall have the power to * * * provide for the common defense and the general welfare of the United States."

The Members of Congress are obligated to carry this out so that our Union may be preserved.

The powers delegated to Congress in article I, section 8, are full or complete powers, first, "to lay and collect taxes." For what purpose? Obviously, "for the common defense and the general welfare of the United States." It follows, therefore, that Congress has the power to lay and collect any tax or taxes that will not disrupt justice or upset domestic tranquillity, but will, instead, secure the blessings of liberty to ourselves and our posterity. Under this provision Congress may assess taxes on income, no matter from what source derived, and Congress may also, under this provision, issue tax-exempt securities if it is in the "common defense and general welfare of the United States."

Will anyone say that incomes cannot be taxed under article I, section 8? I do not think so; but should the question arise, let those who dissent state where in the Constitution the power to tax incomes is denied to Congress. It surely is just, and will equalize the operative cost in maintaining the Government.

It appears from this that the sixteenth amendment was not needed, for full power to lay and collect taxes from any source is granted to Congress in the first paragraph of article I, section 8.

In the same manner "Congress shall have the power to lay and collect duties, imposts, and excises," "for the common defense and general welfare of the United States." It is this qualification that must be considered in all acts of Congress, as well as other branches and departments of the Government. However, the Constitution does not give Congress the right to transfer its power to the Executive, or any other department, but actually denies any such transfer of power. This is only proper and right, for the Congress alone is responsible to the owners of the document—the people of the United States. We are paid by the people of the United States to safeguard and protect their interests against usurpation by political parties and the Government itself, which I believe many Members of Congress have forgotten.

Congress has the power to pay debts, and we may assume that Congress also has the power to consider whether debts should be paid, and how they should be paid. But whatever is done, it must be for the common defense, and for the general welfare of the United States.

It occurs to me, however, that it is well for us to remember that while Congress pays the debts, the money is earned by the industry and business of this Nation, and not by employees of the Government.

"Congress shall have the power to borrow money on the credit of the United States," but it is well for Congress to remember that it must be "for the common defense and the general welfare of the United States," and not for anyone else. A national debt of $42,000,000,000, which at the end of the coming fiscal year is liable to be $48,000,000,000 or more, not including the $13,000,000,000 contingent liabilities, is not for the common defense, and certainly not for the general welfare of our people, but is instead a burden heaped upon the back of future generations, a burden for which Congress should feel ashamed.

"Congress shall have the power to regulate commerce with foreign nations, among the several States, and with the Indian tribes."

What does this mean? It means that Congress may regulate trade with foreign nations, negotiate trade treaties or other pacts concerned with the flow of commerce, such as transportation, warehousing, dock space, and other maritime regulations. Under the same provision Congress may also regulate commerce with the Indian tribes by mutual agreement with the tribal chiefs, but there is no constitutional provision for treating them in any other manner than as foreign tribes.

This provision should be changed, for the Indians are quite as capable of looking after themselves as other tribes we have in the United States, and, being the original Americans, they should be granted this right. I am sure the taxpayers of the United States

would not object to having the various Indian departments, bureaus, and agencies closed, for they benefit neither the Indians nor the taxpayers of the United States.

What interests me most in this paragraph is the use of the wording "among the several States." How anyone can read into these four words the right of Congress to invade the boundaries of the State and the capital structure of business is surely more than I can get out of it.

"Congress shall have the power to establish a uniform rule of naturalization, and uniform laws on the subject of bankruptcies throughout the United States."

To establish uniform rules of naturalization does not mean that when immigration quotas from various countries remain unfilled we shall exert ourselves to fill the quota, at least not until our own people are employed. As to bankruptcy, I believe we have sufficient laws for that, and it is possible that the United States may fall under the hammer if Congress does not begin to reduce the national debt.

"Congress shall have the power to coin money, regulate the value thereof and of foreign coin, and fix the standards of weights and measures."

This paragraph in section 8 has been stretched and misinterpreted both by the Attorney General and the Supreme Court to such an extent that we are now left with a currency that cannot be regulated because all standard value has been removed.

Gold is the internationally accepted medium which establishes money value in all countries. Gold is not only valuable because of its physical qualities but it is valuable and necessary because all nations have agreed to use it as a standard upon which to base the value of money. It follows, therefore, when gold is removed from the dollar, the inherent value is reduced, and when the last fraction of gold is removed all value is removed, and nothing is left for regulation. That is precisely the condition in which the United States finds itself today. We have a dollar devoid of all intrinsic value and have inflated a commodity dollar that depends upon price fixing for purchasing power.

Attorney General Cummings, in arguing this case before the Supreme Court, said:

"Although it may seem trite to do so, I draw attention to what, for want of a better term, may be called 'presumption of constitutionality.'"

The Attorney General should know that the ninth amendment governs presumption of constitutionality.

After reading the Attorney General's argument before the Court, one cannot but come to the conclusion that the onus of responsibility is literally thrown in the lap of Congress; and, of course, that is where it rightfully belongs, because Congress is responsible to the people of this Nation and no one else.

Had the Attorney General put these questions to himself, the answer might have been different:

1. Is it an act of justice to deprive the people of the United States of the right to be secured by gold; and is it an act of justice, after having deprived the people of this protection, to give it to foreigners and international financiers?

2. Is it an act of justice and is it for the common defense of our Nation to allow foreign investors to hold such amount of American securities that, when negotiated, they might seriously deplete the total amount of gold in the United States Treasury?

The remainder of section 8 concerns additional powers which the Constitution grants to Congress, most of them legislative, but at the same time nontransferable. In the next 12 paragraphs of section 8, I cannot refrain from calling attention to these three:

"To declare war.

"To make rules for the government and regulation of the land and naval forces.

"To provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions."

It is clearly evident that in these three paragraphs the people make Congress responsible for the declaration of war and for mobilization. Should any governmental branch, department, or officer violate these provisions of the Constitution, dismissal from office is in order and should be enforced by the ruling power in this Government, the Congress of the United States.

In studying article I, section 8, one cannot but come to the conclusion that the Constitution delegates specific nontransferable powers to act and to provide legislation, and this power cannot be transferred but is instead the total responsibility of Congress.

I shall now quote the last paragraph in section 8:

"Congress shall have the power * * * to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof."

This paragraph is clear, for it gives Congress the right to make all laws as set forth in article I, section 8, but all laws must be "for the common defense and general welfare of the United States." The United States means the 48 States, and not the Federal Government, so let us not labor under any delusion as to the power of these 48 States, or as to where all legislative power rests. I quote again article I, paragraph 1:

"All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives."

It would be interesting to know where, in the Constitution, the majority in Congress found authority to delegate negotiation of trade pacts and treaties to the State Department, and the reorganization of the Government to the executive department. It would be interesting to know where, in the Constitution, the majority in Congress found power delegated to allow Federal corporations to regulate their own affairs without any accounting to Congress. Where did this majority find an excuse for the enactment of the Gold Reserve Act, and the power to place the stabilization fund under the absolute control of the Secretary of the Treasury and the President of the United States?

I believe nearly all of us would like to be informed what is meant by the word "emergency," and the reason for having had this for a period of nearly 8 years. The fact is there is no provision in the Constitution that gives Congress the right to enact this kind of legislation, nor for the Supreme Court to hold it constitutional.

It is well to bear in mind that the constitutionality of all legislation must be based upon the Constitution itself, and not upon some fantastic decision rendered by the Supreme Court of the United States. Citations of court decisions are in no sense conclusive proof that an act is constitutional, and neither is the enactment of the legislation conclusive evidence that Congress considered the Constitution when the law was enacted. I grant that it is the duty of Congress to consider constitutionality, but that seems to be a lost art. To avoid what we have today, namely, a mass of unconstitutional laws, the Supreme Court must, to honor its obligation, base its decision in each and every case squarely upon the Constitution. It is only so that justice can be done to the people of this Nation.

To make this more clear, let me quote from article VI:

"This Constitution and the laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States shall be the supreme law of the land; and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding.

"The Senators and Representatives before mentioned, and the members of the several State legislatures, and all executive and judicial officers, both of the United States and of the several States, shall be bound by oath or affirmation to support this Constitution; but no religious test shall ever be required as a qualification to any office or public trust under the United States."

After reading article VI, there should be no question in the mind of Congress or courts that are called upon to determine constitutionality of legislation, for it is clarified in these words:

"This Constitution and the laws of the United States which shall be made in pursuance thereof, and all treaties made or which shall be made under the authority of the United States, shall be the supreme law of the land."

It is clear from this that laws made in pursuance of the Constitution shall be the laws of the land, which, if nothing else, infers that laws that are not made in pursuance of the Constitution are not the laws of the land, and are, therefore, null and void. It is in this classification we must place the present trade pacts, for Congress has no legal right to allow this power to remain at the whim and fancy of someone in the Executive or State Department.

It will be found that article I, section 8, delegates specific powers to Congress in legislation and regulation, which appear to be clear and understandable. Should any question arise in the minds of those who serve in Congress as to interpretation or meaning, the benefit of the doubt must be given to the people, as set forth in article IX:

"The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people."

When question arises as to the extent of power that has been delegated to Congress and to the Government of the United States, article X should prevail. And this is particularly true when attempts are made to widen or reconstruct the meaning of the Constitution, for the people reserve the unwritten power in the Constitution to the States and to themselves. I quote article X:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Inasmuch as there is no specific declaration of power to Congress to put the Federal Government in competition with private business, one cannot but assume that the Government is now engaged in illegal competition. When the Government allows imports that are destructive to our producers it has exceeded its constitutional authority. Article X is plain and states distinctly that the powers and rights not delegated to the Government are reserved to the States and to the people themselves. This Nation can survive only by adhering to the Constitution. When we depart from it we have destroyed a united America.

In article I, section 8, specific powers are granted to Congress in these words: "Shall have the power to." In section 9, specific powers are denied Congress in the word: "No," or the words: "Shall not." These specific grants of power in section 8, and the specific denials of power in sections 9 and 10 are written into each section to clarify all powers granted or denied by the Constitution to Congress and to the State "for the common defense and the general welfare of the United States." Section 9, of which I shall quote one paragraph, deals entirely with restrictions imposed upon Congress by all the United States, in order to protect the rights of the State.

"No money shall be drawn from the Treasury, but in consequence of appropriations made by law, and a regular statement

and account of the receipts and expenditures of all public money shall be published from time to time."

The founders of our country, foreseeing problems which might confront our Nation, wisely provided that: "No money shall be drawn from the Treasury, but in consequence of appropriations made by law, and a regular statement and account of the receipts and expenditures of all public money shall be published from time to time." Why was this stipulation made? It was made in order to furnish pertinent information to the public as to expenditures and the purpose of such expenditures, not only of money appropriated by Congress, but of all moneys appropriated, earned, or collected by the Federal Government, its departments, bureaus, and of the many new Federal-owned corporations over which Congress unfortunately has no control except in appropriation of money.

This provision of the Constitution has been, and is being, violated by Congress, by the executive department, and by the extra-constitutional Federal corporations which have been created by special acts of Congress, and for which there is no legal authority.

The question should be asked: "Are appropriations for these Federal-owned corporations made according to law?" And the answer is "No," for these corporations are, as I have said, extra-constitutional, and therefore illegal. The Constitution provides that a regular statement and account of receipts and expenditures of all public money shall be published from time to time; the purpose of which is to give those who furnish the money, namely, the taxpayers of the United States, an opportunity to be informed what the Government is doing with their money.

It is this unwarrantable procedure of Congress that is in reality responsible for the condition in which we find our country today, and for this you are also responsible, because of the men you have elected to represent you in Congress. To bring this home, let me quote the Gold Reserve Act, section 3699, section 10 B:

"To enable the Secretary of the Treasury to carry out the provisions of this section there is hereby appropriated, out of the receipts which are directed to be covered into the Treasury under section 7 hereof, the sum of $2,000,000,000, which sum when available shall be deposited with the Treasurer of the United States in a stabilization fund (hereinafter called the fund) under the exclusive control of the Secretary of the Treasury, with the approval of the President, whose decisions shall be final and not be subject to review by any other officer of the United States."

Did Congress conform to the Constitution when it set aside $2,000,000,000 in gold and said that this money should be "under the exclusive control of the Secretary of the Treasury, with the approval of the President, whose decisions shall be final and not be subject to review by any other officer of the United States?" Certainly not. Congress did not give the Constitution the slightest consideration, and neither did the Supreme Court when it upheld this act.

It is acts of this sort, and do not forget there are many of them, which are now causing disintegration of industries and business. How can this be corrected?

By sending to Congress men who will honor their obligation "to preserve, to protect, and defend the rights of the people," as set forth in your own document, the Constitution of the United States.

In article 1, section 10, the Constitution provides:

"No State shall * * * coin money; emit bills of credit; make anything but gold and silver coin a tender in payment of debts."

Did Congress adhere to this paragraph in section 10 when the Gold Reserve Act was passed? It did not, for we, the people, were not only deprived of gold and gold-secured investments but it was made a criminal offense for you and me to be secured by gold—our own property, comparable to other properties such as a house and real estate.

What are we using for money today? We are using inflated currency, with less inherent value that the wampum used by the Indians a thousand years ago. It is not my desire to dwell too long on section 10, but bear in mind: In this section, the 48 United States denies certain rights to each State exactly in the same manner and with the same intent as the same States have reserved the right to themselves and to the people of this great Nation to regulate their own affairs.

The present chaotic state is not due to the obsolescence of the Constitution but is, instead, entirely due to the fact that your own Government does not adhere to it.

Who are to blame for this deplorable situation? We, the people, are to blame for it, for we have been too gullible. We have accepted the promise of the politician to give and distribute other people's property among political factions; and while this may seem pleasing to the factions, it can only end in utter destruction. Your greatest security is to compel your candidates for office to conform and adhere strictly to the Constitution, for therein lies your greatest protection. Your avenue of approach is through the ballot, for it gives you the opportunity to remove un-American representatives every 2 years.

STATE RIGHTS

What is State rights? It is the rights as expressed in the Constitution of the United States, and in addition to that the absolute control of the unwritten power in the Constitution which is protected in the Bill of Rights, and particularly in the ninth and tenth amendments, which I now quote:

"The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people."

"The powers not delegated to the United States by the Constitution nor prohibited by it to the States respectively or to the people."

It follows, therefore, all rights except those which are specifically delegated to the respective branches of the Government in the Constitution of the United States are reserved to the States or to the people.

What are these rights? They are:

(1) For the State to operate unmolested and free under State government elected by the people;

(2) For the people and the State to be represented by two Senators in the United States Senate;

(3) For the State to be administered by its own laws;

(4) For the State government to regulate business and all affairs within the State which have not been specifically delegated to the Government of the United States;

(5) For the State to provide laws for banking under which its own people may be protected, and to use nothing but gold and silver for payment of debts.

I may say at this point that article I, section 8, provides only that Congress shall have the power to coin money, regulate the value thereof and of foreign coin, but the unwritten power to provide regulation for banking and practical use of money is a power which the people have reserved to themselves and must therefore remain within the State. It is only in this manner industries and business can be regulated within the State, for when gold-secured currency is permitted to fall into the hands of private exploiters, the State and the United States suffer from such exploitation.

What was the purpose of setting up a sovereign government in each State?

(1) To maintain the very fundamental principles of this Government, which are based upon the coordinated and united effort of the 48 States;

(2) To make each State responsible for the conditions within the State;

(3) To provide training for public officials to fill more important positions in the Government of the United States;

(4) To make each State responsible for its own government which prevents overlapping and reduces cost of administration.

(5) To provide a more efficient and economical Federal administration which, when being relieved of intra-States administration, may apply itself where it should—to international affairs.

WHAT IS THE CONSEQUENCE OF ABDICATION OF STATES' RIGHTS?

The state of government is in reverse, for the State has become subservient to the Federal Government. What does it mean? It means a tremendous increase in the cost of government administration, not only within the State, but multiplied by 48 times in the Federal Government in Washington. No one should fail to see that each State government is costlier than it was before the seventeenth amendment was adopted. No one should fail to see the weakness produced in State governments by Federal usurpation of States rights.

The Federal Government today is a destructive monster which has grown fat upon the poverty of the States and of the people. What will be the end? The end, no doubt, will be national bankruptcy, and I admit such situation may become serious, but to look at this purely from the collapse of the currency structure is not facing the issue squarely, for when it happens we cannot escape internal strife.

Should we become so involved, protection will be furnished not by the State government but by the Government of the United States, and the forces used will be the military and policing forces.

Should these offensive, defensive, and protective forces take charge, the President, being the chief in command, will, of course, become the Nation's commander, and it is in such manner popular governments like ours are converted into a totalitarian state.

Federal Government Gives Needy Farmers and Laborers a Lift

Monday, May 6, 1940

RADIO ADDRESS DELIVERED OVER WMBS BROADCASTING STATION OF UNIONTOWN, PA., APRIL 2, 1940

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address

prepared by me and delivered over radio station WMBS by the Honorable Wooda N. Carr, of Uniontown, Pa.

The world today is in great turmoil, and our biggest headlines are about the most distant upheavals because these are the most violent and destructive—war, brutal oppression, and other tragic events most abhorrent to our own ideals of peace, justice, and liberty. Unfortunately, the very excitement of the news from abroad tends to make us less aware that we have a serious, if less dramatic, war of our own to wage against certain basic problems that threaten our democratic way of life—against poverty, unemployment, insecurity, and other evils. Make no mistake that this too is war, even if we are fortunate enough to be fighting things instead of people, and to be fighting not with murderous weapons but with all the intelligence, vigor, and foresight at our command. This is the type of war of which all of us can be proud, and in which none of us can afford to be neutral.

One of our major battles if being conducted on the farm front, and this is what I propose to tell you about in these talks. The farm is one of our first lines of defense against poverty and insecurity, and we have always regarded it as the foundation of our democracy. It is the home and support of nearly one-fourth of our population, more people than are supported by any other single type of employment. When these farm people are prosperous their purchasing power benefits our manufacturers and businessmen and opens up more employment to our city workers, but when farm income is meager the rest of the people suffer from the farmers' weakness as consumers. Farm families are rearing one in every three of our children, the fresh blood our cities need as well as our farms. And yet our farmers are receiving only about one in every ten dollars of our national income. Think of it, one-fourth of our people. One-third of our infants and school children. One-tenth of our national income.

Yes, indeed; when this administration was first called to the bedside of our ailing farmer, it found him in a serious condition. His wasn't a new sickness, caused like others of that period by the depression. That infection could have been thrown off more easily had not the farmer's once sturdy constitution been shattered by many years of suffering from other disorders. Among these were uneconomic one-crop farming, abuse of the land, soil erosion, the break-down of the farm-credit system, bad tenure systems, shrinking foreign markets, increased farm mechanization, and the squeezing out of the little fellow by huge commercialized farms. For years, the great majority of our farmers have been just getting by in good years, and going into the red in bad years. Even in our so-called "prosperous" 1929, nearly one and three-quarter million American farmers, more than 25 percent of the total, reported a gross income of less than $600—and that sum included all their operating expenses and the food raised for their own table.

So you see, these people were in a chronically depressed economic state before the depression came. One farmer's sole complaint against the depression was that it came, as he said, in the midst of hard times. It was just the last infection which sent the patient's temperature shooting up to the danger point. By 1935, nearly 2,000,000 farm families were on relief, and another million were close to being there.

I wonder if the thought of farmers on relief makes you shudder as it does me. The man who feeds the world not being able to feed himself and his family. It has been said that farmers are the world's best grumblers. Knowing the farmer so well, his rugged independence, his willingness to toil from sunup to sundown, it seems to me that nothing could give him more real cause for grumbling than the thought that he might be forced to depend upon the public bounty. No real farmer has ever wanted relief. The most he has ever demanded of the Government is the chance to help himself. That was what millions of destitute farm families asked of this administration when a collection of circumstances beyond their control had driven them to the end of their resources.

What was to be done? Contracting industry, and technological advances had for the time being, at least, closed our industrial frontier. The other remedy which "doctor" Government has prescribed almost since he had first put up his shingle—we all know that remedy of throwing open more free land in the West for cultivation—could no longer be prescribed, because there wasn't any more fertile free land available. Our frontier is already at the Pacific. Pioneering of a very different sort is necessary today, pioneering in solving our problems, not somewhere else, but right at home.

Therefore, this administration devised a way of helping the incapacitated farmer to get moving behind his plow again. The agency set up by the Congress to direct this pioneering is the Farm Security Administration of the Department of Agriculture. Under emergency conditions or in certain areas stricken by such catastrophes as drought or flood, this agency does administer relief for subsistence, medical aid and the like to rural families in distress, but then only as a preliminary step toward restoring these families to a self-supporting basis through subsequent planning and financial assistance. Farm Security's major program has operated to remove many families from the relief rolls and to keep others off the rolls. Farm Security people use the word rehabilitation to describe this program, but it can be explained in words of fewer syllables. The job is simply to help the farmer get back on his own feet. For the first time in the history of our Government credit is being combined with training and sound farming methods to accomplish this.

The Farm Security Administration's files contain records of hundreds of thousands of families participating in this program. About 4,500 of these are Pennsylvania families whose loans, totaling more than $2,500,000, have stimulated several million more dollars of economic activity in the communities where they are getting a new start. Close to 175 of these families are residents of Fayette or Somerset County.

Some of these farmers had been affected by years of low prices, bad management, inadequate resources, or all three; some have had mortgage headaches ever since the speculative twenties. Some got a bad start in farming, while others were leading farmers, well established, who lost everything in the 1936 flood, or through a series of other misfortunes beyond their control. Some had been forced by the closing down of the mines or local industries to expand and obtain their entire living from farming. But all these F. S. A. borrowers had this in common; all were low-income farmers eager to profit from their past mistakes or inadequacies, and not one of them was able to get from any other source reasonable credit for the seed, feed, livestock, or equipment they needed to continue farming.

For example, what agency would lend to the family living not far from here whose only assets were $200 worth of household goods and a 1922 sedan? Their financial statement, when they first came to the farm-security office for a loan also showed old feed, fuel, and doctor's bills on the other side of the ledger, giving this family with six young children a net worth of minus $205. The Browns—let us call them that because it isn't their name—were chronic movers, and had been on town relief several months. Then Mr. Brown moved back to a farm, and began fighting another losing battle, keeping cows on feed but owning no stock of his own. The F. S. A. supervisor studied his set-up and came to the conclusion that the farmer could support his family on that farm if he could obtain a loan for four horses, some hens, a few pigs, and about $200 worth of machinery.

Like every other family in this program, the Browns accepted the proposition that their loan would be supervised; in fact they welcomed these four typical recommendations of their supervisor. One, that they keep careful records of all income and expenditures. Two, that they raise some heifer calves to build up a herd of their own. Three, that they diversify their operations by selling eggs and hogs as well as milk. Four, that they raise a good kitchen garden and can or store sufficient home-grown foods to provide wholesome meals throughout the winter. "Feed thyself" is a slogan embodied in every F. S. A. borrower's home plan, and by producing nearly $375 worth of their food, including their own milk, butter, bacon, poultry, eggs, vegetables, and fruits, the Browns conserved their cash for operating expenses and loan repayments. Mrs. Brown made the children's clothing from remnants with patterns loaned her by the F. S. A. home supervisor. By careful management, the family in 2 years has brought its net worth up from that $230 in the red to plus $601. They have recently moved to a better farm where they are building up their income from poultry, hogs, and crops. Their 5-year loan is being gradually repaid.

One sidelight on this family: After not attending church for two or three seasons, due to lack of money and suitable clothes, the Browns are now at church every Sunday. They even have an item of $25 in their budget this year for church and charitable contributions.

By giving the Browns constant supervision the F. S. A. fulfilled its double obligation—to the taxpayer, that the loan would be repaid, and to the farmer, that this credit would not put him deeper in debt, but would really help him to independence.

This program has been operating less than 5 years, operating to counteract diseases of long standing that cannot be cured overnight. But a promising beginning has been made. Already 114,000 families have "graduated" from this term of supervised credit to "farm security." They have already paid up their loans in full and need no further pointers in farm management.

That means that their local bankers, dealers, or production credit association, which once considered these families "bad risks," will now give them credit if they need it. That means that in the communities where they were once on relief, or close to being liabilities, they are now taxpayers and consumers. They are succeeding through their own efforts—make no mistake about that, but the Farm Security Administration made it possible for them to get a fresh start.

At the present time the F. S. A. is helping 1 in every 10 American farmers to plan and finance his operations. It is estimated that at least 80 percent of the more than $300,000,000 which this agency has loaned to these farmers will be eventually returned to the Federal Treasury with interest. Thus the annual cost of this program, including all administrative costs and losses, is less than $75 per family. Moreover, besides offering a cheap method of keeping rural families off relief, through its educational aspects, this program is pointing the way toward rebuilding our agriculture on a sounder basis. It is helping us wage successfully our major battle on the farm front.

The Farmers of the Nation Are Cooperating With the Federal Agricultural Program

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

RADIO ADDRESS DELIVERED OVER WMBS BROADCASTING STATION AT UNIONTOWN, PA., APRIL 5, 1940.

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks in the RECORD, pertaining to farmers and farming procedure in the Nation, I include the second of a series of addresses prepared by me and delivered over station WMBS by the Honorable Wooda N. Carr, of Uniontown, Pa.:

All of us are aware, I believe, that when the American farmer has money, the American manufacturer has a market and the American merchant has a customer. We realize that the farm is one of the basic and ultimate sources of our wealth. Therefore, if our country is to prosper, the farmers must have greater purchasing power. The farmers who are so weighted down with debt that they are about to go under must be given the opportunity to liquidate these debts gradually as they can pay them out of current income.

A constructive program has been developed by this administration to solve such problems. The opportunity we are giving our underprivileged farmers to help themselves toward security is not philanthropy; it is businesslike economy. The farmer who is taking part in the rehabilitation program of the Department of Agriculture's Farm Security Administration is not a public charge. He is a taxpayer.

Experience has demonstrated the form this self-help opportunity should take. Plentiful credit alone is no panacea; the twenties taught us that. Neither is technical guidance alone, because good farming costs money. But small loans, backed up by technical guidance in farm and home management, are a totally different matter.

These loans are sometimes compared to the character loans which our country bankers used to make in the days before the protection of depositors required full security for every loan. Like the old-fashioned character loan, the F. S. A. loan, although secured by a chattel mortgage on equipment and crops, has human equity as its most important security. But whereas the character loan was completed with the borrower's promise to pay, the F. S. A. loan has the plus feature necessary in our far more complicated age. This plus is the supervision which guarantees to the lender—the American taxpayer—that the loan will be used to put the farmer on his feet and will eventually be repaid.

Many borrowers owe their progress more to the technical guidance they receive than to the money. This supervision has undoubtedly contributed to the F. S. A. participants' fine record of repayments. As I mentioned in my talk last week, 80 percent of the 800,000 farmers who have received these loans—the worst possible risks by ordinary banking standards—are getting on a self-supporting basis and actually repaying their loans.

A recent survey of some 232,000 families in this program showed that since they obtained their loans they have tripled their subsistence and increased their net worth an average of $265, or 37 percent. This increase is, of course, over and above all their debts, including their obligations to the Government. This figures up to an increased total purchasing power for these families of $62,000,000.

There is another F. S. A. service for farmers which is proving of direct benefit to the taxpayer and businessman as well.

The need for this service is suggested by the rhyme:

"Oh, little debt, don't you cry:
You'll be a crisis by and by."

Those lines may make us smile, but millions of hard-working and highly respected farmers found themselves in just such a crisis several years ago and they found nothing funny about it. After years of inflated land values and high prices they were close to bankruptcy. The debt millstones around their necks threatened to choke their creditors as well and to drag down their entire communities in an economic landslide. Yet the great majority of these farmers had never welched on their debts in the past, and they could in the future be expected to pay out promptly on a debt load in line with their ability to pay under current conditions. A system of adjusting these debts outside of the law courts, and in such a way as to protect both the farm families' means of livelihood and the financial investment of their creditors, was necessary. This service was started in 1933, and when the Farm Security Administration was set up it became an integral part of its program.

Although working without legal authority to adjust debts, the F. S. A. personnel in charge of this work are not finding it difficult to convince farm debtors and their creditors that it is to the interest of both to work out plans for the gradual liquidation of these debts. To date, close to 112,000 farmers and their debtors have adjusted debts totaling $369,000,000. Some 53,000 of these farmers—less than half—needed Farm Security loans after their top-heavy debt structure had been revised. The others were then able to continue farming either without further credit, or they were able to get loans from banks or other commercial credit agencies.

These adjustments have reduced the total debt by about 23 percent throughout the United States. In Pennsylvania, the 1,800 farmers who have had adjustments paid somewhat more than the national average—84 cents on the dollar. However, many of these settlements are simply new arrangements whereby the farmers can repay in full. These may entail an extension of time on notes, or they may protect the principal while reducing the interest rate. Let me emphasize again that creditors are under no obligation to accept the settlement suggested. They do so voluntarily because they realize that, permitting the farmer to go on farming and make payments as his income allows would bring them more in the long run than foreclosure. Some of these adjustments are undertaken at the creditor's own request.

The debt adjustments serve the taxpayer by keeping families on the land and off relief. They have even more directly benefited the taxpayer because, by unsnarling huge amounts of debts and getting money moving again, they have released nearly $5,000,000 for the payment of local taxes which were long in arrears.

I want to tell you about one of our Pennsylvania farmers who was helped by this debt-adjustment service. We shall call him Robert White although that is not his name. He has always farmed in Somerset County. Robert's difficulties remind me of that Biblical allusion to the "Sins of the fathers" because the family's difficulties began about 20 years ago when Robert White's father borrowed a considerable sum of money from his bank for a coal-mining venture on his land. The coal boom collapsed. The farm, heavily mortgaged, was eventually turned over to Robert White, who assumed his father's obligations. Since every other milk check went to pay interest on the note he had signed jointly with his father, things began to go from bad to worse. At Robert White's request about a year ago, the Farm Security Administration entered the picture to help him get straightened out. A meeting of the creditors was called by the supervisor.

The family could not get credit elsewhere. But they would be able to get a decent living from the farm once their debt difficulties were ironed out. Therefore, the Farm Security Administration had also agreed to make them a 5-year loan based on a farm-and-home management plan. This was explained to the assembled creditors. One was a feed dealer who agreed to carry White's bill indefinitely. Unsecured hospital and doctor bills also were extended without difficulty. The creditors agreed to accept a total of $7,100 in full payment for claims amounting to $9,400. And new agreements were signed accordingly.

The F. S. A. loan included a sum sufficient to purchase outright from a local bank the family's mortgaged livestock and equipment so that they could continue their farming. The adjustment also made it possible for this farmer to pay $500 in taxes that were long overdue.

I understand that as a result of debt adjustments in our State, $130,000 in back taxes have gone into our tax coffers. That is one measurable benefit of the many that have been derived through this debt-adjustment service. Most of the other returns cannot be figured in black and white on a ledger sheet, but it is obvious that when a once-insolvent farmer succeeds in making a financial comeback, every fellow taxpayer, every business and professional man in his community is bound to gain thereby in actual dollars and cents.

Many merchants and other businessmen have informed us that they would have been forced to close their doors had it not been for the help which the various Farm Security service had afforded their farmer customers. They report that old debts are being paid up, new purchases are being made, and in general the business and social tone of the entire community has improved from the reestablished morale of those taking part in the program.

Among the borrowers themselves there is a new spirit. They meet in groups with the Farm Security supervisors to talk over their common problems and experiences, and to plan for the new crop year. In Pennsylvania they are organizing garden clubs for the cooperative buying of vegetable seeds. They are banding together in herd-improvement associations and other ventures of mutual benefit. Their children are joining F. S. A. calf clubs, and also taking an increased interest in the activities of the 4-H Clubs. Beginning this winter several youths selected by the supervisors from the families of F. S. A. borrowers are attending special courses arranged at State College in cooperation with the National Youth Administration.

The opportunities this program is giving to farmers without substance, farmers who were once on the relief rolls or so close to it no banker or merchant would give them credit, are the kind which we like to associate with American democracy. And the use which is being made of this credit and guidance in farming proves that the low-income farmers are true sons of their pioneer forefathers, deserving of this chance to help themselves.

We Must Hand to the Next Generation of Farmers and Laborers Greater Opportunities to Make a Living

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

RADIO ADDRESS DELIVERED OVER WMBS BROADCASTING STATION OF UNIONTOWN, PA., APRIL 12, 1940

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the third of a series of addresses prepared by me and delivered over the above-mentioned radio station by the Hon. Wooda N. Carr, of Uniontown, Pa.

Those of us who live in Pennsylvania, generally referred to as an industrial State, but where agriculture is an important industry representing a larger capital investment than mining or the manufactory of primary metals, are vitally interested both in a prosperous agriculture and in a prosperous industry.

There are those who, with great fanfare and bravado, declare: "The American farmer doesn't need help."

The facts cause us to wonder whether such statements are not made through a complete lack of information and understanding; with a mistaken and false appeal to the traditional independence of the American farmer. * * * Generally, too, the facts show, we find these same individuals, on the other hand, busy planning help for other more favored and more prosperous industries.

Let's see whether the farmer needs help.

Since 1932, when a group of farm leaders from every part of the country called on Secretary of Agriculture Henry Wallace, and asked him to assist them in obtaining Federal legislation to help solve their farm problems, the Government has been spending many millions of dollars to assist the American farmers in solving their problems.

We are interested in knowing why and how the money is being spent. I am particularly interested since I have constantly voted in Congress to support those measures designed to aid in solving the problems of agriculture.

Now, before we supply the answers, as to why money is spent to help agriculture, we must know the questions and the problems.

First, how important is agriculture?

Farmers and their families represent one-fourth of the entire population of the Nation. Consider then, the importance of this purchasing power, especially if the farm income can be raised to its proper position in relation to the income enjoyed by other industry.

Its importance as an industry in Pennsylvania is shown by the fact that the capital invested in agriculture in our State is only second to that invested in any other industry. The value of farm propery and equipment in Pennsylvania amounts to more than $1,460,000,000. This value is surpassed only by the value of the investment in steam railways and equipment, which represents an investment of more than $2,155,000,000. The money invested in farm property and equipment exceeds that invested in all the mines and quarries and all the capital invested in producing steel and other primary metals.

Surely, then, when we are concerned about the problems of agriculture, we are concerned about the problems of a vital and important industry within our borders.

There has been considerable discussion and controversy over the farm question since the fall of farm prices and farm income immediately after the first World War. It is generally agreed that the very acute farm problem of surpluses and falling prices was the result of a condition in agriculture brought on by the war. Therefore, that would seem a logical point to start to examine in order to determine the cause and then attempt a solution of the problem.

Before the World War, agricultural emphasis was on production, in most cases with little or no heed being given to possible soil exhaustion. Patriotism and profits blinded us to the need for caution and conservation. And during the World War, the need for excessive amounts of farm products rose. "Food will win the war" was the cry and America was called upon to supply the food. As a result the farmers of this country plowed up 40,000,000 extra acres of grassland in order to supply food and fiber for Europe.

Then the war ended. Europeans went back to farming. As a result many European nations gradually worked toward a self-sustaining basis and the demand for American agricultural products naturally dropped off; but not so with our additional 40,000,000 acres. They stayed in cultivation.

In the early twenties our farm exports required the production from over 80,000,000 acres. In recent years the foreign market has taken products from only 20,000,000 to 50,000,000 acres. The demand in the domestic market, likewise, has fallen off because of the let down in domestic production and the lowering of income of city workers through lack of employment. As a result of all this immense surpluses of all farm products continued to pile up until we had the inevitable price collapse of 1932.

Now, what was the picture of agriculture as a result of this price collapse?

The cash farm income for 1932 had fallen to $4,328,000,000—less than half of what it had been in 1929.

Not only that, but the purchasing power of this small cash income that the farmer received in 1932 was pitifully low, for, while farm prices fell, the price of industrial goods—the things the farmer had to buy—stayed up.

As a practical example of this disparity between farm and industrial prices:

In 1929, it required 101 bushels of potatoes to buy an average double wagon.

In 1932, it required 183 bushels of potatoes to buy the same wagon.

The purchasing power of other farm commodities—wheat, corn, and milk—were likewise, as low.

To continue the picture of agriculture in 1932: Great surpluses of all farm commodities had piled up, and were continuing to pile up. Cheap prices did not help to move them. Cheap farm prices meant low income to farmers; they meant a loss of farm-purchasing power that resulted in industry in the cities falling off. The farmers had no money to buy manufactured goods, and industrial workmen had no money with which to buy farm products, no matter how cheap they were. Farmers continued to grow immense surpluses in order to bring in some cash, using up their soil fertility, and getting practically nothing in return.

The farmers knew the growing of these immense surpluses hurt them and the rest of the country, but they were not organized as was the rest of industry. They had no guide as to their plantings to meet needs, and thus insure them a fair price.

At this point many farm leaders throughout this Nation realized that we were living in a world of changed agriculture, that the demands for agricultural products had changed since 1914. To meet this change from 1914, these leaders realized that it was necessary to change agricultural methods and planning.

Therefore, the group of farm leaders, to whom I referred previously, asked Secretary of Agriculture Wallace to help them obtain Federal legislation to aid in solving their problems.

The Secretary, well aware of this change in agriculture and in sympathy with the ideas and ideals of these farm leaders, worked with them to bring about the present farm program, which has as its objectives the cooperation of farmers in planning their agriculture to fit it to present-day needs.

The agricultural conservation program is a voluntary program designed by the farmers for the farmers and operated by the farmers themselves. It set out to conserve our land resources by stopping the unnecessary depletion of soil fertility through mining of the soil by growing cash crops far beyond the need of consumers. In addition it aims to conserve our soil through the prevention of erosion that has already destroyed 50,000,000 acres of land in America.

The program set out to assure the farmer of a fair income by planning with him to grow commodities in line with needs and the program further aims, with the welfare of the consumer in mind, to assure the consumer an adequate supply of food and fiber at fair prices year in and year out. This it aims to accomplish through the stabilizing influence of the ever-normal granary.

As a result of the agricultural conservation program the farm picture is changing. Six million farmers throughout the Nation and more than 70,000 farmers in Pennsylvania are cooperating to create a new and better agriculture—a planned agriculture, an agriculture that includes in its planning common sense business principles, such as have been used successfully in other industries for many years.

For the expenditure of the millions of dollars that the taxpayers, through a vote of Congress have been devoting to the upbuilding of agriculture during this period, millions of acres of fertile topsoil have been reclaimed and renewed through the planting of more than 5,000 acres of forest trees; through the seeding of more than 15,000 acres of new pasture mixtures; through the establishment of more than 365,000 acres of new seedings of alfalfa—and the story of the development of this

conserving crop in Pennsylvania under the farm program will, I believe, take its place among the most important things in the agricultural history of the State. More than 1,750,000 acres of new seedings of clover and timothy were established and more than 185,000 acres of green manure crops were grown to put fertility and humus into the soil.

In addition to all this, another important chapter has been written in Pennsylvania agriculture with the application of more than 2,000,000 tons of lime and 175,000 tons of superphosphate. At the present time under the agricultural conservation program more than three times as many tons of lime are used by the farmers in the program as were used by all farmers in the State before the program. Several million acres of neglected soil have been brought to a better state of fertility.

Farmers have now learned to plan their agriculture more in line with their needs, and as a result the immense price-depressing surpluses are gradually being eliminated. The ever-normal granary is working to assure the consumer of an adequate supply of food and fiber each year at fair prices.

At the present time, in the case of wheat, we have, according to Administrator Evans, of the Triple A, about what we ought to have in the ever-normal granary—a supply of about 300,000,000 bushels over and above domestic demand. This reserve is the consumers' guaranty that the United States is going to have ample wheat under all conditions. Right now drought is seriously threatening the winter crop, but we know that even if drought comes up to the worst expectations the people of the United States are going to have plenty of wheat next year.

The ever-normal granary is out of the theory stage. It is working. A similar situation exists with corn. The granary is carrying over a half billion bushels of corn, more than half of which is safely stored right out in the granary, where it can be used in event of a short crop such as we had in 1934 and 1936.

On the other hand, in addition to all its value in the way of soil conservation, restored fertility, stabilizing production, and assurance of abundance and fair prices to consumers, the assistance that has been given to farmers through the various farm programs has almost doubled that pitifully low income of 1932 and farm income is making headway to its rightful goal. This goal is in turn reflected in purchasing power and prosperity to industry.

In fact, the money diverted to agriculture inures to the welfare of the entire Nation, and I believe the facts show it to be actually an investment to guard agriculture so that agriculture can in turn guard the Nation.

Pennsylvania Farmers Enthusiastically Support and Cooperate With the Federal Agricultural Program When Given an Opportunity Through State Cooperation

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

RADIO ADDRESS DELIVERED OVER WMBS BROADCASTING STATION OF UNIONTOWN, PA., APRIL 9, 1940

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the fourth of a series of addresses prepared by me and delivered over the above-mentioned radio station by the Honorable Wooda N. Carr, of Uniontown, Pa.:

We pointed out to you previously that the World War made a drastic change in agriculture. The demands of that war had speeded production until we had 40,000,000 acres of new land under cultivation, and then the war ended. And with the end of the war came an end to our export markets, which cut down the demand for these tremendous crops that we had been producing. We no longer owed money abroad, payments of which we could make with agricultural commodities. Instead, foreign nations owed us. Likewise, foreign nations became more self-sustaining, further cutting down our export market.

In addition to this, tractors and automobiles replaced horses and mules. Thus the market for products from about one-tenth of our harvested acres was lost.

Likewise, efficiency in farming became the watchword—new machinery came into use, higher-yielding crops were developed, and scientific management speeded production. Agriculture was becoming streamlined.

Then the depression set in soon after the World War. Lack of income forced many farmers to use all available land to grow cash crops in order to make both ends meet.

Then it was realized that it was no longer possible to continue producing agricultural products in a haphazard manner. There were no more new lands to exploit, and practically a hundred million acres of cropland had been ruined, with damage to millions of additional acres. A farmer's market was no longer a local market. His market was now a world market. His price was now conditioned on world and national supply.

It was realized that it was necessary to introduce commonsense business principles into agriculture—business principles similar to what had been used by industry for years. This was necessary if the American farm was to be maintained, if the farmer was to receive an adequate income, and if consumers were to be protected.

At stake was the welfare of 7,000,000 farm families, constituting 25 percent of the population of the United States. This 25 percent of the population is educating 31 percent of the children of school age. At the same time this 25 percent of the population has been receiving only 11 percent of the national income. This is somewhat higher than the 7 percent which they had been receiving in 1932, but farmers are still at a severe handicap in comparison with nonfarm groups.

The decision of the farmers to introduce these sound business principles into farming resulted in the present farm program. It meant the goal of conserving our land resources and fertility, stabilizing income and production, and assuring an abundance of food and fiber to all the Nation.

How well has it worked? Certainly the restoring of millions of acres of soil fertility through the sound farming practices as outlined in my recent talk is evidence that we have made at least a start toward recapturing our depleted cropland.

The 6,000,000 farmers who are cooperating in the agricultural conservation program throughout the Nation have come to realize that it was poor business to continue to grow food and fiber far in excess of the actual needs. They decided to do what industry has done for years. For years industry has applied sound business principles to production. When industry determines that a certain number of units of a product are necessary to supply a given market, industry manufactures that amount. Industry does not intentionally produce great surpluses; it produces in accord with its need, thus maintaining a more stable income and a fair price.

Farmers began to question: "If this is a necessary and sound thing in one business, why not in another—in agriculture?" So the farmers began to plant their production in line with needs. This is the part of the farm program in which the farmers voluntarily produce within allotments for the various crops. They are advised as to what acreage is needed to produce sufficiently for all purposes and then each farmer is allotted his fair share of that total.

Now, how has this worked?

I give the word of Administrator Evans, who has declared that "the farm program in full operation in 1939 has been a decided success. The gains that farmers have made with it have demonstrated that this is the greatest farm program ever offered farmers anywhere."

Have the farmers cooperated?

Here are the facts:

Under the 1939 program, in order to produce an abundance, but not burdensome surpluses, farmers were advised to plant within their allotments and grow from ninety-one to ninety-three million acres of corn. They actually harvested ninety-one million.

For cotton they were advised to grow from twenty-five to twenty-seven million acres. They actually harvested 25,000,000.

For potatoes they were advised to grow 3,100,000 acres. That identical number of acres of potatoes was harvested.

For wheat they were advised to grow from fifty-five to sixty million acres. There were actually harvested 55,000,000 acres of wheat.

This demonstrates to you in a practical way, I believe, the sincere cooperation of the 6,000,000 farmers of the Nation.

Under the 1939 farm program, conservation payments, plus parity payments, have given the cooperating wheat farmer about 28 cents a bushel on his normal yield on his allotted acres. This in addition to his warehouse price has assured the cooperating farmers a fair price for their wheat. As a matter of fact, all the parts of the farm program, in full operation, have held a relatively fair price for wheat in spite of the accumulated surplus, which it has been the aim of the program to reduce.

This adjusting of production to demand through acreage allotments or quotas is in direct line with the responsibility that the farmers participating in the Triple A program have assumed. This is the responsibility to supply an adequate supply of food and fiber for the consumer.

This responsibility has been discharged by the carrying of reserve supplies in the ever-normal granary—another sound business principle—a bank account of grain against a rainy day. The ever-normal granary affects both Pennsylvania farmers and consumers.

As I reported previously—in the case of wheat, we have in the ever-normal granary about 300,000,000 bushels over and above domestic requirements. This reserve is the consumers' guarantee that the United States is going to have ample wheat under all conditions; this in the face of drought which is seriously threatening the winter-wheat crop.

The half billion bushels of corn now carried as a reserve under the ever-normal granary is insurance against a short crop, such as we had in 1934 and 1936.

These reserves in the ever-normal granary prevent ruinously low prices to producers in years of plenty, because the surplus can be

taken from the market and stored in the granary. On the other hand, it protects consumers against excessively high prices in years of short crops, for in that case a reserve supply can be drawn from the granary and placed in trade channels.

Pennsylvania farmers have an interest in both sides of the question; they do not wish to see fellow farmers ruined by low prices and themselves eventually sharing in any such ruin. Again Pennsylvania farmers are interested because when it comes to feed grains for dairy and poultry feeds, the Pennsylvania farmer is really a consumer.

As Administrator Evans declares: "The ever-normal granary is out of the theory stage. It is working."

One of the greatest tributes to the soundness of this program that the farmers have adopted to stabilize production is the fact that only recently our own Pennsylvania State government has applied this same Triple A theory of stabilizing production to the anthracite-mining industry.

The Governor of our Keystone State has set up a committee similar to your farmers' committees to determine how much anthracite coal is needed to supply the demand, and then equitably, just as you farmers do in the case of grain, this committee will assign production allotments to the various coal producers.

And again a tribute to the sound theory of your farm program, this new emergency mining committee, which makes coal allotments, operates under no statute making mandatory on the part of the coal producers to mine within these allotments. Instead, it is planned to have it operate on the same theory followed by your farm program—on voluntary compliance on the part of the producers in an effort to stabilize their industry, its production, and prices.

The fact that you farmers have taken your allotment program and your ever-normal granary and made it operate in a practical way for the benefit of the general welfare of the entire country, and the fact that your plan is being adopted by the great multibillion-dollar anthracite-mining industry is additional justification for the expenditure of great sums of money to rehabilitate the great industry of agriculture.

President's Reorganization Plan Will Not Disturb Independent Status of Civil Aeronautics Authority

---

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

Mr. COCHRAN. Mr. Speaker, much has been said and printed concerning the plan No. IV submitted by the President, especially that part which transfers the Civil Aeronautics Authority to the Department of Commerce. The claim has been made that the independent status of the Authority has been destroyed. Anyone who took the trouble to carefully analyze the plan could not come to this conclusion. This statement is verified by the Director of the Budget, Hon. Harold D. Smith. His views are concurred in by the Attorney General of the United States.

Mr. Speaker, as part of my remarks, I include the letter written by the Director of the Budget. The letter follows, as does the letter of the Attorney General:

MAY 2, 1940.

The honorable the SECRETARY OF COMMERCE.

MY DEAR MR. SECRETARY: If Congress takes no adverse action on Reorganization Plans III and IV, the effectuation of these plans will require that the Director of the Bureau of the Budget, subject to the approval of the President, determine the necessary transfers of funds. In view of the limited time available and because of certain questions arising out of the complexity of the Civil Aeronautics Act, the Bureau of the Budget has consulted with the Department of Justice in order to establish a sound basis for the distribution of the available appropriation balances of the Civil Aeronautics Authority. The Attorney General has agreed to the following interpretive statements concerning the civil-aeronautics provisions of the two plans:

1. Plan III centralizes in the Administrator, who is hereafter to be known as the Administrator of Civil Aeronautics, those functions that are essentially of an administrative character as distinguished from those relating to economic regulation; the prescription of safety standards, rules, and regulations; and the suspension and revocation of certificates after hearing. Thus, in addition to the functions now vested in the Administrator by the Civil Aeronautics Act of 1938, he will be responsible for the administration of the Civilian Pilot Training Act of 1939; the issuance and amendment of airman, aircraft, and air-carrier certificates; emergency suspension of certificates; the registration of aircraft, including the recordation of conveyances; the enforcement of safety rules, regulations, and standards; and the control of notification as to hazards to air commerce.

2. Plan III divests the Authority of all control it now has over the personnel and expenditures of the Administrator.

3. Plan III leaves the Authority with all the functions described in title 4 (air carrier economic regulations) of the Civil Aeronautics Act; such of those functions described in title 5 (nationality and ownership of aircraft) and title 6 (civil aeronautics safety regulation) as relate to the prescription of safety standards, rules, and regulations, and the suspension and revocation of certificates after hearings; and the functions vested in the Authority by section 205 (a) and title 10. In connection with the suspension and revocation of certificates, it should be noted that a waiver of a hearing would not operate to deprive the Authority of its jurisdiction.

4. In performing air-safety work, the Administrator will be bound by the rules of the Authority and the extent of his administrative discretion will be entirely dependent upon the rules so prescribed.

5. While the Administrator may submit recommendations to the Board as to safety rules, regulations, and standards, it is anticipated that the Board will have adequate technical facilities for arriving at its own independent determinations as to the soundness of such recommendations, and for developing such material on its own initiative.

6. In order to eliminate the existing confusion in terminology, plan IV provides that the present five-member Authority shall hereafter be known as the Civil Aeronautics Board, and employs the term Civil Aeronautics Authority merely as an over-all designation for the Administrator of Civil Aeronautics and the Civil Aeronautics Board.

7. Plan IV transfers to the Civil Aeronautics Board all functions now performed by the Air Safety Board.

8. In performing its functions, including those mentioned above, the Civil Aeronautics Board will be entirely independent of and in no way subject to control by the Department of Commerce or the Secretary thereof. This independence is specifically referred to in two separate paragraphs of plan IV.

9. The requirement in plan IV that the Board report to Congress and the President through the Secretary of Commerce provides for the routing of such documents through the Secretary so that he may have an opportunity to examine them and append such comments as he may wish to make. This provision does not imply that the Secretary may in any way delete or revise the reports and recommendations of the Civil Aeronautics Board.

10. In providing that the routine management functions of the Board shall be performed under the direction and supervision of the Secretary of Commerce through such facilities as he shall designate or establish, plan IV is designed to prevent the uneconomical duplication of such facilities by the Board, the personnel of which will be relatively small. This provision is not intended to divest the Board of its authority to appoint and control all of its personnel, to authorize expenditures, or to determine and support the Budget estimates that are submitted to the Bureau of the Budget. As stated in the President's message, its purpose is to make available to the Board, in the interest of efficiency, departmental services in connection with these functions.

11. The Board is left with full authority to make its contacts with other agencies of the Federal Government and with State and foreign governments. It is reasonable to assume that the Board will make the necessary arrangements with the Secretary of Commerce so as to coordinate such contacts with those made by the Administrator and thereby minimize duplication of effort.

12. Those functions of the secretary of the Authority which relate to the maintenance of dockets and the keeping of minutes cannot be regarded as routine management functions and will, therefore, remain directly under the Board.

13. Plan IV obviously contemplates that the Board will have its own legal and other technical facilities. Any other interpretation would be in direct conflict with the independence which is to surround the Board's determinations.

14. In connection with the investigation of air accidents, the Board, pursuant to the statutory prescription of the duties of the present Air Safety Board, will furnish the Administrator of Civil Aeronautics with copies of any reports or recommendations that relate to the functions vested in the Administrator.

15. The compromise of civil penalties for violations of titles 5 and 6 becomes a function of the Administrator since it must be regarded as an integral part of the responsibility for the enforcement of these provisions. On the other hand, the Board will have the power to make compromises involving violations of title 7.

16. As contrasted with the Civil Aeronautics Board, the Administrator will be under the direction and supervision of the Secretary of Commerce.

I feel certain that this interpretation is in full accord with what was envisaged by the President in submitting the reorganization proposals to Congress. Identical copies of this letter are being sent to the Chairman of the Civil Aeronautics Authority and the Administrator.

Yours sincerely,

HAROLD D. SMITH, *Director.*

MAY 2, 1940.

Hon. HAROLD D. SMITH,
Director of the Bureau of the Budget, Washington, D. C.

MY DEAR MR. DIRECTOR: I have examined your letter of this date to the Secretary of Commerce in which you set forth your interpretation of the provisions of Reorganization Plans III and IV relating to the Civil Aeronautics Authority, and I agree with the conclusions reached by you.

Respectfully,

ROBERT H. JACKSON,
Attorney General.

Mr. Speaker, the division of administrative management of the Bureau of the Budget at the request of the President made an exhaustive study of the Civil Aeronautics Authority. Below will be found the report of the study.

SUMMARY OF CIVIL AERONAUTICS STUDY

This memorandum summarizes the major findings of the study made by the division of administrative management relative to the Civil Aeronautics Authority. This study, which began on December 4, 1939, was undertaken at the request of the President, who was anxious to ascertain the basic causes of certain administrative problems that had manifested themselves in connection with the operations of the Authority. As the study progressed, it became evident that there were several structural inadequacies in the framework established by the Civil Aeronautics Act of 1938 which could be remedied only by legislative action or through the exercise of the authority conferred by the Reorganization Act of 1939. The following discussion is arranged according to the three major changes recommended for inclusion in reorganization plans.

REDEFINITION OF RESPONSIBILITIES BETWEEN AUTHORITY AND ADMINISTRATOR

The Civil Aeronautics Act of 1938 established an Authority consisting of three agencies that are basically autonomous: A five-member board known as the Civil Aeronautics Authority, an Administrator, and the Air Safety Board consisting of three members. In defining the relative jurisdiction of the Authority and the Administrator, the act very definitely attempted to draw a sharp line of demarcation between administrative functions and those of a quasi-legislative and quasi-judicial character. However, certain inconsistencies and ambiguities were inadvertently included within the act.

More specifically, the following are some of the statutory flaws that have tended to impede the administration of the functions vested in the Administrator and the Authority. In the first place, the act is confusing because of the fact that the term "Civil Aeronautics Authority" is employed in two conflicting senses. (In order to avoid confusion, this memorandum uses the term "Authority" to designate the five-member Board, unless otherwise specifically indicated.) In certain paragraphs it means the five-member Board, while in others it denotes the over-all agency, consisting of this Board, the Administrator, and the Air Safety Board. Of much more significance is the fact that the act falls far short of delineating functions according to the theory upon which this legislation is predicated. Furthermore, the law creates an overlapping of administrative responsibilities that cannot be reconciled with any sound separation of rule-making and adjudicative functions from those of an administrative nature.

Thus, the Authority is made responsible, not only for the prescription of safety rules, regulations, and standards but also for their actual enforcement. It could hardly be contended that inspectional and related enforcement activities properly come within the purview of an agency designed to function solely in a quasi-legislative and quasi-judicial capacity. The confusion is accentuated by provisions requiring that the Authority approve purchases and expenditures of the Administrator, that the Administrator consult with the Authority as to plans regarding air-navigation facilities, and that the Administrator report to Congress through the Authority. In view of this confusion, it is not surprising that the Civilian Pilot Training Act of 1939 completely disregards the attempted segregation of administrative functions and designates the Authority as the agency for carrying out this extensive training program. This activity manifestly has no aspects that even remotely impinge on the rule-making and adjudicative processes.

Fortunately the Authority has recognized the administrative weaknesses inherent in these statutory provisions and has taken full advantage of the authority vested in it to assign certain of its functions to the Administrator. In fact, it has found it necessary to circumvent the prohibition against the delegation of any safety work to the Administrator and has accomplished this by setting up the separate position of supervisor and having the Administrator also serve in that capacity. While such an arrangement may be satisfactory as a temporary palliative, it is entirely too tenuous to be continued for any extended period of time. Indicative of the absence of any substantial foundation for a truly sound organization is the fact that during its existence of less than 2 years the Authority has adopted at least five different organization plans.

It is essential to reallocate the functions of the Administrator and Authority so as to carry out the original intent of Congress, eliminate organizational defects which have tremendous potentialities for friction and inefficiency, and afford a more stable basis for organizational planning than the existing understanding between the Authority and the Administrator. It is recommended that plan III transfer to the Administrator the following functions now vested in the Civil Aeronautics Authority:

(a) Administration of the Civilian Pilot Training Act of 1939.

(b) Aircraft registration and safety regulation as described in titles V and VI of the Civil Aeronautics Act, except the functions of prescribing safety standards, rules and regulations, and of suspending and revoking certificates after hearing.

(c) The authority to require notices as to hazards to air commerce; and

(d) The appointment of officers and employees and the authorization of such expenditures and travel as may be necessary for the performance of all functions vested in the Administrator.

Such a redefinition of functions would eliminate jurisdictional questions, would make the Authority and Administrator truly independent of each other, and would establish the Authority as a real rule-making and adjudicative agency entirely free of functions extraneous to and in conflict with these two responsibilities.

REORGANIZATION OF AIR SAFETY FUNCTIONS

In establishing the Air Safety Board, the Civil Aeronautics Act recognized the desirability of providing for the independent investigation of air accidents so that findings would not be colored by attempts to cover up administrative shortcomings. As established by the act, the Air Safety Board merely investigates accidents and formulates recommendations, but can take no positive remedial steps.

This arrangement is not conducive to the ready translation of accident investigation findings into real action. On the contrary, such an agency over a period of years might well become extremely captious in its attitude and be much more interested in developing an extensive paper record of recommendations than in actual promotion of safety. It has already been demonstrated that such a device has definite potentialities for friction and leaves the investigative agency without an adequate incentive for the speedy investigation of accidents and the development of recommendations. Such an agency would have a much more challenging task if it were required to go beyond the mere investigation and take positive steps toward preventing the recurrence of such accidents. The investigative agency could make a much more substantial contribution to the advancement of air safety if it were implemented with authority to prescribe and revise safety rules and with the power to suspend and rescind certificates issued to carriers and aircraft personnel. Armed with these additional prerogatives, the agency could constantly improve the air-safety rules on the basis of its investigations and could take necessary disciplinary action, thus making its recommendations much more than mere expressions as to what should be done.

If the Civil Aeronautics Authority is established as a purely rule-making and adjudicative agency, and if its independent status is maintained, it seems entirely logical and highly desirable that the Authority and the Air Safety Board be combined. This would place real power at the disposal of the investigative agency and at the same time keep the investigations completely separate from the Administrator, who would be responsible for the enforcement of air-safety regulations. As it is pointed out in the next section, such a rule-making, adjudicative, and investigative agency can be placed within the framework of one of the executive departments simply to make available the usual departmental service facilities without in any way impairing the independent exercise of the agency's substantive functions. It is recommended that plan IV embody a provision consolidating the functions of the Air Safety Board with those of the Civil Aeronautics Authority and changing the title of the latter to the Civil Aeronautics Board. Such a change should facilitate still further progress in the advancement of air safety, which is the basic factor in the development of air transportation.

TRANSFER TO DEPARTMENT OF COMMERCE

The existing arrangement which places promotion and regulation of aviation entirely outside of the regular executive establishment can be looked upon only as a temporary device to be used during a transitional period. The defense and commercial implications of civil aviation make it imperative that the President be currently apprised of any significant developments and that he at all times be in a position to integrate this function with related governmental activities. The need for establishing and maintaining such a relationship may be better appreciated if it is realized that the estimated Federal expenditures which will be incurred during the current fiscal year for civil aviation total more than $108,000,000, which total is made up of the following items:

1940 estimated expenditures

Civil Aeronautics Authority	[1] $25,518,000
W. P. A. and P. W. A. funds for airport construction; and for C. A. A. emergency relief administrative expenses	43,901,992
Total C. A. A., W. P. A., and P. W. A.	69,419,922
Domestic air-mail deficiency	8,260,000
Foreign air-mail deficiency	6,293,000

[1] Includes $4,000,000, civilian pilot training program.

1940 estimated expenditures—Continued	
Weather Bureau: airway weather service and research	$3,469,000
Total net expenditures[2]	87,441,992
Air-mail expenditures offset by revenues	20,600,000
Total gross expenditures	108,041,992

[2] Excludes National Advisory Committee for Aeronautics and Army, Navy, and Coast Guard.

This vast sum definitely negates the thought that in dealing with civil aviation the Federal Government is concerned with a purely private endeavor. On the contrary, air commerce is vitally dependent upon the tremendous financial assistance given by the Federal Government. If the Federal Government's financial participation is to reflect a proper balance between the public and private interests in air commerce facilities, it is essential that the program be continually reviewed on behalf of the President by a Cabinet officer, who would have a broader perspective than can be expected of officers who are focusing their entire attention on the one industry. Such an official could also serve as the instrumentality for expediting the flow of aviation data to the President, whose contacts with the Authority are now necessarily of an intermittent character.

The survey findings point to the desirability of transferring the aviation function to the Department of Commerce, while at the same time keeping the rule-making, adjudicative, and investigative work of the Civil Aeronautics Board entirely free of any control by the Secretary of Commerce. In fact, the Board would be placed within the Department merely so that the Secretary of Commerce might serve as a contact point between the Board and the Administrator of Civil Aeronautics and in order that the Department can act as a service agency in handling the accounting, budgeting, personnel, and other routine management functions of the Board. It would be distinctly advantageous for the Department to function in this capacity for the Board since the latter will be a relatively small establishment in terms of personnel and could not economically afford to maintain its own facilities for handling those administrative details that in no way involve policy or other determinations.

The Administrator of Civil Aeronautics, whose functions are entirely administrative in character, should be subject to direction and supervision by the Secretary of Commerce. The latter will thus be in a position to inform and advise the President as to the establishment and maintenance of airway facilities and the enforcement of safety regulations. Furthermore, the transfer of the Weather Bureau to the Department of Commerce, which has been recommended as the result of a separate study, will facilitate the integration of the work of that Bureau with the airway facility activity. It need hardly be pointed out that the services rendered by the Weather Bureau are indispensable to airway operations. It is to be further noted that the Coast and Geodetic Survey of the Department of Commerce makes a vital contribution to the field of aeronautics through the preparation of aeronautical charts.

On the other hand, the Secretary of Commerce will have no jurisdiction over air-carrier economic regulation, the prescription of air safety rules, regulations, and standards, the investigation of air accidents, and the suspension or revocation of certificates after hearing. This division of responsibilities will surround the civil aviation program with adequate checks and balances and at the same time eliminate certain features which serve no purpose other than to inject confusion into the administration of this highly important function of the Government.

In order to effectuate these recommendations, Reorganization Plan IV should place the Administrator of Civil Aeronautics under the direction and supervision of the Secretary of Commerce and should provide that the Administrator and the Civil Aeronautics Board shall constitute the Civil Aeronautics Authority within the Department of Commerce. This change in terminology would obviate the existing confusion as to the meaning of the term "Authority," since hereafter that would refer solely to the over-all function. It is further proposed that the plan maintain the complete independence of the Civil Aeronautics Board in the performance of its substantive functions and that, insofar as the Board is concerned, the Department of Commerce be restricted to furnishing routine management services. Finally, it is contemplated that the Civil Aeronautics Board report to Congress and the President through the Secretary of Commerce.

DESIRABILITY OF EFFECTING CHANGE AT THIS TIME

In view of the fact that the Civil Aeronautics Authority was established as recently as 1938, the question might be raised as to the desirability of effecting a change at this time, particularly since such a fine safety record has been achieved by the air lines. These facts lead one to the exclusion of theoretical considerations in formulating a plan of action. However, even after this is done, one is faced with the very realistic finding that the present organization structure of the Civil Aeronautics Authority has been productive of confusion and friction which have manifested themselves in problems presented to the President. This condition, although not readily discernible to an outsider, threatens to become increasingly serious.

The suggestions submitted herein do not represent a reversal of the Civil Aeronautics Act of 1938 but, on the contrary, are designed to correct certain deficiencies revealed by actual experience, and thus carry out more adequately the basic administrative concept upon which the act is premised. In other words, this will provide a much more efficient organization for the administration of all existing functions. The danger of deferring any revision of the Civil Aeronautics Authority reorganization is well demonstrated by the experience with the Civilian Pilot Training Act to which reference has already been made. This bears out the conclusion that the effects of these statutory inconsistencies and ambiguities will definitely cumulate rather than abate. Finally, the existing international situation makes it of all the more moment that everything be done to facilitate Presidential leadership in the administrative aspects of the civil-aviation program. To regard civil aviation as something entirely apart from the aviation facilities of the Army and Navy would completely overlook the realities of the situation.

The South's True Interest in Sugar Legislation

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

Mr. MANSFIELD. Mr. Speaker, at the present time Congress is deciding what the sugar policy of the United States is to be after December 31, 1940, when the present Sugar Act of 1937 expires. The Southern States have a big stake in this decision. In the first place, any legislation which cripples the South's sugar-refining industry should be defeated. Secondly, any sugar legislation should be opposed which would decrease the export markets for the products of Southern farms and factories. Thirdly, the Southern consumer does not want to pay higher prices for sugar. The Cummings bill, H. R. 8746, proposed by the beet-sugar industry, would do all three of these things. It should be defeated.

THE SOUTH'S CANE SUGAR REFINING INDUSTRY—WHERE IT IS AND WHAT IT DOES

Many southerners know that the production of sugarcane and its milling is an old agricultural pursuit in southwest Louisiana, but the importance of refining, which exceeds sugarcane growing in value, has long been neglected in discussions of the economic life of the South. It is to be stressed that the southern farmers producing sugarcane for sirup have no interest as producers in the sugar problem. The Sugar Act of 1937 and the discussion herein have no reference to sugarcane for sirup. The South is a leader in refining. It does about one-third of all the cane-sugar refining of the United States although it does only one-sixth of all manufacturing.

The 10 plants which refine raw cane sugar are located on or near the leading southern seaports; for example, on the Chesapeake Bay at Baltimore, Md.; on the Savannah River at Port Wentworth, Savannah, Ga.; on the Mississippi at or near New Orleans and at Sugar Land, Tex., a few miles from 4 ports of Texas.

The South's refining industry is not to be confused with the production of raw cane sugar on the plantations of Louisiana and Florida. Refining is the industrial aspect of the sugar business, not the agricultural. Court decisions and Federal legislation, such as the Wage and Hour Act have designated refining as an industrial process, whereas the manufacture of raw sugar is a plantation process. And finally, raw cane-sugar producers receive generous cash subsidies from the Federal Treasury, whereas the Southern refining industry is not subsidized in any manner.

The finished product of the southern cane sugar refining industry, valued at $125,000,000 per year, is sold mostly in the South and in the Midwest. The raw material which is used in this southern industry is crude, brownish cane sugar, produced largely on the plantations of the tropical islands such as Cuba, Puerto Rico, and the Philippines. About 1,100,000 tons of this tropical sugar is unloaded at southern refining ports each year from some 450 vessels. The yearly

value of this imported raw sugar runs around $50,000,000, and, measured either by worth or by tonnage, is one of the leading products entering southern ports. About 400,000 tons of raw sugar used in southern refining, approximately one-third of the total, is purchased from the cane plantations in Louisiana and Florida, which ship their raw sugar to the refineries by truck and rail. Raw sugar costs the southern refineries about $100,000,000 a year, including duties and excise taxes.

WHAT REFINING MEANS TO THE SOUTH

The refining of raw cane sugar in the South represents an investment in docks, warehouses, refining-plant and housing facilities of around $60,000,000. One of the characteristics of this industry, unlike the work on the raw-sugar plantations, is that it gives all-year-round employment. In the process of refining the raw sugar a pay roll of about $6,000,000 is created at wage rates higher than those commonly paid in the South. Another $8,000,000 a year is expended for fuel, packages, chemicals, and other supplies mostly produced in the South. It is estimated, based upon 1937 data of the United States Bureau of the Census, that the purchasing power created by the operation of the southern refining industry is about $25,000,000 annually exclusive of raw sugar.

It is not only the labor and industry directly connected with the refining plants which share in this purchasing power. Southern cotton farmers find an outlet for about $1,000,000 of their farm products in the cotton bags used as refining containers. Shipowners, seamen, stevedores, warehousemen, and other persons connected with the maritime life of the South receive the benefits of the shipping and unloading of some 450 vessels of raw sugar per year. The railroads, barges, and trucking concerns of the South benefit from the freight bill which arises from the movement of some 2,000,000 tons of products in and out of the refineries each year.

SOUTHERN REFINING MORE IMPORTANT THAN FARM PRODUCTION OF SUGARCANE

Southern refining, an all-year-round industrial activity, adds about $25,000,000 a year to southern purchasing power. This is in substantial excess of the farm value of the sugarcane produced in the South, which in 1938 was reported by the United States Department of Agriculture—Agricultural Statistics, 1939, page 134—to be $18,100,000. The yearly value of southern refining is about the same as the market value of southern raw sugar—approximately $25,000,000.

Taken from the point of view of the small man, southern refining is more important than cane production. At least $5,000,000 a year goes to the ordinary southern refinery worker. On the other hand, the total farm income of all the cane produced on the family-sized southern farm was only about $3,000,000 in 1938. According to the United States Department of Agriculture—Agricultural Statistics, 1939, page 134—the farm value of the Louisiana cane crop in 1938 was a little over $15,000,000, and of this income, the family-sized farmer—planting up to 100 acres—got only about 20 percent, or $3,000,000—an analysis of sugarcane farms participating in 1934 and 1935 sugarcane program, January 1937.

Certainly any sugar policy supported by the South in 1940 should give as much consideration to the position of southern refining as to the position of southern cane growing. This is true not only because of relative size but because refining, unlike cane production, receives no subsidies from southern consumers, nor does it prejudice the position of the sale of southern products in her export markets.

THE IMPORTS OF RAW SUGAR BY SOUTHERN REFINERS HELP SUPPORT THE EXPORT TRADE OF THE SOUTH

Southern refiners pay about $50,000,000 a year for the raw sugar which they purchase from Cuba, Puerto Rico, the Philippines, and other sugar islands. This enormous sum creates a purchasing power from which these tropical islands, in turn, can buy southern farm and factory products. The list of southern exports, amounting in 1937 to almost $800,000,000 is well known—cotton, cotton textiles, cottonseed oil, gasoline, tobacco, cigarettes, lumber, naval stores, wheat flour, and rice. With the decline that has taken place in foreign trade since 1929, the market for these southern commodities has seriously shrunk. Prices have been depressed, even though the volume of output has been severely curtailed by Government action, especially in cotton, rice, naval stores, and petroleum, and, for a time, tobacco.

There are 2,287,000 farms in the South, most of which are dependent upon export markets; there are approximately 9,200 sugarcane growers.

It is a commonplace that there is little chance for a permanent improvement of the southern cotton, tobacco, or rice farmer unless he has some opportunity to regain his lost export markets. Southern exports will grow with the growth of imports, and in no other way. Now, the southern refiner of raw cane sugar is the channel through which an important tropical product flows into this country. Shipowners, seamen, stevedores, and warehousemen in every port of the South will feel the blow, as well as the farm and factory hands, in every State below Delaware. Certainly it is in the interest of the South to maintain a reasonable flow of overseas raw sugar into the United States. Southern refining, therefore, creates southern exports.

The Secretary of State lists this as one of the main tenets in his trade policy to recover lost export markets.

SOUTHERN CONSUMERS HAVE AN INTEREST IN MAINTAINING REASONABLE SUGAR PRICES

In the 15 Southern States, including the District of Columbia, there are some 41,000,000 consumers of sugar. These persons consume on the average about 64 pounds of refined sugar a year which, at current retail price levels, amounts to about $145,000,000. This enormous expense shows that refined sugar is an important item in the food budget of the South. Now, it is obvious that any Federal sugar legislation which tends to boost the prices of sugar above current levels is directly detrimental to the interests of southern consumers. Indirectly, it is detrimental to southern industry and agriculture because it raises the cost of living, and hence the cost of factory and farm production.

With the exception of two counties in Florida, and several parishes in southwestern Louisiana, there is no production of sugar beets or sugarcane in the South; only one farm in about 230 produces sugarcane for sugar. But of the $145,000,000 a year that the southern consumers pay for their sugar, at least $60,000,000 goes to maintain the volume of the producers of sugar beets and sugarcane through an elaborate subsidy system established under the Sugar Acts of 1934 and 1937. At this figure, the cost to the South of this sugar protectionism is over twice the value of all the raw sugar produced in the South, and 20 times as great as the farm income of the sugarcane producers of ordinary size.

On the basis of these facts, it is certain that Congress, in 1940, should not adopt any sugar legislation which would further increase the burden of sugar protectionism now carried by the southern people.

WHAT SUGAR POLICY CAN THE SOUTHERN STATES FAIRLY DEMAND IN 1940?

Before discussing what sugar policy might well be demanded by the South, it is necessary to review briefly the South's stake in sugar. In the first place, nearly one-third of the refining of raw cane sugar done in the United States is done in the South. This industry is a growing one and under no circumstances should its volume of business be reduced by any sugar-quota legislation in 1940 or thereafter. In this regard, the quotas on tropical refined sugar from overseas plantations should be restricted to the figure set by Congress in September 1937. In the second place, the importation of raw cane sugar from overseas islands by the southern refiners helps to bolster up an export trade which is absolutely essential for the preservation of the farms and factories in the South. Certainly, no Federal legislation should be passed which would further reduce the present quotas of the overseas imports of raw sugar.

Thirdly, southern consumers pay some $60,000,000 a year for direct and indirect subsidies to sugar-beet and sugarcane growers. This burden should not be increased by further raising prices. And lastly, although it is of little importance to southern agriculture generally, the fact must be recognized that the producers of sugarcane and raw sugar

in Louisiana need some kind of Federal subsidy in order to maintain their output.

The South's interests would at least be protected if the Barry bill (H. R. 9044) were enacted in 1940. This bill would not raise the price of sugar; it would not increase the production of subsidized beet and sugarcane farmers; it would not kill the South's overseas trade and it would not be harmful to the South's cane-sugar refining industry. It would merely continue the present Sugar Act in the form in which it was originally written in September 1937. This means that it would continue to give a generous protection, through cash subsidies and a guaranteed market, to the sugarcane producers of Louisiana and Florida.

Under any circumstances the southern people should study the sugar problem in 1940 because it is bound to come before Congress in future years. The East and West for many years have had preferences over the South in many commodities; in sugar, the South should fight for an equitable and fair deal. Such a fair deal involves:

First. No objection to a preferential duty to Cuba, which the State Department obviously desires.

Second. No objection to benefit payments to growers of beets in the western area of the United States, and growers of cane in Louisiana, Florida, Hawaii, and Puerto Rico, even though it seems illogical both to impose a high duty on foreign sugar and to provide benefit payments to domestic growers.

Third. No objection to the quota system, which, however, should be fixed and not left to the discretion of any department.

Fourth. But our entire country should contend, in all fairness, and based upon any sound system of economy, that, having accorded all these advantages to the cane-growing areas and beet-growing areas—which in themselves restrict the operation of cane refineries—the same legislation that gives the grants and immunities to offshore areas should not accord these offshore areas the additional privilege of refining sugar when it thereby jeopardizes the employment in continental United States of over 16,000 well-paid laborers and trained employees, endangers the investment of capital made in good faith, and uneconomically substitutes similar new investment in tropical areas, transferring to the relief rolls thousands now gainfully employed.

SUBSIDIZED TROPICAL PLANTATIONS SHOULD NOT BE PERMITTED IN 1940 TO EXPAND THEIR SUGAR REFINING AT THE EXPENSE OF HOME INDUSTRY

The home refining of cane sugar may be wiped out by adverse sugar legislation pending before Congress. To prevent this, a 200-year-old industry, and its thousands of well-paid American workmen, solicit your support.

The Sugar Act of 1937 expires at the end of this year, and Congress is now drafting sugar legislation. Congress since 1934 has put limits on the expansion of tropical refining; it should continue those limits in 1940.

There are three good reasons why this should be done:

First. The Puerto Rican refiners, as cane growers, are heavily subsidized by the Federal Treasury, having received some $2,000,000 in cash since 1934.

Second. The Puerto Rican refiners employ plantation labor which is paid a little over a dollar a day. Puerto Rico has even made attempts to be exempted from the Wage and Hour Act. Unionization, as found in the home refineries, is not found on the tropical plantations.

Third. The United States has adequate facilities to refine all the cane sugar, at fair prices demanded by American consumers. It is not necessary to duplicate refining facilities in Puerto Rico when there are idle men and idle plants here at home.

No sugar legislation should be passed in 1940 unless it puts a limit on the amount of tropical refining.

The National Association of Retail Grocers, the American Federation of Labor, the Brotherhood of Railroad Trainmen, and chambers of commerce in Massachusetts, New York, New Jersey, Pennsylvania, Maryland, Georgia, and Texas, as well as hundreds of other national and local organizations, representing all walks of American life, have gone on record as favoring the maintenance in 1940 of the home cane sugar refining industry.

The Walter-Logan Administrative Law Bill

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

RADIO ADDRESS BY HON. FRANCIS E. WALTER, OF PENNSYLVANIA

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over the radio on April 18:

The United States House of Representatives today passed by a vote of 282 to 97 and sent to the Senate a bill that has received the attention of lawyers, educators, laboring, farm, and business groups for many years. This is the so-called Walter-Logan administrative law bill. The Senate, I am reliably informed, will take up this important legislation in the near future, and if the vote in the House of Representatives is any indication of the sentiment of the people I predict that the bill will be passed by that august body by a correspondingly large majority. While this bill has been described as a new "bill of rights" for the American people, it is neither New Deal nor anti New Deal. It is pro-American, and its passage by a nearly 3-to-1 majority should put on notice another branch of our Government that the representatives of the people will no longer tolerate the maladministration of laws that mean so much to America. With almost the entire world in flames tonight, it is indeed gratifying to me to know that our people are determined to keep separate the three branches of our Government.

This bill is intended to regulate the regulators and govern the governors—in short, to compel officers and employees of the United States to comply with and observe the law as enacted by the elected representatives of the people in Congress. Let no one tell you that the Walter-Logan bill either expands or restricts the rights which the American people have under the Constitution, or the terms of any valid existing statute. It does not. This bill neither expands nor restricts the obligations imposed on the American people under any existing statute. This bill neither expands nor restricts the benefits which may be conferred on any class of American people under existing law. In sober fact this bill neither expands nor restricts the powers or duties of the officers and employees, approximately a million strong, in the executive branch of the United States Government—officers and employees charged, under their oath, with the administration of a vast number of statutes and an even greater number of Executive orders and regulations.

However, and here is the rub so far as the opponents of the bill are concerned, this Walter-Logan bill clearly intends, first, that the Government officers and employees shall not exercise any jurisdiction or authority which is not conferred upon them by statutes enacted by the Congress; second, that these same officers and employees must exercise in a fair and just manner such jurisdiction and authority as is conferred upon them by law; and third, that these same officers and employees must decide in accordance with the terms of the applicable statutes and in accordance with the facts all controversies concerning the rights, obligations, benefits, or privileges of the American people which may be conferred or imposed by law. If this Walter-Logan bill is passed by the Senate and becomes law, it no longer will be possible for the bureaucrats to refuse to give a full and fair hearing to an individual seeking such rights as may be conferred upon him by law or to an individual who claims some privilege or benefit under some law. All of the evidence presented at the hearing must go into the written record and a written decision must be made and filed. Both the record and the decision will be available for review by the board or commission and by the head of the department or other agency concerned. But one record will be made and that record can be used through all further stages of the matter in the agency itself or in the reviewing courts. Thus expense and time will be saved to the individual and to the American taxpayers in the handling and adjudication of claims and controversies with the officers and employees of the United States Government. Let no one suggest to you that this bill will either delay the operations of the Government agencies or that it will add to the present tremendous expense

of such operations. On the contrary, as I have stated, the bill will expedite very greatly the hearing and final determination of controversies with the United States and the bill will greatly decrease the expense of doing so. Also, let no one tell you that this bill attempts to apply the rules of court procedure—either in civil or criminal cases—to the hearing and determination of controversies with the United States. The bill does not even mention such rules of court procedure.

A few simple and obviously fair rules are stated in the bill which both officers and employees of the United States and individuals must observe, but these are rules as old as the Government itself and absolutely essential to any fair and just determination of disputes between individuals or between individuals and officers and employees of the United States. After the record has been made, as I have stated, and after the administrative agency has determined the controversy, the bill provides that the aggrieved individual may secure a judicial review in the United States circuit court of appeals for the circuit in which he resides or maintains his principal place of business. There are 11 such courts. Thus it will be unnecessary for the individual to incur the expense and delay of coming to the District of Columbia to have his controversy judicially determined. In addition, the reviewing court is given the same jurisdiction over both the law and the facts of administrative decisions as such courts now have over judgments of trial courts which hear cases without a jury. We believe that the decision of an administrative officer should have no greater sanctity than does a decision of a trial judge. Under the terms of the Walter-Logan bill, it no longer will be possible for administrative officers to issue rules and regulations without public notice and public hearing if such hearings should be requested. Also, instead of waiting for years to judicially test any rule or regulation—as is now the situation—the bill provides that any such rule may be tested in the United States Court of Appeals for the District of Columbia on a petition filed in that court within 30 days from the date the rule is published for a declaratory judgment. In broad outline, my friends, this is the substance of the Walter-Logan bill to regulate the regulators; to insure fair and just decisions by administrative officers; to improve the caliber of such administrative officers; to expedite and decrease the expenses of settling disputes with such officers; and to insure a rule of law instead of men. It would seem that no one could possibly disagree with these objectives of the bill.

But, my friends, a small minority has disagreed. True it is that this minority does not publicly state that the members thereof are in disagreement with the objectives. They profess to disagree with the details of the bill to accomplish such objectives. Read the debates in the House of Representatives for the past 4 days and see for yourselves what this minority has stated as the reasons for the disagreement. Do not take my word for it or the word of any other man. Study the matter for yourselves. After all, this is your Government—not the Government of the politicians of any political party—and you have obligations as American citizens to see to it that fair and just laws are placed on the statute books. Possibly it is too much to expect that everyone would agree with either the basic principles or with the detailed provisions contained in the Walter-Logan bill for the attainment of these principles. It will be remembered that after 3 long months of hard work in Philadelphia in 1787, there were some members of the Constitutional Convention so dissatisfied with the principles and procedures provided in the Constitution that these members absolutely refused to sign the Constitution. Yet that Constitution was adopted after prolonged debate in the several States ratifying conventions and for 150 years it has provided the most just and fair government that has ever appeared on the face of this globe. Truly has it been said of the Constitution that it is the most wonderful work that has ever been struck off by the brains and purposes of men. Today self-proclaimed liberals are opposing the Walter-Logan bill. They want more power in the hands of Government officers and employees. They want more governmental power concentrated in Washington. They are opposed to public notices and public hearings before rules and regulations are issued. They are opposed to judicial review of rules and regulations until months or years later, when by some chance that rule or regulation may be brought before some court in the merits of some case and after there has been a long course of practice under such rules and regulations. They are opposed to having the rules and regulations judicially determined in an early and expeditious manner before all of the harm has been done by an invalid and illegal regulation.

They are really opposed to a full and fair hearing before the administrative agencies, and they are opposed to a really effective judicial review of the decisions of such agencies. In fact, my friends, many of those opposed to the Walter-Logan bill are the bureaucrats who would subordinate both the Congress and the courts to their purposes. The man or woman who is truly liberal knows that there can be no liberty, no protection of religion, no freedom of the press, no protection of life, and no protection of property without a rule of law which can be, and is enforced by a group of men outside of the political control of the ruling powers, and which group of men have the support of an enlightened and militant public opinion. Laws which an uncontrolled bureaucracy, which is but another term for a dictator, may liberally administer today may be illiberally administered tomorrow. Harsh, unfair, illegal, and biased administration of any law will sooner or later lead to the repeal of that law. I claim to be a liberal. I believe with all my heart that many needed and just laws have been placed on the statute books during the administration of President Roosevelt—laws which I assisted in my humble capacity in placing on the statute books—which I want to see continued in operation for the benefit of our common country. As sure as the sun rises in the East and sets in the West, these laws will not be continued unless we can secure a just, fair, and legal administration of such laws. Without such an administration of the laws, the people will rise up in their might and destroy the laws just as they destroyed the prohibition law and just as they destroyed the laws under which slavery existed. Yea, just as they destroyed the star chamber many hundreds of years ago in Stuart, England, and just as they swept the forces of King George and Lord North from the American soil for reasons so nobly stated in the Declaration of Independence. No bill could have been endorsed and approved by the American Federation of Labor, the American Bar Association, the National Association of Women Lawyers, the Master Plumbers of America, and the American Coalition of Patriotic Societies, the Farmers National Grange, and by numerous other business, legal, and patriotic organizations which is contrary to the rights of all Americans—rich and poor, strong and weak.

The Wage-Hour Battle

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

EDITORIAL FROM THE ST. LOUIS POST-DISPATCH OF MAY 2, 1940

Mr. ANDERSON of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a brief editorial from the St. Louis Post-Dispatch of May 2, 1940, calling attention to the necessity for proper and restrained amendment of the Fair Labor Standards Act.

The editorial follows:

[From the St. Louis Post-Dispatch of May 2, 1940]

THE WAGE-HOUR BATTLE

Is $12.60 a week too much for a family?

A lot of other questions are being asked in the debate in and out of Congress on the wage-hour law amendments, but this is the one which stands above all the rest.

Is $12.60—30 cents an hour for a workweek of 42 hours—is that more than a family should have to live on, to educate its children, to function as a useful, self-respecting unit in America?

The answer, of course, is that $12.60 a week—$655.20 a year if 52 full weeks are worked—is not too much. The answer is that this guaranty of the Fair Labor Standards Act of 1938 provides no more than a subsistence level of living; that something is seriously wrong with the business or industry which cannot meet so modest a wage scale.

Yet we have just been treated to the spectacle of a hard fight in the House to exempt a million or more workers now under the jurisdiction of the law. These chiefly are the canners and other processors of agricultural products whom Congressman BARDEN of North Carolina sought to deprive of the act's protection.

The attempt has failed temporarily at least, but the battle in the House is not over. Supporters of the emasculatory amendments may now try to load up desirable amendments with changes so unacceptable that administration supporters will have to oppose them, just as the administration group stacked Mr. BARDEN'S own amendments against him.

The plea that the canner of peas is an agricultural worker and so should be exempt from the law is specious. The canner may work with an agricultural product, but he works with it under industrial conditions. He does for peas in a cannery what the textile worker does in a mill for cotton—prepares a raw product for the market. He is no less in industry because he is handling a vegetable from the fields instead of a mineral from beneath the ground.

The truth of the matter is that the processors, including the canners of seafood products from the Gulf and Southern Coastal States, constitute one of the groups of workers most in need of the protection of the Wage and Hour Act. The scandalously low pay and long hours which have been their lot were an important factor in the passage of the law. If there has been any mistake, it is not

that the law was drawn to include them, it is that the administration of the law has been slow actually to extend to many of them the protection which they legally enjoy.

This does not mean that adjustments in the Wage and Hour Act are not needed. Some alterations are now an obvious need. The law levies an unfair penalty when it requires employers who pay their employees well over the minimum scale, perhaps as much as several times the minimum, to compensate at overtime rates for all hours worked in excess of the legal maximum. This is not only unfair to employers who pay well, but places many employees in an unfortunate position. They must either turn in memorandums for extra pay which they would prefer not to ask for or blink the time beyond the maximum which they may work in a week.

The need for correction at this point is generally recognized. One of the Barden amendments would have exempted from the maximum-hours provisions all so-called "white collar" workers earning more than $150 a month. Chairman NORTON'S own amendments, which may be described as the administration changes, would exempt all workers earning more than $200 a month from the hours limit. In any case, persons earning approximately $2,000 a year are not those for whom Federal wage-hour legislation was intended. They may not be in the upper brackets, but they are not the bottom-rung workers in whose behalf the law was passed.

The Wage and Hour Act more than any other single piece of legislation embodies the humanitarian philosophy of the New Deal. It needs to be improved and strengthened, not weakened or emasculated. Experience charts the course for its friends in Congress. If they amend it in the light of reason, its enemies will not be able to wreck it.

Organizing for Victory

EXTENSION OF REMARKS

OF

HON. CAROLINE O'DAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

ADDRESS BY HON. JAMES A. FARLEY

Mrs. O'DAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following address of the Honorable James A. Farley, Postmaster General of the United States, to the National Institute of Government, Thursday, May 2, at Riverside Stadium, Washington, D. C.:

This meeting is unique in party annals and I trust its significance will not be lost upon those who like to peer into the future for political signs and portents.

When Mrs. McAllister and her associates first planned this gathering, they expressed the hope that perhaps 500 party workers might find it possible to lay aside their daily cares long enough to visit Washington for a preview of the approaching campaign. Now, you are assembled here, more than 4,000 strong, a loyal and enthusiastic army of crusaders, eager and anxious to carry on the good fight for the principles and policies to which we all adhere.

Naturally we welcome you here and we welcome this sign of your enthusiasm and devotion to the Democratic cause. You have responded in a way that far exceeds our expectations. There is no more effective force in politics than a united and determined body of women, and again I say, that those who are curious about the election should find here a reliable omen of what the women of this Nation propose to do on the 5th of next November.

In a sense this meeting is an experiment. I doubt if any party has ever attempted a gathering of this size in advance of the national convention. The reason for it is founded in the Democratic principle that in organization lies the key to political success. A commanding officer, no matter how clever or brilliant, is unable to rise above the merit of his army. A campaign that extends over 48 States must have something more than a small general staff at headquarters to be effective. The outcome in the long run will depend upon the workers in the field, those volunteer soldiers who give without stint of their time and efforts because conviction has rallied them to the party standard.

We are glad of this opportunity to become acquainted with you personally and to thank you for your past contributions to party success. The facilities of the national committee are at your disposal. You have an excellent chance to see for yourselves what Government is doing to advance the general welfare and to correct the false impressions about Federal activities which have been scattered about by those who are careless of facts or who dislike to face the truth. I am sure that you will leave here with a new outlook on Uncle Sam's activities and a new arsenal of facts with which to confound the political enemy.

The historian who tries to interpret this period in national life without mentioning the political influence of women will have a vital lapse in his story. The old-fashioned notion that your sex merely reflects the views of the stalwart male members of the family has been smashed beyond repair by the political developments of the past decade. I am not referring to the fact that women are using the ballot box in such healthy numbers. I am stating the honest conviction that the emphasis on the improvement of social conditions has resulted largely from your insistence and your wise use of the franchise. We are debating issues today that only a few short years ago aroused nothing but indifference and prejudiced opposition. It is no longer considered political folly to bring unwholesome social and economic conditions into the sunlight and to insist that something be done to remedy them.

The Roosevelt administration has devoted a good part of its energies to the solution of those problems in which women are primarily interested. These include the elimination of city slums, the construction of good schools, the adoption of minimum-wage standards, an attack on the causes of crime, and a measure of financial security for those who spend the best years of their lives toiling in industry or agriculture.

Great reforms are not won in a hurry. They are the fruit of years of patient and persistent effort by hardy pioneers who keep at the task until they awaken the social conscience of the public. There has been a notable series of gains under the present administration, in the winning of which women have played an outstanding part. I feel certain that you are determined to retain the good results of these victories and that you will not tolerate any backward step. Your presence here in such large numbers is proof enough of that fact.

The Republican Party has just paid us a great compliment. For a decade the party has lagged behind the procession in considering these vital economic and social questions. Showing an appalling lack of vision and foresight, the G. O. P. leaders in Congress had little or nothing to contribute to the splendid program which was enacted under the wise leadership of President Roosevelt. Now, being unable to work out a program of their own, they propose to appropriate what they like to call "the best features" of the Democratic program. We propose to keep that program for ourselves. To borrow a phrase from the current war dispatches, we are deeply suspicious of Trojan horses and, I may add, the American public is likewise suspicious. The Republican effort to slip into power by donning the cloak of liberalism, a garment which has always been ill-fitting for the G. O. P., is too apparent to fool anyone.

The Democratic Party has won a remarkable series of victories in recent elections as a result of which it is now the majority party of the country. In winning these victories, we had most of the feminine votes on our side and, frankly, we want the same vote again this year. The great task of holding the lines rests squarely upon your shoulders. The fate of the election may depend upon your efforts, and I feel confident that you will not shirk or falter. The primary purpose of these meetings, the one objective that overshadows all others, is to organize for victory in next fall's election. The Nation will be better under a continuance of Democratic rule and the outcome is up to us.

The Democratic Party is proud of the fact that it was the first to give equal representation to women in its political councils as a matter of right and justice and also as a matter of hard, common sense. From the time the suffrage amendment was adopted the party has been sensible enough to realize the arrival of a new force in politics and to make its plans accordingly. It has not been a one-way or a one-sided arrangement. The party is grateful for your support and in return a sincere effort has been made by those in authority to give the members of your sex the kind of recognition which they deserve. It is not by accident that the Roosevelt administration has appointed more women to outstanding positions in public life than any of its predecessors and that these have been something more than routine appointments of secondary importance.

I always hesitate to mention names because it is so easy to overlook individuals who are entitled to mention. You are all familiar with the fact that Miss Perkins is the first woman ever to serve as a member of a President's Cabinet, and you know the splendid record she has made in office. You know about the appointment of Mrs. Owen and Mrs. Harriman to the diplomatic corps. You know about the work of Mrs. Ross as Director of the Mint, and of Mrs. Roche as an Assistant Secretary of the Treasury.

Far more important than the fact that these individuals were appointed to high places is the part they have played in doing away with old prejudices and mistaken notions about women in public office. In the old days it was a common saying that women were poor executives and administrators, that they allowed emotion to sway their judgment. It was said that a woman could never become a first-ranking diplomat because international politics was too complex of feminine understanding. It was said

that a woman could be given authority only over members of her own sex. The list of old-time prejudices could be extended indefinitely but they are too familiar to need repetition. The interesting thing is that they have all been exploded through the inspiring records of the women whom President Roosevelt has appointed. In the future, when a Federal position of trust and responsibility is to be filled, the appointment may be made on merit alone without regard to the wrong-headed views of past generations.

I have talked only about women in executive or diplomatic positions. The field of legislation requires talents of a different nature, yet the story is just the same. As Members of Congress, Senator CARAWAY, and the three Democratic Members of the House, Mrs. NORTON, Mrs. O'DAY, and Mrs. MCMILLAN, have demonstrated a quick and sure grasp of legislative problems and parliamentary procedure. They have advanced steadily to positions of eminence, not because of male chivalry but because of their own talent and worth.

A review of this nature, however brief, would be incomplete without a reference to the individual who has done so much to fix the new status of women in the realm of social and political thought. I refer, of course, to our distinguished and gracious first lady, Mrs. Franklin D. Roosevelt.

I have talked only about those splendid representatives of your sex who have attained to places of high public trust. Please do not take the mistaken view that the Democratic Party has rewarded its feminine adherents with a few positions that attract public attention, as a kind of window-dressing, and then ignored them in the broader field of Government activity. They have been given deserved recognition all along the line.

A mass of statistics is always boring, and for that reason I have not attempted to gather figures for the entire Government service. Yet I should like to point out that in the Post Office Department in the last 7 years the percentage of women appointed as postmasters has been more than 27 percent of the total number of appointments. These are not confined to the smaller offices. On the contrary, the list includes such large offices as Los Angeles, Little Rock, Fall River, Portland, Maine; Oakland, Calif.; Ann Arbor, Mich.; Minot, N. Dak.; Galveston, Tex.; Camden, N. J.; and Long Beach N. Y. Experience has taught me that comparisons between groups are highly dangerous, so I shall content myself by saying that these appointees have lived up to the highest traditions of the service in every way.

In approaching the coming election we must be sure to remember that the advantage lies with the Democratic Party. Mental attitude is always an important factor in a contest of any type, and our attitude should be one of honest pride in a job well done and not one of apology or misgiving. Given the facts, the American public will arrive at the right decision in the vast majority of cases, and this should be the main source of our strength.

The Democratic Party, in the past 7 years, has faced the responsibility of restoring a badly shattered economy system, while at the same time keeping the peace in one of the most crucial and dangerous periods in world history. The highest order of statesmanship has been necessary to preserve and promote the national welfare, and the Roosevelt administration has met the test in magnificent fashion. While popular government has suffered tragic defeats in other sections of the globe, it has been given new meaning and fresh validity here in the United States. The energies of the Nation have been devoted to the preservation and betterment of human life and not to its destruction.

Within the short time allotted to me there is no opportunity to review at length the campaign issues. That task will be done in adequate fashion before the votes are cast next November. But I wish to emphasize one point. The course of events has done more than demonstrate that the domestic and foreign policies of the administration are sound and essentially right; it has demonstrated that any other program of policies would have menaced the national well-being. To the wise foresight of this administration we owe the fact that not a single American life has been lost in belligerent waters. To the wise foresight of this administration we owe the fact that the United States has emerged from the deepest industrial depression in history with its human resources and natural resources in better shape than when the depression set in. This is the record on which we propose to wage the Presidential campaign.

The advantage always lies with the opposition in the period of uncertainty which precedes the national conventions and the selection of standard bearers. Criticism and faultfinding come easy to those who have no record to defend and no policy to advocate. The atmosphere will undergo a wholesome change when the critics face the responsibility of telling the electorate how they propose to conduct the Nation's Government. The opposition learned that painful fact in 1936.

During your visit the directors of the women's division will acquaint you with the six-point program and other practical measures which they have worked out for campaign activity. I know that you will give them your fullest cooperation and, with your loyal support, I look forward confidently to another party victory in November.

Farmers Have Not Been Discriminated Against in Trade Agreements

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

Mr. HARRINGTON. Mr. Speaker, one of the current methods used in trying to arouse farm opposition to trade agreements is the suggestion that the principal concessions made in these agreements have been those made on agricultural products. This is another effort to set off the interests of one group against another. In the trade agreements there is no pitting of the interests of agriculture against industry as is suggested. Both economic groups receive equal treatment in the negotiation of agreements.

It has long been recognized that farmers generally are in a disadvantageous position as far as protective tariffs are concerned. The tariffs on many agricultural products have not been effective in increasing or maintaining prices as they have done for many manufactured products. People with low incomes, the average worker or farmer, spend nearly all of the income on the immediate necessities of life and a small difference in the prices of those necessities, made possible by tariffs, may be a matter of considerable importance to farmers.

No proper formula for calculating the total cost of tariff to any particular group has ever been worked out. We do know, however, that consumers generally are the forgotten men when United States tariffs are being made. Farmers are becoming better organized and thus placing themselves in a more effective position as far as tariff legislation is concerned. But in the past, when they have bargained with industry in tariff matters, they have usually lost out in the horse trading. That cannot be said with respect to the trade-agreements program. As a matter of record, we have granted many more reductions in duty on nonagricultural products than on agricultural items. Reductions have been made in about 850 nonagricultural items in comparison with about 170 agricultural products. The imports of the 850 nonagricultural items were valued at $334,698,000 and the imports of the 170 agricultural items at $231,510,000 in 1937, when many of the nonagricultural concessions, particularly those in the British agreement, were not in effect. Also included in the imports of agricultural items is Cuban sugar valued at more than $100,000,000. The great majority of American farmers are interested in an enlarged supply of sugar so that they may obtain it at prices more nearly in keeping with those of the farm products which American farmers sell.

Included in the 170 reductions in duty on so-called agricultural products are orchid plants, cut flowers, coconuts in the shell, rutabaga seed, venison, limes, orange marmalades, celery, curry and curry powder, and other items of equally small importance to American farmers as general producers. It is true that the reductions in a number of the nonagricultural items have been small, and as in the case of the reductions in duty on practically every agricultural product of this country, have had no effect whatever on domestic producers. On the other hand many reductions in both groups were lowered by the full 50 percent permitted by the Trade Agreement Act.

An example of an ineffective reduction in duty on a manufactured product was that made on high-priced sewing machines. It is generally recognized that on products of which

we are large exporters tariffs are not effective and so consumers can derive no benefits when tariffs on such products are lowered. The effect in such instances is the same as lowering our duties on distinctly export agricultural products such as apples, on which the rate of duty is not effective. That is, the tariff has no influence in increasing the price of apples.

I have prepared some illustrations of reductions in duty on manufactured products made through trade agreements for the benefit of farmers as consumers. Now, it is realized that the farmer in Iowa, or some other State, may not buy the exact imported product represented in this tabulation, but if, as is frequently the case, he purchases the less-expensive domestic item, more than likely the tariff nevertheless takes toll from his pocketbook. The extent to which the tariff is effective in these illustrations varies from commodity to commodity. Making these reductions in trade agreements is as far as the trade-agreements program can assist American farmers. These illustrations, taken largely from the British agreement, are, however, a complete refutation of the contention of those who have sought to turn the farmers against the trade-agreements program by suggesting that nothing has been done to the industrial-tariff structure. Furthermore, the recent hearings on the extension of the Trade Agreements Act indicate that manufacturing organizations were fully represented in opposition to trade agreements. The American Tariff League and the National Association of Manufacturers acted as the spearhead of this opposition. In the attached illustrations I want to call particular attention to the items from schedule 3 of the Tariff Act of 1930, "Metals and manufactures."

The Bonneville Project

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

Mr. ANGELL. Mr. Speaker, the Bonneville power administration has agreed to deliver a second block of 32,500 kilowatts of power to the Aluminum Co. of America, which now is building its first western reduction plant, to use Bonneville power.

Attracted to the Pacific coast by the large quantities of low-cost energy becoming available on the Columbia River as the result of a Federal construction program at Bonneville and Grand Coulee, the company signed a 20-year contract last December for an initial 32,500 kilowatts of power.

The new contract runs for 5 years and increases the company's total demand for Bonneville power to 65,000 kilowatts. It permits the firm to double capacity of the Vancouver plant, where aluminum will be produced from alumina processed at East St. Louis, Ill., and Mobile, Ala.

The company advised Paul J. Raver, Bonneville power administrator, that it would immediately begin construction of the additional unit made possible by the augumented power supply.

In requesting the additional power, Aluminum Co. officials told Administrator Raver that in view of the unusual demand for aluminum resulting from the situation in Europe and the preparedness program of the United States, they felt the company should proceed immediately with expansion of the Vancouver plant.

Date for delivery of power under the second contract is dependent upon completion of generating units 3 and 4, now being installed at the Bonneville powerhouse by the United States Corps of Army Engineers. These two generators, each having a capacity of 54,000 kilowatts, are expected to be ready early in 1941. The first contract calls for delivery of power upon completion of the company's first Vancouver unit, expected scmetime next fall. The present installed capacity of the Bonneville powerhouse is 86,400 kilowatts—two generators; the ultimate—10 generators with total capacity of 518,400 kilowatts.

The power is being sold to the Aluminum Co. on the basis of $17.50 a year for each kilowatt, the standard wholesale power rate at all points on the Bonneville system outside of a 15-mile zone around the dam, where the rate is $14.50.

The new contract brought the total contractual obligations of the Bonneville Power Administration for all types of agencies—public and private utilities and industries—to 97,610 kilowatts and placed the administration in the position of selling power ahead of the actual installation of generating capacity.

In other words—

Raver said—

the actual demand for power is preceding our ability to supply it, and it is necessaray to schedule deliveries to correspond with the completion of our generating facilities.

Execution of the contract in no way affects the priorities given public bodies and cooperatives by the Bonneville Act.

In negotiating all contracts—

He explained—

due consideration is given to the protection of the interests of public agencies, which, under the law, have a preference to Bonneville power.

Units 1 and 2 of the Bonneville project, completed and in operation, produce 86,000 kilowatts. Units 3 and 4, which are under construction, and for which appropriations have been made, will be completed on or about April 1941 and will produce 108,000 kilowatts. Units 5 and 6 are also under construction, and, with the $800,000 provided by the House, require no additional appropriation, and will be completed early in the summer or late spring of 1942. They will produce 108,000 kilowatts. The additional units, 7, 8, 9, and 10, have not been started, and are not authorized. The additional expenditures provided by the action of the Senate, as set forth in Senate report No. 1397, are strictly limited to speeding up the construction of units 3 and 4, and to building the foundations for units 7, 8, 9, and 10.

The Portland Oregon Journal, commenting editorially on the demand for Bonneville power, says:

BONNEVILLE PREDICAMENT GOOD NEWS

For the time being, the Bonneville administration is in the happy predicament of having more power sold than it can deliver. The second Aluminum Co. contract brings total contract commitments to industries, cities, public utilities departments, and private companies to 97,610 kilowatts. Capacity of the two generators now in service is 86,400.

That doesn't mean that there is a shortage of Bonneville power today, or that there will be one in 1941 when over 300,000 kilowatts will be available. The Aluminum Co., Sierra Iron, and several P. U. D. contracts are not yet effective.

But it does mean that Bonneville power sales are keeping pace with installation of additional generators by the army engineers. And it makes welcome the news that the Senate has approved an additional appropriation of $2,600,000 for powerhouse construction.

The new appropriation, added to the $800,000 allowed by the House, will provide $3,400,000 for powerhouse work. That will permit speed-up of work on four additional generators so they will be ready about next January 1, when the first 32,500-kilowatt Aluminum Co. contract becomes effective.

Bonneville has passed out of the dream stage and has become a going concern. It is selling power in increasing quantities for domestic, commercial, and industrial use. It seems not only possible, but certain, that Bonneville power will find a market as rapidly as generators and lines are completed, until its entire 10-unit 518,400-kilowatt capacity is put to beneficial use.

Senate Report No. 1397 on the War Department civil functions appropriation bill for the fiscal year 1941, shows an increase of $2,600,000 over the House Bonneville item. This $2,600,000 represents two additional expenditures, namely, $100,000 for accelerating the completion date of units 3 and 4 and $2,500,000 for starting the foundations for units 7, 8, 9, and 10. The justifications for these amounts were placed in the record of the hearings before the Senate subcommittee on appropriations by Senators McNARY and HOLMAN, and are found on pages 169 and 213 of the Senate hearings on H. R. 8668.

Unfortunately, the status and necessity for the work was not included in the hearings before the House subcommittee. The brief testimony before the House subcommittee shown on page 125 of the House hearings was based on a misconception, which was partly corrected during the House debate on the bill, and is shown on page 2178 of the CONGRESSIONAL RECORD of February 29, 1940.

In January 1940, the Secretary of the Interior wrote to the Secretary of War indicating the necessity for this work. This letter appears in the House appropriation hearings on the Interior bill, page 223, but was not placed before the Budget or the House war committee. In this letter the Secretary of the Interior pointed out that by 1942 there would be a demand for primary power amounting to 231,920 kilowatts, which is 37,520 kilowatts in excess of the dependable power which will be available at Bonneville at that time.

The details making up this estimate appear on page 173 of the Senate hearings.

On page 174 of the Senate Hearings the prime power sales progress schedule is given, and this exhibit may be summarized as follows:

Item	Number of applications	Kilowatts
Applications received	121	657,614
Applications ready for connection	40	92,971
Feasibility reports completed	25	128,621
Contracts submitted and executed	23	82,210
Contracts executed	15	65,110

Since the preparation of the exhibit, Administrator Raver testified on pages 213, and the following of the Senate hearings that the Aluminum Co. was negotiating for an additional contract of 32,500 kilowatts, which has now been consummated, and that another large industrial organization has asked for a reservation of 50,000 kilowatts.

Under the present schedule of construction, units 3 and 4 will not be completed until April 1941. To take care of contract commitments, contracts in sight, as well as a definite power shortage in the Portland area, there will not be sufficient capacity in operation the late winter of this year to handle the load. The additional revenue accruing to the Government from accelerating completion date of units 3 and 4 will be approximately $500,000 and the cost, $100,000, leaving a net advantage to the Government of about $400,000.

Units 3, 4, 5, and 6 are now under construction and funds appropriated and available do not make any provision for any work on the remaining units. The construction schedule of the Army Engineers was designed to effect the most economical plan. Discontinuing the schedule at this time will result in a construction loss to the Federal Government, for this reason alone, of $200,000 to $500,000.

In addition to the loss occasioned by interrupting the schedule there will be a very substantial loss from inability to contract the capacity of units 5 and 6. If the foundations for units 7 to 10, inclusive, are put in at a later date, it will be necessary to construct a foundation cofferdam which will block off the water from units 5 and 6. These two units will have a capacity of 108,000 kilowatts, which if sold on a firm basis under existing rates will mean $1,890,000 in revenue per year. The total amount of loss to the Government cannot be estimated exactly, as the same will depend on the length of time units 5 and 6 will be tied up, and this in turn will depend on the appropriation schedule. Industry is moving into the Bonneville area. This is not industry transplanted from other sections, but is either new projects or curtailment in Canadian development. This movement should not be stopped by the impression that Congress is curtailing the program. If this movement is slowed down, the loss to the Federal Government could amount to at least $10,000,000.

The object of the $2,500,000 appropriation is to cover so much of the foundation work for units 7 to 10 as will obviate the necessity for cofferdams blocking the output of units 5 and 6.

The report of the Chief of Engineers for 1939 shows that $7,089,200 could be profitably expended during the fiscal year 1941 at Bonneville, and of this amount $4,000,000 would be necessary to bring the substructure of the last four units to a point where there will be no impairment in the output of units 5 and 6. The $2,500,000 is that minimum part of the full amount that the War Department advises can be profitably expended in the fiscal year 1941. This item will avoid tying the hands of the Bonneville administrator on power sales. No industry seeking a location in the Bonneville area would make an investment unless there is a guaranty of capacity delivery. The $2,500,000 appropriation is designed to remove this handicap applying to 103,000 kilowatts of capacity.

BONNEVILLE AND MINING WAGE EARNERS

The gainful direct employment in mining is relatively small compared with processing and indirect employment. In the United States as a whole there is only 1 wage earner in mining to 10 wage earners in industry.

The following table from the United States Department of Commerce statistics shows mining wage earners in the principal Western States and the number of industrial workers per mine worker.

State	Number mining wage earners	Industrial worker per miner
Arizona	6,258	0.8
California	33,895	7.2
Colorado	14,202	1.6
Idaho	4,152	2.5
Montana	9,461	1.0
Oregon	1,841	28.0
Utah	7,556	1.5
Washington	3,958	20.6

This table shows that mining activity in Oregon and Washington has lagged behind other States, and that Arizona, Colorado, Idaho, and Montana have largely exported their minerals in an unfabricated state, and imported their mining supplies and materials.

The Northwest has the following strategic minerals which are now nationally imported. This classification was taken from War Department official lists:

STRATEGIC MINERALS VITAL TO NATIONAL DEFENSE LOCATED IN THE NORTHWEST

Antimony: Essential military shells and auto batteries.
Chromium: Stainless steel.
Magnesium: Metal of future—airplanes.
Manganese: Vital to steel industry.
Mercury: Explosives.
Mica: Electrical industry—automobiles.
Nickel: Steel industry and munitions.
Tin: Containers.
Tungsten: Automobile and steel.
Critical list, Northwest minerals, War Department official list: Lead, graphite, zinc.
Essential list, Northwest minerals: Copper, gold.
Commercial list, Northwest minerals: Bismuth, China clay, diatomite, feldspar, gypsum, iron, limestone, phosphate, silica, silver, talc.

Mining furnishes a substantial indirect pay roll for supplies and materials used in mining, for transportation, clerical help, and trade. In the Western States cited, 20 to 33 percent of the value of the mined product goes into mining supplies and materials. Conservatively, the indirect pay roll is nearly double the direct pay roll.

Direct mining employment is not the measure of value of the mining industry. Its chief value lies in the national or regional wealth it produces and the indirect and industrial pay roll it creates. To secure national industrial independence, we must produce rather than import our strategic and critical minerals.

There is no direct means of measurement available for the possible additional direct mining pay roll in the Northwest. The extent of the cited minerals in the region has not been fully explored, neither has full information been secured on the quality. However, it is known that the quality approaches the lower grade. The large extent of the magnesium and mercury deposits is fairly definitely established. The United States Geological Survey and the Bureau of Mines are now exploring the chrome and manganese occurrences. Electrochemical and electrometallurgical technology is the avenue to be used to overcome the commercial handicap of low-grade ores. This has been worked out for chrome, manganese, and magnesium by the United States Bureau of Mines and Washington State College at Pullman. To release the remaining listed minerals for commercial use, further exploration and research are necessary. As an example of the fact that the direct mining pay roll is not the real measure of intrinsic worth of the mining industry, it can be cited that all the iron mines in the United States had only 14,873 direct wage earners. The steel furnaces and rolling mills in the same period employed on the average 359,630 wage earners, or 24.1 industrial workers per mine worker.

With the present state of our knowledge as to the occurrences, quality, and transportation requirements of the Northwest's mineral resources, the best that we can do is to roughly estimate from statistical analysis and comparisons with other States the probable additional direct mining employment under existing known conditions.

Such an estimate of additional mining wage earners of all classes, metallic and nonmetallic, is as follows:

Low direct-employment estimate would be about 70 percent of present mine employment in Oregon and Washington or additional wage earners, 4,000; conservative upper estimate, 22 percent of existing California employment, 7,400; or the indirect ratio can be conservatively taken as 60 percent of the national average, or 1.6 indirect employees in all classifications per 1 mining wage earner.

The industrial ratio also, to be conservative, can be taken as 25 percent of the national average or 35 percent of the California ratio.

Summarizing these rough estimates, we secure the following on mining and allied wage earners:

	Lower range	Upper conservative range
Direct mining employment	4,000	7,400
Indirect employment	6,400	11,800
Industrial employment fabricating all classes of mineral products	10,000	18,500
Total	20,400	37,700

In making these estimates the intent was to base the same on known facts and to be conservative.

The direct mining and industrial employment based on mining alone, cited above, represents a 10- and 18.5-percent increase over the last reported existing total mining and industrial employment in Oregon and Washington.

The complete Bonneville plant will have sufficient available capacity to make such employment possible. The time that this employment can be reached will depend on the program of exploration, research, construction, and marketing.

This industrial employment applies only to minerals and does not include industrial activity represented by steel, forest products, agricultural, and general manufacture. These would be in addition to the mining activities.

The total over-all industrial direct employment from Bonneville can fall into four possible classifications, depending on the type of industry contracted. These are:

(1) Basic industries with a small ratio of undistributed satellite industries, represented by 28.2 wage earners per 1,000 horsepower. This is the situation at Niagara Falls, N. Y. ---- 12,400
(2) Basic industries with larger number of smaller industries. Conditions similar to Niagara County, N. Y., or 42 direct wage earners per 1,000 horsepower ---- 18,300
(3) 33 percent of present industrial employment in Oregon and Washington, or 100 wage earners per 1,000 horsepower. Fair distribution of smaller industries induced by the basic industries ---- 44,000
(4) National average of ratio of basic to distributed industries, or 153 wages earners per 1,000 horsepower ---- 67,500

These over-all industrial employment figures are based on total Bonneville installed and available horsepower. Indirect employment of 1 to 2 per industrial worker is in addition to the above.

Address to Nebraska State Democratic Convention at Omaha

EXTENSION OF REMARKS

OF

HON. CHARLES F. McLAUGHLIN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

ADDRESS BY HON. CHARLES F. McLAUGHLIN, OF NEBRASKA

Mr. McLAUGHLIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address

delivered by me as chairman of the Democratic State Convention at Omaha, Nebr., on May 2, 1940:

Fellow Democrats, democracy in Nebraska continues its forward march and the spirit of this meeting demonstrates that we are marching with enthusiasm. I am glad to be here to join forces with all loyal members of our party in the work of the convention. I welcome the opportunity of taking an active part in the proceedings by serving as your chairman and am highly honored to be afforded the opportunity of speaking to you at the outset of your deliberations.

I am told this is to be a keynote speech. Frankly, I don't just know the exact definition of keynote, but if it means the note which sounds in the heart of every mother and father, every man, woman, and child in America today and which spells the difference between opportunity for happiness and black despair, between construction and destruction, which points the very way to life or death, then I say the keynote in America at this solemn moment is peace. The United States of America is determined to keep out of war.

Ladies and gentlemen, this is a democratic speech. When I have finished I hope it will have sufficiently spoken for itself on that score. It will point with pride and view with alarm. It will praise and condemn. But before I enter upon it, let me say this: Political parties are a means to an end—a very good end; the means by which Americans adopt their policies, select their public officials; in short, the means by which we Americans govern ourselves. Let us not forget that whether we are Democrats or Republicans or Independents, we are all Americans. We argue and debate but is there one among us who does not know that every honest, fair-minded man and woman in our land in his heart desires justice and opportunity for happiness for his neighbor as well as for himself, harmonious relationships between citizens of differing backgrounds and viewpoints, helpful cooperation between Government, business, and labor and general healthy concord rather than destructive discord? Differences exist as to policies, as to means of accomplishing desired ends. In a republic the airing of these differences, however violently, is a salutary thing, a sign of intense interest on the part of the citizen in the welfare of his Nation. I hope the day will never come in our land when our party will cease to attack the policies and leadership of our opponents when we consider such attack to be justified. And I am sure we all are determined that we will continue in America to unite with all patriotic Americans as Americans, though we may not agree with them politically as individual citizens. In that lies the greatness of our country.

The Democratic Party has been in power for 7 years. We will shortly be summoned before the bar of public opinion to give an account of our stewardship. We willingly answer the summons. We gladly accept the challenge. We stand upon our party's history of performance, past and present. And now, ladies and gentlemen, in the words of a great American, "Let's look at the record."

The Democratic Party has the honor and distinction of being the largest voluntary political party in the history of the world. It has been in continuous existence longer than any political group in a democratic country. Our chief source of pride, however, is not that we are as old as the Republic. It is not that we have the support and confidence of a large majority of our voters. It is rather that throughout our long and honorable history we have been consistently loyal to the high principles of service to the basic needs of the great rank and file of our citizens, and that we have produced an unbroken chain of leaders who have kept the liberal spirit of progressive free government vital in each succeeding generation. We have a right to feel a very real pride in our historic background, but at this particular time we have an exceptionally strong basis for our loyalty to our party. It is that in the critical period through which we have been passing the Democratic Party has been the means by which our Government has been made once again the powerful bulwark of human rights and the effective agent of the common people. This agency has functioned in this crisis under the administration of our party chief, our national leader, our President, Franklin Delano Roosevelt.

As a matter of historic accuracy, the principles of the Democratic Party were not conceived in the mighty brain of Thomas Jefferson. What Jefferson did was to crystalize and adapt to American conditions the age-old truth that a government exists to serve the needs of its people, and not to enforce upon them the will of self-appointed rulers. He made a cold philosophy a living political creed. More than that, he furnished a leadership which prevented those who were the spiritual ancestors of the present Republican Party from making the new Republic a shoddy imitation of the kingdom which had been lately repudiated. Once the all embracing figure of George Washington had passed from the political scene, the self-satisfied aristocracy of the Northeast had attempted to remold the life of the United States into the old patterns, but Jefferson and his democratic disciples gave a rallying point to the liberal hopes of the day and for the succeeding 24 years under Jefferson, Madison, and Monroe the Democratic Party dominated.

Then came a 4-year lapse and the periodic reaction which seems to characterize human action. Once again the need became great and once again the people turned to the Democratic Party and, as had become the custom, we furnished the new surge of life. Under the leadership of that great son of Tennessee, Andrew Jackson, we restored the Nation to the people. The West and South responded and America became a democracy. Control of government passed forever, except for temporary ebbings of the tide, from the domination of the limited groups whose claims to power rested solely upon control of wealth and social position. When Jackson broke the power of the eastern seaboard bankers, he made the common man the first citizen of the Republic. As long as we remain upon the record of human endeavor, "Old Hickory" will stand as the rugged bulwark of democracy. He was and is our "Andy" Jackson.

We have no cause to be ashamed of the record left by Van Buren, Polk, Pierce, and Buchanan during the ensuing 30 years. Probably no human minds could have changed the course of events which preceded the tragic War between the States. At least no other party, no other leaders, had the genius to stem the growing tide of hate.

Then came the single great figure of the nineteenth century, to whom the Republican Party points with justifiable pride. His record and his inspiration belong to the whole Nation. Once Abraham Lincoln passed from the scene, the Republican Party, born with such lofty aims, descended into the hands of a group of unscrupulous, power-mad political tyrants. The carpetbag era blackened the pages of our history, while the vilest political scandals rocked our very foundations. The election of 1876 is, even by the narrowest partisans, conceded to have been won by that true hater of corruption, Samuel J. Tilden. Great as he was as a Governor and as a reformer, he was never greater than when he renounced his just claim to the Presidency rather than plunge the Nation into another bloody internal war.

However, the Nation soon turned to our party and we presented to it the rugged honesty of Grover Cleveland, who triumphed over the hatred and personal abuse of his day and wrote indelibly into our political life the principle that "a public office is a public trust."

Once again a temporary reaction triumphed in 1888. Those who would make government the tool of big business succeeded, and to make their triumph effective they wrote the Tariff Act of 1890. Panic swept the country and continued on through the second Cleveland administration. A combination of reactionary influences prevented effective counter measures until 1896, when the rank and file of the Democratic party took command at the national convention in Chicago and, reaffirming and reestablishing the liberal principles of the party, charted a forward course to bring it into line with the changing conditions of the day.

Under the influence of the silver tongued "boy orator of the Platte," William Jennings Bryan, that convention adopted a platform and conducted a campaign based upon principles many of which were a generation in advance of their time. On the face of the returns the election was lost, but the seed of liberalism was sown and the harvest has been reaped in the subsequent enactment of much humane and liberal legislation which has been accepted generally by fair-minded and forward-looking citizens, regardless of party, as an advance step in human progress. The militancy of that campaign roused the Nation's conscience, revived the pioneer spirit of the West, and set America upon the road toward progressive leadership of the world.

While the rest of the Nation was preparing itself for the acceptance of this twentieth-century liberal movement, the Republican Party controlled the Government. Even in its own ranks the progressive revolt mounted. Kansas, Nebraska, Iowa—all the prairies flamed until it swept the party out of control.

Our opponents charge that they lost control in 1912 because of a party split. Let us consider that. Is it not more reasonable to suppose that if it had not been for the dynamic personality of Theodore Roosevelt, the Bull Moose movement would have found expression in a mass migration to the Democratic Party rather than a temporary sojourn in the third-party territory? When the Republicans claim Teddy Roosevelt as their shining contribution in the twentieth century, we need but remind them that it was only by leaving their party and indignantly repudiating their leaders that he felt he could maintain his own political self-respect.

Fortunately, out of a wide field of trained progressive leaders we could present a great liberal philosopher and statesman in the person of the Governor of New Jersey, Woodrow Wilson. If you would be truly proud of our party and its record, reread the story of the first Wilson administration. Nowhere in previous history had such a comparable series of forward-looking legislation been adopted.

Our archaic banking and currency system, prolific of panic and disaster under Republican administration, was supplemented by the Federal Reserve System, which, if it had been administered as the law provided, would have been a bulwark against the disaster which overtook us in 1929.

We created the Federal Trade Commission for the protection of honest business. We forged an adjustment of the tariff for the benefit of the consumer, while protecting legitimate American production. We, by law, raised labor from classification as a commodity and we laid the foundation of all succeeding legislation for the protection of the rights of labor.

Then came the World War. Whatever may have been the causes of that war historians may discover, but under Woodrow Wilson America was roused to the highest level of idealism in all history. We may sneer at "making the world safe for democracy," but if Woodrow Wilson had prevailed at Versailles, and later in his gallant fight, in which he was so ably assisted by our distinguished native son, United States Senator Gilbert M. Hitchcock, the world might

well have been spared the horrors which again confront civilization. Much as we hate war, we still remember that under Democratic administration the Army and Navy successfully accomplished their tasks without a major scandal or a charge of corruption.

Woodrow Wilson passed on, a martyr to the cause of human liberty, and the Nation, reacting from the tension of war and weary of welldoing, sank to the lowest level of corruption and inefficiency in our entire national life. From Teapot Dome, and the Ohio gang under the genial but careless Harding, through the drunken financial orgy, under the cautious and unsmiling Coolidge, to the inept fumbling under Hoover, the Nation plunged into the downward spiral of disaster, culminating in the devastating panic of 1929. Through 12 long years the Republican Party retained control and wrote a record which they now beg us to forget. They set new records. Most bank failures, most bankruptcies, most home and mortgage foreclosures, most men out of work. Farm and home were united at last under the black blanket of hopelessness, while the sole major contribution of the Republican Party to save the day was the Grundy-Smoot-Hawley Tariff Act, which guaranteed the destruction of our vital international trade.

True to the best of our traditions, our Democratic minority Congress tried to rouse the blind Republican leadership to assume responsibility and to act. Nothing resulted. National collapse seemed imminent. The Republican Party could offer nothing except "more of the same."

As at previous crises, the Democratic Party was confronted with the task first of saving and then of rebuilding the national life.

The climax seemed to be reached in 1932 with stagnant industry, new low prices for agricultural products, new high records for idle men, and new standards for governmental helplessness. Rugged individualism was paying dividends in permits to peddle apples on the street corners.

The Democratic Convention of that year saw a rebirth of liberal idealism coupled with a courageous, realistic attack upon the still mounting economic hurricane. The American people responded and in November rendered an almost unanimous verdict of "guilty" against the incompetent reactionary forces which dominated the Republican leadership.

By March 4, 1933, the whole financial and social structure was collapsing. No party ever took over the reigns of government under more distressing circumstances. The first inaugural address of Franklin Roosevelt electrified the Nation. Hope reappeared. Our citizens found that the Government at Washington was their Government and that its full power had been marshalled in their behalf.

To review the history of the party's 7 years—even to touch upon the high spots—would require days rather than these brief minutes, but no one can ever forget the black despair as the banks crashed on March 1, 2, and 3 of 1933, nor fail to remember the high hopes of March 4 as financial stability again began to reassert itself under the magic of our leader's voice.

Congress was called into special session, and at once the Democratic Party began to justify the faith which our citizens had reposed in it. Throughout history governments had leaped to the side of the rich and powerful, but now every resource of the United States was strained in behalf of plain men and women. Our banking holiday was terminated almost at once, but when the banks reopened it was in a new era. On March 3, 1933, every one of the thousands of bank failures meant distress or ruin to hundreds, even thousands, of depositors. Two weeks later, and to this date, bank failures, which rarely occur, merely mean the liquidation or the readjustment of banking enterprises. Why? Because the United States of America guaranteed to every citizen the safety of his bank deposit up to the amount of $5,000. In other words, the Democratic Party made government the servant and the protector of our people rather than the complaisant agent of corporate wealth.

Under the Republican leadership of Harding, Coolidge, and Hoover the Government carried the load and assumed the risks for the big banks, the major railroads, and the powerful insurance companies. Under the democratic administration the Government does not withdraw its aid from these great institutions which retained their governmental support, but the farmer, the home owner, the laborer, and the helpless received the same needed assistance which previously had been reserved for those who were most able to help themselves.

We have legally secured labor's right to collective bargaining and have laid a foundation so broad that only labor's internal quarrels, or a selfish imitation of the crimes previously charged to capitalists, can prevent the development of a happier era in industrial relations.

We have been mindful of the obligation which we owe to the men who answered their country's call to arms in war. To the disabled, in mind and body, no adequate compensation can be made, but to these men we have offered the care and attention of a grateful country.

We have put into action, effectively, the forces of the Department of Justice, in the administration's campaign to end monopoly in business; to put a stop to unfair competition, and to abolish dishonorable trade practices.

We liberalized the farm-loan agencies, and we set up the Home Owners' Loan Corporation. We made it possible for millions of our best citizens to save their farms and homes, which seemed hopelessly lost. We enacted the basic legislation which enables the States to pay real old-age pensions. We established unemployment compensation. We provided the Civilian Conservation Corps, and gave unemployed youth a refuge from the city slums. We supplied the necessary support to the criminal investigation bureau to stop the wave of kidnaping and organized banditry, but better yet, we provided the funds to bring education to our young men and women who otherwise might be thrown into the swollen ranks of the unemployed.

We provided the world's largest public works program with employment for millions of men, both on the job and in the heavy industries, to say nothing of arranging outlets for the accumulated supplies of raw materials.

We encouraged home ownership by setting up the housing authorities with their long-term loans at low rates of interest. We brought every resource to the aid of agriculture in the Agricultural Adjustment and Surplus Commodity Acts. We put Government credit at work to enable the producing farmer to hold his crops from a glutted market. We made rural electrification a reality.

We made vast loans to villages, towns, cities, school districts, counties, and States to enable them to furnish work to their own unemployed and, at the same time, to construct needed public improvements, which otherwise would have been enjoyed only in the distant future, if at all. If mistakes were made in this field, remember that these Federal funds were granted only when the local authorities certified, first, that they had needy employable workers who were unemployed; second, that the relief load was beyond the local carrying capacity; and, third, that the plans submitted were for needed useful public improvements. We added to the funds for highway construction; we eliminated dangerous grade crossings.

This but touches some of the more important items of our scheme of national restoration. We will freely concede that some errors have been committed and that some of the methods used were not ideal, but we declare that every mistake was made on the side of the rights of humanity.

We have not completed the task of domestic recovery, but we have seen the number of employed in nonagricultural fields rise, under our leadership, from 27,245,000 in 1932, under Republican administration, to 34,940,000 in 1939. We find that the cash farm income of $4,682,000,000 in 1932 is $8,519,000,000 for 1939, while the national income of $40,000,000,000 in 1932 has become $68,000,000,000 in 1939. National wealth has mounted by many, many billions, regardless of the method of calculation or of the statistical sources used.

While we have been fighting this epochal battle to restore our internal affairs the world has gone insane. Dictator powers and greedy nations have all but destroyed the last hope of world peace. International trade has been almost completely disorganized. Foreign "isms" have been, and are, attempting to upset our internal lives. In the midst of this chaos our President and our State Department untiringly have been working to maintain our peace with the world and to build good relations with all peoples who would be good neighbors with us.

Thanks to this administration, our relations with each of the South and Central Americas have been more firmly and more satisfactorily established than at any time in our previous history. If trouble should spread to the Americas, the benefits of our foreign policies will become increasingly apparent to us all.

While we have been engrossed in our troubles at home, and while we were seeking harmony with all peoples, we could not overlook our responsibility for national safety. We are determined to keep out of other people's wars, but we are also still more determined that we shall not become the spoils of war to any aggressors. We are building a land, sea, and air defense which will be so strong that no power or combination of powers will dare to turn their covetous eyes upon this continent.

We are doing our part to make this country internally secure by building a strong, intelligent, and loyal citizenry. We have dedicated ourselves and the Democratic Party to the task of doing all that is in Government's power to make every agency of Government an effective servant to the public good. The task is not complete, but we have made a magnificent start and we will finish the job. The Democratic Party will remain the liberal, progressive, fighting party of the people.

We are assembled in convention today from the length and breadth of our State to renew our allegiance to the fundamental principles and historic traditions of our party and to plan for the future. Adhering to its basic tenets we shall promulgate a pronouncement of our party's aims and purposes and shall set forth in the form of a platform our attitude on those particularly pressing questions which confront us at this solemn hour. Opportunity has been afforded every Democratic man and woman in the State to present for consideration his or her suggestions. The platform which will be submitted to this convention and adopted in accordance with the will of the majority will reflect the composite convictions of the Democrats of Nebraska.

The Democratic Party is made up of independent individuals. This characteristic of independence is peculiarly applicable in the State of Nebraska. No attempt has ever been made to stifle independent thought on the part of the members of the Democratic Party in our State. Such an attempt would fail at the outset, for the pioneer spirit which characterized the settlers of our Commonwealth still typifies the membership of our party in Nebraska. We need never fear the result of honest differences of opinion. It is only by free and open discussion that sound decisions can be reached and worth-while policies formulated and followed. But, like the members of the family who may disagree within the walls of their home, we as Democrats should settle disputes within our party, and having settled them, present a united front. It is through such harmonious concert that best results can be achieved.

We may not agree absolutely with some of our brethren. If all Democrats thought alike it would be proof that they did not think at all. If harmony exists within a political party it exists because its members emphasize their points of agreement rather than their points of difference and, as in this Nation, those things which the whole people have in common are more numerous and more important than the things on which they differ, so in political parties men act in unison when the points on which they agree are more numerous and more important than the points on which they differ.

Present at this convention today are veterans in the ranks of Nebraska democracy who have worked unceasingly and untiringly to keep alight the flame of liberalism which often flickered dimly in the winds of fierce and powerful opposition. We salute these men and women who, in season and out, have always fought the good fight and have kept the faith and who are fighting as hard as ever today.

We extend the hand of welcome to those young Democrats, many of whom are first voters, who already have entered militantly into the fight for liberal principles and whose activities constitute such a vital and forceful contribution to the success of our party's program.

We recognize particularly the splendid work done by the women of our party. The inspiration they have offered in the battle for humane legislation and for measures for social welfare has contributed immeasurably to the success of our cause.

If there are disagreements within the party, let those in disagreement ask themselves whether they are nearer in point of agreement in their political philosophy than with the political philosophy of those in the opposing ranks. The best way to keep our party useful is to keep it in power. The best way to keep it in power is to keep it strong. The best way to keep it strong is to keep it united. Above all, our party must be kept clean and to keep it clean is to be vigilant in our scrutiny of its standard bearers and its aims and purposes. The people have the right to expect and the right to demand honesty of purpose and capacity for accomplishment in public office. We present to the people of Nebraska our candidates for office from the highest to the lowest and we urge the electorate to apply to them these tests of honesty of purpose and capacity for accomplishment in public office. At the same time we urge the application of the same tests to the candidates presented by the opposing party. We will await with confidence the outcome of these tests and these comparisons of candidates by the voters of our State at the polls next November.

Well-meaning people have viewed with alarm the use of new methods in dealing with new problems. With post-war collapse, brought about by world conditions and a selfish and unwise domestic policy, drastic action was demanded to meet an unprecedented national situation. Some of these same well-meaning people who have been tremendously benefited by many of the extraordinary steps taken by our party continue to avow that no good thing can come out of this administration, and indeed, in some instances, to proclaim that nothing but evil can result from any Democratic administration. We all recall, I am sure, the illustration of this frame of mind used in a certain fireside chat, of the old gentleman who, when rescued from what might soon have been a watery grave, after he had gone under for the third time, roundly criticized and condemned his rescuers because he had lost his silk hat.

Economic disaster demanded emergency treatment just as fires or floods or other disasters of nature call for emergency handling. By heroic action the stability of the Nation was preserved and, despite criticism and complaints directed against our efforts, the Constitution remains intact and our representative form of government continues, and will continue for the protection and benefit of the individual citizen. The convention in which we are now taking part is a concrete evidence of the vitality and force of our governmental system. Ours is one of the few remaining nations on the face of the earth in which the citizen has an effective part in his own Government. It is our solemn duty to live up to our responsibilities to the end that our plan of government of the people, by the people, for the people may continue for our own welfare and as an example and a symbol of hope for oppressed peoples throughout the world.

Criticisms of a broad general character are aimed at our recovery program by our opponents. But when specific measures are discussed it is a different story. Leading Republican Presidential candidates assure the people that, if elected, they will continue our farm program, our work-relief program, our social-security program, and the other measures set up by our party to cope with present-day conditions and to bring about recovery. Republican congressional and State candidates likewise heartily endorse the continuance of these measures. These Republican candidates say they favor these laws but that their party will administer them more effectively than ours. What then is the issue? It is, my friends, just this: Which party, the Democratic or Republican, will best administer laws, conceived, initiated, sponsored, and passed by the Democratic Party? We are content to let the voters decide that at the polls next November.

The United States is a Nation of immigrants. Our whole history is the story of pioneers. We the people of the United States in the year of our Lord 1940 are now, as we always have been, a composite of the races of the world. What progress we have made, what success we have had is due to the best efforts, in thought and in deed of this Nation of people who are the descendants of nearly all nations and races. Interdependence is the keynote of our structure as a Nation. We need two basic qualities—foresight and spunk—the former carefully developed, the latter rationally controlled. In 1932 America was a Nation lacking strength, courage, hope. Since 1932 that hope has been restored, that courage revived and today we stand before the world as a Nation with renewed strength and vigor.

Fellow citizens, the Democratic Party has pointed the way. Definite objectives can be reached through determination and through firm, patient, and persistent effort. We call upon all liberal forces to join us. Our direction is not backward. It is forward—definitely, dauntlessly forward.

The Jefferson Memorial "Will Undoubtedly Be the High Light of Most Visits by American Tourists to the National Capital"

EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

ARTICLE BY R. P. HARRISS

Mr. CULKIN. Mr. Speaker, the memorial to Thomas Jefferson, heretofore authorized by Congress, is now taking substantial form on the Tidal Basin. This memorial which was born of much clamor and controversy furnishes a fitting though distinct architectural balance to the Lincoln Memorial which is now beyond the realm of controversy.

The memorial was designed by John Russell Pope, now deceased. In the field of classic structure the late Mr. Pope was without a peer, not only in America but in the entire world.

Thomas Jefferson was not only the first American architect but was one of the greatest of our architects. Mr. Pope, under the instructions of the Commission, embodied in the memorial the outstanding and unique features of the Jefferson school of architecture. The result will be a structure of extreme beauty.

The setting is a superb one. The House already knows that the memorial is located on the last major monumental site in the Capital under the L'Enfant plan of the city of Washington.

My attention has been called to an article in the Baltimore Evening Sun of date of April 13, written by Mr. R. P. Harriss.

Mr. Harriss has caught the spirit of the memorial so effectively that I have asked the permission of the House to include his article in the RECORD. It follows:

WHITE COLUMNS AND CHERRY BLOSSOMS

(By R. P. Harriss)

WASHINGTON.—It was a blowy, nippy spring afternoon, but the sun was almost hot and the cherry blossoms along the rim of the Tidal Basin made a brave pink imitation of an impressionist landscape. They did it rather tentatively, though, as if anticipating the weather's current treachery. Hardy tourists, foreign functionaries, Government clerks strolled and cycled along the paths, admiring (and sometimes trampling) the flower beds, stopping to take photographs, eating popsicles. Whenever they gazed out across the water their eyes roved 'round the shore, with its pink fog of bloom, and came to rest upon the marble pile that will be the Jefferson Memorial.

Hitherto the cherry blossoms have been enough of a show for the thousands of April visitors who walk or drive there. But the cherry blossoms, the whole of the Basin area, are destined to become merely so much appropriate landscaping for the white pillars and white dome designed by the dead hand of James Russell Pope. Even now, in its incomplete state, the structure is inescapable, rising, as it appears to do, right out of the water which becomes its reflecting pool. Once the scaffolding is cleared away, the thing will be dazzling.

It was scarcely less dazzling when the construction foreman (a Mr. Yopps) conducted a two-man tour. In the center of the pantheon, where a statue of Jefferson will stand, one looks north directly at the Washington Monument shaft, with the flagpole of the White House visible to the left. The east portal looks toward the Capitol dome. The western view is the Lincoln Memorial. Only to the south is the view disappointing: No. 1 Highway and, a little beyond it and partly screened by trees, the railroad tracks. We did a good deal of climbing up and down iron ladders

and eventually got in a jerky little lift and were hauled up to the top of the columns, where the low dome soon will fit down like a cup. Mr. Yopps pointed to where a famous declamation of Jefferson's had been cut into the inside of the circular wall, high up under the dome, inviting me to take a good look, since very few, if any, visitors would ever be privileged to read it at such close range again. The enormous lettering spelled: "I have sworn on the altar of God eternal hostility to every form of tyranny over the mind of man."

I thought how this memorial henceforth will exercise its glistening white tyranny over the eyes of all who stroll 'round the Tidal Basin.

The structure will house a monument to Jefferson, and the Memorial Commission has just announced the name of the probable sculptor. He is Lee Lawrie, a New York sculptor who was brought to this country in his infancy from Germany and who received some part of his education in a parochial school in Baltimore. He has specialized largely in architectural sculpture.

The procedure for selecting a sculptor was as follows: The Memorial Commission, which includes three Senators, three Representatives, three members of the Thomas Jefferson Memorial Foundation, and three "Presidential commissioners," and of which Stuart G. Gibboney is chairman, named as a jury. The jury consisted of Henri Marceau, James Earle Fraser, and Heinz Warneke. From more than a hundred applicants, six sculptors were invited to compete: Rudulph Evans, Raoul Josset, Lee Lawrie, Sidney Waugh, A. A. Weinman, and William Zorach. Models were submitted anonymously. Mr. Lawrie's model was picked by the jury, but it was rejected by the commission. Nevertheless, the commission invited the sculptor to submit a revised model, "after which, if approved, it will be submitted to the Commission of Fine Arts and duly made public." In picking Lawrie's model, the jury made these observations:

"To aid in choosing a model which will best typify the man, we started with the fact that Jefferson was not an orator, neither was he a man of great physical action. On the contrary, he was a thinker and a philosopher.

"Therefore, in the first step of the work, these characteristics should be indicated more definitely than the likeness of head and body; whereas, in the next stage, and on a larger scale, the latter points can be more easily achieved. The first rough impulse of the sketch model must give the Jefferson mental characteristic by pose, action, and design, or there is little chance that they will ever be achieved."

It was added that while the winning sketch was not photographic, it distinctly carries throughout the movement of the philosopher and thinker and reflects the atmosphere of Jefferson.

The total cost of the statue, include the payment to the winning sculptor, compensation for the other sculptors who were invited to submit models, and the expense of execution will fall within the $60,000 which Congress authorized. It is hoped that the work will be completed in 3 years, in time for its dedication on April 13, 1943.

The pantheon itself is proceeding on a building schedule which should see it entirely completed by July 1941. There is a possibility that it may be ready for dedication by next January.

There has been a vast amount of controversy over the Jefferson Memorial—over its cost, $3,000,000; over its design, an adaptation of the style of Jefferson's own Monticello and of the Jefferson-designed rotunda of the University of Virginia.

Critics of the memorial (and of the classical tradition in general as applied to Washington) have called it "an unimaginative rehashing of dead architecture," "another Lincoln Memorial," "a pseudo-classical horror," and have derided the use of "empty forms" which, they hold, lack meaning to the present-day American or present-day anybody else. It is a question, however, just how empty these forms really are. Probably they have more meaning to the generality of citizens than the architectural purists and antitraditionalists would be willing to admit. It is not a meaning which the common or garden variety of citizen can readily express, but I do not believe it likely that many people will be able honestly to say that the finished memorial is not impressive and meaningful.

The cold classical forms which make so much of the late Mr. Pope's work seem tomblike are exactly suited to the Tidal Basin job. A John Russell Pope structure inevitably looks like a mausoleum and in this case a supermausoleum is what the design called for and it is what the public is going to get. And it will undoubtedly be the high light of most visits by American tourists to the National Capital.

What would Jefferson himself have thought of this thing? Would the great man of simple tastes have abhorred a grandiose and impractical memorial?

There is considerable evidence to indicate that a design such as this would have pleased him. It is true that he said he wished to be remembered chiefly as the author of the Declaration of Independence, or a religious freedom statue and as the founder of a university. On the other hand, it is hardly conceivable that he would not have been intrigued, enchanted even, with a structure inspired by his own architectural ideas and principles and occupying the finest natural site in the Capital. In France he visited Nimes and gazed worshipfully for hours at the Maison Carrée—"like a lover at his mistress," as he confessed. Moreover, he was a man of great ingenuity. He fitted all sorts of gadgets into Monticello, some of them no less tricky than the disappearing ironing board which today's contractors use as bait for selling semidetached, suburban dwellings. He saw nothing incongruous in adapting classical forms to contemporary needs, or of making them as livable as possible inside. The way in which all the interior details are to be handled, the clever concealment of the public toilets under terraces, the heating arrangements—all these more or less routine features of the design would have appealed to a man of his inventiveness. But I think those marble columns would have fetched him most of all.

Jefferson, the philosopher, swore eternal hostility to tyranny over the mind of man; yet, for good or ill, Jefferson, the architect, imposed his own taste upon his countrymen, some of whom find it tyrannical.

Loans and Repayments of Selected Federal Agencies

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

REPORT BY LEGISLATIVE REFERENCE SERVICE

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks, I include herewith a report prepared by the Legislative Reference Service of the Library of Congress, showing loans and repayments of selected Federal agencies. The table is as follows:

Loans and repayments, selected Federal agencies

	Loans	Repayments	Outstanding
Reconstruction Finance Corporation [1] (Sept. 30, 1939)	$7,292,933,361	$5,509,529,617	$1,783,403,744
Federal home loan banks [2] (June 30, 1939) (advances to member institutions)	523,023,390	354,061,827	168,961,563
Home Owners' Loan Corporation [3] (June 30, 1939)	3,093,450,641	601,002,640	2,492,448,001
Federal Housing Administration [4] (Dec. 31, 1939)	23,967,882	8,519,536	

NOTE.—During the fiscal years 1936-39, the Home Owners' Loan Corporation has acquired 141,742 properties of a capital value of $737,285,128. Of these 55,303 have been sold at an aggregate price of $193,175,844 (capital value $237,636,622), leaving 86,439 properties of a capital value of $499,648,506 on hand.

[1] Total loan and other authorizations from Feb. 2, 1932, to Sept. 30, 1939, inclusive. Excludes allocations to other Government agencies; purchases of securities from Public Works Administration; and commitments outstanding. (Source: Quarterly Report of Reconstruction Finance Corporation, Sept. 30, 1939, p. 44.)

[2] Seventh Annual Report of the Federal Home Loan Bank Board, June 30, 1939, p. 172.

[3] Same, pp. 125, 128. Includes original loans only. Properties, same, p. 137.

[4] As of Dec. 31, 1939, the Federal Housing Administration had insured 2,346,276 loans under title I of the National Housing Act at a face value of $966,417,896; 103,426 claims have been paid to the amount of $23,967,882. Of this amount $4,739,788 in cash and $3,779,748 in repossession credits have been recovered. (By telephone from the Federal Housing Administration.)

Our Farm Credit System

EXTENSION OF REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

RADIO ADDRESS BY FRED BRENCKMAN

Mr. AUGUST H. ANDRESEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by Fred Branckman, Washington representative, the National Grange, over stations of the National Broadcasting Co., on the Grange hour, from Washington, D. C., April 20, 1940:

As those who are conversant with the agricultural situation are aware, a shake-up of considerable proportions has been underway in the Farm Credit Administration for some time, and further drastic changes are contemplated.

The somewhat chaotic condition that prevails today had its inception a year ago when President Roosevelt, under the authority conferred upon him by the Government Reorganization Act, transferred the Farm Credit Administration to the Department of

Agriculture. The major farm organizations of the country were vigorously opposed to this transfer, for good and sufficient reasons.

In an effort to reassure the farmers and to quiet their uneasiness, Secretary of Agriculture Wallace, on May 22 last, issued a statement with the concurrence of the President to the effect that the Farm Credit Administration, including the Federal Farm Mortgage Corporation, would not become an integral part of the Department of Agriculture. It was explained that the principal purpose in transferring the F. C. A. to the Department was to reduce the number of agencies reporting direct to the President, and that in the future the Governor of the F. C. A. would report to the Secretary of Agriculture, rather than to the President himself. As Secretary Wallace well said at the time:

AS WALLACE SAW IT ORIGINALLY

"Not all the functions of the institutions and corporations under the supervision of the Farm Credit Administration are exclusively governmental in character. The Farm Credit Administration exercises a type of Federal supervision over these agencies quite unlike the usual Federal supervision, where the organizations and controls are wholly governmental. Supervising as it does many different types of organizations, involving among other things more than 8,000 corporations, the Farm Credit Administration does not seem to be adapted to complete identification with the Department. The relationship involved can be best handled by a continuation of its present method of operation, with the Secretary of Agriculture exercising a coordinating supervision in only the broadest and most general way."

That was what Secretary Wallace said in May; but by the time November rolled around, he took the position that if he was to be held responsible for the conduct of the Farm Credit Administration, he wanted to have full control of it. The first indications that a storm was brewing came shortly before Christmas, when, after much undercover work, with rumors flying thick and fast, Forrest F. Hill was compelled, under administration pressure, to hand in his resignation as Governor. Dr. A. G. Black, who had been Chief of Marketing Research in the Department of Agriculture, was appointed to fill the vacancy caused by Mr. Hill's resignation.

Others who have been ousted in connection with the shakeup include Deputy Governor Gerald E. Lyons, of Iowa; Payton R. Evans, general counsel, of Virginia, together with Albert S. Goss, who during the past 7 years served as Commissioner of the Federal land banks.

GOSS EXPLAINS HIS RESIGNATION

Mr. Goss was not in sympathy with the move merging the Farm Credit Administration with the Department of Agriculture, destroying the independent status of the farmers' lending agencies. Neither was he in sympathy with the policies that Secretary Wallace announced would henceforth be pursued by the F. C. A. These were the reasons why he was asked to resign.

In tendering his resignation to the President, Mr. Goss issued a public statement showing that there was a fundamental difference of opinion between him and the leaders of the administration with reference to farm-credit matters. He declared there was a tendency toward a type of so-called credit in which personal responsibility is denied, loans made to everybody, with no adequate margin of safety provided, and that under this scheme the Government would be expected to pay the losses whenever borrowers took the notion to quit paying.

Mr. Goss likewise called attention to the fact that pursuant to the act creating the Farm Credit Administration, the Federal land banks had been lending money on the basis of normal values, when under conditions prevailing during recent years, farmers had not received a normal income. That is the nub of the whole matter, and we must not allow all the confusion and uproar that is in progress now with reference to the Farm Credit Administration to obscure this important point.

No system of farm credit that could possibly be devised could be expected to function satisfactorily and remain self-supporting under the conditions that have prevailed during the past several years, when farm income has been several billion dollars a year less than during the 5-year period from 1925 to 1929. Compensatory farm prices, and not "soft" credit, that will sink the farmer deeper and deeper into the mire of debt, is the only real answer to the situation with which agriculture is today confronted.

The leading farm organizations of the country, including the American Farm Bureau Federation, the National Grange, the National Council of Farmer Cooperatives, the American National Live Stock Association, and the National Wool Growers Association are all heartily in favor of the enactment of the Gillette-Kleberg bills, S. 3480 and H. R. 8825. This measure would restore independent status to the Farm Credit Administration under a bipartisan board of five members, with the Secretary of Agriculture serving in an ex officio capacity.

THE JONES-BANKHEAD BILL

On March 4, the same day that the Gillette-Kleberg bill was introduced on the Senate side, another measure, known as the Jones-Bankhead bill, which undoubtedly was drafted by the Department of Agriculture, made its appearance in both Houses of Congress. Hearings on this latter bill were started before the Agricultural Committee of the House 2 days after its introduction, and before anyone connected with the land banks or the farm borrowers had ever heard of it. Dr. Black, the new Governor of the F. C. A., was called as the first witness before the committee. When he was asked to explain the bill and the purposes behind it, he testified that he could not say what the new policies were going to be until he knew what the Department of Agriculture intended to do. Assuming that the farmers of the country, who have invested $130,000,000 of their own money in this cooperative enterprise, still think they should have a voice in its affairs, Dr. Black's statement was not very reassuring, to say the least.

Secretary Wallace, representatives of the farm organizations, Mr. Goss, and many other witnesses have appeared before the Agricultural Committee in connection with these hearings, which have now been completed so far as the House is concerned. Short hearings have also been held on the Gillette-Kleberg bill before a subcommittee of the Banking and Currency Committee of the Senate.

It is true that some attractive bait is contained in the Jones-Bankhead bill, which, among other things, would reduce to 3 percent the interest on mortgages held by the Federal land banks. But it is not necessary to swallow this whole bill, with its many objectionable features, in order to give farm borrowers a lower interest rate. A bill has already passed the House and is now in the hands of the Banking and Currency Committee of the Senate that would continue the present emergency rate of 3½ percent for a period of years. If this rate is not low enough, the bill could easily be amended so as to make it still lower.

The Grange has always favored the lowest interest rate on farm mortgages consistent with a sound loaning policy. Three years ago we strongly urged Congress to override President Roosevelt's veto of the 3½-percent interest bill. If Congress had sustained the veto, it would have had the effect of restoring the contract rates at which the money was originally loaned to the farmers, varying between 4½ and 6½ percent. The following year the President again vetoed a bill extending the 3½-percent rate until June 30, 1940, and when Congress overrode this second veto, it met with our full approval.

At a time when our Government is able to borrow money on its long-time bonds at a rate as low as 2¾ percent, why should the debt-burdened farmers of the country be asked to pay rates ranging from 4½ to 6½ percent? My purpose in referring to this matter is to make it perfectly clear that we are not finding fault with the 3-percent interest rate contained in the Jones-Bankhead bill.

PRINCIPAL OBJECTIONS OUTLINED

Among the principal objections to the Jones-Bankhead bill, which is supposed to have been drafted by the Department of Agriculture, are that it would substitute bureaucratic Government lending and control for farmer-controlled cooperative credit; that it would entail the danger of mixing sound credit with relief and social problems, and that partisan politics, from which the work of the Farm Credit Administration has heretofore been free, would in due time permeate the whole set-up.

In my opinion, it is also possible that the granting of loans to farmers might be made contingent upon compliance with the triple A program or various other programs administered by the Department of Agriculture. With all due respect to Secretary Wallace, who undoubtedly means well, he already has far greater powers than were ever before granted to any administrative officer of the Government, and if, in addition to all his other powers, he should be given a strangle hold on the farmers' credit facilities, a situation would be created that is without parallel in any free country.

It is well to remember in this connection that even if Secretary Wallace should not be tempted to abuse the vast powers reposed in him, nobody knows who the next Secretary of Agriculture may be, nor have we any knowledge as to what policies he might pursue. If we want our democracy to endure, why not let the people themselves have some say in the conduct of their own affairs? Instead of destroying everything that has been accomplished in the field of cooperative farm credit during the past 23 years, would it not be far better for us to build on the experience we have had and improve the system, giving the farmers a larger measure of responsibility and control than they have heretofore exercised?

We are admonished to hold fast to that which is good, and in spite of all that the detractors of our cooperative farm credit system may say, it has on the whole been very successful. It has weathered the greatest inflation of land values ever witnessed in this country, together with the greatest deflation. Its record with reference to farm-mortgage foreclosures is about twice as good as the record of private lending agencies. Most assuredly, it would be a great mistake to destroy the element of personal and joint responsibility in the making of farm loans, because this factor is vital to the continued success of the whole system.

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

Mr. BRADLEY of Michigan. Mr. Speaker, the President has appointed Mr. J. Monroe Johnson to the I. C. C. Mr.

Johnson is now Assistant Secretary of Commerce, where he was formerly in charge of aviation. The record made under his administration in the Department was notoriously bad.

Next, the President announces he will probably appoint Mr. Robert Hinckley, present Chairman of the Civil Aeronautics Authority, to the post to be vacated by Mr. Johnson. In this way Mr. Hinckley can have charge of aviation if the C. A. A. is moved back into the Department of Commerce.

This maneuvering proves that the independence of the C. A. A. is destroyed if the reorganization goes through.

Forever afterward the development of civil aviation will depend on who is the Secretary of Commerce and who is the Assistant Secretary.

Who Am I?

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 3, 1940

AN ESSAY BY LAWRENCE C. MURPHY, POSTMASTER, SAN GABRIEL, CALIF.

Mr. VOORHIS of California. Mr. Speaker, the following essay on one of the foundation stones of our civilization speaks for itself. It is the work of one of the postmasters in the Twelfth Congressional District of California, Mr. Lawrence C. Murphy. I am proud to include it with my remarks.

WHO AM I?

(By Lawrence C. Murphy, postmaster, San Gabriel, Calif.)

I am the smallest commodity in the world. I am, likewise, the cheapest commodity on earth. I am, of all man-made things, the most important. I weigh less than a dram; my price a trifle. I am the reason for the world's largest enterprise. My recognized value is world-wide. From the birth to the death of each existence I am an important factor—every day. In truth and in essence, I am—

The messenger of sympathy and love.
The servant of parted friends.
The consoler of the lonely.
The bond of the scattered family.
The enlarger of the common life.
The carrier of news and knowledge.
The instrument of trade and industry.
The promoter of mutual acquaintance of peace and good will among men and nations.

Every joy, each vicissitude; every romance, each fact, every success, each failure, every birth, each death—all are known to me. Without me, life would lose much of it's charm. Without me, the heart would never know the fullness of love or the depth of sorrow. Were I nonexistent wealth might well discount its power. I am in everything, always meeting you. In your every motivation—social, commercial, intellectual, romantic, idealistic—you always come to me.

In human democracy I am a mighty implement. I prompt and encourage the spirit and the service of what makes for freedom and the happiness of man. I am a binding tie in all affairs.

I travel the world. I know all roads, all paths, all climates. Land and sea and air are my highways and byways. I never weary of my journeys. I am the most familiar wayfarer. My comings and goings are always important. I am a constant visitor. In the sanctums of the mighty or the hovels of the poor I have equal welcome. Though I travel far, none may bar my journeys. The mightiest of armament—vast armies—unlimited resources of nations, all protect my wanderings. Whither I go, law and order supersede violence and the crude customs of savage life.

As a plutocrat I journey. I use only the best and most modern of transportation—motors, streamline Diesels, aircraft, mighty vessels—all are familiar to me. I am their constant passenger. En route I am attended by a trained entourage who guard me jealously, willing to give their lives to uphold the traditions behind me.

Neither storm nor flood, neither heat nor cold, neither pestilence nor catastrophe can stay me. And all because I am in your service—the one reason for my existence. When I part with you, you are certain of a fulfilled mission. Though you send me to the frigid zones or to burning desert wastes, to prince or pauper, saint or sinner, I perform your task.

I know the birth of every day through whose sunlit hours I toil. When night rests on a weary world—I still go on. For me there is no rest. With your every heartbeat I start a journey anew. For I am in your service.

Yes—I am small—the smallest commodity in the world—and cheap, my cost a trifle, and though I weigh less than a dram, who travels farther, works harder, or is more consistent than I? And who, with all the selfishness and clamor of the ages—who—with all the weaknesses of man—can equal my claim—"I know no enemy?"

Who am I?

I am a postage stamp.

Citizenship

EXTENSION OF REMARKS
OF
HON. CHARLES HAWKS, JR.
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 6, 1940

RADIO ADDRESS BY HON. CHARLES HAWKS, JR., OF WISCONSIN

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered recently over the radio:

"Citizenship" is an old word—as old as democracy. "Citizenship" is a proud word that holds all the pride of a free man in his freedom.

"Citizen" is a simple title. It is the boast of America that no American may hold any other. It is our pride that no American is less and that no American can pretend to be more than a citizen of this country.

Not long ago I saw an English passport. An English friend showed it to me, and it was a very elaborate affair. Inside it there is a great show of state seals and a long, flowery statement beginning, "We, Viscount Halifax, His Majesty's principal Secretary of State for Foreign Affairs * * *." Then there is a whole paragraph listing the Viscount's titles. It ends by requiring, in the name of His Majesty, that all concerned allow the subject to whom the passport is issued to pass freely.

Compare that with an American passport. Our passports are not elaborate. There is only this simple statement:

"I, the undersigned Secretary of the United States, hereby request all whom it may concern to permit freely and safely to pass, and in case of need to give all lawful aid and protection to ——— ———, a citizen of the United States."

I take a deep pride in those words, "a citizen of the United States." A free American, one with millions of free Americans—a citizen of the United States.

That is what I want to talk about—what citizenship means in liberty, what it means in the duties necessary to preserve liberty.

There is little need, when speaking to Americans, young or old, to make a catalog of the rights preserved to them in the Constitution, and traditions of the United States. I do not mean to make such a catalog.

Equality in the courts, freedom of speech and of worship, and the universal right to vote in elections which afford a real choice—these are commonplaces to us in America.

There is danger, though, in the very fact that we are likely to think of our most precious liberties as commonplace.

One hundred years ago, Daniel Webster said, "God grants liberty only to those who live it, and are always ready to guard and defend it." This is just as true in 1940. It is even more true, because in 1940 democracy has enemies more dangerous than the Royalists and Tories of Revolutionary days. Fascism lies just beyond this growing thirst for a leader, for one man who can take the heavy job of governing off our hands.

There is no easy way to democracy, there is no easy way to preserve it. I cannot state too emphatically my belief that there is no royal road to freedom and individual liberty.

A free people learn self-government and preserve it as any gift or talent is fostered and preserved, by practice. Only by governing ourselves, by exercising the right to vote and to participate in our own government, can we hope to retain our democracy and our freedom.

Nation after nation around us has learned too late this simple truth that was crystal clear to Daniel Webster 100 years ago. But in learning that the right of citizenship is preserved by use, they lost it.

Citizenship is not automatic. That is something we must not forget in days like these. When the people hold the governing power too loosely in any country, there are strong men waiting to seize it, working to seize it. And America is not so free as to be free of such men. Make no mistake about that.

Once strong men who feed on the power to govern have seized it, they fight to hold on. The weapons they use are not pretty—spies, concentration camps, and soldiers in the streets. We want none of that here.

I paint this dark picture because I see a real danger in taking liberty for granted, and in taking citizenship lightly.

Citizenship is a duty as well as a right, and neglecting that duty means losing the right. That is why I urge the young citizens who are this year assuming their citizenship to take it seriously. It needs exercise as much as their minds and their muscles. That is why I urge those young people who will soon come into their citizenship to look forward to it and to prepare for the business of being citizens.

Citizenship does not mean only voting in this coming national election. It does not mean only voting, even if you are careful to cast a ballot in every election—town, county, and State. Citizenship means more than that.

To my mind a citizen should be familiar with the organization of the governments of which he is a part. He should be familiar with the problems of his community, of his State, and of the Nation. He should know how the officers he elects are handling those problems. This is necessary to his dignity as a citizen. It is fulfilling these obligations that makes him a citizen in the fullest sense. These are obligations to himself, as well as to his country.

Again I cannot stress too much the importance of being a part of local government. It is there that it is possible for the greatest number of American citizens to touch government closely. We can see the problems at first-hand and feel the individual responsibility for decisions. We can see the results of policies we have helped to make close at home.

Community government is doubly important. It is close to us, and what it does is vitally important to every part of our lives. But, in addition, community government is important as a school of government. It is there that we can see problems close enough and on a scale small enough for us to completely understand it.

Without a knowledge of how government works in your own community, you are pretty much at a loss to understand the more complex workings of State and National Government.

Just like a correspondence school, I urge you to learn at home. Study the public affairs of your town, and make yourself as much a part of them as you can. There is nothing more true than that a community gets just the sort of government it deserves. I do not mean morally, but rather in proportion to the intelligent effort the citizens are willing to put into the business of governing themselves.

The young people of America hear the word "politician" used scornfully too often. Politician is only a word of reproach, if the citizens think it is, and hold themselves aloof as too good for the dirty business of politics. That attitude is the only one which can make politics a dirty business.

The citizens can make of politics whatever they want. Their neglect makes it a dirty business, but their active and enthusiastic participation makes of politics enlightened self-government worthy of free men in a democracy.

When I urge you to take your place as citizens to the fullest possible extent, I feel obliged to add a word of caution. And again I quote to you the words of Daniel Webster:

"Liberty exists in proportion to wholesome restraint."

Into those words is written another of the cardinal principles of democracy. It is another simple truth which other nations have ignored to their sorrow, and whose essential value they have learned too late.

It is impossible to forget that democracy is cooperative and universal, impossible to forget this and retain democracy.

The rights guaranteed to us in the Constitution are guaranteed to all of us. Those rights must be preserved to all of us. If they are not, if we deny the fundamental liberties to some of our citizens, the result is the loss of freedom by us all.

The constant effort to insure the blessings of liberty to every citizen of the United States is no more than selfish—if anyone needs the assurance of personal gain to fight for liberty.

No case of the denial of constitutional rights to a citizen is unimportant. Fascism and dictatorship starts slowly and finds its roots in the neglect, and in the failure to constantly defend the rights of every individual. Eternal vigilance is certainly the price of freedom.

In this year, as in no other in the recent history of our country, has there been such a need for alert and sincere citizenship on the part of every American. The flags of freedom are being struck, in nation after nation. It is our first and most sacred duty to keep that of American democracy flying.

The way to do this is not romantic. No bands will be playing. The way to preserve democracy is quiet and industrious. It is to use democracy without misuse. It is to govern ourselves, and to defend the rights of Americans, for every citizen, in every case.

The editorial to which I have referred, follows:

[From the New York Herald Tribune of May 6, 1940]

"'I AM AN AMERICAN'

"We have a day, or a week, for virtually everything. The President has designated Sunday, May 19, as 'I Am an American Day,' to be observed as a 'public occasion in recognition of our citizens who have attained their majority or who have been naturalized within the last year.' This group, officially coming into new responsibilities and gaining the right to vote, doubtless will listen to a great deal of advice, some of an excellent nature, and to various definitions of 'Americanism'—that much-abused word which is such a godsend to the orator. And yet, these new voters could do worse than devote a little thought to their place in the scheme of things. They might ponder the fact that, when one comes right down to it, this is not a bad country.

"Our civil liberties appear to be in an excellent state of repair, for the most part. A vote still means something and is usually counted. Freedom of worship has not been impaired. It is still possible to do a great many things without getting permission from a bureaucrat. Nearly everybody has a chance to get some sort of education. A lot of generosity abounds. Some people—not enough, to be sure, but some—have managed to get and hold on to jobs. The country is not directly menaced by any foreign power. Diseases are waning. We have some odd people who are always annoying, but in the words of Alfred E. Smith, 'This country has to put up with a certain number of crackpots, but we get along.'

"A good country, but at the same time it would be a disservice to oversell the idea to these new voters. They are, it is to be hoped, not entirely blind. Certainly this is not a time for smugness, gloating, or self-righteous chauvinism. Between now and November they will all have a chance to listen to tunes ranging all the way from the most exuberant optimism to the blackest despair—and all from good Americans. Those for whom May 19 has been set apart can say in all pride, 'I am an American' but they might at the same time refrain from thinking that they are sitting on top of the world. For they are not."

Minority Attempt To Usurp Majority Rights

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 3, 1940

Mr. THORKELSON. Mr. Speaker, it is my desire to call particular attention to three bills that have been introduced into Congress, and which bill, if enacted into law, prevent anyone from denouncing those who are now engaged in subversion and destruction of our own Government.

It is high time for Congress to realize that when special protective legislation is granted to any minority, the majority digs its own grave. I imagine Members of Congress would be shocked if a society of thieves should ask for special legislation to protect its rights. Yet it is that very thing that happens when a minority asks for special legislation to grant it extra protection.

It is by minority legislation all free and popular governments are converted into despotisms, and it is that which is happening in the United States. It should, of course, be plain to all that, as each group of our people is restricted by law, all of us will, when the last law is enacted, be deprived of all liberties and rights we had before the first restrictive law was passed.

Two of these bills, H. R. 7603 and 7604, introduced by Mr. CELLER, of New York, are in the Judiciary Committee of the House. The third, which I shall discuss, is S. 3876, introduced by Senator BARBOUR, of New Jersey, and is now in the Judiciary Committee of the Senate.

These bills are most vicious and would, if any of them is enacted into law, penalize Members of Congress as well as everyone else who has the moral courage to denounce those of the various minorities who are now engaged in sabotage and destruction of our Government. I quote S. 3876:

A bill to amend section 211 of the Criminal Code

Be it enacted, etc., That the last sentence of section 211 of the act entitled "An act to codify, revise, and amend the penal laws of the United States," approved March 4, 1909, as amended, is amended to read as follows: "The term 'indecent,' within the intendment of this section, shall include matter of a character tending to incite arson, murder, or assassination or riot and also forgeries or matter of a character fraudulent and scurrilous, tending to incite hate against any religious sect or creed or race."

This bill differs from the others in that it is "An act to codify, revise, and amend the penal laws of the United States." It is this I fear, for as an amendment it appears innocent and may therefore, at the end of the session, be reported out and passed with a mass of other legislation, only to work a great injustice upon our people. This bill should never have been introduced because it is not only unconstitutional but would, if enacted, actually repeal or nullify the first amendment in the Bill of Rights.

The Senator should understand that Congress has no right to pass any legislation that restricts the rights of the people as set forth in the Constitution of the United States. Neither has Congress the right to enact legislation which gives minorities extra legal rights, for it is such legislation that paves the road for minority conquest of the United States.

It is astonishing how minorities within the United States are able to hoodwink a tolerant majority, and, in addition to that, wield sufficient influence over Congress to provide legislation which penalizes the majority of the American people. I cannot understand whether this tolerant attitude on the part of the people is because they do not understand the danger or do not have the proper information. I cannot understand whether the submissiveness of the majority in Congress is due to ignorance of facts or because of some unseen or pernicious power wielded by the minority.

Should this amendment pass, this much is certain: No Members of Congress would be able to discuss or mail information in regard to subversive activities of the minority party that controls the Justice Department and the courts in the United States without inviting legal action as the amendment provides. Surely no Member of Congress will consider legislation justified which deprives his own people of their constitutional rights. Surely no Member of Congress will support legislation which places our own people in a subservient position to those who now wield the power of gold. Let us not forget, when courts fall under the control of the minority and under the power of those who control the gold and money, the majority rights are jeopardized, for the courts can, by law, incarcerate each and every one who insists on his constitutional rights.

Let us put the microscope on this amendment. We now have laws against arson, murder, assassination, and kidnaping, so this amendment cannot be to protect us against such crimes.

As a matter of fact, the law against kidnaping is very severe and could, I believe, be invoked against those who, a few days past, set a price of one or two million dollars to promote kidnaping. Such offers are dangerous to the safety of even our own citizens, for they may induce some weak-minded person to engage in a foolish attempt. It might, as a matter of fact, end in murder, so the question may be asked: Why should the press give publicity to such dangerous provocation of crime? This stunt might reach much further than we expect. Let us suppose that some American cititzen is in Germany when such attempt is made. Is not it possible that such person may meet with reprisal, even though he is absolutely innocent? Is not it possible that blame for such crime may be placed not only upon Americans in Germany, but upon Americans in other countries as well?

Let us now put the shoe on the other foot. Suppose any foreign nation offered a reward of two or more million dollars for the kidnaping of one of our officials. Would we take it with indifference? I do not know how others would feel, but I am sure that I would resent such offer made by anyone, and particularly a foreign nation.

The Justice Department should, in order to clean this up, investigate and expose those who made this offer. It is quite possible that the same group may be willing to pay for the kidnaping of some of our own officials. People with criminal tendencies do not always confine their offers to foreigners, but may, to gratify such abnormality, offer a reward for murder in the United States.

The real crux of S. 3876 may be found in the last four words: "Sect, creed, or race," and make no mistake about that. The bill is to give the minority the legal right, through the control of the justice departments and courts, to prosecute and persecute patriotic American citizens who believe in the fundamental principles of this Government, and who are opposed to the termites who are boring from within.

It is indeed unfortunate that legislation of this kind is introduced in Congress, for it can only engender greater and greater hatred toward this rapacious internationalistic group. However, should this legislation bring about animosities and hatreds, which, of course, it will when the people understand what is happening, the proponents are alone responsible.

It is time that we run these traitors out, for they are becoming more and more obnoxious to us who believe in the fundamental principles of this Republic as set forth in the Constitution of the United States.

Who is more indecent, if we must speak of it, than those who have cast morals on the city dump in pictures, in exhibitions, and in the press? Little should they complain or worry about defamation or decency, for they themselves are the greatest offenders. I say let those who introduce these bills explain the sect to which they refer and explain the creed as well. I am sure it would be interesting to know just who they are. Identification of them by the proponents of these bills would be interesting to us who are perfectly satisfied to obey our own laws as set forth in the Constitution.

Furthermore, let the proponents of this bill designate the race to which they refer, and let them state whether this race is composed of Americans or hyphenates. The question, in reality, answers itself, for no one but hyphenates would ask for greater rights than those enjoyed by the majority of the American people. What a farce it is, and what fools we are, we Members of Congress, who are elected to preserve, protect, and defend the rights and liberties of our own people, what fools we are to sit in the Halls of Congress and allow ourselves to be dominated by this obnoxious tribe, whose sole purpose is to entrench itself and to control our courts and our departments of justice for the protection of its own people.

The gentlemen who introduced these bills appear to be unfamiliar with the Constitution of the United States, for it protects all American people without fear or favor; and the Constitution even protects those who are not Americans in any manner except in lip service.

Let no one be mistaken. These bills are vindictive, unconstitutional, and an insult to those who are perfectly willing to conform to our own laws. I sincerely hope, for the sake of decency, that not one of these bills or any similar legislation will ever be reported out from any committee in this Congress of the United States.

In conclusion, may I ask those who propose such legislation to read the Bill of Rights, and should they be dissatisfied with these 10 amendments in their present form, let them in decency propose amendments to the Constitution according to article IV, so that the people may at least be informed as to the identity of our destroyers.

Civil Aeronautics Authority

EXTENSION OF REMARKS

OF

HON. JOSEPH W. BYRNS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

EDITORIAL FROM THE CLARKSVILLE (TENN.) LEAF CHRONICLE

Mr. BYRNS of Tennessee. Mr. Speaker, during the last few days there has been a great deal of propaganda to the effect that the Civil Aeronautics Authority will not lose its powers to appoint and control personnel and to determine budgetary matters under the proposed reorganization.

If the reorganization is supposed to save money, how can it do so except by amalgamating C. A. A. functions with the functions of the Department of Commerce? And if the C. A. A. has to depend on the Department of Commerce facilities for its personnel and budgetary work, what does it

mean to say that the C. A. A. will be able to reach its own determinations?

What is the purpose of putting the C. A. A. into the Department of Commerce? Things like that are not done just because it looks nice. They are done to give the Department of Commerce control.

Of all agencies of the Government, the C. A. A., regulating the safety of pilots and passengers and of the boys and girls in the civilian pilot-training program, ought to be most independent and most free of the departmental pressures and jealousies. Keep it as it is.

Mr. Speaker, under permission to revise and extend my remarks, I have included herewith an editorial from the Clarksville Leaf Chronicle, Clarksville, Tenn., entitled "Keep It As It Is."

[From the Clarksville (Tenn.) Leaf-Chronicle]

KEEP IT AS IT IS

President Roosevelt has issued an order which, if carried out, will have the effect of destroying the independence of the Civil Aeronautics Authority. The Presidential order would pull the teeth of the C. A. A. and turn its authority over to the Commerce Department. This Department is headed by Harry L. Hopkins, who should have enough to do without taking over aviation.

Former Congressman Samuel B. Pettingill, "the gentleman from Indiana," in a copyright article issues a timely warning against such a move, which he describes as A New Death Sentence. He cites the tragic mistake of February 1934, when air-mail contracts were canceled. Aviation was under control of the Commerce Department and "during that period * * * 473 persons lost their lives in air crashes of whom 146 were air-line pilots. The ranks of the air-line pilots were being thinned at the startling rate of one every 28 days. Their passengers were meeting death averaging 1 every 15 days. The crash-scared public was afraid to ride which resulted in inestimably large losses of revenue to the industry and progress was stymied."

As a result of these tragedies, the Civil Aeronautics Act of 1938 was enacted. The Authority was made independent from political pressure and the act created an independent Air Safety Board which investigated all crashes. Yet, under the new plan, this Board is to be abolished and Mr. Hopkins is to be made responsible.

Considering the remarkable advancement aviation has made under the C. A. A., and the amazing record of a year without a single fatality that commercial air lines have made, it seems to us well enough should be let alone. Commercial air-line pilots have flown more than 87,000,000 miles, or have flown a distance that would girdle the globe 3,600 times without a single death among its more than 2,000,000 passengers.

The C. A. A. is a Government commission that has done a remarkable job. As long as such a record is maintained, or even approached, the Authority should be continued. We are an air-minded Nation because of the relative safety of aviation. The Authority deserves much of the credit and, if anything, its life should be made more secure—certainly not snuffed out.

Dairy Farmers' Union Support Debt-Adjustment Bill (S. 3509)

EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

STATEMENT BY HARRY A. CARNAL, SECRETARY OF THE DAIRY FARMERS' UNION OF NEW YORK

Mr. CULKIN. Mr. Speaker, the storm over the debt-adjustment bill, Farm Credit Act of 1940 (S. 3509), continues to rage both in the press and legislative committees. I am in receipt of a communication from Harry A. Carnal, secretary of the Dairy Farmers' Union of New York, favoring this legislation. Mr. Carnal knows the situation of the dairymen at first hand and is of the opinion that no procedure bound about by red tape will rescue them from their present actual or impending bankruptcy. It is my own judgment that so long as the Government permits the northeast dairymen to be exploited by the Milk Trust that some relief, not homeopathic in character, must be given them.

Pursuant to the permission of the House, I append hereto Mr. Carnal's statement:

DAIRY FARMERS' UNION,
Ogdensburg, N. Y.

STATEMENT IN SUPPORT OF THE DEBT-ADJUSTMENT BILL—FARM CREDIT ACT OF 1940, S. 3509

It is obvious that agriculture in New York and New England stands to benefit decidedly from the debt-adjustment bill. Unlike farmers in other sections, those in the East have not been vocal nor pressing in their demands, nor have they always utilized Government agencies to the full extent, frequently to their own detriment. But in the debt-adjustment bill, which so ably complements the more humane policies of the revamped Farm Credit Administration, they see very real and welcome assistance.

For one thing, the debt-adjustment bill opens the way for reducing the number of farm-mortgage foreclosures. It goes a step further in helping to restore to the land farmers who have already lost their farms through foreclosures. To return these farmers to the land is the best possible solution from the standpoint of human welfare, efficiency, and the national economy. But at present, a farmer once foreclosed, is not eligible for another farm loan.

That provision of the debt-adjustment bill which eliminates the purchase of land-bank stock as a prerequisite to obtaining a loan will be especially commended by eastern farmers. This especially onerous provision has long been regarded as a legalized racket, an unfair toll levied upon those who can least afford it. A pun on the words "stock" and "stuck" has already gone the rounds of the milkshed in this connection.

The stock-purchase plan is so unpopular, not only because of the added burden it imposes, but because it is an obvious injustice to make one farmer jointly liable for the loan of another. A farmer who is a borrower is not impressed with a neatly engraved stock certificate. His major interest is in getting a loan and getting it paid off most expeditiously, and anything which interferes with this is bound to be vexatious, especially when it appears to be unnecessary and unjust.

Those who defend the stock-purchase plan in the New York milkshed claim that it imparts an element of "cooperation" to the system. They are the "professional cooperators" of the Grange, the Farm Bureau, and kindred organizations who are largely responsible for the indifference or hostility of eastern farmers toward the cooperative movement. In fact, agricultural cooperation in these areas has not received the support to which it is entitled largely because of the numerous infringements which have been perpetuated upon the cooperative movement.

From the economic and human standpoint, the debt-adjustment bill is a desirable piece of legislation, and as such it is recognized by farmers of the East, especially by those who are already indebted to Federal Farm Credit.

As representatives of 21,000 dairy farmers in the States of New York, Vermont, and Pennsylvania we give our unqualified support to, and urge the passage of this bill.

HARRY A. CARNAL, *Secretary.*

Dies Committee Against Courts

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

DECISION AND OPINION BY HON. GEORGE A. WELSH, JUDGE, UNITED STATES DISTRICT COURT FOR THE EASTERN DISTRICT OF PENNSYLVANIA

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks, I include herein the decision and opinion of the Hon. George A. Welsh, judge, United States District Court for the Eastern District of Pennsylvania, with regard to the illegal activities of the Dies committee:

[In the District Court of the United States for the Eastern District of Pennsylvania. *Carl Reeve* v. *Chester Howe, George F. Hurley, Albert A. Granitz, Jacob Dogole,* civil action No. 840; and *Frank Hellman, individually and as district organizer of the International Workers Order and the International Workers Order, Philadelphia District Committee,* v. *Chester Howe, George F. Hurley, Albert A. Granitz, and Jacob Dogole,* civil action No. 841. May 3, 1940.]

SUR MOTIONS TO DISMISS

Welsh, J.:

"* * * The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures shall not be violated, and no warrants shall issue,

but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the person or things to be seized * * *."

ARTICLE IV. CONSTITUTION OF THE UNITED STATES

The only question before us for decision is whether or not the above constitutional safeguards and guaranties have been violated. Partisanship and political philosophies have no place or bearing in the discussion. Those matters can very well be left to their proper avenues of expression and control.

The questions thus having been placed squarely before a Federal court for decision requires a full, accurate, and complete statement of the facts and the law involved. The court cannot be otherwise than exceedingly mindful of the fundamental principles of the case thus submitted to it for its decision. The comments of men high in public life, the discussion of the subject in the public press and magazines, and the hundreds of letters on the subject coming to the chambers of the court indicate the tremendous feeling that the case has aroused, the state of the public mind due to existing world conditions, and the confused thought as to what the real underlying principles of the case are. We could scarcely discharge our duty in the circumstances without taking due notice of all these factors, and without exercising a wider latitude in our treatment of the problem than in the usual or ordinary case. Hence, we consider it advisable to state as clearly as possible the actual fundamental facts as we believe them to be. Also, the principles of law that govern and which we believe have governed from the time our country was founded, its Constitution adopted, and as this Constitution has been defined and interpreted by the Supreme Court of the United States for over 150 years.

The courts are concerned only with maintaining the sanctity of the safeguards of the Constitution of the United States. We feel that we should call attention to the exceedingly grave consequences of breaking down the applicable provisions of the Bill of Rights. It just so happens that the aggrieved parties in this case are apparently very much in the minority in our country. But their rights which they claim were invaded are rights that are sacred to all of us. All of our people have the right to form themselves into political parties and to have the free and untrammeled right to the press to promulgate their ideas. The collateral evidence shows that the offices of the political party and the newspaper known as the American Free Press were both raided and much property confiscated and taken away.

The Supreme Court of the United States in the case of *Thornhill* v. *State of Alabama*, decided April 22, 1940, called the attention of our people to the fact that the Continental Congress itself, as long ago as October 26, 1774, recognized the utmost importance of this fundamental doctrine in these words:

"The last words we shall mention regards the freedom of the press. The importance of this consists, besides the advancement of truth, science, morality, and arts in general, in its diffusion of liberal sentiments on the administration of government, its ready communication of thoughts between subjects."

On April 2, 1940, the defendant George F. Hurley, a special investigator for a United States congressional committee known as the Dies committee, made affidavit before Jacob Dogole, a magistrate of the city and county of Philadelphia, that, upon information and belief, matter of a seditious nature, banned by the Pennsylvania Act No. 275 of June 26, 1919, as amended by the act of May 10, 1921, No. 211, was to be found at the headquarters of the Communist Party at No. 250 South Broad Street, Philadelphia, and at the headquarters of the International Workers' Order, 810 Locust Street, Philadelphia, and praying, under the authority of said act of assembly, for the issuance of warrants authorizing the search and seizure of said seditious matter.

The search-and-seizure warrants were issued by Magistrate Dogole, and though by him directed for execution to "any police officer of the city and county of Philadelphia," were, nevertheless, delivered by the magistrate to the defendant Hurley. Pursuant thereto, the defendants Hurley and Howe, accompanied by Lieutenant Granitz and a squad of some 30 Philadelphia police officers, proceeded to the said headquarters of the Communist Party aforesaid at 250 South Broad Street, Philadelphia, and to the headquarters of the International Workers' Order at 810 Locust Street, Philadelphia, and searched and seized and carried away various property which, however, has since been returned and is now in the custody of the polic authorities of the city of Philadelphia.

It transpired that the headquarters of the Communist Party at 250 South Broad Street were in the apparent occupancy or charge of one Carl Reeve, educational director of the Communist Party in Philadelphia.

On April 3, 1940, the said Carl Reeve, in his representative capacity as educational director of the Communist Party, filed in this court his complaint, as above captioned, praying for an order (a) quashing the search-and-seizure warrant issued by Magistrate Dogole; (b) enjoining and restraining the above-named defendants, and each of them, from using, copying, or otherwise interfering with the seized property, or making public any of its contents, and (c) directing the return of the seized property. (The prayer for an order restraining the use or publication of the seized property, was subsequently formally withdrawn before us by counsel for Carl Reeve, complainant.)

On April 12, 1940, motions to dismiss the complaint for want of jurisdiction in this court, and for failure to state a claim entitling the complainant to the relief prayed for, were filed by counsel for the defendant Albert A. Granitz, and by counsel for Jacob Dogole. Briefs for and against the motions to dismiss have since been submitted, and are now before us. As the warrants for the search and seizure both at 250 South Broad Street and at 810 Locust Street, were identical in content, what we shall say of the one directed at 250 South Broad Street, may be regarded as equally applicable to the other addressed to 810 Locust Street.

Upon the question of our jurisdiction, we note, first, that although the warrant was issued by a magistrate of the city of Philadelphia, nevertheless the application for the warrant was solicited from the magistrate alike by defendants Hurley and Howe (admittedly the agents of the Dies committee, which is admittedly a Federal investigating committee), and that the application was actually signed and sworn to by Hurley.

We note further that although the warrant was directed for execution to "any police officer of the city and county of Philadelphia," nevertheless it was delivered by the magistrate to Hurley, who, with Howe and Lieutenant Granitz and a squad of 30 city police, proceeded to 250 South Broad Street and executed the warrant at that place.

We note further that though under the terms of the warrant, return of the warrant and of the seized property was to be made to the magistrate forthwith, or at any rate no later than within 10 days, nevertheless Hurley and Howe took immediate possession of the seized property, and transported it to Washington, and there delivered it to the Dies committee, who, having first made such use of the seized property as it saw fit to make, returned it into the custody of Magistrate Dogele.

Under the narrated facts, we are of the opinion that the search and seizure was in reality a Federal undertaking, taken under the chance that possibly something would be disclosed of official Federal interest. The fact that the undertaking was the joint undertaking of the local and Federal officers is material. The effect is the same as though the Federal agents had engaged in the undertaking as one exclusively their own. (*Byars* v. *United States*, 273 U. S. 28, 32.)

"Where a search has been participated in or instigated by Federal officers, under such circumstances as to stamp it as a joint enterprise * * * the validity of the search and seizure must be tested by the Federal law." (Cornelius on Search and Seizure, sec. 17, p. 62.)

Was the search and seizure invalid? That is to say, was the supporting warrant itself supported by sworn facts competent to be submitted to a jury, as reasonably affording probable cause for believing that seditious or subversive matter was to be found at the headquarters of the Communist Party at 250 South Broad Street? This is the standard by which the validity of the search and seizure is to be tested (*Grau* v. *United States*, 287 U. S. 124–128).

Tested by this standard, we note, first, that the affidavit of defendant Hurley, upon which the warrant issued, sets forth only Hurley's belief "upon information received," that certain persons, among them Carl Reeve, were in possession of and were concealing seditious records and literature, in violation of the Pennsylvania act of assembly, upon the premises 250 South Broad Street. Nothing more. Nevertheless Magistrate Dogele issued the warrant which, as we have said, though directed to "any police officer of the city and county of Philadelphia," the magistrate delivered over to Mr. Hurley. Magistrate Dogele admits he made no inquiry at all as to the source of Mr. Hurley's information. Lieutenant Granitz was not present at the time of the delivery, and the magistrate testified that he did not know how Lieutenant Granitz got possession of the warrant, if indeed he got possession of it at all. It is, however, admitted that Hurley and Howe, accompanied by Lieutenant Granitz and a squad of police, approximately 30 in number, proceeded to 250 South Broad Street, and ransacked and cleaned out practically the entire contents of the headquarters of the Communist Party, not even omitting matters relating to housing construction, the personal property of Reeve, the complainant here, who is a member of the advisory committee of the Philadelphia Housing Authority under appointment of the president of that authority, the Honorable Frank Smith, nor omitting even the Communist Party's nomination papers for election to the State legislature—nomination papers the last day for filing which at Harrisburg was the next day following their seizure and transportation to Washington, with the result that unless some other means might be found it would be too late to do so—nor omitting even a letter file containing the names and addresses of furniture dealers, the property of one Esther Segal who, it is our understanding, was not an employee of the Communist Party.

We are not, however, greatly concerned with the actual property seized and transported to Washington. Whether it was seditious or not seditious has no bearing on the legality of the search and seizure. An unlawful search and seizure would not be made lawful no matter what evidence of an incriminating nature was found among the archives. The authenticity and genesis of any alleged seditious literature may now be difficult to legally prove in view of the circumstances surrounding their seizure and transport, and handling by so many persons involved. However, should this matter be material and relevant it may be legally inquired into later. We go to the affidavit of Mr. Hurley upon which the warrant issued, and find (as we have said) that it stated only that the affiant "upon information received" believed that "books, records, writings, publications, printing, cartoons, or utterances, documents, or writings," of a seditious or subversive nature were on the premises to be searched. Such an affidavit was plainly inadequate. The belief that the statements in an affidavit to a warrant are true,

is insufficient, *Byars* v. *United States* (273 U. S. 28). The fourth amendment of the United States Constitution, provides that:

"* * * and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized."

It was also inadequate as tested by the act of Congress of June 15, 1917 (ch. 30, title 18, U. S. C. A., sec. 613), which provides that:

"A search warrant cannot be issued but upon probable cause supported by affidavit naming or describing the person, and particularly describing the property and the place to be searched."

The affidavit being defective, it is unnecessary to consider the alleged defect in the warrant, for if the affidavit was defective the warrant itself was without lawful foundation (*Grau* v. *United States*, 287 U. S. 124, 127). Being so, it is unnecessary to consider whether the warrant was good under the State law, since in no event could such warrant constitute the basis for the search and seizure here, which was so palpably a Federal search and seizure (*Byars* v. *United States*, 273 U. S. 28, 29). It thus appears that the search and seizure was made without probable cause and without any personal knowledge of the searching officers. As has been said by a high authority, no good reason exists why the right to be free from unreasonable search and seizure should not stand upon a parity today with freedom of religion, of speech, of the press, and of assembly, as guaranteed by the Bill of Rights, inasmuch as all of these rights are of equal importance to the individual (*Hague* v. *Committee, etc.*, 101 Fed. (2d) 774, 787, C. C. A. 3, per Biggs, C. J.). Protected from abridgment by the Federal Government by the first and fourth amendment, they are protected from abridgment by the States by the fourteenth amendment (id. p. 788, citing *Colgate* v. *Harvey*, 296 U. S. 404, 428). The suit in question was brought by the complainant to secure the protection and enforcement of civil rights guaranteed to him by our fundamental laws. The district court has jurisdiction of the suit under section 24 of the Judicial Code (28 U. S. C. A. sec. 41 (14)).

Defendant claims that the complainant has no redress because he was acting as the officer of a corporation, and that a corporation is not within the protection of the Constitution. In the early days of our national life, when business was largely individual in character or conducted by small groups of associates, the artificial entity of the corporation was looked upon as being outside the guaranties of the Constitution. But as we progressed to great corporate activities this view changed, and many years ago the Supreme Court of the United States declared that corporations were persons within the meaning of certain provisions of the Constitution. This interpretation was but a recognition by the highest tribunal of the fact that man's rights, possessed as an individual, were not lost by reason of his associating himself with others in a corporate activity. It requires only casual reflection to appreciate how important this interpretation has been to our national life. Men have been encouraged to combine their fortunes, their brains, and their energies, knowing full well that they forfeited no rights possessed by them in their individual capacity. Corporations have been declared persons within the meaning of the Constitution in certain respects. The mere fact that Mr. Reeve, the complainant, happened to be a member of an unincorporated society, and its duly accredited officer in the lawful possession, custody, and control of its property and paraphernalia, does not remove him from the protecting fold of the Constitution. If he became the victim of a raid or of process prohibited by the Constitution, relief should be given by a Federal court.

Counsel for defendants further allege that the complainant, as an individual, has no legal personal title to the papers and records seized due to the fact that he was also the officer of the corporation. Is this claim warranted within the real meaning of the applicable constitutional provision? Are the effects merely physical objects or do they include something more intangible and possibly far more real and substantial? Is the individual secure in his person, if he is deprived of or denied the right to function according to the rational activities of the office or station which he lawfully occupies? Man's life and his very being consists in his activities; he functions as man in the realm of thought; in this he differs from the brute creation. Surely a civilization as wonderful as ours cannot limit or circumscribe the constitutional guaranties of personal security within the limits claimed by the defendants. Furthermore, dispassionate reasoning must concede that the duly constituted corporate officer, having books, papers, records, money, and other property committed to his care, for the proper use of which, within the scope of corporate powers, he is personally responsible, has a right therein and thereto. We therefore cannot accept the claim of the defendants that they are free from the constitutional command not to violate those rights. Let the seal of judicial approval be placed upon such constitutional violations and liberty of the person, and liberty of religious and political thought and action will have vanished from our land.

Humanity can be no freer than its liberty to think. The search for good and the search for truth must be free for the mind of man to explore in all realms, spiritual and physical, each man according to his light. Man's relation to his God, to his fellow man, and to the State must ever be the subject of search and investigation. This is the liberty that the Constitution of the United States guarantees to its people. Any limitations of that liberty must be placed by the sovereign will of the people, lawfully expressed and self-imposed, and not by the fiat of any branch of the Government, whether it be executive, legislative, or judicial.

Eternal vigilance is the price of liberty. Our Government, through its proper agencies, has the power, the responsibility, and the duty of exercising such vigilance. When such vigilance is exercised within the limitations of the constitutional safeguards, all of our people will be found in sympathy.

The motions to dismiss the complaint in the above-entitled proceedings are denied.

Proposed Amendment of the Wage-Hour Law

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 3, 1940

Mr. MICHENER. Mr. Speaker, the House has just voted to recommit the legislation amending the wage-hour law. The effect of this vote is to send the Norton bill (H. R. 5435), the Ramspeck bill (H. R. 7349), and the Barden bill (H. R. 7133) back to the Committee on Labor. This means that there will be no action on the part of the House looking toward perfecting the wage and hour law at this session of Congress.

By voting to recommit this bill, the House has nullified everything done during the last 7 long days. Now that it is all over, it is will to take an inventory and see just where we started and where we finished.

At the beginning of the debate on the rule making these three bills in order, I called attention to the objections inherent in a rule of this kind. The prophecy made then has surely come true. If this 7 days' wasted time has not done anything else, it should at least convince the House of the fallacy of a rule of this type.

The debate has shown clearly the genesis of these three bills.

The Labor Committee report on the Norton bill, among other things, says:

Section 4 (d) of the Fair Labor Standards Act of 1938 requires that the Administrator submit annually in January a report to Congress covering his activities for the preceding year and including such recommendations for further legislation in connection with minimum-wage and maximum-hour legislation as, in his opinion, are desirable. Acting in accordance with this requirement the Administrator did, in January of this year, submit his report to Congress together with suggestions for amendments to the act which, in his opinion, were necessary to relieve hardships found to exist and to make the administration of the act more effective. These suggestions were incorporated in the bill (H. R. 5435) introduced by the chairman of the committee and have been fully considered by the committee. All of them are carried in the committee amendment but not all in the form recommended by the Administrator. A number of other matters, not contained in the recommendations of the Administrator, were brought to the attention of the committee, and it was the committee's considered judgment that these matters also should be dealt with in any amendments to the act.

It will therefore be observed that the Norton bill not only had the support of the Committtee on Labor, but was in response to the request of the Administrator of the wage-hour law for legislation in order that some of the hardships and inequalities under the existing law might be removed. The Norton bill to which the report refers is the bill as introduced, and that part of the bill reported through which the lines were drawn by the printer and which the House has just recommitted. The Norton bill was introduced March 29, 1939.

The Barden bill was introduced July 11, 1939, and represented the views of organized agriculture as to amendments that were necessary in order that certain branches of agriculture might not be destroyed.

The National Grange, with its over 800,000 paid membership, advised each Member of Congress in reference to the Barden bill as follows:

We regard it as urgently necessary that Congress should pass the Barden bill, H. R. 7173, to amend the Fair Labor Standards Act of 1938, commonly known as the Wage and Hour Act.

Under the act, those who are engaged in agricultural pursuits, together with those employed in handling or processing agricultural commodities in the area of production are exempted. However, this exemption has been largely nullified by the wholly illogical and unwarranted interpretation or ruling made by the former administrator of the act, Mr. Andrews. While his successor has been in office for about 6 months, this ruling still stands.

The purpose of the Barden bill is to amend and clarify the original act so as to give agriculture and the processors of farm commodities in the area of production the exemptions to which they are justly entitled.

Under the Agricultural Adjustment Act it is the declared purpose of Congress to give agriculture price parity with the other groups in our national life. But during the past 2 years the exchange value of farm commodities as compared with commodities that farmers must buy has stood at only about 75 percent of the pre-war level, 1909–14. No industry could be expected to function very long under such a tremendous handicap and remain solvent.

The Wage and Hour Act, as it has been misinterpreted, simply operates to make the old disparity greater than ever. As we see it, Congress has a responsibility in this matter that it cannot afford to evade. We trust that the Barden bill may be enacted.

Mr. Edward A. O'Neal, president of the American Farm Bureau Federation and an outstanding new dealer, sent a telegram to Members of Congress which reads as follows:

Urgently request you support Barden bill amendments to Wage and Hour Act. Unreasonable construction of area of production by wage-hour Administrator makes amendment of act imperative. Farmers producing perishable and seasonal commodities already receiving less than parity prices and income. Cannot stand increased costs in marketing of such commodities.

Mr. C. L. Brody, executive secretary of the Michigan State Farm Bureau, advised the Michigan Members of Congress as follows:

We understand that the Barden bill to amend the wage and hour law will come before the House Thursday or Friday of this week. We are convinced that the enactment of this legislation will give agriculture relief from certain interpretations of the act as follows:

(a) Modify the hour restrictions in certain agricultural trades and industries;

(b) Clarify the area-of-production problem that has arisen from the restricted definition promulgated by the wage and hour Administrator;

(c) Put a statute of limitations period of 6 months upon the time in which action to recover time and a half overtime can be maintained. This is designed to prevent the unwarranted accumulation of overtime with the resultant possibility of complete ruination of business for any technical violation of the act;

(d) Exempt under certain conditions employees working under higher salary brackets.

We are glad to give you our position on the Barden amendments at this time, and hope that it will be helpful to you in your consideration of the bill.

The National Cooperative Milk Producers' Association had this to say about the Barden bill:

In the interest of all agriculture, our organization, which represents approximately 350,000 dairy-farm families, urgently requests the passage of the Barden bill (H. R. 7133) to amend the Fair Labor Standards Act.

The Barden bill not only clarifies the wage and hour exemption provisions of the law but reiterates and carries out the original intention of Congress to exempt operations of employees engaged in the preparation of farm products for market. While specific exemption of such operations was provided for in the wage-hour law, the unwarranted and unreasonable definitions given "area of production" and other terms contained in that act by the Wage and Hour Administration have, for the most part, nullified these exemptions and have deprived farmers of their benefit.

Denial of these exemptions results in saddling increased production costs on the farmers. This tends to widen the existing disparity between prices farmers receive and pay at a time when farm prices and income are still below the parity level which Congress, in the general farm program, has provided as the goal to be reached.

It is vital to American agriculture that the Barden bill be passed. The passage of the bill gives needed relief to agriculture and insures preservation of the specific exemptions which Congress provided in the original wage-hour law with respect to employees engaged in preparing farm products for market.

The bill has the support of the major farm organizations of the country which are sincere in their belief that the wage-hour law has not been administered consistent with the express intention of Congress when it passed the law.

We accordingly respectfully urge that you support the Barden bill—H. R. 7133.

In short, organized agriculture favored the Barden bill because the interpretation placed upon the wage and hour law by the previous Administrator works a direct injustice to agriculture. We, who were Members of the Congress when the Fair Labor Standards Act was passed, all know that it was never intended that the Administrator should interpret the law as he has interpreted it, and which interpretation makes at least a part of the Barden bill essential if the farmer is to have a square deal.

The Ramspeck bill was introduced on July 24, 1939. The gentleman from Georgia [Mr. RAMSPECK] is one of the outstanding members of the Labor Committee and no Member of that committee knows more about Federal labor legislation than does the gentleman from Georgia [Mr. RAMSPECK]. I am advised that after some consideration had been given to the Norton bill and the Barden bill, the gentleman from Georgia [Mr. RAMSPECK] took from those two bills such amendments as to him seemed less controversial and matters on which there seemed to be general agreement within the committee, and embodied those proposals in the Ramspeck bill. This was sort of a compromise, and the purpose was to get needed legislation even though it were impossible to get what the Administrator wanted in toto or what the Barden proponents wanted in its entirety.

The House first gave consideration to the Barden bill and when it had finished, the bill was hardly recognizable so numerous and potent were the amendments.

The Ramspeck bill was only given formal consideration by the House and was withdrawn.

The committee amendment to the Norton bill was given full consideration by the House and likewise was amended all out of shape. Under the rule no opportunity was given to amend the Norton bill as originally introduced, and which contained the provisions asked for by the Wage and Hour Administrator.

When the vote was taken as to whether or not the Barden bill, as amended, would be substituted for the amendment to the Norton bill, as amended, the Barden bill was defeated. Then, in turn, the committee amendment to the Norton bill was defeated, so that in the final analysis the House was required to vote on the Norton bill as introduced and as advocated by the Administrator.

I voted for the Barden bill as a substitute. I then voted for the committee amendments to the Norton bill. Both of these propositions were defeated. Then a motion was made to recommit the bill; that is, to send it back to a quiet pigeonhole in the office of the chairman of the Committee on Labor, there to repose quietly until the end of this Congress, when it would be officially dead. My reasons for voting as I did are as follows:

First. It is generally agreed that the wage and hour law, in order to be equitable and effective, should be amended.

Second. The legislative processes provided to bring this about are:

(a) The introduction of a bill into Congress which is referred to the Committee on Labor.

(b) Consideration by that committee and a report to the Congress.

(c) Consideration and passage by the House with or without amendments.

(d) Consideration by the Senate of the House bill as amended.

(e) If the Senate passes the House bill with any changes whatever, the bill so changed comes back to the House and goes to conference between the House and the Senate. The House is then permitted to vote on the bill as agreed to by the conferees.

In short, by voting against the motion to recommit, I voted to send the bill, such as it was, on its way to the Senate where it might be made better. We all know that the Senate would not accept the Norton bill without some changes. I wanted some changes. Therefore, as a practical matter, when the bill came back from the Senate, the House would have an opportunity to vote on its final passage in the adoption of the conference report.

Those who voted to recommit the bill, in effect voted against any amendments to the wage and hour law at this

session of Congress. Those who voted against the motion to recommit, as I did, voted for further consideration of this whole matter in the Senate with the possibility of making the changes in the law advocated by the Administrator, as well as needed additional changes in order to make the law workable and helpful rather than unworkable and destructive to some of our agricultural industry.

The wage and hour law is on the statute books and will not be repealed. It matters not what our views were before this policy was adopted by the Congress. The fact is that the Congress has determined upon this policy and it seems to me that the duty of the Congress is to honestly, sincerely, and courageously amend the law wherever amendments are needed, to the end that the objective of eliminating child labor, sweat shops, and unreasonably low wages be accomplished. It seems to me that the House has made a mistake in recommitting this bill, and thereby affirmatively killing all chance of wage hour law amendments at this session. Helpful and necessary amendments can and should be made without destroying the commendable features of the act. Had the bill been sent to the Senate amendments would still be possible.

Protest Transfer of Control of State Schoolships

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 6, 1940

RESOLUTION OF MASSACHUSETTS SCHOOLSHIP CLUB OF WASHINGTON, D. C.

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

MASSACHUSETTS SCHOOLSHIP CLUB,
Washington, D. C., May 1, 1940.

The Massachusetts Schoolship Club of Washington, D. C., composed of graduates from the schoolship maintained by the State of Massachusetts, unanimously adopted the following resolution at its April meeting:

Whereas under section 10 of the President's fourth reorganization plan, it is proposed to transfer the control of State schoolships from the jurisdiction of the Navy Department to that of the United States Maritime Commission; and

Whereas such a transfer in these times of uncertainty in the field of maritime labor, when officers, trained under naval discipline and inculcated with a spirit of loyalty, are urgently needed, is most ill-advised; and

Whereas the needs of national defense have been most splendidly served by Navy-trained schoolship men during the past 50 years, as the records of the schoolships show; and

Whereas the present plans of the Navy Department contemplate an ever closer cooperation with the various schoolships; and

Whereas the functioning of schoolships under joint State and Navy jurisdiction affords a permanence which unfortunately may not be the case should the control of the schoolships be vested in the Maritime Commission, a bureau whose permanency is not assured with changes of administration; and

Whereas such a transfer of functions will, in the opinion of many, eventually lead to the abolition of schoolships by the various States: Therefore, be it

Resolved, That the Massachusetts Schoolship Club of Washington, D. C., protest against such a transfer, and respectfully petition the Congress to disapprove section 10 of the fourth reorganization plan; and be it further

Resolved, That copies of this resolution be transmitted to:

Chairman, Senate Naval Affairs Committee; chairman, House Naval Affairs Committee; chairman, Marine and Fisheries Committee of the Senate (Commerce); and chairman, Marine and Fisheries Committee of the House.

CHARLES B. SCULLY,
Secretary, Washington, D. C.

United Democracy

EXTENSION OF REMARKS
OF
HON. JAMES A. SHANLEY
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, May 6, 1940

ADDRESS BY J. FRANCIS SMITH

Mr. SHANLEY. Mr. Speaker, I am taking the liberty of extending and revising my remarks and including therein a speech delivered by the Democratic State chairman of Connecticut, J. Francis Smith, on April 20, 1940, before the members of the Young Democratic Clubs of Connecticut and their friends.

Mr. Chairman, National Committeeman FitzGerald, Governor Cross, Senator Maloney, honored guests, members of the Young Democratic Clubs of Connecticut, and their friends, this gathering, marked by enthusiasm of the true harmony of a common and sincere purpose, augurs well for the success of our party in the crucial elections which make the year 1940 a critical one in the history of our State and Nation as well as of the Democratic Party.

A united Democratic Party cannot fail to command the support of a great majority of our citizens. And I am convinced that we are united. United in a determination that this country shall not return to the cynical reaction of the Harding administration, to the cool indifference of the administration of Calvin Coolidge, nor to the wishful futility of Herbert Hoover. We have had 7 years of progress and of vigorous action under a national democratic administration. No one should claim perfection for this administration. No one should or does claim that no changes are needed nor that all of our problems are solved. That we have made real progress is enough, and that claim cannot be denied by our opponents. In fact, we need no more than their own words to prove our claim. In fact, Governor Baldwin was quoted on February 14 in a Bridgeport newspaper as stating that he considered it "astounding that with employment at the level that it is today there are still people looking for work." But, astounding or not, it is a fact that these people do exist, and it is a fact that progressive action cannot give way to pleasant but meaningless gestures and phrases.

As a further evidence that the progress of the past years has been real and substantial, we need only consider that the Republican Party does not dare to recommend the abandonment of a single major part of the Roosevelt program. Which of the Republican candidates for the Presidential nomination recommends the abandonment of Federal aid to the unemployed, of aid to home owners, of recognition of the rights of labor, of assistance to agriculture, of protection of depositors and investors, of the social-security program? Even conceded that this criticism may occasionally be justified in some detail, what of that, compared to the overwhelming fact that the Republican Party does not and will not dare go before the American people on any other platform than a continuation of the major policies of the Roosevelt administration?

Lacking the courage and the justification for making a direct and forthright attack upon the fundamentals of the Democratic program, the Republican leadership has been reduced to a campaign of devious indirection. We do not need to go outside the boundaries of our own State to observe the nature of this campaign. We have observed the efforts of our own amiable Republican Governor to create the impression that prosperity and employment can be obtained by friendly words and a cheering philosophy. Let me remark that I most heartily endorse the proposition of Governor Baldwin that we should have a government "friendly to business." I most emphatically agree that over a period of years the prosperity and welfare of our citizens will be materially affected by the attitude of our State government toward all legitimate business. The Governor deserves praise rather than criticism for his insistence upon proclaiming Connecticut's welcome to industry and commerce. The fault, and it is a serious one, lies in attempting to make a political issue of a policy approved and supported by all parties and all citizens in this State.

There are two major fallacies in the campaign which has been carried on by the Governor. One fallacy is the idea that a government friendly to business is something new. When have we had a Democratic administration unfriendly to business? Were the administrations of Governor Cross unfriendly to business merely because they promoted the cause of the wage earner or because they recognized the needs of some of our less-fortunate fellow citizens? And if it is not intended to criticize the administrations of Governor Cross, would it be said that the administration of Gov. Simeon Baldwin was unfriendly to business?

State Finance Commissioner Saxon recently issued a statement in which he gave the two principal reasons for the improvement in State finances. One was the reorganization of the financial structure of the State. This reorganization, ladies and gentlemen, was the policy and performance of the Democratic administration of Gov. Wilbur L. Cross.

The second reason given by Governor Baldwin's own official was general business improvement. This brings up the second fallacy. That fallacy is that the actions of the State government can materially or immediately affect industrial prosperity and employment in the State of Connecticut. I dislike even to discuss this contention. It can be described only as downright silly. The following editorial from the Bridgeport Times-Star is common sense:

[Excerpt from editorial, Bridgeport Times-Star]

"Followers of Gov. Raymond E. Baldwin who became too enthusiastic in assigning to him personally all credit for such reemployment as Connecticut knew during 1939 did him no favor and are now engaged in the embarrassing business of confronting some unpleasant statistics. The statistics show a sensational drop in Connecticut employment in the past 6 weeks, turning a foolish claim on the part of Republican leaders into an opportunity for a claim equally foolish on the part of the Democrats.

"As a matter of fact, all such claims and counterclaims are out of place."

Let me say that I know of no responsible Democrat who has taken advantage of the opportunity offered in that editorial to be "equally foolish." We know that Governor Baldwin had no more to do with the recent increase in unemployment than he had to do in 1939 with the increase in employment. I have here a few statistics. They cover seven industrial States: Connecticut, Massachusetts, Rhode Island, New Jersey, Ohio, Illinois, and Michigan. These States now have both Democratic and Republican adminstrations among them. Over the period covered from 1933 to 1939, each State has had both Republican and Democratic administrations. Every State went up (in industrial employment) from 1933 to 1937. Every State went off in 1938. Every State gained in 1939. Every State was higher in 1937 than in 1939, including Connecticut, which shows that such things can happen under Democratic State administrations. These statistics are from the United States Census of Manufactures and the United States Bureau of Labor Statistics. The lowest gain from 1938 to 1939 was in New Jersey, with 7.9 percent; the highest was Michigan with 17.5 percent. The gain in Connecticut was 9 percent, which was exactly in the middle of the seven States. I suppose that Governor Dickinson, of Michigan, could claim that his antivice campaign had led to the favorable position of the State of Michigan, but I think that we may assume that the purchases of automobiles throughout the Nation because of generally improved business conditions had something to do with these results.

I feel apologetic when I present such facts as these to an intelligent audience. I will not aggravate my offense by discussing further matters so obvious as to require no discussion.

I am satisfied in my own mind that the appreciation of the American people for the real accomplishments achieved under Democratic leadership cannot be upset by such ill-founded Republican attacks as we have witnessed. Let us all look for and work for victory in November.

Employee Retirement Rights Under Social Security Act

EXTENSION OF REMARKS

OF

HON. J. FRANCIS HARTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

RESOLUTION OF THE JEWISH FEDERATION FOR SOCIAL SERVICE, BUFFALO, N. Y.

Mr. HARTER of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a communication and resolution from the Jewish Federation for Social Service. From time to time I have had inquiries from various nonprofit organizations now kept from participation in retirement responsibilities and benefits under the Social Security Act. The communication which I introduce is another example of a most worthy organization seeking extension of the act so that its employees can secure retirement rights thereunder.

I know that these requests are being given attention and hope that legislatively we will soon have an opportunity to permit the inclusion of such worthy organizations, at least on a permissive basis. The communication follows:

At a meeting of the board of governors of the Jewish Federation for Social Service of Buffalo, N. Y., held in the city of Buffalo, N. Y., on April 24, 1940, the following preamble and resolution was unanimously adopted.

"Organizations not covered in the Federal old-age retirement plan feel the disadvantages of their position and resulting injustice to their noncovered employees. Employees naturally prefer employment in those positions covered by social security.

"Social-service organizations must of necessity feel embarrassed in that their employees do not possess that same security which employees in business and manufacturing establishments now have; most of the social-service organizations have no plan for retirement of superannuated employees with provision for the future, and the Jewish Federation for Social Service and its constituent organizations are none of them exceptions to this general situation: Therefore be it

"*Resolved*, That the Jewish Federation for Social Service of Buffalo, N. Y., endorses wholeheartedly the work of the committee of national nonprofit organizations in its attempt to have social-welfare organizations included in the Federal old-age retirement plan; and be it further

"*Resolved*, That the expression of favorable opinion for the proposed legislation now before the Ways and Means Committee of the House of Representatives be endorsed and that a copy of this resolution be transmitted to Robert L. Doughton, Chairman of the Ways and Means Committee of the House of Representatives, as well as to Representatives upon such committees from the State of New York and Representatives in the House of Representatives of the Fortieth, Forty-first, and Forty-second Districts."

The Jewish Federation for Social Service employs upwards of 30 individuals, and includes within the scope of its activities practically all of the Jewish social-welfare organizations in the city.

The main constituent societies are: The Jewish Welfare Society, Inc., the Bureau of Jewish Education, the Jewish Community Center, Inc., the Jewish Fresh Air Camp, Inc. It also grants a specified amount to the Y. M. H. A. of Buffalo.

We trust that when this amendment comes before the House it will receive your favorable consideration and active support.

Very truly yours,

JEWISH FEDERATION FOR SOCIAL SERVICE,
EUGENE WARNER, *President*.

Civil Aeronautics Authority and Air Safety Board

EXTENSION OF REMARKS

OF

HON. MELVIN J. MAAS

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 3, 1940

Mr. MAAS. Mr. Speaker, commercial aviation in the United States towers head and shoulders above air transportation anywhere else in the world, whether judged by completed schedules or passenger miles flown or safety records. This magnificent attainment has been brought to its highest degree of success under an independent C. A. A. and an independent Air Safety Board. After struggling for years against political administration of air commerce regulations, Congress finally provided a set-up that had long been advocated by the companies and the pilots. It is working splendidly, and the results speak for themselves. It would be a distinct and disheartening step backward to return to political management this fine organization for the administration and regulation of airways by transferring the Civil Aeronautics Authority and the Air Safety Board to the Department of Commerce, from which the system was so recently rescued.

The very essence of the Air Safety Board is its complete independence and divorcement from the regulation-making bodies. There has been no complaint from anyone, within or without the industry, about the fine administration of our commercial air transportation system. Then why should this fine administration be returned to a political cabinet department? There was constant criticism while commercial aviation was under the administration of the Department of Commerce, all of which disappeared when the independent agencies were created. What purpose can be served by a return to political control? What need for such a return when the present system is working in such a highly satisfactory manner?

It is significant that the pilots and the air-line companies worked for years for the establishment of an independent agency to make and to administer the regulations of the industry. It is also significant that an immediate protest came from the organization of air-line pilots and from pilots individually when the proposal to return the Civil Aeronautics Authority to the Department of Commerce was announced. The pilots were joined in their protest by all of the air lines. This too is significant.

Certainly, as a subordinate division of a politically controlled executive department, the prestige of the Civil Aeronautics Authority will be greatly diminished, and its influence materially lessened. Former control by the Department of Commerce did not prevent a black chapter of increasing accidents and fatalities in commercial aviation. The great evil against which the pilots fought—that of competitive flying—was never brought under control. Political influence was always able to block the efforts of the air-line pilots to abolish the conditions of competitive flying. One of the first accomplishments of the independent agency created for the regulation and control of commercial air transportation was the elimination of this disastrous and disgraceful condition. Immediately the accidents began to diminish, and in a short time they disappeared entirely; whereas they were increasing under the old Department of Commerce control. And yet, it is now proposed, for no good reason, to return control of the commercial air system to the very department that made such a conspicuous failure of it for years.

Why is this plan being presented now? No one in the aviation industry advocates it. The air-line pilots never requested it. The officials of the C. A. A. and the Air Safety Board never proposed it. Private pilots and owners of private planes do not want such a backward step. Who, then, is interested in returning the control of our great air-transportation system to a politically controlled executive department of the administration, and why? The air lines are subsidized to carry the mails. They were always looked upon as fair prey for solicitation for heavy campaign contributions. Being dependent upon governmental subsidies, they were amenable to "suggestions" about liberal campaign donations. When their regulation was vested in a politically controlled department they were easily got at for such "voluntary" contributions. However, when their control was transferred to an independent agency, free from political interference, they were no longer subject to such pressure. Now an election campaign is coming on; campaign funds are urgently needed. Can it be that there is a desire to put the lucrative aviation industry again in a position where it will be forced to contribute heavily to the campaign funds or else be faced with possible cancelation of air-mail contracts, and so forth? No other reason is apparent for such a transfer of the regulatory authority over the air-transport system.

The reasons advanced by the few proponents of the transfer fall of their own weight. One is that regulation of commercial aviation will be given Cabinet representation. Actually what will happen is that the direct contact now existing between the Authority and the White House will be removed, and instead the contact will be filtered through the intermediary agency of a Cabinet department. That system was tried and failed. It existed from the beginning of the regulation of aviation until the independent C. A. A. was established in 1938; and under it all the evils complained of existed, and Cabinet representation at the White House did not result in correcting any of them.

The whole concept of subjecting a regulatory body to the control of an executive agency is contrary to the fundamentals of our philospohy of government. Under our American system, the legislative, the executive, and the judicial branches of the Government must be wholly independent of and free from each other. The Civil Aeronautics Authority is a regulation-making body, and as such partakes of the legislative. It derives its life from the legislature. It is, in fact, a delegation of the powers of the legislature. It should be responsible therefore to the Congress and not to the President. Such is the very heart and nature of an independent agency created by Congress and designed to act for the Congress. To transfer such an agent of Congress to the control of an executive department is to defeat a fundamental purpose of our intended system of separation of the legislative and the executive branches of government, and to destroy our greatest safeguard, checks and balances.

The Air Safety Board's value exists only in its complete independence from the regulatory body and freedom from political domination. It would be as logical to place the courts in an executive department as to transfer the Air Safety Board to a Cabinet department.

An inevitable ill-effect of the proposed return of these independent agencies to the Department of Commerce would be a lamentable lowering of the quality of their leadership. Surely we cannot expect to be able to procure as subordinate officials of a minor division of a vast executive department men of such outstanding caliber and qualities of leadership as may be procured as executive heads of such important independent agencies as the C. A. A. and the Air Safety Board now are.

If, on the other hand, as has been stated in support of the order transferring these agencies to the Department of Commerce, there is to be no change in functioning and no loss of independence, then why make the change at all? Either significant and undesirable changes will result, or there is no purpose in making the change.

Had the control of civilian aviation worked out satisfactorily under the Department of Commerce, there would never have been the movement to take it out of the Department and set up an independent agency. Why then is there any reason to believe that the old system will be any more successful now than it was before? We know the old system didn't work well; we know the present system does work well. Then why return to the old method? It just does not make sense.

For years, when all these matters were under the control of the Department of Commerce, we talked about mass training of civilian pilots under a Government program. We talked about a square deal for the private flyer. We talked about aiding the small-airplane manufacturer. We talked about assistance to the privately owned airports. Talked about these matters, yes, but that was all. In less than 2 years under the independent C. A. A. every one of these talked-of objectives has been attained. The air-minded young men and boys, and girls, too, are getting a chance in aviation now. Is there any reason to believe that the same old Department of Commerce will be any more sympathetic or progressive in these matters now than it was before? Shall we risk losing the advances we have made? Will not a return of the control of aviation to the Department of Commerce mean a return to the old conditions? Will it not mean at least freezing progress of commercial air transportation at its present point? Private aviation has advanced more in its little more than a year under the C. A. A. than in any 5-year previous period under the Department of Commerce domination.

The argument is advanced that the control of civil aviation must be brought under the Department of Commerce in order to better integrate it with the related activities of the Weather Bureau and the air navigation-chart service of the Coast and Geodetic Survey. Our civil aviation is intimately related also to our Army and Navy aviation. Must the latter services also be brought into the Department of Commerce to better integrate them? They, too, depend upon the services of the Weather Bureau, and they use air-navigation charts. The latter proposal is no more ridiculous than the former.

Under Department of Commerce control pilots were being killed in scandalous numbers, there was an alarming increase in passenger fatalities, and the companies were losing money. Under the administration of the C. A. A. the number of accidents has been so reduced that there have been no pilot or passenger fatalities during the past year. Also air lines are now making money, expanding their services, speeding up their schedules, and vastly increasing the number of their passengers.

Again I say, let the C. A. A. and the Air Safety Board alone. Let us defeat Reorganization Order No. IV and continue the progress of American aviation.

Emmett Marshall Owens

MEMORIAL ADDRESS
OF
HON. HAMPTON P. FULMER
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. EMMETT MARSHALL OWENS, late a Representative from the State of Georgia

Mr. FULMER. Mr. Speaker, in the passing of our colleague, EMMETT MARSHALL OWENS, who was a member of the great Agricultural Committee of the House and a personal friend of mine, the State of Georgia has not only lost a distinguished citizen and lawmaker, but his valuable service to his people and his country on the Agricultural Committee and in the House of Representatives will be missed.

Emmett was a rather quiet man, but he was conscientious in the performance of his duties to his people and to his country. He was ever mindful and thoughtful of the best interests of his friends and colleagues, and, apparently, he took a personal interest in me. Very often, either in the office or some other place we would sit and talk about matters of interest to both of us and concerning the problems of the country. He, apparently, had a great deal of confidence in me, and his very splendid and gracious attitude of friendship for me, naturally caused me to be very fond of him.

Our colleague held many positions of trust and honor during the years he spent in this life. His services, as stated, were rendered on a very high and efficient plane, all of which brought about that type of attitude on the part of his people toward him which enabled him during all of these years to receive their favorable consideration for the many positions accorded him in the way of their suffrage.

I am sure that his loving and friendly disposition and his readiness to be of service to his colleagues and to his people will be missed.

I join with the members of the Agricultural Committee and his many friends in the House in extending to his bereaved family my deepest sympathy in the untimely passing of this distinguished citizen of Georgia and their beloved one.

'Tis easy enough to be pleasant
When life flows by like a song;
But the man worth while is the one who will smile
When everything goes dead wrong;
For the test of the heart is trouble,
And it always comes with the years,
But the smile that is worth the praise of the earth
Is the smile that comes through tears.

Carl E. Mapes

MEMORIAL ADDRESS
OF
HON. HAMPTON P. FULMER
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. CARL E. MAPES, late a Representative from the State of Michigan

Mr. FULMER. Mr. Speaker, during all of the years that I have had the privilege of representing my State—South Carolina—in the Congress of the United States I have had the privilege of observing the outstanding character and ability of our colleague, CARL E. MAPES, who passed away on December 12, 1939.

During these years, while not closely connected with him, in that he served as a Republican, and for a number of years on the Rules Committee of the House, however, as stated, I had the privilege and pleasure of meeting and speaking with him on many occasions, and the opportunity of observing his statesmanlike attitude on all matters, and I agree with many of my colleagues on both sides of the House that in the passing of this distinguished lawmaker Michigan and the Congress of the United States has lost a most capable and worthy citizen.

Mr. MAPES, in every instance, regardless of the temper of the House, performed his duties calmly and efficiently, as well as impartially. To know him and to observe his wonderful and outstanding personality always in his work or in speaking with his colleagues individually, we were impressed with the fact that he was conscientious, God-fearing, and desirous of impressing those around him with that type of life which is not only worth while here but which would mean everything to them when called upon to enter the life beyond.

You had only to observe his personality and his character to understand that there is a life beyond this tenure of work, strife, sickness, pain, and death. Therefore, we should be happy in the thought that, although the Great Speaker of the heavens called, "Come quickly," he answered the call, his place is vacant, and many are sad; we all have the consoling memory of a life lived bravely, of tasks done nobly, and of a personality that pleased, that helped, that inspired his associates among whom he lived, loved, and was loved.

I am glad to have had the opportunity of serving with him, he coming from one of the North Lakes States and I from the deep South, in that I have had the privilege of observing in him, as well as in many of our colleagues from the various sections of this country, that, regardless of the section from whence we might come or what might be our race or creed, the same God whom I adore is the Father of us all.

Along with my colleagues who mourn the passing of this distinguished lawmaker, I extend my deepest sympathy to his loved ones, and may I leave with you this gracious thought: Today he is basking in the sunshine of a beautiful heavenly home prepared from the foundation of the earth for those who love the Lord, and that in the years to come those of us who have been spared will have the privilege of seeing and being with him again.

'Tis easy enough to be pleasant,
When life flows by like a song;
But the man worth while is the one who will smile
When everything goes dead wrong;
For the test of the heart is trouble,
And it always comes with the years,
But the smile that is worth the praise of the earth
Is the smile that comes through tears.

The Spirit of the Pioneer

EXTENSION OF REMARKS
OF
HON. JOSEPH F. GUFFEY
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 7 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. LEWIS B. SCHWELLENBACH, OF WASHINGTON, AT OLD POINT COMFORT, VA.

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the junior Senator from Washington [Mr. SCHWELLENBACH] before the Jeffersonian Democratic Club, at Old Point Comfort, Va., on Saturday, May 4, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I was delighted to be able to accept the invitation to speak to the Jeffersonian Democratic Club at this banquet. For one from the far West, the privilege of meeting with a group of Old Dominion Democrats is a distinct honor. I know there is no need for me to discuss the question of democracy with you. You in this State have a background of cherished traditions of which we in the West are, by the very force of circumstances, deprived. However, I do feel that it may be possible, since I come from so far away, for me to add something to this meeting by outlining the philosophy of the democracy of the far West. It may be that even you good folks in Virginia can find some profit in understanding our political background on the Pacific coast and why, in that area, there exists such substantial and enthusiastic support for the New Deal administration of President Roosevelt.

To us the spirit of the New Deal is the spirit of the pioneer. It is the spirit of the American pioneer. It is the spirit which refuses to accept those conditions which are wrong, just because they always have been wrong. Like the pioneer of old, the New Deal pushes on. It has the will and the determination to make conditions right.

It means courage; love of adventure; understanding of the needs of, and ambition for, the future of all our people; peace and amity with the nations of the world. The New Deal is the expression of the hopes and aspirations of the pioneer spirit in American life. May we not, then, with propriety characterize it with the name "pioneerism"?

We in the West are closer to our pioneers than are you of the East. When you want to know what your pioneers did, you look it up in a history book. We just go and ask ours. Our pioneerism is just a bit more realistic to us than it is to the people of sections of the country older than ours. The result is that we are not so easily frightened by new ideas as are some other people. You can't be touching shoulders daily with people who themselves or whose fathers and mothers carved out from the forests the great cities in my State and be much alarmed about the country being wrecked by the New Deal.

Those people were unafraid. They were determined that they would have economic security. They were not satisfied with a condition in which their children would be undernourished or ill-clad. They demanded proper housing facilities. They were not to be deterred in their program.

Those people were not without their critics. Some said they were restless. By some they were called shiftless. Others said they were foolhardy and irresponsible. For myself, I think they were upright, courageous Americans. Regardless of what may have been said at that time, we now know that they "had what it took" to build a great nation on a great continent.

The problems of this day are not dissimilar to those which confronted our pioneer forefathers. They take courage. They take determination. The goal of economic security is the same one the pioneers sought. Our task is to see to it that the New Deal has "what it takes" to save that Nation which they built.

I know that right here the doubters and the scoffers will rise up and say that these pioneers had no governmental assistance. They did not get P. W. A. grants. They had not C. C. C. boys to build their trails. There were not any W. P. A. jobs. They could not collect wheat checks or old-age pensions. That is absolutely true. But don't let anyone tell you that Government bounties were not being given in those days. The difference was that the real pioneers who grubbed and slaved and really developed the country got none of them. The railroads got their sections of land in each township to encourage their efforts. Vast tracts of timber lands were made available for spoilation by the timber operators. The mineral and oil resources were quickly acquired by a greedy few. A protective tariff system was maintained by which hidden taxes were removed from the pockets of everyone who labored in industry or agriculture. A system of financial control was fostered and protected which resulted in increased cost on everything which was purchased or sold. Government did not bother business in those days. It couldn't. Why? For the simple reason that business wouldn't let it. In those days, business ran the Government. There were bounties galore. But the people who worked, and who bought and consumed our products never got in on them. It is that very fact which has brought on the problems of the last 9 years.

I now hear you ask, Why has it taken so long? Why has this condition not come upon us before? Why did it happen in 1929 instead of 25 or 50 years before?

You have heard about the last frontier. You have read about it. You have seen pictures of it. I live there. In my State our west is the Pacific Ocean. When you get that far, you can't get any farther. So long as we had an undeveloped West—new lands, new resources, new opportunities—we had no cause to worry. We could permit concentration of wealth. We could permit speculation of our heritage. We could permit waste and erosion by wind and water, but we caught up with ourselves. We reached our last frontier. We on the Pacific coast know this just a little better than do others. It is more graphically before us day by day. We know that the time for rebuilding and repairing and replacing has come. That's another reason why we understand the New Deal.

As we look back today we realize that we were most prodigal, both of our resources and of our opportunities. We denuded our forests, we permitted wind and water to erode our fertile topsoil. We exploited our mineral and oil resources; we planted millions of acres to which the till should never have been laid. Then, almost 26 years ago, an event occurred which upset all the plans of which we or any other people had previously dreamed. A Europe-wide war was declared. Even then it seemed to us to be something separate and apart. Three thousand miles of ocean on one side and five thousand on the other created for us an isolation which would not permit us to be touched by the events of either Europe or Asia. It is true we enjoyed the profits which came to us from the sale of our agricultural and manufactured products to the belligerents.

Two and one-half years after that time, we found ourselves in the midst of the struggle. Even then we did not appreciate the extent to which we were involved. Except to those families to whom the war was brought in direct contact, our participation was largely a glorious adventure. Even with the termination of the war, we did not realize the extent to which we were a part of the world. The American people were tired of high idealism, we wanted to get back to normalcy and we proceeded to draw ourselves back into the shell of isolation.

Our leaders told us that prices in this country were too high, what we needed to do was to contract the currency. That was done, and in September 1921 we plunged abruptly into a minor depression. Millions of acres of land which we placed under cultivation in order to supply food for the belligerents were still kept under cultivation. Yet no one could understand why farm surpluses thus created resulted in depression of prices for farm products and lowered agricultural land values. Despite the fact that we had changed from a debtor nation to the extent of $2,000,000,000 on July 1, 1914, to a creditor nation to the extent of $22,000,000,000 on January 1, 1921, we still clung to our old tariff policy and raised the rates in the Tariff Act of that year. This resulted in twenty-nine nations raising their tariff walls against us. We had plenty of money, so we climbed over these raised tariff barriers by the simple procedure of loaning the people of those countries money with which to buy our goods. Most of the money has not been repaid. We kept our money circulating by the simple expedient of private P. W. A. projects in not only this country but in South American countries and other parts of the world.

We launched into a period of breathless prosperity by the creation of fictitious values at home through the medium of speculation in the security markets. Even with the collapse of 1929 there was no understanding upon the part of our people of the fact that the condition with which we were confronted was of a fundamental nature. Had we not pulled ourselves out of previous depressions? We completely forgot the fact that the method used in previous depressions was the extension of the frontier, and that we had not only reached our last frontier but that we had exploited and despoiled the resources within our boundaries. In my opinion, by and large, the American people did not appreciate the fundamental nature of our problems even with the advent of this administration and the New Deal. They were terrifically angry with those who had mismanaged affairs of business and government during the 12 preceding years. By and large, they felt that the President could wave a magic wand here and there, do a little tinkering with this and that, and we would all slip back into the comfortable days which preceded the war and live happily ever after. It is only since the depression of 2 years ago that there has come a realization that if democracy is to be maintained in this country, government must recognize its responsibility to afford some reasonable assurance of economic stability to the American people.

Today, for the first time, the ever-lengthening shadow of totalitarian states appears over the shoulder of the average American and has become to him a serious threat to the maintenance of the liberties which he enjoys. First, it was the dictatorship of proletariat in Communist Russia. Then came the advent of Fascist Italy. More recently came the dominance of national socialism in Germany and Austria. The methods of these forms of dictatorships have become known to us. We have come to recognize the subtle processes of the Communists and the more direct onslaught of the Fascists and the Nazis.

I said a few minutes ago that we came to take our liberties for granted. We have done more than that, we have completely misconstrued their purposes and objectives. Very largely we have looked upon such rights as freedom of speech, freedom of the press, freedom of religion as ends in themselves. We have thought that the right to make a speech or the right to print a paper, or the right to go to any church we may choose should satisfy our people. I do not believe that down through the ages men and women have fought and suffered to establish and maintain these rights simply as empty gestures in themselves. Mankind has always sought two goals—one of them, political liberty; the other, economic security. To my mind, the goals are correlated. Political liberty is revered for the reason that it makes possible economic security. Reasonable economic security must be maintained if political liberty is to be protected.

There are many people today who preach the doctrine that the democratic processes have been destroyed through the medium of gradual encroachment. History disproves this contention. No one will deny, however, that it was economic insecurity which resulted

in three outstanding dictatorships which today threaten democracies in the world. Futility has ever been the nemesis of democracy. Democratic processes are necessarily slow. It is only when they fail to function and fail to provide that economic security to which a people feel that they are entitled that the people of a country are willing to abandon the liberties guaranteed to them under democracy and turn to dictatorships. This was the condition in Russia, this was the condition in Italy, this was the condition in Germany. It was also the condition in Austria.

From the throats of these dictators come rumbling threats to democracy. We are told that democracy can't work. We are told the democracies must go. The institution democracy is sneered upon and spat upon.

What these other nations do is their own business. The people of these nations have the right to live under governments of their own choosing. We need not interfere with them. Our task is here at home.

Of all forms of government yet conceived, democracy furnishes the most useful agencies for fighting arbitrary and artificial mismanagement. What we must do is to protect and preserve democratic methods in America. No doubt we will be importuned again to spend our resources in a futile effort to correct conditions in Europe. What we must do is to preserve American democratic processes, to care for our own.

History shows that democracies have disappeared when they failed to care for their own. Never in the world's history has it been more necessary for democracy to work than it is for democracy to work here now. If we are to preserve that democracy we must first be sure that we have a lasting peace. May I, at this point, explain what I mean by a lasting peace?

Let me put it in this way. We all remember what England's Prime Minister, Chamberlain, said when he returned to England after sacrificing Czechoslovakia at Munich. These were his words, "We have preserved peace in our time." In England he was applauded for that statement. His phrase "in our time" turned out to be just about 11 months.

I will not be content with a "peace in our time" for the United States. I fully recognize my responsibility to maintain that sort of a peace for our people. I know that each of us in Government is responsible to the mothers and fathers of the young men of military age to see that their boys are not dragged off into war. I know how you mothers and fathers of such boys feel. It happened that in the last war I was right in that military age. I know how my own mother felt. But I am not content to assure that group of parents alone. I think we in Government have an equally serious responsibility to the parents of boys 10 to 15 years of age. I even venture to think of the mother and father listening to this speech who may before this night is over tiptoe in for a goodnight glance at an infant boy in his crib. I think we in Government have a responsibility to try to so conduct our Government that even they need not fear that that child will become the fodder for cannon when he comes to military age. I don't think we in Government can be content with any lesser responsibility. If we are, we are not faithful to our trust.

We will have no great task in attaining a Chamberlain's peace in our time. We can stay out of this war for the next 11 months, or even the next few years, without much difficulty. We can do that by simply sticking our heads in the sand and refusing to see or hear what is going on in the world around us. We can rely upon the protection of our two oceans. We can trust to the fact that the other nations are too busy in their own wars to bother with us. It will take no great statesmanship to preserve that sort of a peace in our time. But I am not content with that. America is entitled to peace during this whole next generation. Those of us in Government owe it to our people to strive to maintain it.

We hear so much today of the lesson we should learn from what happened between 1914 and 1917. I fully agree that that lesson should not be forgotten. The mistakes we made then must not be repeated. They took us into the last war. We must not let similar mistakes take us into this one.

What we must not forget, however, is that avoiding these mistakes will not suffice. By avoiding these mistakes we can preserve a Chamberlain peace in our time. The avoiding of these mistakes we owe to the parents of the boys who are now of military age. If you agree that we also owe a responsibility to the parents of the younger boys, then you must agree that we must go further than avoid the 1914–17 mistakes.

That responsibility requires that we avoid the mistakes made since November 11, 1918. People often wonder why the peace which followed the last World War was of such short duration. Statesmanship requires an analysis of the reasons behind the short tenure of that peace. Such analysis is essential to the lasting continuation of our own peace.

First, it must be conceded that the bases of that peace were unfair. The bases of that peace were punitive. You can't long maintain a peace that has as its purpose either the punishment or intimidation of a great race of people. That's why it is so important that our Government keep the record straight. That's why it is essential that our Government should protest every effort by any government to impose its will through either force or fear upon a weaker government. That is why it is important that we should preserve our economic stability in order that our voice might be heard when the belligerent nations sit around a peace conference at the termination of the present hostilities. If our peace is to last, the peace to which the belligerents agree must have as its basis the principles of fundamental fairness.

The second mistake that the nations made was the abandonment by most of them of the principles of simple, common honesty. The best standard by which to judge the honesty of nations as well as men is whether they keep their word. Broken promises, broken pledges, broken treaties, have contributed more to the present world disaster than has any other single factor. These breaches of faith have not been limited to any single nation or group of nations. I do not deprecate the importance of economic needs in the present situation. However, if the nations of the world had kept their word during the last quarter century many of these economic factors would not today exist. Had Germany and Russia believed that England and France would keep their promises to the smaller nations, they would never have dared to plunge the world into its present condition.

Our people hope when the present wars end to play some part in establishing a lasting peace. To my mind that hope will be barren unless we can enter into such a peace conference with a record clear of the taint of treaty breaking on our own part. The only leadership we want to give the world is moral leadership. We must have our own hands clean if we try it.

That is why I am so insistent that we should discontinue our present policy of violating our obligations under the Nine Power Pact by supplying war materials used by Japan to destroy the administrative and territorial integrity of China.

The third mistake has been the failure of peace-loving nations to prepare to protect themselves against the aggressions of nations which they should have known were bent upon a policy of aggression. Not only China, Ethiopia, Czechoslovakia, Poland, Finland, and Norway have been the victims of their own unpreparedness. Even England and France today are suffering from that mistake. That is why I insist that we shall not permit ourselves to be similarly victimized.

It must not be forgotten that our responsibility for defense is not limited to the 48 States in the continental United States. Almost 120 years ago we assumed the responsibility of defense of the entire Western Hemisphere. That policy of over a century cannot be and will not be abandoned by our people.

America's international policy today must have as its foundation the recognition of these three policies:

First, the maintenance of fairness in our dealings with the other nations of the world.

Second, the eternal insistence that we at least will respect our international promises and obligations.

Third, that we will be as vigilant in our degree of preparedness as will allow us to protect ourselves from attacks from any source.

No one can lay down a guaranteed formula for lasting peace. The best that may be asked of anyone is that he does not repeat the mistakes which should already be evident to him. Certainly it should be apparent that we cannot ignore the world around us. While we may not like what is going on in the rest of the world, the fact is that we live in it. We could commit no greater blunder than to ignore it. There is nothing shorter lived than a fool's paradise. It will take more than a cool head to keep us at peace. We must keep our heads up and alert to maintain a lasting peace for our people. May I conclude by repeating that when I speak of peace, I mean peace even for that little boy child who is lying in his crib. Even he is relying on us.

Eleven-Point Program for America

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, May 7 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. HENRY CABOT LODGE, JR., OF MASSACHUSETTS, AT COLUMBUS, OHIO

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the junior Senator from Massachusetts [Mr. LODGE] at Columbus, Ohio, on May 4, 1940, and a summary of the address.

There being no objection, the address and summary were ordered to be printed in the RECORD, as follows:

I greatly appreciate the opportunity to speak to such a fine audience of Republicans in Ohio—a State to which we in Massachusetts are linked by so many historic ties. In fact, the first covered wagon to go into the Northwest Territory and settle at Marietta started a few miles from my home. My personal sense of pleasure in being here is also enhanced by my friendship with the men whom you have sent to represent you in Congress. I have had the pleasure of close association with your junior Senator, and am happy to be here to testify to his intelligence,

patriotism, and character. Since I have been interested in affairs in Washington I have never seen a man grasp the business of the Senate as quickly as he, or forge ahead as fast. May I also say that your Governor has many friends outside of Ohio, and that we all have great expectation for him in the future, as well as respect for what he is today.

As Republicans, we are, of course, interested first of all in our forthcoming national convention, to be held at Philadelphia next month, with the duty of choosing candidates and adopting principles which will gain the support of the American people and bring back honest and unselfish government to America. I shall not tonight go into personalities or attempt to make a choice from among the many excellent men who are candidates. I have thought it appropriate, however, to submit some recommendations for the Republican platform. I cannot, of course, expect all Republicans will agree with me. In a party as large as ours, differences of opinion are inevitable. I hope you will all agree, however, that it is useful to have principles submitted so that we may discuss them and eventually find broad foundations of agreement.

Point 1. I submit that our platform should contain a pledge for a balanced Budget, balanced with sound money, with control of the currency vested in Congress as provided in the Constitution. Of course, there is no thought of balancing it immediately, but it is perfectly possible to move in the direction of a balanced Budget instead of moving rapidly toward a financial precipice. There definitely are items which could be eliminated or reduced. Only the other day Congress in one of its rare moments of economy adopted a motion of mine to strike out an appropriation of $162,000 which was to be devoted to paying a group of so-called business experts who were to find out what caused the depression and who, in actual fact, were duplicating the work of others and were a real fifth wheel. You may say that $162,000 is not much; but it is something. If you do it often enough, you will really make some savings.

This leads me to the second point, that the Republican Party should stand for economy in governmental expenses without sacrificing any real needs of the people. This last cannot be overemphasized. Our opponents keep circulating the rumor that if the Republicans win, those who are now receiving relief will be cut off without a penny. Such rumors are entirely untrue and should deceive no one. There is not a single responsible Republican who does not state that if the Republicans obtain control of the Government that they would, of course, continue Federal financing of relief activities. Let that be understood once and for all. And let no party seek to obtain votes by frightening the underprivileged into believing that their welfare will be adversely affected by Republican victory.

We would, of course—and this brings me to my third point—change the system. We would make it work better. We would get a larger proportion of public funds into the hands of the man on relief. We would see to it that the taxpayer received more for his tax dollar. We would treat unemployment relief as a relief proposition and not as a political proposition. We would put an end to the present outrageous system whereby relief funds are allotted to the States and their subdivisions on the basis of the individual discretion—or let us say whim—of officials in Washington. We would see to it that these funds were allotted on the basis of a formula, scientific and humane, whereby each State received the amount of money to which its unemployment entitled it. Year after year now I have moved such an amendment to our relief bills so that the amount of money going into Ohio, we will say, would bear the same relation to the total amount of money appropriated as the unemployed in Ohio bore to the total number of unemployed in the Nation. No worth-while argument has ever been made against such a proposal. It has, however, always been defeated. To adopt such an amendment would unthrone the king-makers who now apportion funds and withhold funds in accordance with their personal preferences. I say we should have no king-makers in this country anyway, but certainly no king-makers who draw their power from the miserable pittance which is allotted to the needy.

In fact, this partiality in the allocation of relief funds is but one symptom of a disease which seems to be rampant at the present time. I refer to the mania for attempting to milk certain sections for the benefit of others. Only last year a strong effort was made by the party in power to allocate funds for old-age assistance, aid to dependent mothers, aid to the blind, and to handicapped individuals generally, on a basis which would have given larger amounts to those States where the "per capita income" was below the national average. I hope you will get that phrase "Per capita income." It is natural that in certain States where the climate is warm that the per capita income should be lower. Had this scheme gone into effect it would have constituted probably the greatest device for siphoning money from one group of States into another that has been devised in years. Of course, if a formula like that is permissible—if you can give money to States where the per capita income is low—then you should also give money to States where the cost of living is high. That was my final conclusion, and I offered an amendment to that effect. The result is that this proposition is now asleep, but it may wake up at any time.

Point 4. The Republican Party should certainly favor the awarding of Government jobs on the basis of merit and not through political influence. And when I say merit system I do not refer to a bill which would cover in for life a lot of political appointees. I mean a true merit system which means all that the word implies.

Point 5. As a great national party which is proud of the fact that men of many different races and creeds have molded its destiny, we should say further that we will never permit any consideration of race, creed, or color to prejudice any man or woman in our public service. The diversity of our racial stocks is our richness and our strength. Let us never forget that fact.

Point 6. It is well said that the welfare of us who work for a living is dependent, insofar as government is concerned, on two things: One, that we be protected against exploitation, and, two, that government allow an atmosphere to exist in which risk takers can have confidence in the future and thereby create new jobs, new wealth, and higher wages. The first involves a positive act on the part of government, either through child-labor laws, wage and hour laws, old-age-pension laws, etc., a field, by the way, in which Republicans have been leaders and in which States which have always been under Democratic rule have had the worst record. The second function is negative. It means that the Government should not do those things which discourage new enterprise.

For my sixth suggestion, therefore, I suggest that we express our opposition to Government competing in business with its own citizens; that we proclaim our faith in private enterprise and inventive genius and do everything possible to promote them; that, in short, we should at all times have policies which will create real work and real wages.

We must make it clear, as the seventh point, that this does not mean any laxity on our part in the prevention of exploitation. The two are not contradictory. We can favor a liberal old-age-pension policy within the limits of our financial capacity at the same time as we submit that a civilization in which people can save money to take care of themselves in their old age is a very desirable kind of civilization. We recognize the value, for example, of having young men enroll in the C. C. C. and our Army and Navy, but at the same time, my friends, if you have my experience, you know hundreds of boys and girls just coming out of school who want a real chance and a real job with a future which will enable them to lead happy and useful lives, and I tell you with all urgency that a wise answer to this question of opportunity for youth must be found if we are to avoid an answer which is destructive and unwise.

As an eighth suggestion I would submit the thought that all of these things can be accomplished within our constitutional framework of government—that these things do not require a superman or a superstate or a lot of personality boys or the activities of royalists—be they political or economic. Let us make a plea, therefore, for constitutional government—for democratic and not bureaucratic government—to the end that we may have government for the many and not for the few.

Point 9. My suggestions so far have been internal—looking inward into the problems which confront us at home. To be complete we also must look abroad. The moment we do so, the word "isolationist" raises its head, and to clear the air I ask: "What is an isolationist?" If an isolationist is someone who believes that it would be desirable to isolate the United States from the dangers of the outside world, then I suppose most of us would be isolationists. If, however, the word means someone who thinks that it is easy to isolate the United States from the outside world, and that we can do so simply by wanting to do so, then, of course, no one but a fool would be an isolationist. My efforts will be devoted to keeping the United States at peace and to save America first.

I submit that the party in power do not think that it would be desirable to isolate the United States from the dangers of the outside world. In fact, they seem to think that there is a positive advantage in developing foreign trade just because it is foreign. I asked witnesses for the administration when they came before the Finance Committee in support of the Reciprocal Trade Act why it was not better to sell a car to a man in Ohio than it was to sell a car to a man in Europe. The man in Ohio would be a customer for oil and gas and tires and parts, and would pay taxes in support of the roads. He would eat in American wayside lunch rooms. It seemed to me that it was not only just as good to sell automobiles in America—yes; it was even better.

I also pointed out that we have a wage and hour law in this country which aims to prevent the payment of sweatshop wages, and the working of people under slave conditions, and that no other country had laws like that. If we are to maintain our standards we simply cannot allow goods to come into this country which are made below those standards. The choice is perfectly clear. We can either compete, and reduce our wages and increase our hours to that of foreign workmen—and to this I am unalterably opposed—or else we can strive to maintain the high-wage rate which has been one of the most prideful things in our history, and retain our own American market for ourselves. And this proposition I hope the Republicans endorse.

The statement is made, of course, that these reciprocal-trade agreements promote peace. I suppose if you say anything often enough—no matter how absurd it may be—there will always be someone to believe you. Certainly the situation in Europe today is not a very striking endorsement of the peace-producing quality of our trade-agreement policy. Certainly there is nothing in history which shows that foreign trade promotes peace. In fact, almost all of the major wars in the history of the world were caused in greater or less degree by the friction arising out of foreign trade

and the bitter competition which it engenders. I asked Secretary Hull, for whom I have the highest personal respect and regard: "If it is true that free trade promotes peace, how is it that England, the greatest free-trade nation on earth, is always the first to get involved in every major war?" I have yet to receive an answer to this question. And so I say to you, as a ninth point, we may well stand for a tariff policy which will protect American labor and American industry, which turns its back resolutely on all of the old logrolling methods of the Smoot-Hawley Act (which the Democrats have never repealed), and which favors a scientific tariff-making procedure based on a protective philosophy.

Point 10. It is clear that we could isolate ourselves from the world, but that we have not done so. We could be almost self-sufficient and completely so if we were to confine our foreign trade simply to the countries north of the Amazon. But we have not done so. Our normal foreign trade is an important item in our economic life, and war-supported foreign trade is growing by leaps and bounds, with the active encouragement of the party in power. Even if we were self-sufficient, we should have to maintain an army and navy. At this stage in the world's history when every nation which refused to arm is being defeated, it is essential—and I suggest this as the tenth point—that we maintain an army and navy sufficiently large to be an effective aid in preserving peace for the United States. Our naval construction is well in hand. Our Army, however, has a shortage of equipment which is alarming. In spite of our tremendous resources in manpower our Regular Army of over 223,000 and our National Guard of over 250,000, we only have enough tanks, planes, machine guns, and field artillery for an army of 75,000 men—not enough to repel an invasion on our own shores at the present time. At this moment we do not possess a single military plane which embodies the lessons which have been learned from this current European war. These are matters which call for immediate correction.

Point 11. Let it be understood that we favor such an army and navy, as I said, as an effective aid in preserving peace for the United States and not with a view to using it in the near future to help some foreign country. We hear constantly the words of administration leaders that there is no thought of sending American soldiers to Europe. I wish they would add in the words "sailors, marines, and aviators." They never seem to mention them. I submit that we maintain an army and navy to fight for the United States, and that we should never draw the sword except in an American cause. This struggle, deeply as it engages our sympathies, and intimately as it involves all of us who have relatives in Europe, is not a struggle which threatens the safety of the average American. Of course, it offends our ideas of right and wrong. Of course, it runs counter to our ideas of government. It may be true that a spread of totalitarianism in Europe would cause an economic depression in this country, which, in its turn, it is alleged, might lead to totalitarianism over here. But if we relax our credit restrictions, repeal the Johnson Act, and give supplies to the Allies, are we not scuttling private enteprise in our own land? And if our democracy cannot withstand economic privation, is it not weak indeed? The Pilgrims who landed in Plymouth; the first settlers who left Ipswich, Mass., in 1787, and came to Ohio to found the Northwest Territory, established a democracy in the midst of privation. I do not believe that American democracy hangs on a slender thread of war-supported dividends.

Let us say in conclusion that it is American democracy in which I am interested, for which I would fight, and for which I would be willing to see my countrymen struggle. A struggle for any foreign cause, no matter how noble it may appear or how convincingly it may seem to affect our selfish interests, can only be destructive of American democracy in the end. I close on this note because it is the fundamental one at this time. Without peace, all of our internal reforms will melt like snow in the summer sun. With peace, all things are possible.

SUMMARY OF 11-POINT REPUBLICAN PROGRAM

1. A balanced Budget—balanced with sound money, with control of the currency vested in Congress as provided in the Constitution.
2. Economy in governmental expenditures without sacrificing the needs of the people.
3. Local control of unemployment relief, with Federal grants on the basis of greatest need, thus placing a larger proportion of public funds into the hands of the man on relief and giving the taxpayer more for his tax dollar.
4. Government jobs to be given on the basis of merit and not through political influence.
5. No consideration of race, creed, or color to prejudice anyone in public service.
6. No Government competition in business with its own citizens; renewed faith in private enterprise and inventive genius so that we may create real work and real wages.
7. Security for the aged and a real chance and a real job for those in early life who have been forgotten.
8. Constitutional government to the end that we may have government for the many and not for the few.
9. A tariff policy, scientifically devised, which will protect American labor and American industry. No return of the old logrolling methods.
10. An Army and Navy sufficiently large to be an effective aid in preserving peace for the United States.
11. No armed American intervention in Europe by American soldiers, sailors, aviators, or marines. No extension of credit. Keep out of war.

Government Spending

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, May 7 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. JOHN G. TOWNSEND, OF DELAWARE, BEFORE AMERICAN FORUM OF THE AIR

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the senior Senator from Delaware [Mr. TOWNSEND] before the American Forum of the Air on May 4, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Since March 1933, I have been a member of the Committee on Appropriations of the United States Senate. I have there listened repeatedly to arguments urging that Government spending is the panacea for our economic ills. I have seen billions spent in an attempt to prove it, and I have seen that attempt fail. I have also seen our national debt tremendously increased by unnecessary expenditures.

My firm conviction from my experience as a member of the Senate Appropriations Committee is that you cannot appropriate yourself out of a depression—you cannot spend your way, on Government borrowed money, into prosperity. I am also convinced that we can drastically cut governmental expenditures, and in time effect a balanced Budget.

In 1933, upon the plea that plenary powers were needed to resurrect the Nation from the depths of the depression, Congress granted to the President the greatest powers that this Nation has ever given to any one man.

Immediately, an unprecedented number of agencies was created, unprecedentedly large appropriations were demanded, and the spending spree was on.

From March 1933 to June 30, 1939, the programs which passed as "must" legislation caused an increase in the national debt from twenty-two billions to forty-two and one-half billions despite unusually high taxes.

Have you ever stopped to think how fast we have been spending in excess of our income?

Just think—in 8 New Deal years the excess of Government spending over revenues will exceed by five billions the excess for the 144½ fiscal years from 1789 to 1932. And the national debt of twenty-two and one-half billions after 144½ years, in 8 New Deal years will be nearly forty-five billions.

This debt equals $346 for every person in the United States.

In terms of tangible wealth the New Deal deficit is enough to buy the estimated tangible wealth of Maryland, Kentucky, West Virginia, Maine, Vermont, Washington, Montana, New Mexico, Wyoming, and my State of Delaware.

If all of the property in all of the States west of the Mississippi River could be sold today for its assessed value, the total amount realized would not pay off the national debt.

Bear in mind that while these deficits were mounting the New Deal advocated, obtained, and collected taxes equal to or in excess of the amounts produced during our most prosperous years, when the taxpayer was far more able to pay.

What has been accomplished by all this Government spending?

Throughout the 7 New Deal years there has been an average of ten and one-half million unemployed workers. Today there are still ten and one-third million.

Agricultural surpluses and low farm prices are still with us.

While the Government has expended large sums in connection with housing programs, private residential building has declined 60 percent. Private industries have expended $4,000,000,000 per year less on the construction of homes, factories, and other buildings than in the years prior to 1933.

Over 83,000 firms which survived the depression year of 1932 have failed for a total of nearly $2,000,000,000.

New capital investment has dropped from nearly four billions a year to less than half a billion.

Such are the results of the New Deal spending program.

We all will frankly admit that the Government must spend money. My plea is that too much money has been spent in nonproductive uses, unnecessarily, and that no recovery ever will result until governmental expenditures have been cut to the bone and limited to necessities.

In 1932, when the President was campaigning, he made a solemn promise to reduce the costs of Federal Government operations by 25 percent. At that time there were 570,000 Government employees

Instead of adhering to that promise the President has almost doubled the number of people on the Federal pay roll, for on January 1, 1940, there was an all-time high of over 987,000 employees.

When the reorganization bill of 1939 was being discussed it was said that the consolidation of various departments and agencies which would follow would be in the interests of economy. The bill became a law on July 1, 1939. The economy effected to January 1 of this year, after three such reorganizations, was the addition of more than 61,000 employees in a period of 6 months.

Not all of these new employees have by any means gone into the new agencies. Old-line departments have been so crowded with political job holders that they literally fall all over each other. They have titles, often so long and complex, particularly in the high-salaried brackets, that the officials can hardly pronounce their own titles.

Take, for example, the Department of Commerce. The Budget for the current fiscal year asks appropriations, in the office of the Secretary of Commerce alone, for the Secretary, an Under Secretary, Assistant Secretaries, Administrative Assistants to the Secretary, Assistants to the Administrative Assistants to the Secretary, confidential clerks, confidential assistants, and secretaries to them all—without end—all at very attractive salaries

The White House itself has not been at all neglected.

In 1933, when President Roosevelt took office, White House costs were $369,000. For the fiscal year 1941, the President has requested $3,500,000 for the White House—an increase of nearly 1,000 percent.

Here we have an excellent example of what happens, when the spenders run rampant and disregard the condition of the Federal Budget, recklessly spending money without regard to whether we have the money to spend.

Since 1934, we have squandered over $1,000,000,000 on foreign silver, at more than its value—silver which no other government wants. At the same time we have wasted hundreds of millions of the wealth produced by American farms, factories, and labor in paying $35 an ounce for gold.

Congress appropriates millions to increase agricultural production and then appropriates more millions for the purchase of surplus commodities. Then Congress appropriates again to take acres out of production. Finally, the tariff is lowered so that billions of dollars' worth of competitive farm products may be imported. Then another twist is given to this merry-go-round.

I am definitely not against giving assistance to farmers, that is, to family-sized farms. In 1937, about one-half of the 7,000,000 farmers participated in the soil-conservation program and received an average check of $75. However, to reach this average, 11 companies received payments of more than $100,000, 8 of which were insurance companies, one of which received nearly $260,000. Twelve other "farmers" received from $50,000 to $100,000; 272 farmers received more than $10,000.

In connection with the 1937 sugar program to benefit the farmer, there were 140 payments of over $10,000, 36 of which were way in excess of $100,000.

I repeat that, while I would help the farmer, I cannot condone the spending of borrowed money to make this sort of payment in the name of the "farmer."

There are only three ways to raise money to meet governmental expenditures. They are (1) by increasing the borrowing power, (2) by increasing taxes, or (3) by printing money.

Interest on the Federal debt this year will reach in excess of $1,000,000,000. We certainly need no debt increase. Inflation through the printing press is unthinkable. That leaves only taxation. But—there is a limit to the portion of private income which can be taken through taxation for Government purposes without causing a loss of jobs and a general lowering of living standards.

The road which we must travel is clear.

The problems which we have are not solved by the imposition of taxes which restrict and discourage private industry—by transferring their functions to the Government, and by giving to that Government a blank check on the resources of the Nation.

We must reduce Government spending.

We must reduce taxation.

We must encourage, through sound public policies, a resumption of private spending. We must stop giving our wealth to foreigners for things we do not need.

We know from experience that such a program will bring business expansion, increased pay rolls, and reemployment, as well as revenue to the Government.

Education for Democracy

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 7 (legislative day of Wednesday, April 24), 1940

ADDRESS BY SECRETARY MORGENTHAU BEFORE NATIONAL INSTITUTE OF GOVERNMENT

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD a very able and instructive address delivered by the distinguished Secretary of the Treasury, Mr. Morgenthau, before the National Institute of Government, Washington, D. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am particularly pleased to be able to talk to you today because I am in such hearty accord with the purpose of this series of meetings, which I understand to be education for democracy. I applaud the initiative and the public spirit of the leaders of the Woman's Division of the Democratic National Committee in making this notable convention possible.

In considering your invitation it seemed to me that I might contribute most to stimulation of your thought on the problems of democratic government by talking to you about the money of the United States, and particularly about gold. I have chosen this subject because I think it is one in which all of you are interested; and it is one about which you may be asked a good many questions as the year proceeds.

One thing you will hardly need to be told about our monetary system; that is, that the American dollar is the soundest unit of currency in the world. Its value is unquestioned here at home and it is not questioned anywhere else in the world. It is a solid rock of strength and stability amid all the monetary confusion created by aggression and war. It is more than a domestic currency; it has become in the last few years more and more an international currency. People throughout the world who are driven by disaster and fear to hoard currency prefer to hoard the currency of the United States, when they can get it.

We have tried through many means to facilitate stability in the currencies of the world. An outstanding example is the tripartite accord which we initiated in September 1936. In all, six of the leading democracies of the world have subscribed to the principles of that accord. Unfortunately, the progress we were making in the field of international finance and trade has been interrupted by the cataclysm in Europe.

One of the most striking developments of these recent years has been the universal confidence in the American dollar as one of the very few certain things in a highly uncertain world.

Some of our citizens who admit the strength of the dollar and the world's confidence in our currency now suggest that confidence in our dollar has resulted in this country receiving too much gold.

During the last 6 years we have acquired about $10,000,000,000 of gold from abroad.

Why has so much gold come to the United States?

In the first place, we have exported many billions of dollars' worth of goods and services in excess of the amounts we have imported. Secondly, large amounts of foreign funds have come to this country to be placed and kept on deposit with our banks. Foreigners have sent their funds here for safekeeping because of the peace, stability, and security which this country enjoys.

Thirdly, foreigners have made large investments in American industries because they regard American business as a safe and profitable investment. Finally, Americans have been withdrawing their funds from abroad and liquidating their foreign investments in large sums because they prefer the dollar to any other currency.

It is for these reasons that we have had so large a favorable balance of payments; it is for these reasons that gold has come and is continuing to come to the United States.

Gold moves from country to country not as a commodity but as a means of payment and the one final medium through which international settlements are made.

The continued acceptance of the gold that comes here is the only sound course of action open to us. There are, it is true, other courses of action theoretically possible, but they would all have disastrous consequences.

Take, for example, the proposal so frequently made to us that we stop buying gold. It has the charm of simplicity. All that we have to do is to issue an appropriate Treasury order. But let me tell you what I think would happen. Dollars abroad would instantly become very scarce and more costly, and the foreigner would find it much more expensive to buy American goods. For example, the British pound, the Canadian dollar, the French franc, the Dutch guilder would at once sharply depreciate. A chain of forces would be set in motion which would disrupt our trade, seriously discourage what remains of world commerce, and remove from world finance the strongest element of stability.

The cessation of gold purchases would have the following three immediate effects of great importance to us:

First, the sale of American products in foreign markets would be made much more difficult. This would not apply so much to war materials, which foreign countries want so urgently, but it would hit hard our export of hundreds of agricultural and industrial commodities not vital to the conduct of the war. We would lose heavily in the very markets we will badly need when the war is over.

Secondly, there would result an immediate flood of imports of cheapened foreign goods, which would deal an even more serious blow to labor, industry, and agriculture in America. The very items which compete with our domestic products would deluge our home markets. Meat and dairy products, textiles, and hundreds of other articles would at once be subjected to greatly intensified competition from abroad.

Thirdly, Americans who have investments abroad would find that they had suffered substantial dollar losses overnight just as foreigners with investments here would find that they had windfall gains overnight.

So you see this simple remedy is, in effect, a proposal that would completely disrupt our foreign exchanges and our trade, and greatly increase unemployment in this country. And so with the other naive proposals which some well-meaning citizens suggest as a remedy for our accumulating gold stocks.

Shall we follow their advice and cut the price for gold? A moderate cut would be ineffective, and a cut in price sufficiently large to have a significant effect on the gold inflow would introduce the same conditions as would follow prohibition of gold imports. This also would cause a serious decrease in our trade and a big increase in unemployment.

Shall we, as some have suggested, discriminate against certain countries in our purchases of gold? Such a policy would not even have the virtue of effectiveness. The active cooperation of practically the entire world would be required to prevent any one country's gold from entering the world's markets and reaching the United States. Obviously this would be impossible, even in normal times, let alone at a time such as this. Besides, the value of gold is proportionate to its unqualified use and acceptance as an international medium of exchange. To limit its acceptance would mean to reduce its usefulness.

There is yet another alternative which has always been open to us. Instead of taking gold we could have granted credit. Americans could again have accumulated huge unsettled claims abroad. We have had experience with that system—extensive experience—in the decade that ended with the economic collapse of 1929. It is doubtful that Americans would want to repeat that experience.

For the excess of goods we shipped and for the dollar credits we granted, we have taken gold in the last 6 years instead of promissory notes. The phrase "good as gold" still has real meaning in the world. I prefer the gold to pieces of foreign paper. I think most Americans agree with me.

Our gold policy is carefully adjusted to the realities of a complex world situation. There have been many glib suggestions for changing that policy. Examination of each of these suggestions has revealed, as in the examples I have mentioned, that in the effort to remedy fancied evils they would bring on real disaster.

Of course, should basic conditions alter, should we be confronted with new and unforeseen economic and political developments, the Government will necessarily take such action as will best protect American interests. It is to be prepared for such contingencies that the powers with respect to gold operations have been kept flexible. The Treasury is constantly observing, analyzing, and studying the course of events in their relation to monetary problems in which this country is interested. But nothing has yet appeared which would warrant any change in our gold policy.

There is only one sound way in which we can work to reduce the inflow of gold and to promote the return of at least a part of the wealth it represents to useful service in the lands from which it came. That way is to do everything in our power to contribute to the return of peace to the world and to encourage reconstruction and the restoration of normal trade. With the restoration of enduring peace and economic stability abroad the gold problem will solve itself. Our great export surplus will drop—not because we shall sell less abroad but because we shall buy more. Foreign capital will be gradually repatriated—not because we drive it out but because it is attracted home by the reemergence of security abroad. Our investors will once again invest their funds abroad—not because of the scarcity of opportunity at home but because of greatly enhanced opportunities for sound and profitable investments in other lands. And finally our tourists will spend hundreds of millions more in foreign countries.

These are the developments which will automatically and gradually direct the flow of gold away from the United States. These are the developments upon which we must concentrate. We must concentrate on the promotion of further recovery here and peace and security abroad not in order to correct the gold situation, but because prosperity, peace, and security are in themselves the supreme ends of governmental policy. That their attainment will also solve the world's gold problem is only a byproduct, but an important one.

I should like finally to turn to the question of the continued usefulness of the gold we have and the gold we are going to get. This is a matter that is troubling some people.

Let me reassure you once and for all. As long as there are independent nations, and as long as there is international trade in goods and services, so long will it be necessary to settle international balances. Gold is the international medium of exchange par excellence. Its acceptability is universal; its utility as international money survives changes in economic systems. It is used and needed just as much by the freest democracies as by the most rigid dictatorships—as much by capitalist economies as by socialist economies. It is the refined instrument of international exchange of goods and services, as well as an essential ingredient in the more complex international financial transactions—an instrument that has functioned without challenge for hundreds of years. Every foreign country wishes it had more of it; no foreign country likes to lose any of it; all countries accumulate it as soon as they can afford to do so. And the fact that some countries find it possible to conduct their international trade without gold does not mean that they prefer to do so any more than people reading by candlelight do so because they prefer candles to electricity.

Gold does not lose its value because some countries are forced to resort to clearing arrangements, barter, import controls, and other substitutes. All these substitutes are admittedly worse alternatives. They are methods of conducting trade and finance which will only be adopted when a country does not possess adequate gold holdings. Governments resort wholly to these substitute methods for keeping a country's balance of payments in equilibrium only during times of great and prolonged stress and instability, and only when for one reason or another they have been unable to prevent the loss of most of their gold holdings. All countries would like to have more gold, and the countries which have the least are, you will find, countries which are striving most to add to their gold holdings. They do so because they know that an adequate supply of gold promotes economic strength and furthers financial stability.

To be sure, if the political picture of the world should undergo a drastic change in the future, so that instead of 50 or 60 independent nations there should exist only 1 or 2 groups dominated by ruthless powers, then international trade and finance may assume the character of domestic trade. There would cease to be independent monetary systems, as there would cease to be independent foreign policies. Balances between countries would be settled as balances between our States are now settled—that is, by transfers of deposits. Under such circumstances it might well be that gold would no longer be needed. But under those circumstances life would be so different that the possible loss in the value of gold would, I am sure, be the least of our troubles.

Certain governments may boast of the day when independent democracies will disappear. I, for one, have no fears that such boasts can be made good. I am as confident that gold will continue to be used as the medium of international payments as I am that the majority of nations will succeed in maintaining their independence. With the return of peace and of normal economic and political relationships, the present barriers to the free flow of goods, capital, and services will be gradually lowered, and gold will inevitably play its indispensable role in making that result possible.

One word more—the exchange we made and are making in return for gold is a good bargain for us. It has enabled us to increase employment and recovery. It has made possible the utilization of labor, capital, machinery, and resources that would otherwise have been idle. We have expanded our exports and encouraged our domestic industry. And, moreover, we have at the same time acquired the safest physical asset in the world.

There are some sincere people who have been disturbed by stories that this country had a monetary policy that threatens to cause loss to the Nation. If you meet such people I hope you will reassure them. You may tell them that the greatest and richest country of the world has the best and soundest monetary system and that there is no reason to fear that it will not remain sound.

We can feel entirely comfortable in the possession of a supply of gold with which we can meet future demands on our monetary system without any shock to our economy. We can be prepared also to play the part we ought to play in the reconstruction of the world that must follow the senseless destruction of war.

Stephen Collins Foster

EXTENSION OF REMARKS

OF

HON. A. B. CHANDLER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, May 7 (legislative day of Wednesday, April 24), 1940

ADDRESS BY POSTMASTER GENERAL FARLEY AT BARDSTOWN, KY.

Mr. CHANDLER. Mr. President, on Friday last, at My Old Kentucky Home, at Bardstown, Ky., the first Stephen Collins Foster stamp was issued. Upon that occasion a very brilliant address was delivered by Hon. James A. Farley, Postmaster General of the United States. I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is appropriate that the first sale of the Stephen Foster commemorative stamp be made in the great State of Kentucky, where love of home and home life, the two abiding themes of this composer, have meant so much in the lives of your citizens, many of whom have played a prominent part in the history of our country. Few places are more cherished than this Old Kentucky Home. And I am happy, indeed, that the appointments of my office bring me to Bardstown today.

Of all the poets and minstrels, none has done more than Stephen Foster to make us more simply, more universally aware of our deeper national emotions. His voice was the voice of the people.

His spirit was of the stars—to which we look for light. The name of Stephen Collins Foster is eminently suited to inaugurate and endow with approval this musicians' group in the series of stamps for famous Americans.

When a portion of mankind obviously hates and lies, it is well that we think more than ever of those who have loved and sought truth. Our musicians, perhaps more than any other class of men, have made us inwardly happy. "Let me make the songs of a people," said an eminent philosopher, "I care not who makes the laws." On the wings of song we range through the lexicon of life—birth, love, sorrow, happiness, hunger, death.

May I congratulate your city with its distinguished Federal Hill of Judge Rowan and its many memories devoted to Stephen Foster. May I extend my congratulations also to the city of Washington, the Nation's Capital, with its distinguished Federal Hill of another sort—which is today commemorating in a similar manner the distinguished composer and director, known to all the world, John Philip Sousa.

Words and testimonials sometimes fail us where one verse of a song will definitely carry the message. Perhaps that is what's needed to give us the picture today of the tragedy of Foster's altogether too-brief existence. I speak as one with a sense of reality of the magic which this "beautiful dreamer" wrought.

Stephen Foster is commemorated and loved, generations after his death, because he wrote of the elemental values of life: Of "folks," of good will to men, of home—which makes a brotherhood of all men. Everywhere he roamed, the "homesickness of living" affected him. And he translated it into music. For all of us, his thoughts, his hopes. his dreams about the Old Folks at Home, My Old Kentucky Home, Jeanie With the Light Brown Hair have become our thoughts, our hopes, and our dreams.

But—philosopher and poet—Stephen Foster was eminently a composer of music, a melody maker. At a time when Philadelphia was 26 days by stage from the Ohio Valley, he devised a melody that fell with welcome delight on the ears of both the westerner and the easterner. In a world of onrushing factories and a retreating frontier, he preserved the touch of the good earth, of the fields and rivers, and of man laboring with his hands. While music was still considered only a fit occupation for women and foreigners, Foster gave the forty-niners their theme song. Oh, Suzanna, will be forever associated with that dramatic westward migration, which came from Alabama as well as from every other State of the Union.

Foster's talent came from within. When he was 7 years old, Stevy once picked up a flute in a music shop. In a few minutes he was playing Hail, Columbia. From then on, music was his passion, his lifeblood. Fifteen minutes of improvisingat a piano, or spent strolling in the park whistling, meant the beginning of a great new song. In less than 20 years as an active composer, Foster wrote almost 200 heart-gripping melodies.

His subjects were similar. His music was primitive, plain. But his power lay in a few carefully chosen words, in a sentiment born of the melody itself. His tunes are charming. The best of them, the ones we whistle and hum and hear played, are endowed with an expression that is incomparable. They are the folklore of American music.

What Stephen Foster might have been in Robert Burns' bonnie hills! Or in Franz Schubert's graceful halls! But he was of the busy Ohio, of plaintive darkey voices in the moonlight, and of the joyous minstrel frolic. He was the son of a Pittsburgh merchant, born in a pleasant white cottage on July 4, 1826, the fiftieth anniversary of the Declaration of Independence.

Stephen carried the hereditary marks of that eventful date; he was impatient under the discipline of school. Although his teacher called him "the most perfect gentleman," the boy preferred the solitude of the forests and streams to the study of books and multiplication tables. He would rather whistle a few new bars, or warble his newest song to his companions. "Idle dreaming ways," his family concluded.

But the young dreamer, at least, was not idle. Even while still at school, his many songs pleased his audiences—if not the judges. He discovered his total inability to do bookkeeping. He got married. Fairly suddenly. The young lady of his choice, Jane McDowell, one evening accidentally invited both Stephen and another admirer to her home. When Stephen saw his rival, Richard Cowan, he turned his back upon the two and proceeded—strangely enough—to read a book. After Richard finally left, Jane didn't know with which of her young men she sympathized most. But Stephen, stern and pale, settled the issue. "And now, Miss Jane," he said, "I want your answer. Is it 'Yes'? Or is it 'No'?" Nineteen-year-old Jeanie, then and there, made up her mind.

Sensitive, dreamy, young Stephen Foster reveled in the southern river atmosphere. He delighted in the sketches of the E. P. Christy's widely known minstrels. And he decided to write "Ethiopian melodies" for these shows himself, freeing the minstrels from their crudities and lack of novelty. Louisiana Belle, Massa's in de Cold, Cold Ground, De Camptown Races, were among song after song which led him to fame.

The story of his discovery of the immortal Swanee River is well-known but bears repetition. For Old Folks at Home, Foster needed a two-syllable name of a southern river. Yazoo had been used before. Pedee didn't sound right. But there was a little river down in Florida that might do: The Swanee. That's how Way Down Upon de Swanee River was born.

That song sold hundreds of thousands of copies and made his publishers rich. Others—Old Dog Tray, and Old Black Joe—were almost as popular. But Stephen Foster was naturally not a good businessman; his song writing was not financially profitable. For Oh, Suzanna, he was glad to take two $50 bills. Later, the successes became further and further apart. From July 1860, when he went to New York, the composer wrote without resting. But, somehow, the old spark was almost extinguished. The years seemed to be invading his talent, leaving him only a remnant that grew smaller and more barren.

Much has been said about those last years of Foster's life. Perhaps too much has been said. We do not know, even now, all of the facts. Certainly his life had never been a contented one. He was too much the brooding artist to be a happy individual. Stephen Foster paid a high price for his emotional temperament. But the whole world is enriched because of that same temperament.

Let us rather remember the earlier Foster, the remarkable genius known and loved the world over. Kind, polished, with a sympathetic low baritone voice, he was a popular figure in his wide circle of friends. And his large, dark eyes and pensive countenance—which this stamp shows so well—his graceful features and well-proportioned slenderness made up for his lack of height.

Nor was he wanting in courage. He was always ready to give a hand to another. Out walking once with his niece, he overheard two hangers-on make an insulting remark. Leaving her in a nearby drug store, Stephen proceeded to beat up the two men. Then he walked to the nearest police station, paid his fine for disorderly conduct, returned for his niece, and, perhaps, a strong lemonade.

Foster's tastes and wants were simple. He loved nature, liking nothing better than to go picking wild strawberries in the fields. He loved his fellow beings, especially the company of cultured people. Above all, he loved the universe of music, listening to as much of it as he could, and composing anywhere and everywhere. The legend of his writing many songs on a piece of brown wrapping paper, if not true, is symbolic.

We have not forgotten the man who brings the happiness of a child to so many of us. His native city of Pittsburgh honors him with numerous monuments. Fargo, Ga., the source of the S(u)wanee River, also commemorates him. Along the picturesque banks of the famed Swanee, near Lake City, Fla., there is an interesting shrine to Foster. And the beautiful, unique, and nearly complete collection of Foster's songs, letters, manuscripts, and other data in Foster Hall, Indianapolis, was recently presented to the University of Pittsburgh by its founder, Josiah Kirby Lilly. Here, in Bardstown, old Judge Rowan's mansion is a museum known far and wide.

All the world over, the songs of Stephen Foster—more eloquent testimony even than these memorials—are on the lips of millions. A graphic motion picture and, recently, a national radio program were devoted to the story of his life. From neighboring Tennessee, a group of Lincoln Memorial University players has been touring the South over a period of years with a play called "O Stephy Foster." I am sure that this commemorative stamp issue will contribute its part to the universal admiration in which he is held.

Stephen Foster touched life, and it burst into song. He sang what he felt in his heart, and it has become immortal. He felt the inner humor, the charm, the tragedy of human life as have few others. To the last, his fellow men were "Dear friends and gentle hearts."

Perhaps his was not a great life—as we measure great lives—but his accomplishment was distinctively harmonious and great. No thought of ours can efface the memory, the beauty of a man:

"Whose heart sang the simple joys of a world and broke in sorrow upon his last note."

In closing, I have the honor to dedicate this stamp to the refreshing memory of that unexcelled and distinguished composer of folk melodies, one of America's greatest—the troubadour of the Ohio Valley—Stephen Collins Foster.

What Is the Matter With America?

EXTENSION OF REMARKS

OF

HON. JOHN THOMAS

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Tuesday, May 7 (legislative day of Wednesday, April 24), 1940

ADDRESS BY FRANK GANNETT AT LAWRENCE, KANS.

Mr. THOMAS of Idaho. Mr. President, last Thursday, May 2, Mr. Frank Gannett delivered at Lawrence, Kans., a very fine address on the farm problem. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Recovery was the first—and soonest forgotten—promise of the New Deal. The President asked for such power as endangers constitutional government, and more money than any ruler in the world has ever had to spend in peacetime.

But instead of substantial and sustained recovery we have had low income for agriculture, unemployment for industry, deflation and liquidation, staggering taxes, huge Government debt, discouragement, and lowered living standards for everybody. The ground has been plowed and harrowed and a perfect seedbed prepared for destructive inflation. Seeds of the Russian thistle of communism have been planted there, too.

Whether the result has been reached by ignorance or by design, the responsibility is the same. The new dealers sidetracked recovery when it was most needed. Some of them were, from the outset, frankly in favor of a "planned economy." That is the polite parlor name for national socialism. It is a system where the politicians in control of the state decide and the people do what they are told.

Agriculture, the new dealers said, couldn't be regimented if prices went to profitable levels. Industry couldn't be subjected to N. R. A. codes and price fixing if business became profitable. So the brakes were put on recovery after the first hundred days of the New Deal.

And every time the engine of private enterprise picked up, the brakes were put on again. In the spring of 1937, when farm prices were just getting into line with industrial prices, the President said commodities were too high. The country knew he was in control of the machinery of banking and credit and that he had the power to inaugurate a policy of severe deflation. His threatening announcement drove markets into a tailspin and the country into the second phase of a needlessly prolonged depression.

Measured in dollars, what has the failure of New Deal policies cost Kansas? Every year the farmers of Kansas receive $180,000,000 a year less for their crops. During the 6 years before the depression farm income in Kansas averaged $450,000,000; now only $270,000,000 after the benefit payments have been added to the prices received.

What does it mean to the farmers of Kansas and to the businessmen from whom they buy to have $180,000,000 a year, one-half million dollars every day, subtracted from the farmers' income? Since 1933 this loss adds up to one and one-fourth billion dollars for the State of Kansas alone. This means that every one of the 175,000 farms in this State has suffered an average total loss in gross income of $7,200 under the New Deal compared with its normal income before the depression.

Farmers everywhere suffered from depressed prices. The total loss of income and buying power by farmers during the last 10 years has amounted to $38,000,000,000. Think of it. A loss by one group of almost as much as our total national debt. And that tells only part of the story. You in Kansas know that your producers of petroleum, coal, lead, zinc, and other basic raw materials also have suffered just as farmers have from low prices. All raw-material producers in the Nation have had a heavy toll taken from them. The total deficit from depressed prices of all American farmers and producers of basic commodities has amounted to $54,000,000,000 in the last decade.

Fifty-four billion dollars of destroyed purchasing power. That figure should be repeated again and again. When farmers' and basic producers' prices melted, they could not buy from city industries, and Nation-wide unemployment is the result.

Farmers and producers of other raw materials comprise 55,000,000 of our population. The price tag on their products as they move to market is the base of the Nation's entire income. During the twenties this averaged $17,000,000,000, and the national income was about $85,000,000,000. When basic producers' income fell to $8,000,000,000, national income dropped to forty billions.

If we want recovery that will cure the ills of our private-enterprise system, we must restore farmers' and basic producers' income to normal. Only then can we have the national income of $90,000,000,000 or more that our productive system should yield.

When these facts are seen in true perspective, city people as well as farm people will understand what's wrong. They will understand that the way to recovery is to retrace the road that led into depression. And recovery must come soon if we want to cure the ills of our private-enterprise system and not kill the system.

"But," says the man in the city, "I, too, am suffering from lowered income. The depression hit me just as hard. Why should I be taxed to help out the other fellow?"

The city person with that point of view needs enlightenment. He needs, in his own self-interest, to look in the right end of the telescope.

The depression and unemployment problems of our cities started on the farms, in the mines, and forests, back where the food came from for the city man's table, the fiber for his clothing, the fuel for his heat and power, the lumber and metals for his house and workshop. Our depression started among the raw-material producers. The price tag on all these products melted, not only in the United States but all over the world. And there will be no understanding of the cause of depression and no intelligent approach to recovery until this sequence of events is taken into account.

The cycle of deflation and bankruptcy was set in motion by a world-wide collapse in commodity prices. Buying power dried up in the rural communities where people depend for their living on farming, mining, quarrying, oil production, lumbering. When commodity prices fell below the cost of production, country buying slowed down. Then the cities began to suffer, and not before. Wage reductions and industrial unemployment followed and resulted from the commodity-price collapse.

Let us look at the typical United States farm. It represents an investment of $10,000, has one and two-thirds gainfully employed workers besides the unpaid labor of women and children. After deducting unavoidable expenses such as taxes, fertilizers, interest, machinery, and counting nothing as a return on the capital, nothing for management, the average farmer and his hired man have had $1.40 per day in cash and 46 cents in food produced and consumed on the farm.

How can the farmer be a good market for city products with a cash income of only $1.40 a day? How can businessmen and stockholders in the city fairly ask him to be their voting ally to preserve our system of free enterprise if it gives him so little for his labor, even when no return is allowed for his capital investment?

The farm problem is the city's problem. The sooner that is understood the sooner unintelligent attacks on farm relief will cease. And the sooner we shall have intelligent cooperation of industry, finance, and labor, together with agriculture, to find the way out of depression for all groups. For not one of them can prosper permanently unless all are permitted to exchange their goods and services at a fair level of prices.

Under our constitutional system of free enterprise, everyone should strive to give the most for the least in free markets. There is no purchasing power but goods and services produced by one group in exchange for desired goods and services produced by others. The price tag on commodities, manufactured goods, wages, salaries must be in balance so that every producer can buy his fair share of the other's goods. If any one group charges too much, competition must bring it down. What the Nation has been suffering from during the past 10 years is an uncorrected price disease that is holding down the price tag on the products of farmers and other producers of raw materials. Until we correct this, they cannot buy in full volume, nor can they dispense with relief from the Federal Treasury.

City labor should see this, for it is a fact that pay rolls go up or down in step with farm income. When farm income, before the depression, averaged $12,000,000,000 a year, industrial pay rolls were around twelve billions. When farm income dropped to five billions, pay rolls fell to five billions. Industry should see this, because the volume of industrial production goes up and down with agricultural income.

Restoration of fair prices for farm products and other basic commodities will bring recovery to the cities. Our farms and rural communities will again be able to buy in normal volume from industry. There will be a tremendous farm market for radios and bathtubs, telephones and vacuum cleaners, books and magazines and machinery and building materials. Make the commodity-producing half of our population prosperous, and all will be prosperous—all who are willing and able to work.

The can't-works will be generously cared for. That was always the American way. And the won't-works? Their number would diminish if we had a Government that wasn't interested in their votes.

Now, the problem of recovery has other aspects. One is security and freedom for private enterprise, free from the stifling control of government. Private enterprise with all its blessings is the child of liberty. Only when our Constitution was set up did private enterprise get its charter of liberty. Never before were men starting business or making inventions protected as they were under our written Constitution and our Bill of Rights. Our forefathers substituted the security of law for the caprice of personal government. They set up barriers—which we thought permanent—against government by men. And our private-enterprise system, giving free rein to initiative and reward to thrift, created in 150 years more well-being than any people had ever known. The men who set up this system were the greatest liberals of history. We, who fight to preserve what they created, are the liberals of today. The reactionaries of our time are those who are trying to destroy it.

But, the exchange of goods and services in high volume under free enterprise depends upon a properly functioning price system. The most that government should do is to establish stable standards and fair rules. The Government set up by our forefathers was never to act as a player—no; not as quarterback—in the competitive game of producing and exchanging goods and services. Government's job was to be a fair umpire.

Something happened during and after the World War that upset price relationships everywhere between the basic producers and the industrial populations. It was not overproduction. It was underconsumption due to faulty distribution. I call it a price disease. Another name for it is depression. It started to sweep like a plague through all capitalistic countries.

Many nations set up a quarantine to keep the price disease from getting within their borders. In each case they acted under economic advice from London to adjust the local price tags on commodities, not by governmental price fixing, but by adjustment of their foreign exchanges.

Germany let the price disease run its course. Result, national socialism under a dictator.

France struggled with the same price disease, and communism nearly got the upper hand.

The United States believed it was immune.

Great Britain based its program for recovery on studies of the Macmillan Commission, appointed by the British Treasury in the autumn of 1930.

The British Government was the only one that made any investigation of the cause of the depression. In its report to Parliament in June 1931, the Macmillan Commission said:

"The problems thus raised transcend in importance any others of our time and generation, and we have regarded it as our main task to expound their significance and bring forward suggestions for their solution."

The policies recommended by the Macmillan Commission were carried into effect by the British Empire Economic Conference in Ottawa in the summer of 1932 and were extended to the so-called "sterling bloc" of 22 nations. The Ottawa Conference was under the leadership of Neville Chamberlain, then Chancelor of the Exchequer, now Prime Minister.

England, the wisest banking nation in the world, recognized that the price depression had its origin in monetary forces and not in overproduction. It made restoration of farm prices its primary objective. Let me quote from the official reports:

"A rise throughout the world in the general level of wholesale prices is in the highest degree desirable." * * * "The governments of the British Commonwealth should persist by all means in their power, whether monetary or economic, within the limits of scund finance in the policy of furthering the rise in wholesale prices." * * * "A rise in the general level of commodity prices in various countries to a height more in keeping with the level of costs * * * with a view to avoiding, so far as may be found practicable, wide fluctuations in the purchasing power of standards of value."

Instead of recognizing the realities of the problem, as the British did, the New Deal brain trust grappled with the problem on the false basis that has destroyed the export power of American agriculture, that has killed production with scarcity policies, reduced freight for our railroads, and generally made the Nation poorer. You can't give people abundance by producing less.

Every effort of the British and associated governments, on the other hand, was directed toward raising the price level of basic commodity producers toward parity with the prices of industry and the wage rates of labor. The British Government knew that industrial prices and wages could not be scaled down to the level of commodity prices. The voice of inexperience still suggests trying it.

The United States needs a similar open-minded approach to economic realities. It needs to face the commodity price problem of its depressed farmers and its oil and coal and metal and lumber producers. It must face this problem with knowledge of the protective measures that have worked in other countries.

This is what the Roosevelt administration has refused to do. It ran away from the facts. When a committee of the Business Advisory Council of the Department of Commerce made a semi-official investigation in 1935 and 1936, President Roosevelt suppressed its report. He didn't want public discussion of the methods which the 22 sterling nations, following Britain's leadership, had used successfully to turn depression into recovery.

That suppressed report recommended a permanent monetary policy for the United States along lines endorsed unanimously by the great national farm organizations—the Grange, the American Farm Bureau, and the National Cooperative Council. It advised returning to Congress the constitutional function of regulating the value of money and of foreign exchange. It recommended the creation by Congress of a monetary authority with powers such as Britain was using successfully to restore economic balance between commodity producers and other groups. It pointed to the partnership of prosperity, with balanced budgets and little unemployment, which the sterling nations enjoyed while the United States was floundering in deficits, unemployment, and depression.

Why did President Roosevelt prefer not to follow the tested and successful road that brought recovery and balanced budgets to 22 nations with 600,000,000 people? Was it because he wanted to gather still more powers and to keep in his own hands the monetary powers Congress abdicated to him in 1933?

New dangers have arisen now. Another world war has again upset price relationships. True, there is a greater demand for commodities and some prices are rising. But that is only temporary. Meanwhile, Britain and France are adjusting their foreign-exchange rates to their own advantage. I am not criticizing them for doing so. But I do insist that the United States should have a monetary policy of its own, and it should be fitted to the needs of our own people.

Why should we hold our farmers in a strait jacket of price disadvantage against a $3.50 pound or Canadian dollars at 80 or 85 cents? Selling wheat, lard, wool, and cotton at the world price, our farmers receive 80 cents, where the Canadian farmer, in his currency, receives a dollar, and the eight principal sterling nations the equivalent, in their own respective currencies, of $1.23 for the same products. We are under no obligation to allow our farmers to remain with depressed prices so that they must depend upon war exports and lopsided recovery built on armament and war.

Our problem is to cure the price disease in our distributive system to keep Americans consuming to the fullest possible extent the goods and services that Americans can produce. We have the factories, the technical equipment, the willing workers, the productive power of farmers and miners to produce $105,000,000,000 of annual national income. This would mean $1 a day more for every gainfully employed worker; $666 more per year for every farm; $9,000,000,000 more for interest, dividends, and taxes; and still leave $10,000,000,000, or $1,000 a year of wealth production for each of the 10,000,000 now unemployed.

After this world war there will be economic readjustments as far reaching as those which followed the last war. Unless we are prepared to adjust ourselves to those changes, a worse depression will be in store. And a worse depression would end in inflation and the death of private enterprise.

Great Britain and associated nations are adjusting their exchanges to keep their farmers and basic producers solvent. We remain disadvantaged because we have no mechanism for automatic adjustment. We leave it, under the New Deal, to the whim or judgment of one man, the President, to do with our money and our price level whatever he pleases.

The constitutional power of Congress to regulate the value of money and of foreign exchange doesn't belong to the Presidency and should never be lodged there. It should be recovered by Congress and administered through a monetary authority under a strict mandate to provide a stable and honest dollar. This has been all during the New Deal the unanimous request of the farm organizations. The administration has persisted in ignoring their petitions while dealing out part-way relief to agriculture.

Speaking from agricultural America, I wish I could make all city people understand that the farmer doesn't want a "hand-out." He has accepted relief from the New Deal because it was the only approach offered to economic justice. One billion dollars for farm relief is a poor substitute for an annual loss of four billions. The problem of farm parity can't be solved by the new dealers' formula. The price disease must be attacked with a knowledge of its economic cause and a readiness at least to investigate the cure which other nations have applied successfully.

The monetary and economic measures adopted by Britain and 21 other nations of the "sterling bloc" were so successful that reemployment, high building activity, and generally balanced budgets resulted.

What is most important to farmers is a fair price for what they grow—a restoration of their missing $4,000,000,000 of annual income and buying power.

If New Deal policies continue to keep the American private-enterprise system on a dead center, with the income of the commodity-producing half of our people so low that they cannot buy the goods and services of industry, you will see national socialism as complete in America as it is in Germany and Russia. We must save agriculture to save America.

The New Deal, unless it is stopped, will finish breaking down State lines and State sovereignty. You know it in the West because Washington has seized control of your water resources. You know it in Kansas because your able Republican Governor Ratner is resisting the Federal Government's attempt to seize all of the petroleum industry.

Unless the New Deal is stopped, it will wrest supervision of life insurance from the States and eventually make insurance a Federal Government monopoly. It will make medicine a Government monopoly. It will extend price-fixing from coal to everything you buy. Private enterprise, initiative, self-reliance, thrift, independence, will all go by the Board, as they have gone in Europe when economic distress is not relieved.

The record is plain. Behind the New Deal are influences working to change our social order and our form of government. We have let them experiment and conspire too long for our comfort. But not too long for action.

We still have the ballot box. We still have a means of redress—if we will use it before it is too late. It is already too late in Germany and Russia and in a large part of the world.

We can lift up our spirits. We can throw out the whole New Deal crowd—if we bestir ourselves.

We can substitute business experience for experimental philosophy.

We can stop raising taxes. We can lower them, and stop crazy spending.

We can reverse the process of executive dictation of tariffs, and protect our home market. Whatever else may be said about the trade treaties, they are greatly harming agriculture, already our most distressed economic group.

We can continue all desirable aids to agriculture while taking the steps which other nations have used successfully to give basic producers profitable prices.

We can adopt a helpful, friendly attitude toward all honest business. We can stop promoting hate.

We can give kindly care to the unfortunate and stop coddling those who won't work. We can revive the virtues of thrift and self-reliance.

We can bring about the one reform that America most needs; that is recovery, with reemployment, and prosperity, and opportunity for youth.

If you believe in private enterprise and want constitutional government for yourself and your children, this is the year to do your whole duty as a citizen.

Go to the delegates and to the national committee men and women of the Republican Party. Tell them that agricultural recovery has been too long delayed; that this year they must work with representatives of agriculture and raw material producing States to formulate a platform that will restore agriculture to its rightful place and make farmers our voting allies for victory in November.

My call to farmers is—Use your political power to put through the program of restoring farm prices upon which the great national farm organizations, the Grange, the Farm Bureau, and the National Cooperative Council, have united. Tell your local political leaders and the delegate who speaks for you in the Republican convention that you will work and vote only for candidates and a platform that will give agriculture restored prices and its just income. Use your political power. Save agriculture to save America!

Report of Republican Program Committee

EXTENSION OF REMARKS

OF

HON. JOHN THOMAS

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Tuesday, May 7 (legislative day of Wednesday, April 24), 1940

LETTER FROM A. H. PACKARD

Mr. THOMAS of Idaho. Mr. President, Mr. A. H. Packard, president of the Vermont State Farm Bureau, addressed to Mr. Glenn Frank, chairman of the National Republican Program Committee, a letter which I ask to have printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

VERMONT STATE FARM BUREAU, INC.,
Burlington, Vt.

GLENN FRANK,
Chairman, National Republican Program Committee,
Chicago, Ill.

MY DEAR MR. FRANK: I have been studying the report of the Republican program committee on money and banking which was submitted to the Republican National Committee on February 16, 1940, and I notice that this committee recommends a return to a fixed gold standard, and yet I understand in other sections of the Republican committee's report they urge that normal purchasing power be restored to agriculture.

It is very hard for many of us up here in the Northeast to understand how you plan to have both agricultural prosperity and a fixed gold standard. We have had a fixed gold standard most of the time for the past 100 years, and during this time we have had two major depressions. We are in the midst of the second great depression today. It is taking away from the farmers of America the ownership of their farms much faster than many realize.

Today, out of the 6,000,000 farms of America, there are two and one-half million tenant farmers, and on the three and one-half million farms, to which the farmers still hold title, there is a mortgage debt of over seven billion. When you take away from the farmers of this Nation the ownership of their land, you have taken away the initiative, the courage, and the industry that made America great.

While we were still on the gold standard, farm income dropped from the 1924-29 average of $12 billions to $9.5 billions in 1930; to $7 billions in 1931; to $5.3 billions in 1932.

The most effective thing that has been done since 1930, as I see it, to help a mortgaged farmer to hold on was the revaluation of gold in 1933. The President, by authority of the Thomas amendment, raised the price of gold 69 percent, and this in turn raised the basic commodity level about 67 percent. While the cost of living increased only 3 percent. In 1933, after we had abandoned the fixed weight of gold in our dollar, for 100 days we had such recovery as had never taken place in a like period of time in the Nation's history. Three and one-half million men and women went back to work. Ten million stockholders saw their investments increase almost $20,000,000,000 in value. Business activity increased 53 percent.

This would have proved a God-send to agriculture and America, had not several bills passed like the N. R. A. which widened the price disparity between agricultural prices and sticky prices, including debts.

Your committee appears to be worried over the "threat of inflation," but they do not appear to be worried over the rigidity of salaries and other fixed costs that have been with us for 20 years. This group must, in some way, learn that World War No. 1 is over and we, in agriculture, want to meet them on an exchange basis that will permit the free exchange of goods and services.

Today we are trying to carry on with United States farm prices at an index of 99, while in 1915 they were 98. The index of our cost of living today is 141—in 1915 it was 102—and the cost of distribution of food is 168 while in 1915 it was 106. I wish to respectfully say to you that this Nation cannot go forward while this price disparity exists.

I wish further to say that since our civilization is too complex for barter, that our unit of value—our dollar—has to be the common denominator for price relation as between goods and services. There are millions of men and women who are receiving the same salary or a larger salary than they received 10 years ago or 20 years ago. At the same time the farmers of the United States, instead of receiving the same number of dollars, or more than they got 10 or 20 years ago for their commodities, are receiving about two-thirds as many dollars.

Now, if the salaried or sticky-price group wishes to continue on their present price level and we wish our dollar to function as a common denominator so that agriculture, industry, and labor can freely exchange goods and services, we will have to change the gold content of our dollar from time to time according to supply-and-demand conditions for gold. At the present time we need smaller dollars to restore purchasing power to our primary producers. With price equilibrium, surpluses would disappear.

Those who have saved money for declining years should not expect years of bargains at the expense of young men and women who are trying today to find jobs. If their dollar would buy two pounds of butter when they stored their money, they must not expect that when they draw it out it must buy three.

Up here in Vermont many people in and out of farm organization believe our monetary program is most important. We feel that if the men who shape the platform for the major parties had faced a farm mortgage for the past 10 years, that they would not be asking for a return to a fixed gold standard, and I assure you, that many of these debtors are our finest citizens. In closing, please read the joint resolution passed by the Vermont Legislature last session and signed by Governor Aiken March 2, 1939, as follows:

"Mr. Walker, for the committee on agriculture, offered the following joint resolution:

"J. R. H. 26. Joint resolution relating to investigation of monetary system of the United States:

"Whereas it is very apparent to the residents of the State of Vermont, and particularly to the producers of primary products, that there is a grave disparity between prices received by primary producers for their products produced in Vermont and the fixed charges which are attendant upon the producers; and

"Whereas our natural instinct tells us that something is wrong with the present monetary situation in this country; and

"Whereas article 1, section 8, clause 5 of the United States Constitution gives exclusive power to the Federal Government to provide a currency for all the States, to coin money and regulate the value thereof: Therefore be it

"*Resolved by the senate and house of representatives,* That it is the opinion of this legislature that there should be an immediate and thorough study by the Congress of the United States, through a special committee, of the reason for the grave disparity that now exists in all parts of the country between prices to primary producers and the fixed charges that are attendant upon them; to investigate carefully the monetary system of this country with the view of correcting evils that are now apparent and with a view of bringing to this country a better monetary system and to report their findings at an early date to the Congress of the United States for proper action."

The major national farm organizations—the American Farm Bureau, the National Grange, the National Cooperative Council—have united in asking of Congress the establishment of a managed currency system to replace the gold standard, which has brought disaster to American agriculture.

Other nations—Argentina, Australia, and Brazil—took defensive measures in 1929 and 1930 in time to save their farmers from the worst of the depression. Eight of these countries of the sterling bloc, large agricultural producers with which our farmers must compete in world markets, receive today, on the average, when selling their identical products in world markets for identical quantities of gold, 54 percent more in their respective currencies than American farmers receive in dollars.

Many farmers are asking themselves whether the program committee's recommendation for return to a fixed gold standard foreshadows a refusal on the part of the Republican Party to cooperate in restoring farm prices by revaluation or managed currency, the only methods that have proved effective in our own experience or that of other nations.

Very truly yours,

VERMONT STATE FARM BUREAU, INC.,
A. H. PACKARD, *President.*

A Foundation for a Political Platform for Recovery

EXTENSION OF REMARKS

OF

HON. EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 7 (legislative day of Wednesday, April 24), 1940

DECLARATION OF PRINCIPLES BY WENDELL WILLKIE

Mr. BURKE. Mr. President, within the next 2 months or so the national party platforms will be adopted. It would be a great blessing for America if every citizen who

will be represented in those conventions could read the declaration of principles set forth by Wendell Willkie, and insist upon its consideration. I ask unanimous consent that Mr. Willkie's petition be printed in the Appendix of the RECORD.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

[From Fortune for April 1940]

Before the political platforms are written, we, the people, have a declaration and a petition to make.

In the decade beginning 1930 you have told us that our day is finished, that we can grow no more, and that the future cannot be the equal of the past. But we, the people, do not believe this, and we say to you: Give up this vested interest that you have in depression, open your eyes to the future, help us to build a New World.

In this decade you have separated "business" and "industry" from the ordinary lives of the people and have applied against them a philosophy of hate and mistrust, but we, the people, say: Business and industry are part of our daily lives; in hurting them you hurt us. Therefore abandon this attitude of hate and set our enterprises free.

In this decade you have undertaken vast new obligations, which we support. But because you have not applied to these obligations the ordinary standards of business judgment, you have lost our money by the billions and we, the people, say: Give us a business-like administration that will act as the steward of our prosperity; that will insure the social progress that is now threatened; and that will manage our affairs at least as intelligently as we manage our own enterprises.

In this decade, under the banners of reform, you have usurped our sovereign power by curtailing the Bill of Rights, by short-circuiting the States, and by placing in the hands of a few men in executive commissions all the powers requisite to tyranny; and we, the people, say to you: We do not want monopolistic government, any more than we want monopolistic industry. Give us back the powers that our forefathers declared to be ours; liberate us to govern ourselves by law.

Because you have concealed from us the amount of our real taxes, and because you have hidden from us the real nature of our expenditures, you have specifically usurped our power over the public moneys, and we, the people, say: Give us as much information concerning our Government as we expect to get concerning our own enterprises, so that we may control the vast sums that it has become necessary to spend.

You—the politicians of both parties—have muddled our foreign affairs with politics, with vague threats and furtive approvals, with wild fears and inconsistent acts; and we, the people, say: Give us a foreign policy that we can trust and upon which we can build toward the future. We are against aggressors, we are for foreign trade, and we recognize that our own standard of living can be improved only by raising the standard of the other countries of the world.

This declaration will not interest those who regard the United States as a laboratory for social experiments.

It will not interest those who regard the United States as a free-lunch counter.

It will certainly not interest those who regard the United States as a somewhat impoverished gold mine out of which they can still scrape a nugget or two for themselves.

It will interest only those who think of the United States as their land—a land that they know and love—a land that became rich through the industry, thrift, and enterprise of its people, and will never regain its prosperity in any other way.

The National Defense

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 7 (legislative day of Wednesday, April 24), 1940

ARTICLE BY LUDWELL DENNY

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Defense Weakness," written by Mr. Ludwell Denny and published in the Washington Daily News.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News]

DEFENSE WEAKNESS

(By Ludwell Denny)

Loud talk but little action is expected from congressional re-examination of American defense in the light of German victory over the Allies in Norway.

After Congress has appropriated $8,500,000,000 in the last 9 years to modernize our defense system, why are our forces now considered grossly inadequate? Specifically—

Why is our air strength so puny compared with the land and sea forces?

Why is such a small portion of our Army mechanized?

Why is there so little coordination and so much costly rivalry between the land, sea, and air forces?

Confessions of our weakness have come from the highest officials. Secretary of the Navy Edison, as a result of the recent United States Fleet maneuvers in the Pacific and of German successes in Norway, admits that aircraft have a "temporary superiority" over battleships. Major General Arnold, Chief of the Army Air Corps, admits—according to Senators—that our warplanes are inferior to Europe's best, not only in numbers but in quality.

Today Senate committees are to begin the requestioning of Secretary Edison and other War and Navy chiefs about the apparent superiority of German weapons and methods as compared with our own expensive "horse and buggy" ineffectiveness.

There are many reasons why the outcome of this "investigation" is apt to be more alibis and more money for the same set-up, rather than real reform. Here are some of them:

1. The "investigators"—that is, the congressional Military and Naval Committees and appropriation subcommittees—are jointly responsible with the executive authorities for the present system; they cannot be expected to indict themselves.

2. President Roosevelt is an amateur admiral, who has operated as his own Secretary of the Navy and Secretary of War, and who has personally supervised preparedness Budgets and policies. He has covered up blunders, when news about them has leaked out, and has opposed investigation.

3. The admirals and the generals, especially the admirals, have a vested interest in the self-perpetuating system of old weapons and methods at the expense of new. In their control of the air forces and in their congressional lobbies, the sincere but prejudiced Army and Navy commands naturally put aviation last instead of equal—much less first.

4. The naval shipbuilding lobby is one of the richest, strongest, and best organized in Congress; and it can wangle billions for battleships, at $70,000,000 to $100,000,000 each, until there is little left for $25,000 planes.

5. Now that the administration has turned over virtually the entire American aircraft production industry, plus expansions, to the Allies, there is no chance of getting sizeable warplane deliveries for the United States Army and Navy, even if Congress makes an even Budget trade of 1 new battleship for 4,000 pursuit planes.

6. The basic issue of establishing a single command over three coordinate defense services, with a united air corps ranking equally with Army and Navy, probably will not even be faced in Washington unless and until the backward British model is belatedly revamped to meet German victories.

Of course nobody expects a final decision by admirals in this generation on the endless debate of battleship versus bomber—no matter how many Norways fell. It must be assumed both are essential.

The immediate question in the United States is whether defense can be balanced better between sea and air fleets, between manpower and mechanized power in the Army; and whether aviation can have equality under coordinated command.

Unless Congress sets up a powerful independent investigating committee—without fear of vested interest lobbies, admirals, generals, commanders in chief, and Presidents—there seems no hope whatever of getting a streamlined defense system for our borrowed billions.

Seventy-five Percent of All Railroad Employees Urge Passage of Wheeler-Lea Bill (S. 2009)

REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1940

Mr. VAN ZANDT. Mr. Speaker, there are in the United States today approximately 1,103,600 railroad employees.

For the information of the Members of the House, I am inserting the following table showing the various classes of employees:

	Number	Percentage
Employees not in train service:		
Clerks, station and express employees	225,000	20.4
Maintenance of way	249,000	22.6
Shop crafts [1]	290,000	26.3
Dispatchers	3,100	.3
Signalmen	12,000	1.1
Telegraphers	48,000	4.3
Yardmasters	4,500	.4
Marine workers [2]	7,000	.6
Total	838,600	76.0
Train-service employees:		
Engineers	47,000	4.3
Firemen	60,000	5.4
Conductors	26,000	2.4
Trainmen	122,000	11.0
Switchmen	10,000	.9
Total	265,000	24.0
Grand total	1,103,600	100.0

[1] Represented by 7 organizations: Machinists, boilermakers, blacksmiths, electrical workers, sheet-metal workers, carmen, firemen and oilers, and roundhouse shop laborers.
[2] Represented by 3 organizations: Masters, mates and pilots, marine engineers, longshoremen.

More than 75 percent of the railroad employees of the country are in favor of the passage of S. 2009, the Wheeler-Lea railroad bill. Their approval of this legislation is expressed through 15 of the great railroad labor organizations in the following letter over the signature of the president of each labor organization:

[American Train Dispatchers' Association; International Association of Machinists; International Brotherhood of Boilermakers, Iron Ship Builders and Helpers of America; International Brotherhood of Blacksmiths, Drop Forgers and Helpers; Sheet Metal Workers' International Association; International Brotherhood of Electrical Workers; Brotherhood Railway Carmen of America; International Brotherhood of Firemen and Oilers; Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees; Brotherhood of Maintenance of Way Employees; Brotherhood of Railroad Signalmen of America; Order of Sleeping Car Conductors; Railway Employes' Department, American Federation of Labor]

REPRESENTING 850,000, OR MORE THAN 75 PERCENT OF ALL RAILROAD EMPLOYEES URGING ENACTMENT OF CONFERENCE REPORT TRANSPORTATION BILL S. 2009

The conference report transportation bill S. 2009 should be enacted into law at this session of the Congress. It proposes equality of treatment, regulation, and preservation of the inherent advantages of each mode of transportation.

We are opposed to referring the bill back to the conference committee. We urge enactment of the conference report at this session of Congress.

We speak for approximately 850,000 railroad express and Pullman employees, more than 75 percent of all railroad employees. Their interest will be improved by the enactment of the conference report. Unregulated, subsidized water and motor-carrier transportation is taking a heavy toll of railroad employment and railroad business. It is estimated that 180,000 railroad jobs have been lost because of present unfair, discriminatory transportation policies and lack of Federal regulation of these other modes of transportation.

The legislation proposed by the conference report does not in any manner change the law regarding consolidation of railroads.

Railroad employees already have the decision of the Supreme Court in the Rock Island consolidation case and the Washington job-protection agreement of May 1936 to protect railroad jobs in consolidations.

Railroad employment should be increased, not reduced, by enactment of this legislation.

C. L. Darling, president, American Train Dispatchers' Association; H. W. Brown, president, International Association of Machinists; J. A. Franklin, international president, International Brotherhood of Boilermakers, Iron Ship Builders, and Helpers of America; Roy Horn, general president, International Brotherhood of Blacksmiths, Drop Forgers, and Helpers; L. M. Wicklein, vice president, Sheet Metal Workers' International Association; J. J. Duffy, vice president, International Brotherhood of Electrical Workers; F. H. Knight, general president, Brotherhood Railway Carmen of America; George Wright, vice president, International Brotherhood of Firemen and Oilers; George M. Harrison, president, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees; F. H. Fljozdal, president, Brotherhood of Maintenance of Way Employees; A. E. Lyon, president, Brotherhood of Railroad Signalmen of America; M. S. Warfield, president, Order of Sleeping Car Conductors; B. M. Jewell, president, Railway Employees' Department, American Federation of Labor.

MAY 6, 1940.

Citizenship Day

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, May 7 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM MILWAUKEE SENTINEL AND LETTER FROM AMERICANIZATION LEAGUE OF AMERICA

Mr. WILEY. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial from the Milwaukee Sentinel of May 4, 1940, entitled "Citizenship Day," and, following the editorial, a letter from the Americanization League of America, together with a resolution enclosed in the letter.

There being no objection, the editorial, letter, and resolution were ordered to be printed in the RECORD, as follows:

[From the Milwaukee Sentinel of May 4, 1940]

CITIZENSHIP DAY—WISCONSIN HAS SET PATRIOTIC EXAMPLE

The Hearst newspapers have noted with much interest and pleasure the extent to which Citizenship Day has become an occasion for annual and national observance.

When the county of Manitowoc in Wisconsin publicly honored a class of 350 young citizens a year ago, these newspapers thought the patriotic example thus set was worthy of wider emulation, and said so.

A large number of other American communities agreed, with the result that thousands of young Americans who had achieved the age of citizenship were appropriately welcomed to their new and high estate.

First, as always, to recognize an opportunity to expand its Americanization program through this medium was the American Legion.

At its national convention in Chicago in 1939, the Legion adopted a resolution calling for an annual and national observance of Citizenship Day, the purpose being to give recognition to all American young people when they gain and accept the privileges and responsibilities of voters.

In accordance with that program, May 19 of this year was designated officially as Citizenship Day by the National Education Association, and special committees have worked out plans for observance in many States, including Wisconsin, Alabama, West Virginia, Montana, Iowa, Minnesota, California, and South Carolina.

California, incidentally, varied and broadened the program in part by devoting an entire week to instructive and inspiring citizenship projects, from April 29 to May 5.

In view of the impetus which was given to this splendid movement by the patriotic people of Wisconsin, it is interesting to know why and how it was conceived.

Hugh S. Bonar, superintendent of schools of Manitowoc, thus explained the origin of citizenship day in the Wisconsin Journal of Education:

"Citizenship day, as conceived and carried out in Manitowoc County, was an effort to make significant an important event in the life of every young man and woman.

"That event was arriving at age 21.

"This foundation of government in our country, universal suffrage, has been threatened because of the indifference toward it and the absence of any recognition of the major qualification for beginning voters—becoming 21 years of age.

"Both to arouse in young and old voters an appreciation for this vital right and to better prepare to exercise it, citizenship day was inaugurated."

It is hardly necessary to say such a movement is important in the United States.

And it is a matter of clear and proud record that it has already accomplished worth-while results.

The thousands of young American men and women who have been made to feel that a thing so important to them is vitally important to the country are the personification of its results.

For whatever reason some States still do not designate a Citizenship Day, either of their own selection or in conjunction with the date set by the American Legion and the National Education Association, none should any longer refrain from participation.

The opportunities for encouraging and creating higher standards of intelligently informed and patriotically loyal American citizenship are too abundant in this project to be neglected.

Why should any young American reach the age of active American citizenship without being made to realize he has gained something of priceless value?

Why should he not be instructed in the privileges and responsibilities of what he has gained?

Why should he not be honored and acclaimed upon attainment of the right of full participation in the vital affairs of his beloved country?

Not just those States which have first recognized the great possibilities for better Americanism in the observance of Citizenship Day should pay this tribute to youth, but all American communities and States should do so.

AMERICANIZATION LEAGUE OF AMERICA,
Milwaukee, Wis., May 1, 1940.

Hon. Senator ALEXANDER WILEY,
Washington, D. C.

MY DEAR SENATOR WILEY: We have been furnished with a printed transcript of the hearing before the subcommittee of the Committee on the Judiciary on Senate Joint Resolution 233 and House Joint Resolution 437, discussing citizenship-day rallies, and noticed that on page 9 it was stated that the first rally was held in Manitowoc, Wis.

For your information, we wish to advise that the Americanization League of America held the first rally of citizens in this country on November 7, 1931.

We are enclosing a copy of the resolution of the common council in Milwaukee, Wis., and wish you would request that a correction be made so that the matter will be taken care of in the CONGRESSIONAL RECORD.

Respectfully yours,

AMERICANIZATION LEAGUE
OF AMERICA.
Mrs. A. B. VAJDA.

[Enclosure]

STATE OF WISCONSIN,
City of Milwaukee, Milwaukee County, ss:

I, Stanley J. Witkowski, city clerk of the city of Milwaukee, do hereby certify that the following is a true and correct copy of a resolution adopted by the common council on May 18, 1931, viz:

"File No. 47031.

"Resolved by the Common Council of the City of Milwaukee, That the proper city officers be, and hereby are, authorized and directed to issue a city order in the sum of $250, payable to the Milwaukee Auditorium Board, in payment of the rental of the concert division of the Milwaukee auditorium for the celebration of the Americanization League of America, which rental shall be used for the purpose of maintaining and operating the Milwaukee auditorium; said amount to be charged to the fund set up in the budget under the heading 'Common council; special; special funds; auditorium patriotic-purpose rental fund.'

"STANLEY J. WITKOWSKI,
"City Clerk."

Wheeler-Lea Transportation Bill

EXTENSION OF REMARKS
OF
HON. VINCENT F. HARRINGTON
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1940

LETTER FROM AMERICAN FARMERS

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I include herewith a letter addressed to President Roosevelt, signed by American farm leaders from every section of the country. I also include a letter from the Iowa State Cooperative Legislative Council of the Transportation Organization, signed by four legislative representatives representing 80 percent of all railroad labor in the State of Iowa.

This is clear evidence of not only universal opposition by all thinking and progressive farm leaders in the United States, but by the most successful and experienced of all railroad brotherhoods.

WASHINGTON, D. C., *May 2, 1940.*

Hon. FRANKLIN D. ROOSEVELT,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: We are opposed to the adoption of the conference report on the Wheeler-Lea transportation bill for the following reasons:

1. It ignores the public interest and lays the basis for a transportation monopoly.

2. It will increase the cost of distributing agricultural products, which cost the farmer has to bear, thereby reducing his income.

3. It will increase the cost of things that the farmer has to buy, thereby further reducing his income.

4. The destructive effects of this legislation upon agriculture will retard the economic recovery of the Nation, and this in turn cannot fail to adversely affect the railroads themselves, who are the advocates of this bill.

5. Those who drafted this legislation appear to have lost sight of the fundamental purpose for which Government regulation was established, namely, to protect the public interest. Instead of adhering to this sound principle, under the bill regulation would be employed to stifle competition and to bring water and motor rates up to the level of rail rates, regardless of the cost of rendering the service.

The cost of transportation is the heaviest service charge that the farmer has to pay. Approximately 20 percent of all the freight revenues accruing to the railroads are derived from carrying agricultural products to market. In 1929 the farmer's freight bill amounted to $1,000,000,000. In 1937, when the farmer's income was greatly reduced, the figure was $838,000,000. These items do not include the freight charges paid on commodities purchased by the farmer, which he must likewise pay.

Last year the farmer received only 39 cents out of every dollar paid by the consumer for food. At the depth of the depression the farmer's share of the consumer's dollar dropped to 33 cents. While transportation and distribution must be regarded as legitimate and indispensable functions in the affairs of civilization, the fact remains that when those who merely transport and distribute the products of our farms receive vastly more than the share that goes to the producer, it amounts to the same thing as the perpetration of an economic crime. Instead of ameliorating the conditions that have so long handicapped agriculture in matters relating to transportation, the pending bill would most certainly aggravate the situation.

We are sensible of the fact that railroads are a necessity, and we want every properly managed railroad to be solvent and prosperous, but we must not lose sight of the fact that agriculture is also a necessity, even more fundamental to the well-being and the very existence of man than the railroads or any other agency of transportation can possibly be. Common sense should teach those who are charged with the management of our railroads that they cannot expect to benefit by reducing to bankruptcy the fundamental industry upon which their prosperity rests.

There is justification for condemning the report of the conference committee on the transportation bill by virtue of the fact that the Miller-Wadsworth amendment, which passed both House and Senate, was entirely eliminated from the bill. The gist of this amendment was to the effect that no form of transportation could be compelled to charge higher rates than would be compensatory. The full wording of the amendment was as follows:

"In order that the public at large may enjoy the benefit and economy afforded by each type of transportation, the Commission shall permit each type of carrier or carriers to reduce rates so long as such rates maintain a compensatory return to the carrier or carriers after taking into consideration overhead and all other elements entering into the cost to the carrier or carriers for the service rendered: *Provided*, That nothing in this paragraph shall be construed so as to affect the long-and-short-haul provision of section 4."

It is manifest that with the Miller-Wadsworth amendment stricken out the declaration of policy contained in section 1 constitutes nothing but empty words because nothing contained in the bill gives the public any assurance that it will receive the benefit of transportation at the lowest possible cost. In our opinion, the Miller-Wadsworth amendment was so fair and reasonable that it would be nothing short of tragic to pass the bill without this provision.

Those who are engaged in agricultural pursuits find an additional reason for dissatisfaction in the report of the conference committee because an amendment adopted by the House which provided for reduced rates on farm products for export, comparable to the lower rates granted to industry in this connection, was eliminated.

We maintain that there are only two legitimate grounds upon which the Government could justify itself in attempting to regulate transportation on our inland waterways and in the coastwise trade. One of these grounds would be in the interest of public safety, and the other to protect the public against monopolistic practices. So far as safety is concerned, the Department of

Commerce already looks after that; and when it comes to protecting the public against monopoly, the truth is that no monopoly whatsoever exists among the carriers on our inland waterways, nor in the coastwise trade. The rivers, the lakes, and the seas are open to all. So far from breaking up any monopoly among the water carriers, which in reality is nonexistent, the pending legislation takes a long step toward creating a monopoly.

The carriers now operating would be permitted to continue, subject to rules and regulations laid down by the Interstate Commerce Commission; but before it would be possible to establish a new service, it would be necessary to secure from the Commission a certificate of public convenience and necessity. If this bill should be enacted it is very doubtful if there would be any new water carriers, because the legislation is so worded as to virtually instruct the Interstate Commerce Commission to deny any person a certificate of convenience and necessity if the Commission comes to the conclusion that the present transportation facilities are adequate to take care of existing commerce. The fate that befell many of the common and contract carriers under the grandfather clause of the Motor Carrier Act of 1935 furnishes an example of what may happen to many of our water carriers if the present bill is passed.

As the Secretary of War, the Secretary of Agriculture, and the Chairman of the Maritime Commission well said in a joint letter addressed to Senator JOSIAH W. BAILEY on February 18, 1940, in opposition to this legislation:

"Certificates of public convenience and necessity should not be used to create a monopoly in the branch of transportation industry where monopoly is presently nonexistent and where the public interest requires that competition, although it should be regulated to prevent abuses, should not be limited or discouraged. The great advantage of water transportation to shippers is the flexibility and variety of service it can offer. Certificates of public convenience and permits would destroy this advantage and stifle competition. The same effect of stifling competition is discernible in the provisions of the bills, that except with the permission of the Interstate Commerce Commission no carrier can operate both as a common carrier and as a contract carrier."

We think the writers of the joint letter already mentioned are on the right track when they said:

"All the provisions of the bills seem designed to free the railroads from restraints and obligations, while imposing restrictions on their water competitors and making it more expensive for the public to move freight. Under these provisions inland-water carriers can easily be regulated out of existence without the recapture of enough tonnage to affect railroad earnings appreciably."

We also endorse the further statement of the writers of the joint letter when they declare:

"Farmers and other shippers should not be required to pay rates based on transportation costs of properties improvidently built, wastefully operated, or partially obsolete. The advocacy of thorough regulation of the minimum rates of motor and water carriers by a centralized agency appears to represent an attempt to use Government power to bring competing transportation agencies into a cartel, and in this manner to share traffic and adjust rates in such a way as to earn a return upon all transportation capital of these agencies. The present high rail-rate level would be protected from the impact of vigorous competition. Undoubtedly such a policy would also result in more rigid rates in times of depression, since the motor carrier and the boat line would no longer play their role as an effective competitive force in bringing down rail rates on commodities susceptible to rail or truck, and rail or water movement."

We are impressed by the fact that the general public has had no opportunity whatever to become acquainted with the conference report on the transportation bill; the Members of Congress as a whole have not had time to familiarize themselves with its details; there is no public demand for this legislation; it is filled with numerous objectionable features and ambiguities, and for the good of all we are strongly of the opinion that it should be defeated.

Respectfully submitted,

J. Elmer Brock, president, American National Live Stock Association; Frederick Brenckman, National Grange; J. B. Wilson, secretary, Wyoming Wool Growers Association, National Wool Growers Association; Irvin S. King, master, Washington State Grange; T. M. Hoskins, manager, Lone Tree Farmers Exchange, Lone Tree, Iowa; Oscar Heline, president, Farmer Grain Dealers Association of Iowa, Marcus, Iowa; Frank Rutherford, secretary, National Cooperative Elevator Association, Omaha, Nebr.; Karl Peterson, Midland Cooperative Wholesale, Minneapolis, Minn.

DES MOINES, IOWA, *May 6, 1940.*

VINCENT F. HARRINGTON,
Representative in Congress,
House Office Building, Washington, D. C.

HONORED SIR: The cooperative legislative council of the transportation organization, in session at Des Moines today, urge you to work for the recommitment of the measure generally referred to as the omnibus transportation bill, with instructions to reinsert the consolidation provisions, with full protection for labor. We will appreciate your advocacy and support of motion to recommit S. 2009.

Very truly yours,

W. H. JEFFRIES,
Iowa Legislative Representative, O. R. C., West Des Moines, Iowa.

C. G. BRANDON,
Iowa Legislative Representative, B. of R. T., Sioux City, Iowa.

J. W. SNYDER,
Iowa Chairman, State Legislative Board, B. of L. E., Waterloo, Iowa.

T. L. TOLLEFSON,
Iowa Chairman, State Legislative Board, B. of L. F. and E., Waterloo, Iowa.

Poll Tax Statesmanship

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1940

EDITORIAL FROM THE NEW YORK EVENING POST

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I insert in the RECORD an editorial from the New York Evening Post, which is self-explanatory:

[From the New York Evening Post of May 2, 1940]

POLL-TAX STATESMANSHIP

Score one for democracy. Under the insistent pressures of a Presidential year, the Barden wage-hour amendments have, so far, been blocked in the House. This result is good, though the manner in which it was achieved is not edifying and represents a frivolous way of doing the public's business.

Here are the ways in which the public's trust was abused:

1. Mr. BARDEN'S amendments, which would have denied the benefit of the Wage and Hour Act to more than 1,000,000 of the 3,000,000 persons affected, were forced to the floor by the Rules Committee though they had been rejected by the Labor Committee. Not for many decades has it happened that legislation turned down by a regular standing committee has been given way to the floor in rules.

2. When the legislation reached the floor it became obvious that the Senate had no intention, in a Presidential year, of weakening the wage-hour law. Any bill passed by the House would therefore die in the Senate. Thus it became safe to load up the Barden amendments with other amendments most liberal on their surface. The Republicans seized this chance to make good labor records for themselves, secure in the knowledge their proposals would never become law.

They joined with the new dealers to put through a blanket 30-cents-per-hour minimum for everyone. At this point Representative BARDEN took the floor against his own bill, altered beyond recognition.

3. After the bill had been liberalized, it was voted down, 156 to 66. Almost the same majority that had amended it, killed it. But nowhere was there a test vote on the Barden proposals themselves; the final vote was on a hodge podge bill, thrown together to provide material for the summer's stump speeches.

One point rises clear to the surface. That is the fact that Mr. Cox of Georgia, who dominates the Rules Committee, and who forced the Barden proposals to the floor, is much less sensitive to Democratic pressures than is the House as a whole. Why was he not afraid to take this stand? Why does Mr. Cox not fear retribution at the polls in a State in which wages are notoriously low?

The answer in large measure is that a vicious poll tax in Georgia, as in seven other Southern States, keeps the majority of the people from voting, allows an election turn-out of only 20 percent of the eligible voters, effectively denies the remedies of democratic process to the people affected by antilabor legislation.

That group of Southern Democrats which has fought the New Deal even more vigorously than the Republicans, a group represented by Cox and SMITH of Georgia, STARNES of Alabama, and GARNER of Texas, does not fear the people because the people do not have the vote in their States.

It is a group of misrepresentatives whose power can be broken only by passage of the Geyer bill, H. R. 7534, which bars the poll-tax requirement in elections for Members of Congress.

There is the root of the problem and the point around which supporters of the liberal ideal must rally. If they win this fight, they will never see repeated such a spectacle as has just taken place on the House floor.

The Hatch Bill

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1940

LETTER FROM ABRAM FLAXER

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

STATE, COUNTY, AND MUNICIPAL WORKERS OF AMERICA,
New York, N. Y., May 4, 1940.

The Honorable FRANCIS E. WALTER,
House Judiciary Committee, House of Representatives,
Washington, D. C.

DEAR MR. WALTER: On behalf of the organized Government employees of this country, I want to congratulate the members of the House Judiciary Committee for their farsightedness in tabling the Hatch bill.

The State, County, and Municipal Workers of America takes pride in its slogan, "Make the Government service a career service." We stand for good government, for the defeat of the spoils system, for the extension and protection of the merit system, and it is on these grounds that our organization opposes the extension of the Hatch law to cover State employees.

This union maintains that the only way to outlaw political manipulation of Government employees is to give them the protection of an ironclad civil-service merit system. Such legislation as the Hatch law, rather than removing the rank and file Government employee from the influence of pernicious political practices, lays him wide open, for the Hatch bill specifically exempts the very officials who can use their office for such pernicious practices. The only way to remove politics in Government administration is to remove the jobs of the Government employees from the hands of political manipulators through ironclad civil service.

I sincerely hope, Mr. WALTER, that if a motion to reconsider the tabling resolution is introduced, you will vote against it.

Sincerely yours,

ABRAM FLAXER, *President.*

Secretary Edison Revamps Naval Program—Real National Defense—Tennessee-Tombigbee Inland Waterway

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 2, 1940

Mr. RANKIN. Mr. Speaker, this country is to be congratulated on having as its Secretary of the Navy, Hon. Charles Edison, a worthy son of a most illustrious sire. If he did not inherit the genius of his distinguished father, Thomas A. Edison, he at least inherited a large measure of his practical common sense, which enables him to face realities without illusions.

I am glad to note that he recognizes the fact that spending billions of dollars on alleged national defense will not protect this country in times of stress, unless those funds are properly applied. He knows that we cannot protect ourselves in case of war by following the example of the Chinese soldiers—wasting their resources on useless expenditures and then turning somersaults in the air in the face of the enemy.

His determination to reexamine and revise the plans for building the battleships which Congress has authorized should be commended by every patriotic American. We need men of the same courage, vision, patriotism, and sound judgment in every other branch of the service, including the Senate and the House of Representatives.

What a pity we could not have had an Edison in control of our air force for the last 20 years. What a pity we couldn't have men of such vision to pass legislation for the development of our inland waterways.

Eighteen years ago Gen. "Billy" Mitchell told us that naval vessels could be destroyed by bombing from the air, and proved it by sinking the *Ostfreiland* off Hampton Roads. The *Ostfreiland* was the largest German war vessel we captured during the World War, and yet it was sent to the bottom with an expedition that should have warned the world of the part an air force would play in future conflicts.

But, for that valuable demonstration, General Mitchell was rewarded by being demoted and "sent to the cactus." Today everything he said is being borne out by demonstrations abroad.

Recently Col. Charles A. Lindbergh, the outstanding aviator of all time, gave England and America some first-hand information on air preparations abroad. For that great service he has been maligned and abused unmercifully both in England and in America. His statements have been borne out by subsequent events.

Congress recently provided for battleships costing as much as $80,000,000 apiece, which, if constructed according to the old plans, would probably have been helpless under a bombardment from the air, accompanied by submarine attacks from below.

What we need to defend our country is an air force and a submarine force second to none. Then we should do one thing that continental Europe has done, and that is develop our inland waterways so as to make them available for inland transportation at all times.

Today the nations of Europe are at war over the routes of ingress and egress to an iron mine in northern Europe. Today every inland water route in Europe is developed and in operation. They are moving safely along interior lines protected from bombardment from the sea. They will probably decide the fate of Europe.

While in this country, the Congress of the United States strains at the gnat and swallows the camel.

On last Wednesday the Senate of the United States, under the pressure of a barrage of telegrams, struck from the river and harbor bill the provision for the construction of the Tennessee-Tombigbee Inland Waterways—one of the greatest contributions that could possibly be made today to a permanent and effective program of national defense—and cut the great Columbia River in two by striking the provision for the Umatilla Dam from the bill.

Just how this action can be reconciled with the appropriation of something like a billion dollars to build battleships that would have been obsolete before the keels were laid, if Secretary Edison had not intervened, I am unable to understand.

This Tombigbee inland waterway would penetrate an area richer in natural resources than all the iron mines of Sweden and Norway, and would shorten the distance from that area to the Atlantic Ocean by more than 1,000 miles.

I fear that august body was misled by the railroad lobby. A veritable barrage of telegrams was sent in, signed by men who claimed to be members of the railroad brotherhoods, who had also been misled into believing that the development of this great inland waterway would hurt them; when, as a matter of fact, it would have stimulated railroad transportation in that area for the next 10 years and forced the railroads to have readjusted their rate structures and ceased their discriminations. That would have stimulated rail traffic in that area, and increased the number of railroad men employed.

No project of this magnitude that was ever thoroughly surveyed and approved by the Army Engineers, as this one has been, was ever finally defeated. This development is bound to come, and the sooner the better.

What a farce! What a mockery! to be spending billions of dollars on alleged national defense, and then refusing to develop our inland waterways, which every well-informed man knows is the greatest contribution any nation can make to its national defense.

An international writer tells us that the European war is being fought primarily for the control of the Danube River. Here we have a project leading right to our source of nitrate supplies from which we would derive our explosives in times of war, and penetrating the very heart of an area upon which we must depend for our raw materials of all kinds, entirely protected from attack from the sea, furnishing an additional outlet for agricultural and industrial commodities, and shortening the distance to the Atlantic ocean by 1,000 miles.

Yet the Congress of the United States becomes stampeded by a barrage of inspired propaganda and strikes this project from the bill, and almost at the same time votes to build battleships at a cost of $80,000,000 apiece, every one of which would probably be obsolete before the keels were laid and any one of which could be sunk by one well-directed torpedo from a submarine or put out of commission by a barrage from the air.

The elimination of this project was a great blow to the people of Mississippi, Alabama, Tennessee, Kentucky, Ohio, and all the other States of that area. It was a great blow to our program of internal development as well as to that of real national defense and one that must be corrected, no matter how long it takes.

Mr. John L. Bogert, associate editor of the Marine Journal, in a letter to me, says:

How strongly I feel about the Tombigbee-Tennessee River Canal you can appreciate if you have carefully read what I have written. I do not hesitate to say that it is one of the most necessary canals for the enhancing of our national prosperity. It means everything to Tennessee and that entire section of the United States that has been on the sidetrack far too long. More power to your tongue and pen in this worthy campaign.

The article to which he refers reads as follows:

The Mississippi River is the normal outlet for the products of our farms and mines situated adjacent to its banks and the banks of its tributaries. But the very current which helps to bear our exports to the sea hinders our imports which must move "upstream." With the same power expended by the propulsive machinery of the towboat, which would be adequate for a flotilla speed downstream of 9 miles per hour, only a speed of 3 miles per hour can be maintained bucking the current. Which means that, assuming the accuracy of the foregoing, it would cost three times as much to transport cargo upstream as down. A mill a ton-mile is considered an economic performance for any tow, but transportation which costs 3 mills per ton-mile is not especially attractive, though even that would be highly creditable bucking the Mississippi current in the spring when the river is running "full."

It is only in the lower Mississippi that such currents as 4 miles, 6 miles, and even occasionally 8 miles per hour will be encountered, for the upper Mississippi from St. Louis to Minneapolis, 673 miles, has by means of 26 locks and dams been canalized, or transformed into a succession of lakes, practically currentless. And what is true of the upper Mississippi is also true of the Ohio, which has 47 locks and dams.

Thus, leaving out of consideration the Mississippi River below Cairo, there will be over 3,000 miles of canalized waterways in 1940 with a minimum depth of 9 feet and no heavy current to buck anywhere. Wherever possible, instead of a normal river sloping 5 or 6 inches per mile, a series of pools about 25 miles long has been developed, constituting a succession of steps each one about 10 feet high. In such water it should be perfectly feasible to transport cargo at rates approximating 1 mill per ton-mile either upstream or downstream. The 47 locks and dams on the Ohio River cost the Government $147,000,000. The 26 locks and dams on the upper Mississippi have cost $150,000,000. Examples of public money well expended. It would be practically impossible to canalize the lower Mississippi, owing to the great depth of the alluvial trough through which the river winds its tortuous way. So, of necessity, downstream costs will be but one-third upstream costs, which works to the advantage of exports but not of imports. However, Nature has provided a remedy which involves no huge expenditure of time, labor, and money in utilization. We are referring to the possibility of joining the Tombigbee and Tennessee Rivers by a canal of but 27 miles in length, which will connect the Yellow Creek of the Tennessee River with the Mackeys Creek of the East Fork of the Tombigbee River.

Yellow Creek branches off from the Tennessee River at mile 215, and it is just about there that the Tennessee River changes its direction from roughly east and west to nearly due north and south. Accordingly, as the Tombigbee runs nearly north and south, Nature has offered a simple solution of an extremely difficult problem. Here in the joined Tombigbee and Tennessee Rivers is a waterway that can be cheaply canalized for its whole length, and can supplement the Mississippi River's lower 1,000 miles by what might be well called double tracking. With large flotillas always going down the Mississippi and up the Tombigbee and Tennessee, there would be small chance for collisions. What an ideal arrangement—a double-track combination of waterways.

At present the only outlet for commerce on the Tennessee River, which is 652 miles long from Knoxville to Paducah, is by way of the Ohio River to Cairo, 46 miles, and from Cairo down the Mississippi to New Orleans, 980 miles. The total distance by that route would be 1,678 miles from Knoxville to New Orleans. But by way of the canal connecting the Tennessee and Tombigbee, the distance would be materially shortened. Thus: Knoxville to Yellow Creek, 437 miles; Yellow Creek to Mobile, 491 miles; Mobile to New Orleans, 153 miles. Total distance via Tombigbee from Knoxville to New Orleans, 1,081 miles—a saving of 600 miles. If the object sought was simply a tidewater shipping point, Mobile is one of the most active ports on the Gulf, and the saving in reaching tidewater for Knoxville shipments would be 750 miles. When this canal is dug and opened for business we can imagine the citizens of Knoxville and Chattanooga holding a joyous celebration; and, of course, what is true of those two cities is equally true of all communities up and down the whole Tennessee Valley.

All cities and towns on the Ohio River will share in the benefits that flow from this connection between the Tombigbee and the Tennessee. All points on the Ohio River above Paducah will be 320 miles nearer tidewater at the Gulf. For the distance by river from Mobile to Demopolis, where the Warrior River branches off on its way to the Birmingham coal and iron district, is 231 miles; and the distance from Demopolis to the Tennessee River at mile 215 is 260 miles. So the distance from Mobile to the Ohio River at Paducah is 231 miles plus 260 miles plus 215 miles, or 706 miles. But the distance by the Mississippi from New Orleans to Cairo is 980 miles, and the distance on the Ohio of Paducah from Cairo is 46 miles. So the distance of Paducah from New Orleans by the Mississippi is 980 miles plus 46 miles on the Ohio, or 1,026 miles. Thus the saving in distance for all points on the Ohio River above Paducah from tidewater at the Gulf is 1,026—706 or 320 miles. But best of all is the saving in current bucking.

What is true of the Ohio cities and towns is likewise true of all points on the upper Mississippi and on the Missouri and the Illinois, though the saving in distance from tidewater is less by 92 miles, which translates into 320—98, or 228 miles.

By short cut along the shore of the Gulf of Mexico, New Orleans is but 153 miles distant from Mobile. So imports for the entire interior of the United States can transfer to river barges at either New Orleans or Mobile and still go upstream by way of the Tombigbee-Tennessee route; and even if the transfer to barges is made at New Orleans, the route by way of the Tombigbee-Tennessee Rivers will be the shorter for all points above Cairo, Ill., by not less than 75 miles. So little is generally known of the towns and cities along the Tombigbee that it might be well to give some short account of the Tombigbee and the region through which it flows.

Starting with Mobile, few seem to realize that this city is one of the only two free-zone ports in the United States, where dutiable imports may be received and stored without having to pay duty until removed from the free zone for actual entry into the country. Because of this free-zone facility, it shouldn't require a high degree of prophetic instinct to predict that Mobile, as a port of entry, is bound to grow in popularity with importers all over the land, especially since Mobile is wide awake when it comes to loading and unloading facilities. Of course, Mobile is not yet the Rotterdam of the Gulf and Atlantic seaboard; and the Tombigbee, or rather the Mobile River, as the Tombigbee is called below its confluence with the Alabama River, 45 miles above Mobile, is not yet the Rhine of the United States. But don't make any mistake about it, Mobile, Deo volente, has, in virtue of its location and the intelligent vision of its citizens, one of the most brilliant futures of any port in the entire Nation. Remember, it was the vision of one man in New York and his Erie Canal, which a majority of the metropolitan newspapers and practically all the city's assemblymen and senators fought bitterly, that raised the rank of the port of New York from fourth in importance to preeminence. And the writer would like to here record a prediction to the effect that if and when the Tombigbee-Tennessee Rivers and their connecting canal become a reality, comparable in efficiency with the canalized Ohio and upper Mississippi Rivers, the cities, towns, and villages along these waterways will grow and thrive just as did Schenectady, Utica, Rome, Syracuse, and Rochester along the New York State Barge Canal.

Alabama's future seems bright indeed. It is at Demopolis, 231 miles upstream from Mobile, that the Warrior River (usually called the Black Warrior) branches off toward Birmingham, the Pittsburgh of the South and the most rapidly growing city in Alabama, the center of the coal and iron deposits, 430 miles from Mobile and connected with that city by a channel maintained at 8-feet depth.

What coal, iron ore, and limestone can do to make a city grow is well demonstrated by Birmingham. In 1930 the population of Birmingham was 260,000, in 1931, 270,000, an annual rate of growth of 4 percent; next in size to Birmingham is Mobile with 69,000 in 1931. All of the other cities in Alabama are smaller than Mobile, and when the Tombigbee-Tennessee canal is an actuality, just watch Mobile grow; nothing can stop it except foolishly listening to the siren song of the railroads, which are moving heaven and earth to block any and every new waterway no matter how meritorious.

Though one-third of our railroads are bankrupt, and another one-third can just about "hold their heads above water," there is always plenty of money forthcoming to spread propaganda against every form of water transportation.

The railroads were given presents of land totaling 275,000 square miles—not marginal or submarginal land, but choice acreage. As there are 640 acres to a square mile, they received 176,000,000 acres. What do you suppose that land is worth today? At $100 per acre, which is not a high figure for choice farm land, it would be $17,600,000,000. In contrast with that sum does the few hundred millions spent on our waterways look like anything but "chicken feed"? And don't forget that any and every last railroad stockholder and bondholder is free to use these very same waterways on the same terms as everybody else. He hasn't been injured to the tune of one cent personally. He can scrap his railroad tomorrow, and ask permisison of the court to abandon unprofitable service, like the Old Colony Line, down the length of Cape Cod. There are no inhibitions to his changing his investments; the building of waterways does him individually no injustice. But he sins against light and progress, and becomes a public liability, when he throws millions of money, that rightfully belong to the stock and bond holders of his railroad away in a mistaken effort to hamper progress and fetter transportation with methods and means that have been abandoned in Europe for many years.

Read carefully the foreign news in the papers and see how every nation in Europe is exploiting its waterways to the utmost. The Russian Soviets, the German Nazis, the Belgian Monarchists are all building new waterways. Are they all dumb, and are the only wise ones those who spend millions in trying to preserve the "all the traffic will bear" railroad freight structure? The writer doesn't think so.

Books and Articles on Unemployment

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1940

LIST COMPILED BY ALBERT M. TEWKSBURY

Mr. VOORHIS of California. Mr. Speaker, public opinion all over America is becoming more and more aware of the pressing need for a solution to our No. 1 public problem, the unemployment of 10,000,000 people. As an aid to those searching for a way out of this dangerous situation, I append a brief bibliography of recent, selected writings on unemployment which was compiled by Albert M. Tewksbury, research counsel in the Legislative Reference Service at the Library of Congress.

A SELECTED LIST OF RECENT REFERENCES ON UNEMPLOYMENT

Where Are We Heading Under Reorganization Plan IV?

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1940

Mr. BRADLEY of Michigan. Mr. Speaker, the greatest struggle in the world today is that concerning a philosophy of government which would subject public right and private interest to the determination of personal decree instead of the rule of law. This struggle has gone on through the centuries. To guard against the dominance of that philosophy we must ever be alert against well-intentioned and seemingly minor steps to extend the power of personal rule.

In our own system of economy, when the regulation of great industries was undertaken, Congress saw the danger involved if regulation were to be entrusted to the Executive. It saw that in regulation of this nature, public and private rights and interests of so extensive a character were bound to be affected; that if power were to be vested freely in the Executive, the stability of our institutions would inevitably be undermined.

Consequently, when the regulation of a great industry first occurred, that of railroad regulation, Congress evolved a new instrument of government, the independent regulatory agency, free of Executive domination, and operating under legislative standards to carry out the will of Congress.

In 1938 Congress followed the pattern set forth in the creation of the Interstate Commerce Commission, when it determined the regulation which should control the new and growing civil aeronautics industry, an industry which in a few years promises to be of transcendent importance to our civil life. Congress created an independent Civil Aeronautics Authority to exercise jurisdiction.

Now, it is proposed to reorganize that Authority and place it in the Department of Commerce. Since that proposal was made, opposition to it has been voiced from every side, on the ground that the independence of the Authority must at all costs be preserved.

Recently there have been hasty moves to marshal support for the measure, coupled with protestations that the independence of the Authority is not threatened.

But the best evidence that the reorganization will subject Civil Aeronautics to the personal rule of the Executive is disclosed in the very moves made to gain support for the proposal. An Assistant Secretary of Commerce, whose record in dealing with civil aviation before 1938 had been unfortunate, has been appointed to another post, and the President has announced that to succeed him he will appoint the present Chairman of the Civil Aeronautics Authority. There could be no clearer demonstration that if this reorganization is adopted, the office of the Assistant Secretary of Commerce will be of first importance in the regulation and development of the industry. That office, and the exercise of its power, are directly under the Executive. Its incumbents come and go, depending upon Executive decision and policy.

It is this very effort to enthrone personal rule against which our traditions have stood fast. The good intentions of one Executive, the likelihood that one Assistant Secretary of Commerce will be able and above reproach, should not beguile us into an abandonment of fundamental principle.

In preservation of an American principle, vital to our institutions, we should reject the proposed reorganization.

Warning to Neutrals

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1940

EDITORIAL FROM THE SHREVEPORT (LA.) JOURNAL

Mr. BROOKS. Mr. Speaker, under leave to extend and revise my remarks, I present an editorial from the Shreveport Journal, of Louisiana, published April 23, 1940, entitled "Warning to Neutrals," which I think is of universal interest.

[From the Shreveport (La.) Journal of April 23, 1940]

WARNING TO NEUTRALS

Tragic happenings in Norway, resulting from the invasion by German troops upon the thin pretext of "protecting" that country from allied aggressions, will serve as a solemn warning to other small neutral states of continental Europe. These should immediately take stock of themselves, to discover whether or not their governmental and defense forces are being undermined by Nazi intrigue, such as has been shown to have occurred in the Scandinavian country, in Czechoslovakia, in Austria, in Poland, and in Memel. The fuehrer, it is already known, never undertakes an expansion enterprise until his agents have first had opportunity to bore from within the government to be attacked.

In Norway, at peace with the world and observing the strictest kind of neutrality as between Germany and the Allies, the German army was permitted to enter and to take over the capital and principal ports without resistance because of orders issued by traitors in high place. These had been reached by Germans, masquerading as business emissaries, and they evidently sold their country's honor. Norway is paying the price, and, though in the end her independence may be preserved, that price is going to be the sacrifice of many lives and the shattering of many of her population centers. Norway believed Hitler's promises, and all the bitter consequences of such gullibility are now being suffered. The Norwegians failed to weed out the traitors within their own armies and in high governmental place.

That the Balkan states are next in line for crushing by the German juggernaut is believed by most diplomats now in Europe, with Rumania almost certain to feel the first blow unless she accedes to every demand for economic and other concessions, and with Russia awaiting only a favorable opportunity to regain the rich territory of Bessarabia taken from her after the World War. Already it is plain that Nazi plotters are at work within Rumania, and when the time comes Hitler will make use of his usual strategy—that of claiming necessity for the protection of German nationals or the prevention of Allied aggressions. Apparently the Rumanians will be prepared to offer more resistance than was met in Denmark and Norway when the Hitler surprise was sprung, but, if there are in King Carol's land the same kind of traitors, this will be useless.

That Nazi propagandists are engaged in all South American countries, and even in the United States, is also generally accepted as true. For this reason, let the Dies committee of the House of Representatives keep up its good work. Let it ferret out every individual engaged in subversive activities of any kind, and especially those who may be suspected of trying to inculcate into American youth the philosophies of the German maniac. The time may come when it will be found this task was supremely important. Though far from the scene of conflict, even America should heed the warning that is made plain by what is now taking place on Norwegian battlefields.

Public Ownership, Unemployment, and Natural Resources

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1940

RADIO ADDRESS BY HON. JOHN M. COFFEE, OF WASHINGTON

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein a copy of an address made by me recently and broadcast over a Nation-wide hook-up of the National Broadcasting Co. system.

The address is as follows:

Ladies and gentlemen, I value highly this opportunity of speaking for the People's Lobby on the subject The Public Ownership of Natural Resources.

Some Americans are puzzled that citizens are starving while crops are left to rot in the fields, that raw materials are unused while men and women have no work. Poverty in the midst of plenty—that is the problem! But today some Americans with a degree of foresight are beginning to see that one of the main causes of our distress is that many of our most valuable natural resources are being both exploited and controlled by gigantic monopolies and semimonopolies. Price agreements, rebates, sales agreements, among these corporations have left the public almost helpless. Observe the American Aluminum Corporation, which now owns 100 percent of the bauxite deposits in America. Today the deposits of diatomite, magnesite, magnesium, and molybdenum in America are each controlled by a single corporation. Do you know that four leading copper companies mine 78 percent of the total production, four companies control 60 percent of the lead, and three business concerns mine 71 percent of the anthracite coal? Are you aware of the fact that the mammoth United States Steel Corporation owns and controls over half of the known iron deposits in our country? Few persons realize that four corporations have 100 percent of the potash and another four business concerns own 84 percent of the known marble deposits. Both sulfur and beryllium deposits are owned by huge trusts. The Standard Oil companies, whose past black record of price fixing, manipulation, and intimidation has seldom been paralleled, control four-fifths of the oil production in the United States. As a vast holder of our natural resources the Bethlehem Steel Corporation recently reported its greatest profits since 1929, and the Anaconda Copper Co. reported that its net income for the first 3 months of this year is $1.20 per share, compared with 42 cents in the same quarter last year. As controllers of many natural resources, some "fat cats" are certainly making fat profits at a time when 10,000,000 are unemployed.

With 200 of the largest corporations having three-fifths of the corporate wealth in America, the silk-hatted pundits, who control our many natural resources given to them in sumptuous land grants by our benevolent Government, are robbing three groups chiefly: First, the workingmen who are employed in the production of raw materials; second, the manufacturers who are dependent upon these raw materials; and third, you and me as common consumers. Workingmen are often thrown out of employment in the production of raw materials owned and controlled by monopolies. To assure their maximum profits, monopolies and semimonopolies drop their production rather than cut their prices when there is a drop in demand. This monopolistic practice causes men to lose their jobs, and instability in employment results. For an example, observe the cement industry, where five major corporations perform 40 percent of the production and have indirect control over the rest of the market. Here prices in 1926 and 1932 did not drop, but in 1932 production was only 48 percent of that in 1926, and as a result only about half as many men were employed. Similar examples are numerous.

The manufacturer who is dependent upon receiving certain raw materials is the next to suffer. Knowing that the manufacturer has to have these raw materials, the producer controlling the natural resource can easily charge a high price for his product. As a result of this hold-up, the manufacturer cannot cut his production costs, and consequently he cannot increase his output, which would increase employment. An example of such hold-up methods is found in the case of the American Aluminum Corporation, as I have mentioned, which has a strangle hold over all the bauxite deposits in the United States.

But the most serious effect of the monopolistic control of natural resources is upon the common, everyday consumer—you and me. Often we are charged high prices, because a manufacturer by will or by necessity passes along his increased cost of production, caused by the monopolistic prices of some trust. Our dollars are taken from us because some corporations not only control the raw materials but make the finished goods. We are skinned by corporations who both produce and distribute, as by some of the companies in the oil industry where price agreements, trade association tactics, and illegal restraints of trade are the order of the day. In the end you and I pay; we pay through the nose. Meantime, our standard of living is lowered. The absence of lower prices keeps our demand low, and as a result our unemployed friends cannot find jobs in industry. With monopolies controlling many of our most necessary natural resources, is it surprising that 10,000,000 American citizens are jobless and discouraged?

To alleviate the evils of private monopolies of our natural resources such as oil, water power, coal, copper, and the like, some citizens have advocated Federal and State regulation. We have followed their recommendations by setting up the Federal Power Commission, the Bituminous Coal Commission, the Antitrust Division, and a hundred and one other Federal and State agencies. But, in the main, these agencies have failed, they have failed miserably. They have been unable to prevent monopolies of natural resources or to regulate them adequately. For how is it possible, my friends, for the small $800,000 Federal Trade Commission to prevent unfair trade practices of many billion-dollar corporations which have a strangle hold upon our natural resources? How can

the small Antitrust Division stamp out the ever-increasing restraints of trade, when corporation lawyers are thinking up new ways to avoid the law each day? And what can the Division do, anyway, to put an end to huge monopolies when the Supreme Court since 1912 has taken upon itself the task of deciding what are reasonable restraints of trade? This agency of the Government seems helpless, after the Supreme Court ruled in 1920 that the United States Steel Corporation was not restraining trade, in spite of the fact that the concern produced over half of the steel in America. Since, in the words of the court, "bigness is not an overt act in itself," it seems virtually impossible to loosen the holds of this huge octopus—the monopolies of natural resources.

Yes; regulation has failed. Today, under the hypnotic guise of the magic word "conservation," the largest oil producers, with the aid of the Federal Government, have been able to strengthen their semimonopolistic control by the passage of the Connally Act. This act has almost put the small oil producer out of business. Other monopolies are forwarding this pseudo-conservation argument to gain similar control. Today the monopolies of natural resources have a death grip on American industry.

But shall we remain complacent and accept servility enforced upon the American public by these huge trusts? The answer is "No." Since our attempts at regulation have seemingly failed, we must go further. We must nationalize our natural resources, we must remove them from the exploitation of the monopolists and place them under public ownership. Such a program can be constitutionally upheld, as was the T. V. A. a few years ago, because the Federal Government has the power of eminent domain. Let us remember that "basically ownership resides in the State (either in the Commonwealth or Nation); for under the police power the State may constrain the private use of land within bounds set by the public interest."

Let us keep in mind the fact that originally the Federal Government gave the present monopolists the right to exploit our country's natural resources. Federal land grants to the trusts have been very plentiful. Thus the oil, the acres of virgin timber, the iron ore, the bauxite, and the many bountiful resources of America really belong to the Federal Government—they belong to the people of America. With the establishment of the public ownership of natural resources, a far-reaching conservation program would commence, a program which would preserve our fast-diminishing natural resources now being exploited and wasted by grasping monopolies. Efficiency and economy in production would result. Our dollars would be used to better advantage, for prices would be lower. No longer would there be poverty in the midst of plenty—hunger, unemployment, and depression in this the richest land in the world.

The Logan-Walter Bill

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1940

EDITORIAL FROM THE BLOCK NEWSPAPERS

Mr. SPRINGER. Mr. Speaker, one of the highly important measures which has been passed by the House at the present session is the Logan-Walter bill. This legislation is now in the Senate and the same should have the unqualified support of every Member of the Senate. The people are entitled to some relief from the arbitrary rules and regulations which have been adopted by the various governmental agencies and which rules and regulations have the force and effect of law; in many instances there is no redress for the people under the adopted rules; this legislation will give the people the right of appeal in certain instances from the vicious force of unjust rules—a right which is not now extended to them. This proposed legislation is both just and sound.

Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD, and to include therein a very interesting and illuminating editorial which appeared in the Block newspapers of recent date, which editorial follows:

[From the Block Newspapers]

CONGRESS SHOULD PASS WALTER-LOGAN BILL TO CURB TYRANNY OF GOVERNMENT COMMISSIONS

There has been for some years a persistent running fight over the charge made by critics of the New Deal, and denied by its supporters, that many of the independent, quasi-judicial agencies exercise such wide and arbitrary powers, without appeal from their rulings, as to deprive the citizens affected of their constitutional rights.

Many of the bodies created by the New Deal have been cited for overbearing action of this sort. The National Labor Relations Board, the Securities and Exchange Commission, and the Tennessee Valley Authority are but a few of the Commissions which have exercised their power in a despotic manner. But perhaps never has there been a clearer case of arrogant interference than that of which the Federal Communications Commission has been guilty in its recent rulings on television.

The Commission originally authorized commercial television beginning September 1 this year. As a result of this the Radio Corporation of America was able to plan for sales of television receivers and for regular sponsored programs, which would have begun at long last to net a return on 10 years of research costing $10,000,000 and might have given additional employment to many people.

Now, however, the Commission has revoked its permission to proceed. The reason given is that television should not be marketed "prematurely"; that is, that it is not now perfect, and that competitors should be allowed to catch up with the pioneer company in order to prevent monopoly.

The value of the Commission's judgment on the technical aspect of the question is well illustrated by the fact that the only member of the Board who knows anything about television disagreed with his colleagues and voted to let the sales proceed. And just where, we may ask, would this country be if we had waited for every invention to be perfected and had prevented distribution on the basis of some foolish fear of monopoly?

The action of the F. C. C. would be reprehensible enough even in good times. But under present conditions, when new industrial fields providing an outlet for capital and a stimulus to employment are just what are so badly needed, it is doubly to be condemned.

The whole incident emphasized the vital necessity for a curb on the brazen bureaucracy which has grown up in Washington, a bureaucracy which is doing everything to hold back business recovery and reemployment. It is time that the citizen who has been hindered in his rights by the rulings of these commissions should have the privilege of seeking redress in the courts.

A bill to provide such a course, the Walter-Logan bill, is now before Congress. It deserves the support of all who wish to preserve their own rights and those of their fellows from the intolerable and tyrannical interference of the New Deal agencies which have sought to take the law into their own hands.

PAUL BLOCK, *Publisher.*

The Iniquitous Hatch Bill

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1940

Mr. KEFAUVER. Mr. Speaker, after several weeks of earnest consideration, the Committee on the Judiciary of the House voted to table the bill extending the Hatch law. This action was taken after thorough investigation and mature study of the purposes of the bill, the result that would ensue if enacted, and the philosophy of governmental control involved.

In view of the public interest that has been expressed, as one of the members of the committee who voted to table the bill, I wish to set forth my reasons.

The bill has been widely heralded as an effort to purify politics. It is popularly misunderstood, and I do not believe the extent of the application or the catastrophic confusion that would have resulted had the bill been passed are fully realized. The philosophy of the bill and the result that would have ensued upon its application are so dangerous and undemocratic that I am sure many of its proponents, upon a fuller analysis, will agree that the committee has acted wisely.

Stripped of bric-a-brac, the philosophy of the bill is to extend the control of the Federal Government over officers and employees of States, counties, municipalities, and other local political districts, where (1) any part of their salary is paid directly or indirectly from Federal funds, or (2) where they do any work or perform any function in connection with any project or agency financed in whole or in part by Federal loans or grants.

Section 2 of the bill extends the provision of the law to "any person employed in any administrative position by any State, by any political subdivision, or municipality of

any State in connection with any activity which is financed in whole or in part by loans or grants made by the United States."

Section 12 (a) of the bill provides "no officer or employee of any State or local agency who exercises any function in connection with any activity which is financed in whole or in part by loans or grants made by the United States," shall use his authority to influence elections or take active part in political campaigns, and so forth.

This is the first effort and step toward regulation of employees of State and local political subdivisions by the Federal Government. Heretofore conditions have been imposed by the Federal Government as to the type of projects and services which the State and local subdivisions may perform with grants or loans from the Federal Government, but the Hatch Act extension is the first effort to regiment the activities, dictate the extent or expression, and restrict the political right of employees of States and local political subdivisions.

Let us see what would be the result of the enactment of the law. The Federal Government secures its funds from States. In giving it back to the States and political subdivisions in the form of loans and grants, it has heretofore attached conditions as to the type of road to be built, the curriculum of schools to be established, and so forth, but under this bill it would say to the States and political subdivisions, "We will give you back your money, but with it follows power and control; the people you employ must be regulated as to their political activities by the Federal Government. If you wish to preserve your State and local political rights and control over the people you employ, you cannot secure Federal funds—we will not return your money."

We are extremely critical of any attempt on the part of the Federal Government to regiment people, to deprive them of their political prerogatives, or rights of expression. Legislation regulating the personal conduct or freedom of the individual is a blow to our safeguards of liberty, and hence impossible of enforcement and dangerous if enforcement is undertaken.

If Federal power can be used to prohibit activities on the part of employees of States and local subdivisions, it can by the same token be used at another time to promote activity. And this power in the hands of a person with dictatorial inclinations could literally be used to produce a political dictatorship over the entire Nation from Washington. In my opinion, the American people would not stand for a measure that sets out to subject the grants of the Federal Government to control the democratic processes in the States, cities, counties, and other political subdivisions throughout the United States.

Under the bill the enforcement agent is the Civil Service Commission which, being an administrative agency, is to some extent dependent upon the continuation in power of the party under which it serves for its own fortune, and would therefore be tempted to enforce the provisions of the bill in such a manner as to perpetuate the continuation of the party to which it was responsible in power. It could and might prosecute its enemies and wink at the pernicious political activities of its friends. If the power is given an administrative agency to penalize a State and prosecute an individual for a vague and indefinite offense called pernicious political activity, the next step might be to prosecute for lack of activity agreeable to that agency. It is evident that in capricious or dictatorial hands the authority given could be used to stultify and even usurp the rights guaranteed by our Bill of Rights. An unscrupulous administration could use the power given in the bill to exert a tremendous influence over, if not to control, local elections by subjecting its enemies to the embarrassment of political prosecutions under the guise of having engaged in pernicious political activities.

In my opinion the law would be absolutely impossible of enforcement, and a law in this category can only lead to ridicule and a deterioration of general law enforcement. It would be impossible even with a veritable army of investigators to determine when employees of State and political subdivisions were doing any work in connection with any activity, or who were exercising any function in connection with any activity. Under the law an employee might work one week in connection with such a project, and with immunity engage in political activities the following week when he is on his leave of absence, or is working on some other project. Furthermore, pernicious political activity, or taking any active part in political management or political campaigns, or using his official authority or influence for the purpose of interfering with an election or affecting the result, are such vague, indefinite, and uncertain terms as to make enforcement impossible. We all know that the inflection of the voice, the gesture of the hand, or the blink of an eye may be as effective in political persuasion as the words spoken, and yet the proponents of this law would have the employees of an administrative agency decide the financial destiny of the States and local political subdivisions, and also determine whether political prosecution should be commenced. The American people would not tolerate this type of undemocratic and dictatorial violation of their right of freedom and expression which has been guaranteed to them by our Constitution.

In these days of distress, it is imperative that movements and laws aimed at destruction of our safeguards of liberty be nipped in the bud.

Civil Aeronautics Authority and Air Safety Board

EXTENSION OF REMARKS

OF

HON. LEONARD W. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1940

Mr. LEONARD W. HALL. Mr. Speaker, the real significance of the President's reorganization order scuttling the independent and well-working Civil Aeronautics Authority and the Air Safety Board does not lie in the feeble explanations the President has given the country. Nor have the spokesmen for the New Deal who have been thrown into the breach in a desperate effort to allay the Nation's growing resentment against this proposition given the real clue to the motive.

When one cuts into this reorganization order, the real reason behind it becomes clearer. And from a New Deal viewpoint, it is a logical reason and one that conforms thoroughly to its history.

The answer is simply that the President could not "handle" the Civil Aeronautics Authority and the Air Safety Board as now constituted. He does not like its independence; it does not conform to his pattern of government, predicated on Executive control. Hence his recommendation that the Civil Aeronautics Authority must be transferred to the Commerce Department and the Air Safety Board must be abolished.

His fight on the Air Safety Board and on the Authority is the Supreme Court fight all over again. It is the history, repeated, of the President's fight on the nonconforming Mr. Humphreys, of the Federal Trade Commission. It is the history of his fight, again, on the nonconforming Mr. Morgan, of the Tennessee Valley Authority.

The challenge, the threat, of the New Deal has always been: Conform or be annihilated.

And now the intended victims are to be the Civil Aeronautics Authority and the Air Safety Board.

The air pilots tell us that the President's recommendation threw consternation into their ranks. This same reaction has been had among both Members of the House and the Senate, and especially among those who know the history of civil air regulation while in the hands of the Commerce Department or who come from districts with aviation industries, and who appreciate the terrible set-back to civil aviation while control was vested in the Commerce Department. And I think it is fair to say that the people of the

country generally were equally amazed and flabbergasted—and just as resentful.

Here we have the spectacle of a clean, wholesome, beneficial, and independent confidence-creating agency of the Government laid open to the surgical knife of the New Deal. To do what? To cut away a vital and healthly adjunct of civil-aviation control, independent, nonpolitical control, and to replace it with a political crutch to be furnished by the Commerce Department. When everything is said and done, that is what this attempted surgery would do. But that political crutch would furnish the control the President wants. With it the Civil Aeronautics Authority would become dependent on the administration.

The issue is clear enough.

Let us keep this independent Civil Aeronautics Authority and our Air Safety Board. The people have confidence in its administration. And so has the industry.

That the C. A. A. and the Air Safety Board have done their job well is attested by the fact that it has not been in the public eye. Since its inception our newspapers have been free from headlines screaming their notices of air crashes and the toll of human lives in airplane accidents. Everything has been going smoothly.

And yet, despite this background, and without even a murmur of demand for any change, we are asked to reorganize this agency. What we are being asked, in fact, is to disorganize it, to destroy its independent status, to put it again under the same spoils-ridden Commerce Department where years ago the administration of civil aviation nauseated every instinct of decency and conscience, and where its only accomplishment was a tragic toll of lives and a disorganized industry.

I hope that the House will vote down this reorganization order. To carry it out will be indeed to tempt fate. Let history teach us something.

The National Defense

EXTENSION OF REMARKS

OF

HON. PHIL FERGUSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1940

Mr. FERGUSON. Mr. Speaker, I have today introduced the following short, vital resolution:

Whereas the Constitution of the United States provides that Congress shall provide for the national defense; and

Whereas in present world conditions with the break-down of international law and the failure of all treaties to protect the sovereignty of nations, no nation can feel secure; and

Whereas the Congress should accept the responsibility of providing for the national defense of the United States of America and to protect the sovereignty of the countries of North and South America and the West Indies as announced under the Monroe Doctrine: Therefore be it

Resolved, That on the passage of this resolution the Speaker at such time as he may designate at this session of Congress shall call the House of Representatives into executive session and the Speaker shall invite the Secretary of War, the Secretary of the Navy, and those charged with the responsibilities under them to inform the House of Representatives on the actual condition of the national defenses of this Nation and to answer questions that may be propounded by the Members of the House of Representatives as to the conditions relative to the national defenses of this Nation.

The Speaker is further authorized to call such additional executive sessions of the House of Representatives until the House of Representatives shall have been satisfied of the information necessary to guide them in providing legislation and funds that may be required in providing adequate national defenses.

Mr. Speaker, the people of these United States can well be compared to a bunch of corn-fed rats basking in the sun waiting to be pounced on by the wildcat nations prowling the world today. Congress has voted billions for defense, yet no informed person feels secure.

Before this session ends Congress must adopt an adequate defense program. Balanced budgets and a $45,000,000,000 debt limit pale into insignificance if our national security is at stake. The hungry wildcat nations of the world covet the fat resources of North and South America. We are pledged to defend the sovereignty of this Nation. What with? A powerful Navy, the most powerful in the world perhaps. England had the most powerful navy in the world. Yet she could not protect Norway. Our present air force could not protect one shore line of the United States. How will we protect the shore line of North and South America and the West Indies? Our limited number of trained, equipped men would not make a formidable expeditionary force to dislodge enemies from the West Indies if they were firmly established. We can avoid the terror of invasion in the continent only if we are prepared. Three years of intelligent, defensive preparation would find us equipped for any eventuality. Bravery and patriotism are sterling American qualities but barehanded and untrained American forces would be smashed by a warring nation in this continent just as the brave and patriotic Poles, Finns, and Norwegians were smashed.

We should know how late it is. Congress should know how late it is by adopting my resolution. The House of Representatives may act as a committee to find what the actual needs of this Nation are and provide adequately for those needs. Our President has made bold and far-reaching steps to provide a Navy, an Army, and an air force. But the time has come when our President needs the united support of an informed House of Representatives to provide this Nation with an adequate defense program.

Puerto Rico and the Sugar Legislation

EXTENSION OF REMARKS

OF

HON. BOLÍVAR PAGÁN

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1940

Mr. PAGÁN. Mr. Speaker, under leave to extend my remarks, and having in mind certain statements inserted in today's RECORD, I want to make the following remarks about the refining of sugar in relation with Puerto Rico and the sugar legislation which is now under consideration by Congress.

THE SITUATION AS REGARDS THE REFINING OF SUGAR IN PUERTO RICO

The nearly 2,000,000 American citizens in Puerto Rico request that no discrimination be laid against our industry. Puerto Rico is under the American flag and is an integral part of the United States, politically and economically. Sugar legislation that seeks to place on Puerto Rico any restrictions pertaining to the marketing of sugar that do not apply equally to sugar producers in other parts of the United States is unjust discrimination and un-American.

According to newspaper stories, the eastern seaboard refiners are seeking to restrict production of refined sugar in Puerto Rico on the basis that an increase in the refining of Puerto Rican sugar would result in the displacement of labor on the mainland.

The facts are that the maximum amount of sugar that Puerto Rico could refine is the amount that is produced on the island. The island is completely out of the lanes of traffic in which raw sugar flows from other countries to the continent, and from a practical business point of view it is impossible to ship sugar from the continent or any other area serving the continent to Puerto Rico for refining and then reship it to the continent. Accordingly, the maximum amount of sugar that Puerto Rico can refine and sell in the United States is the amount that it is allowed to produce under the quota system. In 1939 this amount was 800,000 tons, in round numbers.

The 1937 Census of Manufactures shows that there were 14,024 people engaged in refining sugar on the continent,

and these 14,024 people refined 4,516,000 tons of sugar, or 322 tons per person employed. If Puerto Rico refined its entire output of 800,000 tons of sugar on the basis of the amount of sugar refined per person by the eastern-seaboard refiners in 1937, only 2,485 people would be required to refine Puerto Rico's entire quota. Of course, not all of these people are engaged in actual refining operations. Many of them are engaged in moving sugar to and from the refinery or into the channels of trade. No matter whether the sugar is refined in Puerto Rico or in the continental United States, those engaged in moving the sugar into the channels of trade would still be employed. Thus, the number that would be displaced, assuming that Puerto Rico refined its entire continental quota, would be something less than 2,452.

This is, indeed, a small number, considering the vast amount of propaganda and the many statements put out about the reduction in employment that would occur if Puerto Rico was allowed to refine all of its sugar.

In actual practice, however, the island never would refine more than a fraction of its total quota. The reason is because the island on the average grinds its entire crop of sugarcane in about 4½ months. Thus, each individual raw sugar mill would have to refine all of its own sugar or other refiners independent of the raw mills would have to purchase sugar for refining from the raw mills and carry it over during the other 7½ months when there was no raw sugar available.

Anyone at all familiar with the situation on the island knows that by no means all or any large portion of the 41 independently owned companies would ever attempt to refine even their own sugar, and furthermore, it is sheer ignorance to assume that any refining unit is going to purchase sugar and hold it in Puerto Rico for 7½ months in order to refine the sugar. The market risk is too great.

The larger mills which for 40 years have been able to finance refining operations have shown no inclination to refine sugar. The main reasons why the larger mills have refrained from going into the refining business are, first, they would be able to operate their refineries only about half the year; and, second, they would have to establish selling agencies on the mainland. Experience indicates that the cost of maintaining selling agencies for so small an amount of refined sugar would amount to as much or more than the refineries would realize out of their refining operations.

The four large mills of the island grind approximately 50 percent of the sugar produced on the island. If they have not found it advisable to go into refining in the 40 years that they have been in operation, during most of which period there were no restrictions, it is not likely that they would find it advisable to do so under present conditions.

A few of the smaller mills can refine their sugar and sell it in bulk direct to chain stores or other large users of sugar. Then the question comes as to what chance there is that other smaller mills would be likely to set up and attach refining units to their raw mills for refining their own individual output. That is difficult to say. It is known, however, that not all of them are so situated or are in financial position to go into the refining of sugar, and the experience of the small mills that have gone into the refining of sugar does not lend too much encouragement to those not now refining.

The result is that, when you review the refined situation in Puerto Rico from a practical standpoint, it is not likely that the island will ever refine more than a fraction of its total production. Thus, the argument advanced that permitting Puerto Rico to refine its own sugar would displace a large number of employees engaged in refining on the mainland is largely pure unadulterated nonsense, designed to be misleading.

If the island refined half of its quota, which seems to be the maximum under present and prospective future conditions, it would not displace at the outside more than 1,200 workers engaged in the refining of sugar, based on the record of the number of employees required to refine sugar on the mainland. This, of course, makes no allowance for the number who would still be employed on the mainland in moving the sugar into the channels of trade.

Not only has discrimination against Puerto Rico been proposed in this connection, and not only has the effect and extent of Puerto Rican refining been exaggerated, but other erroneous statements have been made regarding the island's refineries. It has been printed publicly that Puerto Rican refineries pay laborers only a little more than $1 a day. I can state that refinery workers in the island are under the provisions of the Fair Labor Standards Act of 1938, which means that minimum wages cannot be less than $2.40 for an 8-hour day.

In addition, a recent charge stated that refinery workers in Puerto Rico are not represented by labor unions as are mainland refinery employees. To the contrary, workers in Puerto Rican refineries are organized. Wage rates are determined each year by collective bargaining between the unions and the representatives of the refineries.

The further charge has been made that Puerto Rico's refineries are subsidized by the Federal Government, that they have received $2,000,000 in cash in benefit payments since 1934. But the facts are that no refinery on the island has received any benefit payments for the refining of sugar. The only payments have been to growers of sugarcane, exactly the same as in all other domestic sugar-producing areas.

Faced with record-breaking unemployment, entitled to its full rights as a part of the United States, Puerto Rico asks for and insists upon fair and equal treatment in all matters pertaining to sugar.

In this matter, as in all matters, we simply appeal for simple justice to the American Territory of Puerto Rico.

Bureaucracy Runs Wild

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1940

Mr. BENDER. Mr. Speaker, every week you work 3 days' pay goes for taxes. Those taxes today support the greatest number of Federal bureaucrats in the history of organized government.

Bureaucracy is as old as society. No man can enforce the rules of any community without assistance. In even the most primitive tribes the native chief probably called in his favorite nephews to help run the business. He would have been a good deal less than human if he had not heeded the demand of his wife or wives to distribute a few of the softer jobs to the long list of relatives on his waiting list. And those who succeeded by this ancient process in gaining comfortable berths on the tribal roster undoubtedly joined in the game by employing still other pals and relatives to assist them. From such small beginnings rise great institutions.

We all know the famous lines:

> The big fleas have little fleas upon their backs to bite 'em,
> The little fleas have lesser fleas, and so ad infinitum.

No better description can be offered of the New Deal in action. No one denies for a moment that any system of organization requires the development of bureaus. Someone must be found at the top, and down the line there must be an army of subordinates, each contributing his share to the effective functioning of the system.

Even the simplest forms of human organization acquire constantly expanding duties. Families assume new responsibilities as they grow. Governments create them in the process of growth.

Even the most embittered critic of our present National Government recognizes the imperative necessity for a bureaucracy in the guidance of our people. Republicans, no less than Democrats, concede the truth that our gigantic business of government requires a vast army of public officials to carry out the detailed operations of the Nation. We know full well

that there are tremendous forces at work compelling our representatives to establish new agencies to meet unforeseen and sometimes unpredictable problems.

In the colonial era of American history bureaucracy was already an old acquaintance. Committees drew up rules for the organization of the Continental Congress, for its Army, for the safety of the Colonies, for executive business. A 13-man Naval Committee launched the American Fleet, to be succeeded by a Board of Admiralty. The modern problems which rise from the endless red tape of bureaucratic government were well known to John Paul Jones, who found the naval officials of the Revolutionary Government impossible to handle. In disgust he threw up his hands and obtained from the French those famous ships with which he harassed British vessels up and down the Atlantic coast. Treasury problems were no less irksome. To start the flow of checks, the Continental Congress named two Treasurers, as an assurance of honesty. A few weeks later a congressional committee was added to check accounts.

Within 6 months they set up a new standing committee to check on the checkers. Committees of commerce, foreign affairs, superintendents of finance, marine, and war introduced the founding fathers to bureaucracy at close range before the Republic was born.

By the dawn of the nineteenth century Federal departments were no longer a novelty. But the tremendous expansion in their personnel, expenditures, and functions has been a creature of the twentieth century. Just over 100 years ago, in 1839, the United States Department of Agriculture began its existence with an appropriation of $1,000. Today, a century later, its bureaus have mushroomed to a position which would have amazed the citizens who founded it. More than a billion dollars have been spent by the Agricultural Department alone in that century. The number of its subdivisions defies accounting. No less than 70 separate programs are carried on by its employees, ranging from "dourine treatments to horses" to "phony peach control." Young men by the hundreds stand along the Nation's highways, casually asking motorists to confess the transportation of Japanese beetles, gypsy moths, and pink bollworms. Pamphlets teaching the proper technique of handling three-cornered pants are sent in the mails.

The process of bureaucratic growth has been instructive. It demonstrates the inevitable conflict between the desire for economy in government and the tendency to gain voting strength through the pleasant device of padding the pay roll.

But in the last 7 years we have seen bureaucracy run wild in the United States. It is a new kind of bureaucracy, far removed from the harmless variety which blossomed with the creation of the Interstate Commerce Commission in 1882. The New Deal's bureaucrats represent a new species, all afflicted with "bureaucratis perniciosis." They fancy themselves as more than administrators. Many of them look upon their role in American life as that of legislators, policymakers, appointment dictators.

More than 50 new agencies have been established to house this new army of Federal superservants. So-called "brain-trusters" have used such bureaus as the sounding boards for their pet ideas. Masquerading as legal counsel to the R. F. C., S. E. C., P. W. A. are men who look upon themselves as missionaries, dedicated to the spread of New Deal gospel to a recalcitrant, reactionary Congress. With oratorical fanfare and newspaper trumpets, they have made such alphabetical concoctions as C. W. A., W. P. A., C. C. C., P. W. A., F. E. R. A., and F. H. A. part of the everyday language of millions of Americans. Even those whose business it is to know these things find it almost impossible to find their way through the labyrinth of Government bureaucracy. Only the manufacturers of "red tape" find cause for rejoicing in the brain children of the New Deal's agencies.

Some of these establishments have unquestionable merit. A few may even be completely indispensable. Yet, valuable, necessary, or wise, the growth of this new kind of bureaucracy must raise many questions.

How can we reconcile the rise of a new generation of domineering bureaucrats, responsible only to their appointers, with the traditions of a government based upon direct accountability to the people? What does the new centralization of government in the hands of Washington's floating population portend for the future of our Nation?

The Republican Party is convinced that the New Deal's vast new army of civil employees engaged in the task of administering legislation marks a sharp departure from the basic pattern of our governmental system. Republican administrations, too, have established bureaus. But for 150 years it has been the boast of America that ours is a "government of laws and not of men." We in America are determined that our lives shall not be regulated by arbitrary individual action. We know that regulation rushes quickly into regimentation—that regimentation is a synonym for tyranny.

To the men and women of the United States the growth of the New Deal's new kind of bureaucracy represents the direct antithesis of democratic theory. We believe that those who make our policies must be removable at the will of the voters back home. In a republic this is axiomatic. But the New Deal has created a new kind of irresponsible bureaucracy. The establishment of administrative agencies is not in itself a denial of American principles. But the New Deal's bureaucracy declares: "Those whom you elect may sketch outlines of policy. In the daily operations of the Government's business we, the administrators, shall take over the affairs of state. We shall determine the actual effect of each policy upon you. We shall interpret the law. Upon our regulations will rest the success or failure of legislation."

We have seen the results of this new departure in American life. Like a swarm of locusts, investigators, armed with pencils, paper, and authority to compel the production of books, records, pay rolls, and correspondence have descended upon the unsuspecting businessmen of the Nation. Wherever they have gone, they have harrassed them, spreading suspicion of their integrity throughout the land. Farmers have been besieged by earnest young agents of the Agricultural Department, requesting them now to curtail production, now to expand production, sometimes to cease production entirely.

From all that has occurred, one conclusion seems unchallengeable. No matter how well-meaning may be the motives of the New Deal's bureaucrats, their results endanger the American principle of governmental responsibility. This New Deal bureaucracy means a constant diversion of attention from the business at hand. It means the creation of hundreds of new sources of friction in the intricate industrial, agricultural, and commercial life of America. It means the constant employment of men and women whose livelihoods depend upon the analysis of other people's business. It means the creation of a group regarded by the remainder of the Nation as parasitic.

America's founding fathers were well aware of irresponsible bureaucracy. They had seen it in the course of their own relations with the British crown. Dozens of intermediaries stood in the path of any direct appeal to the mother country. They had witnessed misunderstandings fostered by the representatives of a distant government. In the French revolution, too, they had observed its effects. They were not willing to impose any such monstrosity on the newly founded republic.

There are those who argue strenuously that more and more agencies must be created in a never-ending process, because of the growing complexity of modern life; that the recognized need of regulation invariably requires the presence of a multitude of new officials. To them the answer must be straightforward. Our Nation grew from an insignificant group of sea-coast colonies to a mighty power in less than a century and a half. We established Federal bureaus, but they did not usurp the powers of their creators. We developed the East from an agricultural into an industrial center without changing our system of government policy making. We built a railroad network covering 3,000,000 square miles with only one administrative tribunal to handle complicated affairs.

What has happened in the period since 1932 to justify the almost incredible multiplication of these agencies? To be sure, we have suddenly found ourselves faced with a seemingly endless relief problem. To meet it perhaps the Federal Government was justified in establishing a group of organizations within its framework to assure efficiency in feeding the hungry and sheltering the homeless. But this in no way accounts for the establishment of E. C. W., E. H. F. A., F. B. V. E. F. C. of T., F. I. C. B., F. S. L. D., and the dozens of other fantastic growths which have mushroomed overnight since the New Deal took office.

The dangers which arise from the establishment of these many Federal bureaus are no creations of an overactive imagination. In Europe the Communist, Nazi, and Fascist dictatorships of the Russian, German, and Italian Governments did not seize power with ammunition and bayonets. They started on the path to tyranny through constitutional methods. They promised every group within the population precisely what it lacked. Their spokesmen won elections. They added converts to their causes. To hungry men and women they brought the promise of food, the hope of gain. And once in power they perpetuated their authority by the simple device of centralized bureaucracy-dominated government. All power was vested in the leaders. In Communist Russia it went to Lenin and then to his successor, Stalin. Italy gave absolute authority to Il Duce. Germany revered its Fuehrer. But behind each of these men was the army of government employees whose livelihoods were determined by the maintenance of an authority which was being ruthlessly exercised. In Europe the procedure was simple. To carry out its needs the dictatorship developed a pattern for the life of the entire country. Business became part of the government. Laborers and farmers were conscripted into the army of the state. Huge governmental expenditures became normal. Mass-work systems requiring the services of every available man were instituted. Over the air waves and in the press a constant stream of propaganda directed at convincing the nation of its prosperity was propagated. Everyone became part of the bureaucracy. It was the ultimate in bureaucratic government, with the entire nation on the pay roll.

These are steps astonishingly similar to those employed in our own Nation in the last 8 years. With the exception of the freedom of the press, they reflect an almost identical adoption of European practices by an American government. We, too, have heard the talk of a planned economy. From every administrative official high up in the councils of the New Deal has come a discussion of the advantages, the Utopian splendor, of a system completely organized from one coast to another. Rex Tugwell, Henry Wallace, Harry Hopkins, are all disciples of this delusion. They recognize in it nothing antagonistic to the American tradition of free enterprise. They are ready to scrap the whole system for the sake of their plan.

Centralization of government is more an abstract idea. In practice it means that the entire business of government must radiate from Washington. The States become subordinate. Their well-being depends entirely upon an ability to satisfy the dictates of Washington's rulers. And the price of rebellion is all too expensive. Cooperate with the Federal Government and your reward is certain. W. P. A. projects, P. W. A. construction, speedy distribution of Federal old-age pension contributions—these are the reward for good behavior. Refuse to join the chorus of "yes men" and your State is penalized. Ohio finds itself pleading in vain for $1,300,000, withheld by the Social Security Administration because of an internal Democratic Party feud. W. P. A. appropriations become snarled in endless complications. Governors find themselves "persona non grata" before administrative overlords. It is all a very pleasant era for the powers that be. They find it possible to wield the "big stick" with impunity, for their decisions are final. Woe unto those who cross them. This is centralization in practice.

No wonder business finds itself constantly concerned over the development of our "wonderland of bureaucracy." To penetrate it requires the services of accountants, lawyers, bookkeepers in untold numbers. Every new piece of legislation furnishes the source for dozens of regulations issued by agencies of whose existence we are scarcely aware.

In America our farm population numbers 32,000,000. Their lives are intimately affected by the growth of centralized government. It has reached out to make them part of official Washington. What they may plant and what they may harvest are determined by the dictum of the Agricultural Department. Agents scattered over the 3,070 counties of America run our farms. Thirty million workers engaged in industry recognize the growing importance of administrative agencies. They determine the rights to organize and in increasing measure the opportunity to work. Salesmen, bankers, exporters, importers, investors see their daily lives governed almost completely by Federal regulation. The era of voluntary self-regulation which was inaugurated in the twenties has given way to a new day, a New Deal, with Government taking over the role of private policeman.

Bureaucracy is here in full force. Little by little we are pushing on toward centralization. It is not in the interest of America to succumb to this device. We who value individual freedom cannot reconcile it with the dictates of our daily lives by Government agents. It is a short step from free "advice," reinforced by governmental mandate, to coercion, reinforced by the concentration camp. We must determine now never to take this step.

W. P. A. Employment

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1940

Mr. ANGELL. Mr. Speaker, experience of the W. P. A. in the operation of the provision we heretofore adopted requiring 30-day lay-offs for W. P. A. workers who had been employed continuously for 18 months has proven its adoption a serious mistake. Many workers who have dependents and no other means of support have been made to suffer, particularly those of past middle age. With some 10,000,000 of our people on the unemployed list, it is evident to all of us that these older workers who are discharged have scant opportunity to find reemployment.

Industry is taking up the slack with younger workers to some extent, and those 50 years of age or over are cast aside. I urge that before we adjourn we modify this provision which has been so harmful.

I am just in receipt of a letter from a constituent whom I have known for many years and who is familiar with the operation of this provision of the law in my district. I ask leave to include this letter in the extension of my remarks. Obviously I will not disclose the name of the writer. I also ask leave to include the news item referred to in the letter.

PORTLAND, OREG., *May 4, 1940.*

Hon. HOMER D. ANGELL,
Member of Congress, Washington, D. C.

MY DEAR MR. ANGELL: The enclosed article appeared in the Oregonian of May 3 on the subject of the 18 months' continuous employment of the W. P. A. workers and the proposed amendment to the same. I feel sure that you are interested in this matter and I therefore hasten to address you regarding the havoc this rule has worked on the employees as well as retarding work on the projects. It is a drastic rule considering the dismissed are compelled to remain idle for 6 weeks, it requiring the relief worker assigned to the case 2 weeks in which to reassign the person. You can see that, even if the amendment holds, the worker will be out a month—possibly more, if not assigned to another project immediately.

I understand that this removal rule has been and is but an experiment. It certainly is a nerve-racking experiment for the young, but more so for the older workers, for they cannot expect to obtain private employment, preference being given to the young "fry," as you know. The salaries given by W. P. A., especially to

the intermediate and unskilled workers, many of whom have dependents, do not allow saving for dismissal time, hence when it comes worry and debt ensue until one is on the verge of distraction. The skilled office workers do not fare much better, as they have been compelled to incur past indebtedness because of the varying maneuvers from time to time of the W. P. A. moguls. If the W. P. A. administrative department would dismiss many of the workers young enough to get private work, but who are preferably making W. P. A. a "career," experiments in all probability would be unnecessary. I know positively from experience with these youngsters that they do not try for private work in the majority of cases.

It is my opinion that the ones doing the skilled work (the older ones generally), such as timekeeping, pay rolls, editing, proofreading, etc., should not be removed, as it retards the progress of the work to a big extent. The ones already on the projects should remain until the conclusion of the projects in order to assure accuracy.

I am employed on the most important nonconstruction project in Oregon (it is in effect throughout the States, I understand), that of land classification, such as public domain, Oregon-California holdings, bird refuges, reservations, etc., doing timekeeping, pay rolls, editing, as well as typing land descriptions, which work is hard and particular and requires corrections because of inaccurate clerks. If the 18-month rule is in operation November 1, I will be in line for dismissal, and then the trials and tribulations and indebtedness will begin. Being an efficient office worker for many years, I have been able to handle the work no doubt much better than the average run of W. P. A. workers could do.

I am appealing to you, a member of the Relief Subcommittee, to put forth your best efforts to have this drastic and seemingly foolish experiment put totally out of commission, as it is a detriment to both projects and workers. I am not appealing from a purely selfish standpoint, but for the interest of all who are in line for dismissal, with its consequent trials and tribulations.

[From the Portland Oregonian of May 3, 1940]

RELIEF BARRIER LIFTING URGED—HEAD ASKS END TO RESTRICTIONS

WASHINGTON, May 2.—The administration moved Thursday to persuade Congress to abandon severe restrictions placed upon the Work Projects Administration in this year's relief bill and grant wide discretion in expenditure of $985,000,000 in the 8 months following July 1.

Col. Francis P. Harrington, W. P. A. Commissioner, proposed to the House relief subcommittee it abandon most of the restrictions voted last year after a W. P. A. investigation.

He approved, with modification, one of the most controversial restrictions. This is the provision for a 30-day lay-off of W. P. A. workers after they have been on the rolls for 18 months. He suggested the lay-off be cut to 15 days.

California's Migrant Problem

EXTENSION OF REMARKS

OF

HON. ALFRED J. ELLIOTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1940

EDITORIAL FROM THE CHICAGO TRIBUNE

Mr. ELLIOTT. Mr. Speaker, I am appreciative of the fact that eastern editorial writers are taking more and more interest in California's migrant problem, and advising the reading public of our State's sincere efforts to care for the migrants. Facts compiled by the Department of Agriculture indicate that migration to California is due to that State's high labor standards. Secretary Wallace's report was printed in the Chicago Tribune of May 2, 1940, and reprinted editorially in the Washington Times-Herald of this morning. I ask unanimous consent to have printed in the RECORD the editorial of the Times-Herald, and that I be permitted to extend my remarks.

[From the Chicago Tribune of May 2, 1940]

WHY THE JOADS WENT TO CALIFORNIA

By this time several million Americans have either read Grapes of Wrath or seen the movie. A great many of them are no doubt persuaded that farm labor in California is poorly paid.

It may be well, then, to adduce the facts as compiled by the United States Department of Agriculture, Henry Wallace, Secretary. They were presented graphically on the financial page of the Tribune a few days ago.

Farm wages in California are not low; they are the highest in the United States. Mr. Wallace reports that the average monthly farm wage rate, with board, in California is $45.50. This compares with $33.75 in Iowa, $32.50 in Illinois, $34.75 in New York. In Georgia the corresponding figure is $12.50. In Oklahoma, the home of the Joads, it is $20, and in Texas only a little higher.

Farm wages in California are about 35 percent higher than in the Middle West, 300 percent higher than in the Southeastern States, and rather more than 100 percent higher than in Oklahoma and Texas. It is scarcely remarkable, then, that considerable numbers of Texans and Oklahomans hit the road for the Golden West. They migrated, as men have from the earliest times, to better their economic condition. They did not have to be lured by false promises of employment. They went in the certainty that employment on the land in California could not be more difficult to find than in Oklahoma and was far better paid.

The reason the farm hand in California gets the highest wages is not at all obscure. The capital investment per acre there is relatively high. That, in turn, means that the productivity of land and labor is relatively high. That means that the wage rate can be high, for wages cannot rise above the value of the product.

Mr. Steinbeck did not do justice to his Okies. He pictured them as pitiful dupes who set out on a perilous pilgrimage without any real prospect of improving their condition at the end of it. In fact, they were behaving as intelligent people are supposed to behave; they were leaving a low-wage area for a high-wage area. Thousands of the migrants have benefited materially from the exodus.

Idealism and Transportation—Being Advice "North Northwest" to Idealists in Politics

EXTENSION OF REMARKS

OF

HON. T. V. SMITH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1940

ADDRESS BY HON. T. V. SMITH, OF ILLINOIS

Mr. SMITH of Illinois. Mr. Speaker, the transportation bill forthcoming for consideration by the House has set my mind to work upon how much of our political enterprise can be regarded as transportation of something or other from somewhere or somebody to somebody or somewhere else. I submit here for the consideration of idealists, who specialize in transportation wholesale, an address I delivered some time ago in the city of Chicago before a group of earnest citizens devoted to the improvement of that great city:

GREETINGS TO FELLOW IDEALISTS

We are gathered here, as I understand, to celebrate and to facilitate the cause of city betterment through means political. It is a worthy cause in general and an opportune one in particular. Great as Chicago is, she is not yet perfect; her will to do requires support from our joint will to do well. Whatever happens in Europe, whoever is President of the United States, whoever becomes Governor of Illinois, whoever is mayor of Chicago—the City Council of Chicago needs honest, efficient, and intelligent aldermen. That is the cause, as I understand it, to which you mean to address your efforts in the days ahead. It is a cause that is good regardless; for whatever does or does not happen elsewhere, here and now we in Chicago need the best aldermen we can get. We have some good aldermen. We need more. We shall not get too many good ones. If other things go well, this present effort is also well; if other things go ill, this is well—and all the more important. The mayor of Chicago, whoever he may be, can always profit from having a few independent men in the council, and the citizens of Chicago stand to profit even more greatly by having public matters publicly debated before they are acted upon.

I am personally happy to be here with you and to raise my voice in behalf of this will of yours to improve Chicago. It was this group or the nucleus of such a group as this which prodded me into politics, though I acknowledge that it did not require heavy prodding. They call you idealists; you may accept unequivocally the ambiguously intended appellation. The cause you represent will be alive and flourishing long after the lesser causes are forgotten of those who are less idealistic than you. The will to improve one's city: to make its personnel more intelligent, its services more humane, its performance more efficient—this desire is as deep as the human will to power and in height towers above the will to power and all its hungry kin.

ADVICE TO IDEALISTS

As idealists we have nothing to apologize for—nothing save our impotence. We have a good cause, a permanent cause. What we

need is that our good cause should cause something, that it should make a difference in our city. I am not one to belittle high ideals even when they are useless; for what is useless may be far from worthless, and I hold ideals to be that which is finally worthful. But when worth can be turned to use it is doubly worth while. I know that some good people are good for nothing; but a lot of good people are both good and good for something. By venturing into politics we idealists advertise our desire to convert worthiness into utility, to turn our ideals into the humble channels of action. In doing so, we also subject ourselves to the discipline of action. Thereby hangs the larger tale of the impotence of idealists in politics.

For the first lesson to be learned from the discipline of action is this: That many more noble things can be thought than can be done. One lifetime is enough to think all noble thoughts, but it is not enough to effect more than one or a few noble changes in human society. The price of doing anything in politics is not trying to do too much. What we idealists almost never learn is how to specialize our ideals into action. The logic upon which we mostly operate I have observed to be something like this:

Major premise: Whatever is wrong and remediable should be remedied.

Minor premise: Here is something wrong and remediable.

Conclusion: Therefore I should remedy it.

Now, that's a beguiling argument, in logical form almost impeccable, though not quite impeccable for man. It is an argument good only for God. For a man to conclude that he ought to begin to right all the wrongs he sees about him is for him to right none of them. Frustration is the normal outcome for such aspiration. What each idealist needs to learn is simply this: That he is not God. Whatever idealist has learned this is on the humble road of achievement. Thus humbled, he may leave some modest monument ere his brief day be done. The lesson is harder than you might think; for it is our friends who become our enemies here. It is easy for us idealists to tell our enemies where to go; but to resist our friends who request of us only the simple thing that we be God—that we sponsor all the good things, introduce all the reform bills, speak against all the wrongs of the world—to resist such friends is a matter so difficult that I have found thus far only one idealist who is mean enough to do it.

But this, I believe, is the price—the painful price—of our being more than dreamers of things very dear, but also very, very dead. We must specialize, we idealists—must specialize in our idealism. This you have begun by foregoing official responsibility for the mayoralty fight. Keep up what you have begun. Disavow, not interest in, but responsibility for, a few thousand other things, and we shall be on our slow way to sure betterment of Chicago. Beyond this advice to specialize—one man, one cause—I can help you, if help I can, by sharing with you some notions as to what causes to choose for the specialized concentration of your efforts.

Most that any one person, or any one group, can do in one lifetime flows as an unearned increment from something else wisely chosen and well done. It was this thought that led me to resist for 4 years the temptations offered by friends to sponsor only one bill during my entire term in the State Senate of Illinois. I saw, or thought I saw, one thing to do, which, being done, would itself do a thousand other needed things. And that was to provide a research staff for the legislature itself under the direction of legislative leaders, to furnish lawmakers with the facts they need when they need them. I thought that if we could thus unite the practical sagacity of political leaders with the scientific intelligence of the trained technicians, we should strike a body blow for improvement. I still think so. Indeed, I know so.

In some such abstemious and foresighted spirit, let us pass by the easy temptations to specialize against the visible evils of drinking, gambling, and excessive good timing in general—pass them by in order to make our efforts themselves carry on for our ideals. I see four lines on one of which I'd specialize were I privileged to sit in the city council. The other three I'd try to get somebody else to master and represent. 1. The fiscal system. 2. The traffic system. 3. The personnel system. 4. The educational system. In saying a word upon these four problems in turn, I mean not so much to offer a political program as to illustrate a method for moral ideals to improve in political effectiveness. And I certainly do not mean what I have to say as a broadside against the best efforts in these directions of sitting members of the city council. Not criticism of the past but hope of betterment for the future—let that be here our theme.

1. THE FISCAL SYSTEM

As regards the city's money, citizens are entitled to know that it comes from fair sources, that it goes to useful and necessary ends, and that it really comes rather than stays and really goes rather than sticks. It is abuses here that, next to drinking and gambling, usually attract the easiest attention of us reformers. When some fiscal agent of the city fixes or permits to be fixed tax bills, so that the money does not come in save from the weak and the gullible, or when some venal official takes a few thousand or a few hundred thousand dollars to enrich himself or more often to save or help his friends, the city gasps and reformers get busy to reform. And, faith, there's every reason the city should gasp and every reason that idealists should resolve to reform such putrid excesses against common decency and honesty.

But to get a tax system which levies most taxes on those most able to pay and least taxes upon those least able to pay, this, while undramatic, is infinitely more important to good government than the stopping of occasional stealing; for lopsided taxation is the graft of great grafters, the acceptance of the benefits of the city without acceptance of the responsibilities of the city's cooperative life. You can bond against theft, but not for integrity. Taxation touches our deepest integrity for fair play in the rules of the game. Chicago's idealism requires a man who's head is as hard as his heart is tender to give all his time on the city council to this task, which is a thousand tasks rolled functionally into one. One such hard-headed specialist, not also hard-hearted, could do much to save the city for and from business, from and for genuine humanitarianism.

2. THE TRAFFIC SYSTEM

If those who have the political power had to put up with transportation normal for the majority, there would not long be such transportation as Chicago now has for the bulk of its population. Even most of us articulate idealists ride most of the time on fast, comfortable North Shore or Illinois Central trains rather than upon the jerky, noisy, smelly, slow streetcars. Or we drive our own cars that are not draughty, with money enough in our pockets to pay for convenient parking. To tire workers out in getting them to work is not economy, and to wear them out on the way home is not decency. And to do both for the sake of private enrichment is not democracy. The problem of getting men and women to and from work and pleasure, from and to the spot called home, requires honesty and brains, requires skill in city planning and construction engineering, requires knowledge of finance and accounting.

This is a problem upon which I do not purport to know more than that it has often been left to city fathers that know no more than I. The fact that the subway is coming at last makes not less necessary, but more necessary, the election of men to the city council that mean well and that know as much as possible about the problem. We need wise idealists to discourage stealing the comfort and the pennies of the people, to further both economy and efficiency, and to keep abreast of city planning and population shifts. We need tender-hearted, hard-headed specialists as aldermen from a few wards to represent all wards on this central and crucial matter. One such idealist who'd keep his mouth mostly shut about other matters and his brain always active on this matter would enrich the city from highly paying dirt.

3. THE PERSONNEL SYSTEM

An aspect of politics that lies very close to my own heart is the personnel system of our public service—urban and national. A metropolis like ours requires a veritable army of skilled men and women, and unskilled, too, to carry on the daily work. The unskilled do not constitute a crucial problem—given any moderate desire to serve the city rather than some party leader. But the skilled servants of the city require great care in training, in selection, in promotion, in retirement. This is no task for a politician with personal interests to be served thereby. To know what sort of jobs need doing, to get the kind of men who can do them best, and to keep conditions continuously favorable for the right man in the right job—this would be to effect economy through efficiency and to get efficiency through economy. Here is the real and only great chance to save money without impairing civilized services.

To get the right people in the right places is what the term civil service ought to mean. It is not what the term means in Chicago. So far from this meaning has been the fact in Chicago during my time here, regardless of the party in power, that the very name has come to suggest partisanship, nepotism, and occasionally scandalous graft. Temporary appointments by the thousands, delay in examinations, probable favoritism in the lists—all these, and more, have brought the city's personnel work into such disrepute that it is simply better to call it the uncivil service and be done with it. There is a frankness about all this that, were it not ignorant, would be cynical.

While all this is going on, the necessity of scientific personnel work has grown apace. The functions of government are expanding, the social services are increasing, the necessity for continuous skill is ever more and more apparent. Great strides have been made by technicians in making skilled administration possible, but not largely for Chicago. Our city goes on its ancient way, inefficiently, wastefully, stridently. Political partisanship is made to appear more important than perfect performance in the work of the city.

What a field is here for an idealist who will become a specialist and stay a specialist on civil service. There is available a whole moral philosophy to back him up—cities, model compared with Chicago, would uphold his hand, and the citizenry, once informed, would welcome the chance for their most skilled sons and daughters to find a career in the service of this fair city. A civic cesspool here awaits transformation by hard-headed idealists.

4. THE EDUCATIONAL SYSTEM

Totalizing all opportunities at improvement is that offered by the educational system. Through the schools, public and parochial, pass now each decade the total population in its quest for richer life. Schools are justly the center of all major efforts to make Chicago better, and the public schools are the crucial center. The public schools alone prevent parochial schools from sacrificing citizenship to sectarianism, and private schools from training cads rather than men. Both private and church schools perform a useful role in our city, but permanently useful only if the public schools confront them constantly with a high standard and a democratic will.

There are those who would keep the public schools out of politics. I would not. I would, the rather, keep politics out of the schools. There's little chance to keep schools out of politics; for politics concern the most important things of our common life, and the schools are the most important things. But to keep

politics out of the schools is the first essential of democratic statemanship. There is every doubt whether this is being done in Chicago today. Citizens are entitled to know what is being done with the schools, to the schools, for the schools. As a democratic idealist, I should welcome the chance to devote myself exclusively to this problem in our city council. There would not be much competition, I believe. How many debates on this matter in the council have we heard or heard of for a half-dozen years?

If the schools are to be kept properly at the center of politics and politics is properly to be kept out of the schools themselves, then political authorities must insist upon a board of education itself educated, impeccable, impartial, and unapproachable. It must be a board that enjoys informing citizens about the schools while educating the children in the schools: Frankly explaining its budget, eagerly exposing its curriculum, ardently soliciting the interest of parents and jealously protecting the integrity of teachers. But I find that I'm off my subject; I'm not talking about the Chicago schools. Let me return to Chicago.

Some years ago I was walking to school thinking of what I'd been reading in the morning paper when I overtook a friendly policeman. I asked him if he noticed several new appointments to our city school board. He had, and thought well of them. I commented wonderingly upon the number of coal merchants in the list. And what had I against coal merchants, he wanted to know. Nothing, I replied, in the coal business; but what fits them peculiarly to run our schools? Well, they are businessmen, he said, and businessmen ought to be able to run anything. "Come, come," said I. "I am myself a school teacher, as you know. I admit that I'm a plumb good one. But what would you think if you had read in the morning paper that I had been appointed chief of police?" "Why," said he sputtering, "I'd think it was a hell of an appointment." And so it would be, my friends. So it would be.

We need some idealist, who is much more patriot than partisan, to go to the city council and specialize in educational matters. The city fathers are responsible in the last analysis for the city children. The city council ought to ask of the official custodians of education an accounting for their high stewardship. Weakness, cowardice, indirection, arrogance, ignorance, avarice—these have no place in the management of schools. Nor has partisan politics or partisan religion either. We need somebody in the city council high-minded enough to free the school from partisanship, intelligent enough to expose failure of function, and courageous enough to put public education in Chicago where it belongs—put it right in the forefront for the sake of all the children whether all the children go to public schools or not.

And while upon the educational problem, I would as an alderman give some of my specialized idealism to adult and even to official education. I'd like to see some idealist who believes in the efficacy of light arrange for an adequate system of reporting upon the city's business, with a proper and independent audit of all funds, including those of the board of education. This ought not to be a matter of muckraking; it ought to be done as a matter of course, for the sake of popular education and decent citizenship. Aboveboard enterprises have nothing to fear from the light and everything to hope from popular interest in public business.

The radio makes possible in large cities for the first time since Pericles a proper educational approach from officials to citizens. As an adult educational measure I would like, as a city father of Chicago, to further the use of the radio for correction, improvement, and enjoyment of the city services. The city council ought to provide for itself or the mayor or for both, a station or regular hours on the air in which scandals could be exploded, problems explained, plans broached, and achievements celebrated. To neglect this new and magnificent avenue to enhanced morale is to forego the mightiest opportunity yet offered to make knowledge effective out of campaigns as well as in campaigns. While the schools are educating the oncoming generation, we can now, by the radio, educate ourselves to common problems, projected solutions, eventual compromises. But there is little hope of adequacy in this larger field of enlightenment until idealism can make itself effective in saving the integrity of the common public schools from predatory interests and cultural provincialisms.

Chicago is, in all truth, too fine a place to have education mean less than all the light all of us can shed all the time upon common concerns. In the schools it is light shed by one generation from all the generations for the sake of the next generation. Out of the schools it is the light of honesty shed on civil affairs. In and out, it is the creation of finer human hungers so that as surely as slowly we shall from our many racial cultures, religious complexes, and economic conflicts create one community, the community of Chicago the civilized. It is the task of idealism to create such a community on this very site of this very city.

No idealist can do it all, nor all idealists do all of it at once. But give Chicago four idealists each specializing in one of these four regions and cooperating for the good of the city, and we should make Chicago better more rapidly than any materialists believe possible. One intelligent, specialized idealist is a company, two's a crowd, three's a regiment, and four's an epoch. These problems are not so many that we idealists must break up in dissention over them, as we have done in the past.

These problems are really all one, as the city itself is one. They are really all problems in transportation. Our fiscal system is transportation through taxation of money from private plethora to public need. Our traffic system is transportation of persons from home to work or pleasure and back again. Our personnel system is transportation of skill from private to public business through wise recruitment and proper placement. And, finally, our educational system is transportation of ideas and sentiments from man to man and from generation to generation. So much one enterprise are these several problems seen to be that one idealist could do them all, were it not for the meagerness of human energy and the shortness of human life. Capable men in the several fields of interest should be able through cooperation to relieve each other of having to play at being God and yet enable all together to be more than mere man.

To regard our city politicians as idealistic experts in transportation is to require of them one outstanding characteristic, integrity. He who moves all things else must not himself be easily moved. He must himself stay put so that all else may move in order and to a purpose. He must not be in politics for money, for there's too much money moving about him for safety. Only idealists meet this elemental demand—services for a moderate salary. He must not be in it for power, for there are always too many people about him who are powerless to protect themselves against him. Only idealists meet this indispensable demand.

He must not be in it to get even with life for wrongs fancied into his very personality, for he will poison with suspicion the sources of human friendliness and succor. Only idealists meet this inexorable demand. Our city politician, he must be in all truth what you are; he must be a devotee of the ideal but willing to disclaim responsibility for all but a little of that. To do what can be done well and to do it with a will—that's the vocation of an idealist.

The United States Housing Authority

EXTENSION OF REMARKS

OF

HON. EWING THOMASON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1940

ADDRESS BY HARRY C. BATES

Mr. THOMASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the very able and informative address of Mr. Harry C. Bates, president of the Bricklayers, Masons, and Plasterers International Union and chairman of the A. F. of L. housing committee, before a recent labor conference in his home city of Dallas and appearing in the El Paso Labor Advocate.

The housing program is one of the most constructive accomplishments of this administration. It has had my vote and active support from the beginning. I joined with officials of El Paso and many citizens in recommending and urging that El Paso be included among the cities awarded projects. I am happy in the thought that one of these projects is now nearing completion, and construction on another about to begin. This will mean much for the health, happiness, and prosperity of many underprivileged citizens in my home city. It will also bring lasting indirect benefit to our entire citizenship. I congratulate the El Paso Housing Authority on the fine work it has done.

The speech is as follows:

I am proud to have this opportunity today to address the Southwestern Labor Conference of the representatives of a great labor movement that has raised high the banner of the American Federation of Labor. I am honored because I have been asked to come and speak to you about housing—a problem of vital importance to every single member of our great labor movement; a problem with which the American Federation of Labor has succeeded in dealing effectively where many had failed. But, above all, I am proud to be here to discuss this vitally important subject with you as one who comes from Dallas, who is a son of Texas, and who, no matter where he is or in what representative capacity, will always remain at heart a delegate from the great Southwest.

The American Federation of Labor, which has grown over a period of nearly 60 years, is four and a quarter million members strong today. During these many years the American Federation of Labor has seen many changes take place, has faced many obstacles, and has weathered many storms.

Among such changes were the growth of our whole Nation; development of new means of production; new products; new, better, and faster means of communication. Among these changes also was the great, almost incredible, transformation of the South-

west from sparsely populated and neglected open spaces into a region rich in resources, expanding in production and trade, where we have built large cities, have reared tall buildings up into the sky challenging others to catch up with our pace and our ability to succeed in a difficult job.

When I say that in the past 60 years the American Federation of Labor has overcome many obstacles and has weathered many storms, I say that knowing that some of these obstacles had seemed insuperable, and yet they were overcome, and that some of these storms had seemed fierce and menacing, and yet labor emerged from them unscathed, only strengthened by the experience.

For more than a decade now the ship of labor has been lashed by the worst storm it has encountered, the storm of unemployment. Uncertainty, privation, insecurity, and outright suffering—all these things have been faced by workers, and all these things have strengthened their belief that they must be together and act together if the way out is to be found. Those four and a quarter million wage earners who today make up the membership of the American Federation give our movement the strength it has never had before, and give us the assurance that we shall pass through the storm of unemployment and emerge upon the true course which leads to better wages, better working conditions, and a better standard of living.

There are over 10,000,000 workers today whom we count as unemployed and who should find employment in private industry. A part of this number are new workers coming into the ranks of our working population every year and seeking jobs. A large portion of this number, however, are the workers previously employed in their trades and occupations, those whose skill and experience are not being put to use because of the lagging industrial business and construction activity.

Since 1929 our population has grown and our needs have become greater, but the construction industry as a whole employed nearly a million workers less in 1939 than it did in 1929. Workers in other industries have also carried a heavy burden of unemployment, but it was the construction industry, together with the industries related to construction, that was most severely affected by the depression and has failed to make up for its share of unemployment losses.

Organized labor realized earlier than it is generally supposed the importance of a long-range construction program as a force which would lessen the severe fluctuations in business activity and in employment in all industry and trade. As far back as 1923 the American Federation of Labor made its proposal for a permanent public-works program. It was this proposal of ours that served as a foundation for the Employment Stabilization Act of 1932 and whose basic principles were finally given realization in 1933 by the public-works program.

But the 1933 P. W. A. program was admittedly an emergency program and not, as we proposed, a program of permanent public works through which useful projects could be expanded in the periods of severe unemployment and the activity contracted when private construction was revived. Today the P. W. A. program is rapidly tapering off. Large numbers of workers employed on P. W. A. projects and on the production of materials for these projects are being constantly laid off. As each one of these men loses his job more and more importance attaches to the question, Why has not our proposal been accepted in full? Why has not Congress provided for a permanent public-works program?

Because no such provision has been made, even more insistent, more pressing, and more immediate is the question, What other work is there for these workers?

Eight years ago, at the very bottom of the depression, the volume of our home building shrank to practically nothing.

Residential construction, which is not only an important part of our major industry but also the most vital part, one which affects most directly our standard of living, came to an almost complete halt in 1932. Realizing the importance of this to our economy and the danger of the already developing shortage of decent housing to the workers, the American Federation of Labor gave particular attention to the problem of housing, sought the advice of experts, and studied the facts. In the meantime the shortage of low-rent housing had become more acute. While more workers were driven by unemployment into slums, with two and more families often huddling together in crowded quarters, lack of new building kept vacancies down and rents continued high.

Local housing committees were formed in several communities to study these conditions and to formulate plans to remedy them.

While the Federal Government undertook the construction of several demonstration projects with P. W. A. funds, no provision was made for a comprehensive long-range plan that would be flexible, rest upon local initiative, and reflect local needs and yet provide for the necessary measure of Federal assistance in the form of repayable loans for the construction of low-rent projects.

Our local housing committees were then organized nationally in the labor housing conference of the American Federation of Labor, which in collaboration with the Building Trades Department formulated a housing program in 1934. In February 1935 this program was discussed in detail by the representatives of the building and construction trades with Senator WAGNER who prepared and introduced a bill which carried our labor's principles for a national housing program. This legislation provided for a permanent agency of the United States Government, and was designed to make possible a Nation-wide low-rent housing and slum clearance program. No action on the bill was taken by Congress in 1935. The 1935 bill was shelved by Congress because our labor movement had not yet fully grasped the importance of this program nor had it mustered its full strength in its support. The program was new and the public opinion had not yet crystallized on the issues it presented. The supporters of better housing seemed divided and the administration, busy with various temporary housing experiments paid but little attention to the permanent and fundamental program contained in this bill.

In 1936 the American Federation of Labor unions voiced a Nation-wide demand for the enactment of the Wagner housing bill. As the result the bill passed the Senate by an overwhelming majority. In the House it was caught in the last-minute legislative log jam. The future of hundreds of thousands of ill-housed families depended on a few parliamentary technicalities. There was still strong opposition and the administration was still indifferent as to the outcome.

By 1937 it became clear that half-hearted experiments and stop-gap expedients could not solve the problem. Private enterprise, with or without the F. H. A. insurance, was clearly unable to meet the mounting need for decent low-rent homes. This time labor was thoroughly aroused and from the entire ranks of the American Federation of Labor unions resounded the insistent call for the enactment of this permanent housing program by Congress. This call did not go unheeded. The United States Housing Act of 1937 became law in August 1937, and the United States Housing Authority was organized on November 1 of that year.

The United States Housing Act of 1937 is your act. It contains the basic program formulated by the American Federation of Labor, a program whose outlines labor had studied, analyzed, discussed, and debated long before it was put into the form of legislation. It is an act whose passage was due chiefly to the forthright demand for low-rent housing on the part of the American Federation of Labor unions. To thousands of our building trades councils, central labor unions, and locals of national, international, and directly affiliated unions and countless individual members who supported this act, goes the credit more than to anyone else for making this program a reality. Let me quote from an official publication of the United States Housing Authority a statement of the Government view of what the American Federation of Labor has done to put the housing program through:

"From the very first, important State organizations and international unions in the United States helped to bring housing before the public eye. The low-rent housing bill was discussed at union meetings from coast to coast. Representatives of labor appeared before congressional committees and presented dramatic evidence of the need for public housing. They told grim stories of crime and disease and deterioration in America's slums."

At the first the United States Housing Authority was authorized by Congress to lend a total of $500,000,000 in repayable loans for construction of low-rent housing projects. In response to the demand for labor, Congress passed an amendment in 1938 increasing this authorization for construction loans to $800,000,000. This is the amount authorized by Congress for construction loans to date. These loans are made to local housing authorities constituted by each community. The local housing authority is a public agency of the community; it initiates each project and is responsible for its development. The act also authorized the U. S. H. A. to make grants of $28,000,000 a year in the form of annual contributions, which, together with contributions made by the communities themselves, assure low rents in U. S. H. A. assisted housing projects.

We have seen that organized labor has made this program possible and that organized labor has also led in the first step toward the expansion of the program. But our job has just begun. Today we know that the program we have designed is sound not only in theory but also in fact. It has passed all tests. The most grueling and time-consuming task of starting from scratch and planning, organizing, and developing a Nation-wide program of truly low-rent housing was completed by the U. S. H. A. in the past 2 years. A lot of preliminary work had to be done in that time; a lot of underbrush had to be cleared.

The enactment of enabling State legislation and the formation of local housing authorities do not in themselves build projects, but without them projects cannot be built. Ways had to be figured to make the program economical, with the result that the cost to the Federal Government of assisting families to live in decent housing has been cut. As the result of all this work the U. S. H. A. and the local housing authorities cooperating with it are now ready to turn to their main job with their attention undivided, and that job is to build projects. There are 176 projects now under construction in 107 communities. By the first week in April, 22 projects were completed and occupied, and several projects have been opened during the last 2 weeks. While progress is being made, it is being made within the very narrow limits imposed upon the program by Congress. Some 160,000 families can be rehoused under the program we have today. But this number of low-income families seems insignificant when we know that about one-third of all our families are now living in substandard housing, and the majority of these ill-housed families are in need of such housing as the U. S. H. A. can provide.

Aware of this, conscious of the need for expansion of the U. S. H. A. program, the 1938 and 1939 conventions of the American Federation of Labor unanimously voted to urge amendments which would double the amount of U. S. H. A. construction loans and increase the amount for annual contributions to $45,000,000 a year. This proposal was embodied in the bill known as S. 591, introduced by Senator WAGNER, and passed by a large majority of the Senate

last year. This bill is still pending action of the House of Representatives. But the congressional session is drawing to a close and time is getting short.

Why is the enactment of S. 591 so important to labor? Just what does the housing program mean to the workers throughout the Nation, and more particularly what does it mean to the workers whom you represent, workers of the Southwest?

The expansion of the U. S. H. A. program means good, healthful, decent housing for working men and women and their children who have been the worst victims of badly built, insanitary, substandard housing in our cities and towns. For the first time workers' families are given an opportunity not only to live in clean, comfortable homes built by local housing authorities with U. S. H. A. aid, but also to live in these homes at rents which they can afford to pay.

As I just told you, the present program authorized by Congress provides for $800,000,000 in loans for construction of these projects. These loans are repayable over a period of years out of the rents charged on these projects. The money does not come from the Treasury, but is obtained by borrowing. This means that the U. S. H. A. program places no additional burden upon the Federal Budget, that its operation in no way increases the public debt, and that the cost of the projects is not supported by the taxpayer.

The only item of cost to the Federal Government has nothing to do with the construction of the projects, and although this cost is relatively small, every dollar of it stretches far to make this program a low-rent program. I am referring to the annual contributions made to these projects to insure their own low-rent character and to take these projects out of any possible competition with private enterprise. Annual payments are necessary to bring rents on these projects within reach of low-income families. It costs the Government about $6 a family per month to keep rents low and to keep these good homes within the reach of the workers.

S. 591 authorizes the increase in these annual contributions by only $17,000,000, while it doubles the construction-loan authorization of $800,000,000.

We have seen that under the program authorized to date, 160,000 low-rent homes will be constructed on more than 436 projects in some 200 communities. We have seen also that in proportion to our housing need, while this is a good beginning, it is a very small beginning. The increase in authorization for construction loans of $800,000,000, and the increase in annual contributions by $17,000,000 will more than double the present program. Profiting by initial experience the United States Housing Administration and the local authorities will be able to make every dollar go even farther. Thus it will be possible to build more than twice the number of low-rent homes that can be built under the present program and more families will be benefited. All this can be done if S. 591 is approved by the House in the same form as it passed the Senate. But this is only one of the things the passage of this legislation will accomplish.

The most important question to us today is what will this measure do to provide work for the unemployed? It does a lot. The United States Housing Administration is a double-barreled employment program. But it also shoots straight at the heart of the unemployment problem.

Building-trades mechanics and laborers profit most directly from the United States Housing Administration projects for they are needed to do the construction work at the site.

The present program will provide a total of approximately 512,000 building-trades jobs on the sites of projects in 200 cities and towns. For this work they will receive in wages a total of around $225,000,000. These are important items to the building workers. They mean jobs and they mean wages in the pay envelopes, wages paid by the contractor at not less than the prevailing rate.

But you must remember that the U. S. H. A. will hit its full stride next June, and to the building worker that means gradual tapering off in employment unless additional provision is made by Congress to keep up the pace of the U. S. H. A. activity. And this cannot be done unless S. 591 is approved by Congress.

The amount of indirect employment and wages which the U. S. H. A. program yields is even greater.

For every 100 men put to work at the project site 150 men are given employment and are kept busy supplying building materials, in cement plants, brickyards, sawmills, and all the related building materials industries.

This means employment and buying power to labor at the crucial time when the burden of unemployment has become unbearable to those millions of American workers who are entitled to their opportunity of earning a decent living through their own efforts.

In the world in which we live today we are surrounded with conflict and strife on every side. Under these conditions, more than ever before, we must act and act vigorously to achieve our purpose. We must make our wishes known and back them up by our strength. Our course is not an easy one. But I know we shall succeed because the strength of the American Federation of Labor as a labor movement is in the very simplicity of its objectives. As an American movement, as a democratic movement, and, above all, as a labor movement, for nearly 60 years our goal has been kept clear and distinct as it remains today: To provide shorter hours, to secure higher wages, to improve working conditions, and to insure stability of employment for American workers.

The U. S. H. A. program is one of the means to achieve these objectives. It is not a partisan program. It bears no political imprint. It is in a real sense labor's own program.

Having done as much as it has to launch the U. S. H. A. housing program, labor must not permit it to be scuttled at the time when the real worth of this program has been demonstrated and proved to the world beyond challenge. That is why I ask every delegate to this meeting to act without delay and to appeal to their Congressmen, urging them to give their full and unqualified support to S. 591 in order to insure the enactment of this important labor legislation. On your action now depend the future jobs of thousands of workers. On your action now depends the future of low-rent housing.

The Benefits of Being an American Citizen

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1940

ORATION BY MISS MARY CALEMINE

Mr. RANDOLPH. Mr. Speaker, it was gratifying to me to have this body act in agreement with the Senate in the matter of establishing I Am an American Day. The conference report was agreed to April 26, and the President signed the bill May 3.

Increasingly we are realizing the privileges we possess in being citizens of the United States of America. We must not take our rights too lightly, for there is a very real responsibility connected with our being citizens of this land.

Recently, while visiting in my congressional district, I was a guest of the Rotary Club at Keyser, W. Va. On the program that day there appeared Miss Mary Calemine, high-school girl of that city, who had recently won a contest with an oration, The Benefits of Being an American Citizen. She delivered the speech with eloquence and feeling. I was impressed with her splendid preparation of the subject and asked her to send me a copy, which follows:

Many people in America are not mindful of the benefits they enjoy. Benefits enjoyed become so matter-of-fact and commonplace we sometimes forget that they are the components of our hard-earned freedom. On occasion down through our national life we have experienced internal disturbances which have threatened our pattern of freedom. On such occasions we have stopped to evaluate and reappraise our benefits as American citizens. At this very hour when wars and oppressions abroad shock our sense of humanity we count our blessings and become deeply conscious of the benefits of being an American citizen.

In times past, doubting Americans left our shores in search of pleasures, benefits, or safety, which they thought could not be found under our American system. We now find these expatriots returning thoughtful of privileges once unappreciated, horrified at the Old World's dictatorships and their accompanying disregard of personal rights. These self-motivated exiles have seen human hopes blighted by threats of war. They have seen personal liberties and benefits of freedom yield to the cause of war and national survival. They have seen slavery in so-called civilization, bondage under so-called freedom, and even hell in a supposed Christian world.

HUMAN RIGHTS PRESERVED

In America, we are protected by a Government which will not allow our human rights to be so twisted or altered.

Our forefathers fought for the rights and privileges that are found in the famous documents which are the foundations of our Government.

A famous clause in the Declaration of Independence states that "All men are created equal; that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness." How hollow these words would sound in an Old World dictatorship. In America, Mr. Smith is a common factory worker, but that is no reason why his children will not acquire a good education. The Government has provided schools where all may attend. The rich and poor alike are educated under the same standards. Here, any high-school graduate has an opportunity, through his efforts, to win a scholarship or work his way through college. Work is honorable. Opportunity is not issued out like rations or uniforms. The world may have hidden scientists, teachers, and doctors who have not become known because their government has not insured opportunities for them to acquire an education.

The preamble to our Constitution states that our purpose is "to secure the blessings of liberty to ourselves and our posterity." Today we are virtually the only people fully preserving such blessings as freedom of press, speech, and assembly. Americans are entitled to read in uncensored newspapers facts concerning world news, not news our ruler wants us to read. Congressman

MARTIN DIES said: "Our unfettered press is free from the paralyzing fear of deadening control that characterizes newspapers and magazines in those lands where the dictators tell the people what they may or may not read."

NO PERSECUTION HERE

We may listen to foreign broadcasts without the fear of being persecuted. It is not that we care so much about what goes on in certain foreign countries, but there are countries where the people know nothing of what takes place in other lands more than what the government allows them to know.

One of the greatest benefits we have is the right to vote. However, too many people do not take advantage of voting. If many of our countrymen were in lands where this privilege is denied they would readily see how fortunate they are in free America.

In some foreign countries the one and only political party elects the man they want as ruler, and by controlled political methods keep him there. In America on election day, every American citizen, regardless of race, creed, or color, has the privilege to go on to the polls and vote for the man he wants in power. Thus, the ruler of our country is the choice of the people.

I am a first-generation American. My parents and other immediate relatives came from abroad. But the family to which I belong is truly American. I am not boastful of my parents' patriotism or civic mindedness. I am proud of a country where intelligent immigrants can find a life which compensates for family ties and traditions left in the Old World. I can speak of the benefits of being an American citizen because my country held out to immigrants freedom of religion, freedom of thought and action, freedom of initiative and enterprise, freedom of property and contract.

FREEDOM OF RELIGION

In America we are privileged to adhere to any religion or faith. We are not persecuted. We are not sent into exile for our convictions. Our churches and synogogues are not robbed; our church officialdom is not punished or put to death. Our Bible is not rewritten and flavored with paganism and nationalism. It is difficult even for us to imagine such atrocities in a so-called Christian world.

I am glad I live in a country with our kind of educational and welfare institutions. Schools and colleges are not hotbeds of nationalist propaganda but champions of freedom of thought and action. Sympathetic institutions for the handicapped and unfortunate exist out of the great heart of a helpful people. Our philosophy is that of rehabilitating and instilling hope. While Europe and Asia fight to kill, America fights to save.

My uncle is a shoe cobbler on one of the busy streets of our town. He came to America 35 years ago and opened a shop. No Government decree altered his plans of enterprise. No governmental agency set the price on the products of his labor. He is successful in a free, competitive system and lives on quality of workmanship and customer satisfaction. His right to use his talents and develop economic security for himself and his dependents rests upon our American freedom of contract and the right of private property. In other parts of the earth we may observe, along with the march of dictatorship and totalitarianism, the fall of private property and the mutilation of the right of contract. Contracts are not observed even by the governments themselves.

THE PRIVILEGE OF CITIZENSHIP

Finally, ladies and gentlemen, I consider it a benefit to live in a country where problems of government and social life are the concern of all the people. I readily admit to the Fascist or Socialist that under American democracy we make many mistakes in seeking to solve our problems. We blunder and resort to trial and error methods in our attempt to advance in a young and growing country. But in the end we reach our goal with freedom preserved. By such methods we have achieved a high standard of living. The common man remains above the state and not a servant to it. What a glorious privilege it is to live in a country where achievement, both in private and public life, is a challenge to the common citizen. The future of America is my dream. It is yours too. It is not the aspiration of some empire builder or power-mad egotist. To accept this challenge to advance individually and collectively, I consider, is the greatest benefit of being an American citizen.

The Wisdom of Pope Pius XII

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1940

EDITORIAL FROM THE WASHINGTON TIMES-HERALD

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Times-Herald of Washington, D. C., of May 7, 1940:

Speaking Sunday in honor of Italy's new patron saints (St. Catherine of Siena and St. Francis of Assisi), Pope Pius XII mentioned "the whirlwind of war, unleashed from the depths of human passions and egoism," and addressed this plea to the Almighty:

"Triumph in the world, O God of Hosts, and may that peace return in the midst of peoples and nations whom rancor poisons and vengeance inflames, separated by forgetfulness of Your life. O Jesus, disperse the whirlwind of death which crushes humanity, redeemed by You."

By his unceasing struggle for an early peace, Pope Pius XII shows himself the wisest statesman in Europe today, even as his World War predecessor, Benedict XV, by his 1915 and 1917 appeals for a peace without victory, showed himself Europe's wisest statesman of those times.

Had the Allies and the Central Powers listened to Benedict XV, many of Europe's present-day miseries would most likely have been avoided. By listening now to Pius XII, Hitler and the Allies could avert a catastrophe which threatens to hurl Europe into some species of Twentieth Century Dark Ages.

It is doubtful that Hitler would talk peace on a basis of giving up all of the territory he has conquered. Peace is almost always signed on the basis of the fait accompli, the accomplished fact. But the details of the workable peace could be hammered out if only the peace conference could be got under way. If Pius XII's peace pleas are to fail we fear that the executioner Stalin waits for all of Europe.

Iowa Businessmen Are Opposed to the Conference Committee Report on S. 2009

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1940

MESSAGES FROM CONSTITUENTS

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I wish to include two telegrams signed by the Iowa manufacturers of carbonated beverages and the Iowa legislative representative of the Order of Railroad Conductors. This is clear evidence of the opposition of all railroad labor as well as businessmen throughout the Middle West to the enactment of the transportation bill:

WEST DES MOINES, IOWA, *May 4, 1940.*

VINCENT HARRINGTON,
Representative in Congress,
House Office Building, Washington, D. C.:

Iowa members Order of Railway Conductors urge you to work for the recommitment of the measure generally referred to as the omnibus transportation bill, with instructions to reinsert the consolidation provisions with full protection for labor. We will appreciate your advocacy and support of motion to recommit.

W. H. JEFFRIES,
Iowa Legislative Representative Order of Railway Conductors.

DES MOINES, IOWA, *May 3, 1940.*

Hon. VINCENT F. HARRINGTON,
House Office Building, Washington, D. C.:

Senate bill 2009, being considered in House today, places private truck operators hauling their own products under burdensome requirements of Interstate Commerce Commission. One hundred twenty-five manufacturers of carbonated beverages in Iowa urge your opposition to this bill.

IOWA MANUFACTURERS CARBONATED BEVERAGES,
EDWARD A. KIMBALL, *Secretary.*

Carl Edgar Mapes

MEMORIAL ADDRESS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1940

On the life, character, and public service of Hon. CARL EDGAR MAPES, late a Representative from the State of Michigan

Mr. MARTIN of Massachusetts. Mr. Speaker, it is with great emotion I pay my humble tribute to my warm friend

of many years, CARL E. MAPES, of Michigan. Fate brought us together as members of the Rules Committee. There I learned to appreciate his many splendid qualities.

CARL MAPES was a gentle man. He would never knowingly do any harm or any injustice to anyone. He was one of the most sincere legislators I ever knew. He was a man of wide experience, a profound student of national affairs. He was an expert parliamentarian.

Together with his knowledge he possessed a judicial mind. He was thinking always of doing the right thing, the fair thing. No abler or fairer man ever sat in the American Congress than this distinguished son of Michigan.

When my Republican associates were good enough to choose me as minority leader, it was natural I would lean heavily upon my old friend, who served as assistant leader. I highly valued his good advice and his sterling loyalty.

The loss of CARL MAPES would be severely felt at any time. But his death is a great loss particularly at a time when we are facing many critical days in our national life. Men like CARL MAPES, with the rugged courage of their convictions, are too few in this country. And so are men like him, who in great moments could arise above partisanship for the service of our country.

We who remain pause to pay fitting honor to a great American who has passed on to enjoy the rich reward of a life nobly lived.

Third Term for President Roosevelt

EXTENSION OF REMARKS

OF

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. JOSH LEE, OF OKLAHOMA

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most interesting, able, and eloquent address delivered by my colleague the junior Senator from Oklahoma [Mr. LEE] over station KOMA, at Oklahoma City, and carried over several other Oklahoma stations, on Monday, April 29, 1940, on the subject Third Term for President Roosevelt.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Home folks and neighbors, I am grateful for this opportunity to talk to you about the nomination of a Democratic candidate for President.

There is a great deal of discussion as to who will control the Oklahoma delegation which we send to Chicago.

I do not believe that any individual, whether he is a private citizen or a high public official, should control that delegation. Neither do I believe that any group of politicians should be allowed, through the use of political pressure, to dominate our State convention and deny the people their constitutional right to vote for whomever they wish.

I believe that the rank and file of the members of the Democratic Party is the authority which should control our delegation.

When you deny the people the right to select the nominee of their choice you are thwarting democracy itself, because the rule of the people is the very essence of democracy. Any effort to prevent the rank and file Democrats of Oklahoma from nominating the man they want for President is a dictatorial usurpation of power entirely out of harmony with democracy.

The Presidential primaries which have been held in other States have shown without exception that the people want Roosevelt again. While we have had no Presidential primary here in Oklahoma, yet every single poll has indicated that the Democrats of Oklahoma want President Roosevelt to lead them again. In fact, every method by which public sentiment can be determined shows an overwhelming preference in Oklahoma for Roosevelt.

If we had a Presidential primary, as some States have, where the Democrats could show by their ballots whom they want, there is no doubt but that it would be Roosevelt.

But under the precinct system it is much easier for a small minority, by the use of political pressure, to select a delegation which does not represent the wishes of the majority.

Fellow Democrats, we may just as well face the facts—under our precinct system a well-organized political machine representing, say, only 10 percent of the people can thwart the wishes of the other 90 percent unless the other 90 percent do something about it. Those who constitute a political machine are motivated by patronage and political favors, but the other 90 percent have no other incentive than their desire for good government.

I want the people to have the right to decide for themselves whom they want to lead them in 1940. But, Mr. Democrat and Mrs. Democrat, of Oklahoma, unless you go to the precinct meetings and express your preference in those precinct meetings, you will have no more voice in the selection of a Democratic nominee for President than if you were not a citizen of the United States.

I repeat to the rank-and-file Democrats of Oklahoma: No matter how much you may want Roosevelt, the only way in which you can have a voice in selecting him as the Democratic nominee for President is to attend your precinct meetings and there vote for Roosevelt delegates to the county convention. You can also express your preference by passing resolutions demanding a Roosevelt-instructed delegation to the national convention.

Those who are against Roosevelt are now making a seemingly plausible argument. They are saying, Let us send an uninstructed delegation but one which is friendly to Roosevelt.

Make no mistake, fellow Democrats. An uninstructed delegation would more than likely be an anti-Roosevelt delegation. The plea for an uninstructed delegation is simply the strategy which the anti-Roosevelt forces are using to deprive the rank-and-file Democrats of a delegation that reflects their sentiment.

If the majority of the Democrats in Oklahoma want Roosevelt, then they have a right to a delegation instructed for Roosevelt.

THIRD-TERM ARGUMENT

Then again, the argument is being used that we should not break the precedent against a third term, but that also is merely an effort to deny the people the right to their choice for President of the United States. In a democracy the power to make or change a precedent rests with the people. Therefore, if the people themselves want to change this third-term custom, it is their undisputed right to do so.

The decision whether or not to break this third-term precedent does not lie with Mr. Roosevelt, but it lies rather with the people. He, himself, cannot break this precedent. The people alone have the power to do that. All that President Roosevelt can do is to accept or reject their decision.

There is not a word in the Constitution against a third term. While the founding fathers debated the limitation of the Presidential term, it is significant that they refuse to adopt a resolution prohibiting a third term.

George Washington declined a third term because he was old and wanted to retire, not because he hoped to set a precedent.

Gouverneur Morris, whose hand drafted the Constitution, wrote a letter to George Washington appealing to him to stand ready to serve a third term if circumstances demanded it.

"But you may say that you stand indirectly pledged to private life. Surely, sir, you never gave, nor meant to give, such a pledge to the extent of possible contingencies."

President Grant said of a third term:

"It may happen in the future history of the country that to change an Executive because he has been 8 years in office will prove unfortunate, if not disastrous."

Thomas Jefferson told a close friend in a letter that he stood ready to serve a third term in order to prevent the election of a monarchist:

"There is, however, but one circumstance which could engage my acquiescence in another election—to wit, such a division about a successor as might bring in a monarchist."

Furthermore, George Washington himself made an exception. He told Lafayette in a letter that he saw no propriety in the people depriving themselves of the leadership of their strongest man during a great emergency:

"I can see no propriety in precluding ourselves from the services of any man who, on some great emergency, shall be deemed universally most capable of serving the public.

To compare George Washington's refusal of a third term to the present situation is like comparing a peaceful summer day to a roaring storm on a winter's night.

At the end of George Washington's second term there were many of his able lieutenants, known to be in full sympathy with his political philosophy, who were ready to carry on his work. There were no great economic problems or clouds of war darkening the horizon. Therefore Gen. George Washington, who was an old man, felt that he could allow the mantle of leadership to fall upon younger shoulders.

But the present situation certainly presents a different picture. The economic maladjustments which have been accumulating for years are now all crowding for immediate solution. While at the same time half of the entire world is literally blazing with war. Couple this with the fact that we have available one of the greatest leaders of all times who is just now in the prime of his life, and in robust health, and you have a very different situation.

Today Franklin D. Roosevelt has the best knowledge and grasp of the entire situation, both foreign and domestic, of any man in the United States.

Then ask yourself the question, Does it seem rational that we should deny ourselves his leadership simply because he has had 8 years' experience at the job already?

The situation in which we find ourselves today is, in every sense of the word, an exceptional one. Although President Roosevelt

has accomplished more in less time than possibly any other President of the United States, yet there is so much to be done that his work is not yet finished.

In that regard this has been no ordinary administration, but this administration will mark an epoch in history. It has been necessary to crowd into a few years the greatest number of social and economic reforms ever attempted in the same period of time by the American Government. Therefore this administration, by its very nature, constitutes an exception to the no-third-term rule.

During President Roosevelt's administration we have launched an entirely new program for social and economic betterment, and unless these measures are strengthened by friendly hands many of the gains for humanity may be lost.

The important thing today is that these gains for humanity not be lost. I ask you to consider: Is not this of greater importance than the question of a third term or no third term? The question of 4 years more or 4 years less is of little importance when compared to the economic security of 130,000,000 people. Does not the question of a third term dwindle into insignificance when compared with the importance of extending the great humanitarian program of Roosevelt?

I know that it is argued that others would carry on Roosevelt's program, but we cannot be sure that they would. We are sure that no President before Roosevelt ever inaugurated these reforms which were so long overdue. But Roosevelt did, and we are certain that he would continue his vigorous efforts in behalf of the underprivileged. Therefore, why should we in these critical times exchange a certainty for an uncertainty?

There are many candidates for President in both parties, but none of these candidates have advocated outright repeal of a single one of Roosevelt's important measures. Yet we know that most of these candidates are not in sympathy with this program, and we know that if elected they would sabotage indirectly what they dare not repeal outright.

Furthermore, we know that many of these candidates are giving Roosevelt's program lip service only. We know this because they are promising the people they will keep all of Roosevelt's program going and yet at the same time they are promising the same people that they would stop spending the money which is necessary to keep it going. But the people of this country are not fooled by these empty promises. They know that you cannot have your cake and eat it, too.

Many of these candidates say to the needy old people: We will guarantee you security. But can the old people be sure that those pension payments, which mean life itself, would keep coming to their trembling hands under some other President?

Many candidates tell the farmers that they will carry out the farm program better than Roosevelt and that they will do it without any cost to the Government, but can the farmers depend on that?

We have a tariff system which is very unfair to the farmer. It forces him to sell his commodities on an unprotected market and buy what he uses on a protected market.

Would some other President equalize this disadvantage to the farmer by sending him parity payments to offset that discrimination? Or would we slide back to the old system, which allowed the farmer to sink deeper and deeper into debt without any help from his Government?

Would some other President consider soil conservation a national problem and help the farmer in his efforts to conserve this natural resource? Or would we slide back into the old system of mining the soil and wasting its fertility?

Would the millions of unemployed workers throughout the Nation be able to go home at night to their families with arms full of groceries, or would they be compelled to go home empty-handed and watch their children slowly starve while waiting for some mysterious increase in business to open up employment?

Would thousands of young people who are now able to go to school because of the N. Y. A. program continue their education under some other President?

Would the C. C. C. camps be continued, or would the boys be forced to go back to the highways, the boxcars, and the back alleys?

Would the surplus food continue to be distributed to the poor and the needy throughout the country, or would these surpluses again accumulate in warehouses and elevators while starvation stalked the land?

Would people once more lose their savings in failed banks without Government protection?

Would people's homes be foreclosed again, without Government aid?

Would some other President fight the people's battles for them against the big Power Trust? Would some other President build great power projects, like Red River Dam and Grand River Dam, in order that the people might enjoy the benefits of cheap electricity?

We do not know what the other candidates for President would do, but we know what Roosevelt would do, because we know what he has already done.

One of the necessary requirements for a candidate is that he can be elected. Today Franklin D. Roosevelt is the only man the big Wall Street bankers fear. They fear him because they know they can neither defeat him nor control him. Their opposition to Franklin D. Roosevelt should be proof enough to the people that he is the right man to lead them in 1940.

NO DANGER OF DICTATORSHIP

Then, again, it has been argued that we should not reelect Roosevelt because he might become a dictator, but let us consider that argument.

When the people elect a man for the first time, they are taking a chance that he might abuse the power of his office. But when they elect a man for the second time, they know how he will use his power. Then if they should elect him for a third term, they would be taking much less chance than when they elected him for his first term, because they would have 8 years' experience and knowledge of how he used the powers of his office on which to base their judgment.

The people of the United States know that Roosevelt has used the power of his office for the benefit of humanity. They know that he is the greatest friend of the plain, common people since Andrew Jackson. They know that he is the greatest champion of the downtrodden since Abraham Lincoln; and if they have the chance, they will express that confidence at the ballot box in the next election.

No, my friends, it is not that Roosevelt's enemies fear that he would become a dictator; it is that they know he would be elected.

If Roosevelt had planned to use patronage in order to perpetuate himself in office, then why has he sponsored the greatest extension of civil service of any administration in the history of the United States?

If he had planned to use patronage to extend his power, then why did he sign the Hatch bill and publicly encourage its extension?

No, my friends, it is not because President Roosevelt has abused his power but because he has used his power for the benefit of the many underprivileged people in the United States at the expense of a few overprivileged people.

It may be that many sincere people have a conviction that in normal times we should not elect a President for a third term. But I dare say that most of those people will make an exception as George Washington did, for a critical period.

Not only is this a critical period from the standpoint of social and economic conditions within our borders, but it is also a critical period because of the wars in Europe and Asia. Scarcely before in the history of the world have we seen more turbulent times abroad than we are witnessing today.

Yet in spite of the danger of international involvement, President Roosevelt has for 7 years steered a straight course toward peace. He has at the same time increased the prestige of the United States throughout the world. His foreign policy is based upon justice and is guided by a dogged determination to keep America out of war.

What another President would do we cannot be sure, but the people of the United States have a deep-seated conviction that on account of the critical conditions at home and abroad, they should not be deprived of the leadership of Franklin D. Roosevelt.

Out of every crisis of history, God has raised up a leader to lead the people out of their distress. Such leaders are scattered sparingly through the pages of history.

In the early struggle for freedom, it looked as though the attempt of the American people to found a new nation was doomed to failure. But out of the crisis there came George Washington.

Years passed and another great crisis threatened the destruction of the Nation, but out of that crisis arose Abraham Lincoln.

Years passed again; then came the depression. It was a crisis more dangerous than outside foe and more sinister than civil war. The threat of class revolution raised its ugly head. Utter poverty, stark misery, nakedness, and starvation stalked the land, while warehouses and granaries burst with surpluses. The horrors of the French Revolution, like flitting shadows, lurked in the background.

Adolf Hitler had already predicted the collapse of democratic government in America. Josef Stalin was already planning the extension of communism upon the wreckage of the American Government.

But in this dark hour an airplane roared up from the flying field in New York, and Franklin D. Roosevelt flashed across the sky to Chicago to accept the nomination of his party.

Then in rapid succession there came the greatest list of reforms ever crowded into a new administration. Foreclosures were stopped. The youth of America were gathered up from off the highways. The farmers were saved from bankruptcy. The unemployed were given employment. The hungry were fed, the naked were clothed, and the homeless were sheltered.

Whose clear vision chartered the course of that recovery? Roosevelt's.

Whose strong hand forced it into action? Roosevelt's.

Whose stout heart for 7 years has borne up our courage through drought and flood, wars, and economic disasters? Roosevelt's.

But his work is not yet finished. As the people turned to George Washington in their distress, as the citizens of New Orleans turned to Andrew Jackson in their danger, so are the people of the United States today turning to Franklin D. Roosevelt to lead them again in their battle for human rights and to guide the old ship of state safety through the dangerous waters of international strife.

The drums of public opinion have already sounded the long roll. Every Gallup poll has shown that the people want Roosevelt. Every State primary election has shouted "Roosevelt."

I want the people of Oklahoma to have a voice in this nomination. Away with this talk about certain high officials dominating our State convention and controlling our delegation. The democratic way is to let the people themselves decide this question.

Let the rank-and-file Democrats of Oklahoma attend the precinct meetings Tuesday, May 7, and there decide this important question for themselves.

Liberty, Law, and the War

EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. JOSEPH E. DAVIES, AT MADISON, WIS.

Mr. SCHWELLENBACH. Mr. President, I ask to have printed in the Appendix of the RECORD an address delivered on May 5, 1940, by Hon. Joseph E. Davies, Special Assistant to the Secretary of State, at the banquet of the University of Wisconsin, at Madison, Wis., in connection with ceremonies dedicating the University's new law library. The occasion of this address is of particular interest to me, as I was born in Wisconsin, and I commend the address to the attention of the Senate. Mr. Davies spoke on the topic of Liberty, Law, and the War.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great pleasure to be here for the dedication of the law library at my old alma mater, the University of Wisconsin, and to speak to you tonight on Liberty, Law, and the War.

Civilization, in its development from the cave man to the present day, has contributed to mankind no more priceless benefits than liberty under law—the only kind of freedom that remains secure rather than destroys itself through its own excesses. Law under our system is ordered liberty. It is liberty under law which assures us freedom to worship God as conscience dictates, security in our lives and in our homes, freedom to think, speak, write, or act in a conscious effort to mold conditions of life under which we and our children wish to live. Blest is that government or people which has this citadel of freedom, for tyranny begins where law ends.

During my stay in Europe I saw the stark tragedy of men and women who have been denied these protections. Liberty under law takes on a very vital significance when you see men tried and condemned to die because of the lack of these privileges. Concentration camps, secret police, forced emigration of peoples, mass starvation, economic, industrial, financial, and journalistic slavery, where the state is master of men and men exist only for the state, and those small groups that control the state—these among other things are conditions which make the liberties which we enjoy the envy of millions of people in the world.

WORLD FORCES AND THEIR EFFECT ON US

All peoples have the right to determine their own political and national ideology and policy. That is their own business, respectively, and none of our affair. But it is our vital duty to see, know, and understand the forces which are at work in the world and to guard jealously our own beliefs and our own institutions that the kind of life which we think is worth living shall be preserved.

The fact is that the world has reached a most critical stage in the crisis which confronts a threatened civilization. It is a fact that in many parts of this earth absolutist political creeds, ready to crush all opposition without pity or remorse, are doing battle against our concepts of law and liberty. Our constitutional system under which individual rights are guaranteed is the mother of our economic, social, and political life. We citizens of the United States cannot conceive of living in a society in which rights of the individual, which are the essence of our ideas of religion and life itself, can be systematically denied in the name of a state or a party or a race. It shocks our sense of justice and right that the moral unity of international society should be shattered by wars—declared and undeclared—in which both primitive and progressive peaceful nations, who desire only to be left alone, should be subjected to force, intrigue, sabotage, and invasion.

We, here, are innocent bystanders in what may be the greatest war ever waged. All about us there exist now and are developing further, tremendous upheavals in religious, social, and political concepts. It is intelligent and wise that we should assess these facts and the impact which these forces might have upon our life—upon the well-being of our farmers, businessmen, manufacturers, wage earners, our churches, and possibly even upon the form of government which we cherish.

EFFECT OF WAR CONDITIONS

It would be manifestly improper for me to discuss political or military aspects of, or to take sides in, this military conflict. Our Government is maintaining a strict neutrality. It is entirely proper, however, that we should study and discuss some of the possible effects which are threatening or may threaten our country. Due to Providence, we are secure from any possibility of armed invasion. We can and will protect ourselves and will maintain the security and freedom of this hemisphere against outside intervention. Under the leadership of the President, the Government of the United States is taking far-reaching naval and military precautions to guarantee that security. Protection from the indirect consequences of this war on world economy and upon our own life, however, is more difficult.

FISCAL REPERCUSSIONS

Even though the war were to be settled tomorrow, forces already exist which will have far-reaching effects upon us. I need not recall that the artificial skyrocketing of farm prices and farm values in 1914 and thereafter left disastrous results here, from which we still suffer today. The business boom which may be created here by this war will have its accompanying disastrous reaction unless we exercise the highest quality of wisdom.

A prolongation of the war, on the other hand, will inevitably create even more devastating forces in the world. Each year, entirely apart from the human life and values being destroyed, the belligerent nations are spending for nonproductive purposes—for destructive purposes—an amount of goods and effort costing more than the total gold supply of the world. Whether this war, therefore, results in an "all-out victory" for either side, with a peace imposed by the will of the conqueror, or whether it results in a stalemate, the effect upon the daily lives of our people will be enormous. It will be a new world in which we will live and elements that may be beyond our control will influence the life and the political thought of our children and their children.

No man can foretell now what the outcome of this war will be. An accident might determine the result. But for the rain that fell on the fields of Waterloo the night before the battle, the history of Europe might have been different.

Even though no foreign military plane, warship, or soldier ever touches our shores, the forces which this struggle has unleashed seem sure to affect us vitally. Some of these are the new economic alinements now being forged across the seas.

The outlet for our agricultural, mineral, and industrial products in foreign trade already has been clogged, and the regular channels of peaceful intercourse between nations have been disrupted.

Hundreds of years of experience has taught mankind that the largest volume of trade is induced by having as a basis of their monetary systems a medium of exchange which is convenient, small in compass, reasonably stable in supply, and universally acceptable. The best medium which civilization has found through this experience has been gold. It is the use of this system and this metal which has facilitated the growth of trade and increased its velocity manyfold over the primitive methods of barter. This system brought attendant greater prosperity, higher standards of living, and better conditions of living to the peoples of the earth. That system has now been challenged as obsolete over a large part of the world by a so-called new and scientific system of barter and exchange where the medium is not gold or a currency based upon gold, but which involved the highly controlled and restricted barter of commodities induced by necessity, force, or fear.

POLITICAL, ECONOMIC, AND INDUSTRIAL EFFECTS

Our greatest foreign market and the greatest foreign market of all the Americas is Europe. Nearly 40 percent of Brazil's coffee crop alone is sold in Europe; about four-fifths of Argentina's meat and hides are sold in Europe; nearly half of our agricultural products and more than half of our nonagricultural products are sold in Europe. With Europe denuded of gold, this great market might possibly be temporarily excluded from American goods except on the terms which the buyers would impose; to wit, on a basis of exchange of commodities in such quantities and of such character as the buyer would desire. Such a situation might involve serious dependence of the Americas upon European control, or the alternative of finding other markets, which do not exist, in order to keep the standard of living of their peoples consistent with national well-being.

European markets for our manufactured goods may be lost; South American and other markets now friendly to us might be closed by preferential barter; and it is entirely possible that we might be faced with a financial and industrial crisis compared with which the 1930 depression would rank as a period of prosperity.

The liberal thought of the world cleaves to the hope that following this terrible military destruction in Europe, America will still have the strength and power to help recreate our civilization and heal a stricken world. That hope, we believe, will be fulfilled. To safeguard its fulfillment, however, we should think the matter through and envisage potentialities of the situation. We should not overlook the possibility that these high hopes might be thwarted by the fact that we might be relegated to the position of a minority stockholder in a going world concern in which we would have little to say.

EFFECT ON SOCIAL AND POLITICAL CONDITIONS

These are some of the conditions which confront us and which might bring us face to face with far-reaching and serious effects upon our agriculture, our manufacture, and the standard of workers' wages; with an unemployment situation on such a scale and social insecurity of such intensity that the foundation of our social and political order might be shaken. Despair knows no law.

The continued existence of our individualistic system might possibly be threatened.

These things I do not say will happen. It is, nevertheless, prudent and wise, is it not, that we should appreciate and foresee the forces now existing in the world which affect us, the consequences of which we and our children might have to confront.

There is, of course, another side to the picture. We should not look through a glass too darkly. There are great strengths in our people which are inherent in democracy. James Bryce said 20 years ago:

"No government demands so much from the citizen as democracy, and none gives so much back."

These conditions which I have suggested to you are now being met by American business and by the American Government. It is innate in the genius of our country to meet emergencies and find their solution sanely and practically, and, as our President recently said, with our feet on the ground. It is essential, however, that the facts should be seen and their possible significance understood.

Thus, in conclusion, I would stress again liberty and law as the foundation of our life. Our pioneer forbears left to us precious values as a heritage which we must guard jealously. Whatever the result of the world conflict, our form of government must never be translated from a government of, by, and for the people to a government of, by, and for a dictatorship. Our civil liberties must never be abridged to deny us the equal protection of the law, liberty to worship God freely as conscience dictates, the right to fair trial, against which no writ can ever run, and that form of life in which men are not slaves to a state but where the state is the servant of mankind, where the dignity of the human spirit shall be preserved as the most priceless attribute with which God has invested mankind. To deserve these blessings, we must be vigilant in their protection.

So, my fellow citizens, I recommend that you give these few thoughts and suggestions your consideration. This is our America.

Addresses at Dedication of Tablet Commemorating Cooperation of Railroads With the Government in 1917

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. LOUIS JOHNSON, ASSISTANT SECRETARY OF WAR, AND REMARKS BY JOHN J. PELLEY AND DANIEL WILLARD

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Hon. Louis Johnson, Assistant Secretary of War, together with introductory remarks of John J. Pelley, president of the Association of American Railroads, and Mr. Daniel Williard, president of the Baltimore & Ohio Railroad. The addresses were delivered in connection with the dedication at the Union Station in this city on April 26, 1940, of a bronze tablet commemorating the patriotic cooperation of American railroads with the Government and the services of the Railroad War Board in 1917.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

INTRODUCTORY REMARKS OF J. J. PELLEY, PRESIDENT OF THE ASSOCIATION OF AMERICAN RAILROADS

Our gathering here today is to do honor to the men who were responsible for a significant achievement in industrial coordination, undertaken in patriotic support of the war effort of the United States in 1917.

The lessons of the experience of that time are alive with meaning for us today. No American wants to see this country at war, but every American knows that the Nation must be prepared to defend itself, come what may—and in that defense transportation arteries of the Nation are an essential element. So today, in commemorating events which took place 23 years ago, we are not simply talking about the past. We are looking at the past with an eye to its lessons for the future.

It is particularly fitting therefore that we should have in this gathering some of those who were responsible for what was done in 1917 and 1918—two members of the War Industries Board of that period, for example, and surviving members of the committee of railroad executives, which came to be called, informally, the Railroad War Board. We have with us, too, a number of the members of the staff of that board—railroad men who gave devoted service under great difficulties; also, the only present member of the Interstate Commerce Commission who was a member of that body during the World War period.

Leaders in Congress who have a peculiar interest in transportation or in the national defense, or both, are with us today, as well as those in the executive departments and other agencies of the Government which have special responsibilities in connection with transportation or the national defense. We have, too, officers in key positions in the Nation's armed services. By the presence of so many of those to whom the Nation looks for the plans and organization necessary to meet any future national emergency, we are especially honored.

The first step toward organized cooperation with the Government taken by any industry after the declaration of war in 1917 was taken by the railroads. For that Daniel Willard was responsible more than any other one man. Sixty years he has been a railroad man, starting as a fireman in Vermont. For more than 30 of these years he has been president of the historic Baltimore & Ohio. His career is familiar to you. His position of leadership, not only in transportation affairs but in national affairs, came to him unsought by reason of his ability, his courage, his unselfish devotion, his fairness, and his friendliness. The railroad industry does honor to itself when it presents to this audience, and to the national audience made possible through the facilities of the Mutual Broadcasting System, the dean of railroad presidents—Daniel Willard.

ADDRESS OF DANIEL WILLARD, PRESIDENT OF THE BALTIMORE & OHIO RAILROAD

On the 6th of April 1917, the Congress of the United States declared that a state of war existed between this country and Imperial Germany. Just 5 days later, on April 11, more than 50 railroad presidents, representing practically all class I railroads in the United States, assembled in Washington in response to an invitation from the Council of National Defense, extended myself as chairman of the advisory commission of the Council. They met at the Willard Hotel. Mr. Hale Holden was requested to take the chair, and presided until the conference had accomplished its purpose.

In explaining the call for the meeting, I stated that a few days previously the Secretary of War, who was also Chairman of the Council of National Defense, had told me that President Wilson felt concerned about the transportation situation, our country having entered the war, and feared that it might be necessary for the Government to take over the control and operation of the railroads, as had been done in England. Feeling that this action was neither necessary nor desirable at that time, I suggested that if the Council of National Defense would request me as chairman of its advisory commission to take the matter up with the railroad executives, I believed they would take such immediate steps as might be thought necessary to meet the situation.

Having explained the call for the meeting with reasons which made prompt action seem imperative, I recommended that those present select an executive committee and give it the necessary power to act for all the railroads during the war emergency. This recommendation was unanimously adopted. A committee was then appointed, of which Mr. Howard Elliott was chairman, to draft a suitable resolution, and a brief recess was taken during which time Mr. Fairfax Harrison prepared the following:

"*Resolved*, That the railroads of the United States, acting through their chief executive officers here and now assembled, and stirred by a high sense of their opportunity to be of the greatest service to their country in the present national crisis, do hereby pledge themselves, with the Government of the United States, with the governments of the several States, and one with another, that during the present war they will coordinate their operations in a continental railway system, merging during such period all their merely individual and competitive activities in the effort to produce a maximum of national transportation efficiency. To this end they hereby agree to create an organization which shall have general authority to formulate in detail and from time to time a policy of operation of all or any of the railways, which policy, when and as announced by such temporary organization, shall be accepted and earnestly made effective by the several managements of the individual railroad companies here represented."

The conference unanimously adopted this resolution and immediately selected an executive committee to carry out its provisions. This committee consisted of Mr. Fairfax Harrison, president, Southern Railway, chairman; Mr. Samuel Rea, president, Pennsylvania Railroad; Mr. Howard Elliott, president, New York, New Haven & Hartford Railroad; Mr. Hale Holden, president, Chicago, Burlington & Quincy Railroad; Mr. Julius Kruttschnitt, chairman, Southern Pacific Lines.

Two others were designated to serve as ex officio members of the committee—Hon. Edgar E. Clark, member, Interstate Commerce Commission, and myself, chairman, advisory commission, Council of National Defense.

The committee became known as the Railroad War Board. It established headquarters in Washington, and its members gave substantially all their time to the matters entrusted to their direction until the railroads were taken over by the President on December 28, 1917.

This action by the railroad industry as a whole in pledging its united support to the Government during the period of the war and subordinating during that period all of its individual and competitive interests in an effort to create a truly continental and coordinated system was the first action of its kind taken by any industry after the United States entered the World War. The example thus set by the railroads was, as I had ample opportunity to know, of great value later on in pointing a way in which other industries equally loyal and anxious to be of service to the country might correlate their activities in the most effective manner.

The results accomplished through the activities of the War Board are a matter of record, and I shall not dwell upon them save to refer briefly to a report which was prepared by one of its members, Mr. Julius Kruttschnitt, for the chairman of the Senate Committee on Interstate Commerce. In this report Mr. Kruttschnitt pointed out that the increase in ton-miles alone handled by the railroads in 1917 over 1915 was greater than the total ton-miles handled in the last previous year of record by all the railroads of Canada, Great Britain, Germany, Russia, France, and Austria combined. No greater tribute could be paid to the loyalty of the individual railroad companies and their employees and to the effectiveness of the War Board than was expressed in this report.

However, it became apparent near the end of the year that it would be desirable, if not necessary, for the Government to take over the control and operation of the railroads. There were several reasons why such action seemed necessary. The coordinated operation of the railroads required the rerouting of much tonnage in order best to serve the country's needs. This resulted in the excessive concentration of freight on certain lines. On others it caused a relative reduction in traffic, with consequent serious financial disturbance which was beyond the power of either the railroads or any then existing Government agency to remedy. Equally, if not more serious, was the fact that no agency existed at that time with power to determine which shipping orders for Government account should be given preference when preference was necessary, as frequently happened, and the railroads themselves had no legal right to do so. As a result railroad tracks, particularly at eastern industrial centers and seaports, became congested with cars which could not be unloaded because of lack of ships to receive the tonnage, or because of inability of consignees to accept it. The railroads moved the freight promptly enough, but large numbers of their cars were used by shippers for storage, instead of transport, under the emergency conditions.

I do not hesitate to say that with the railroads as now organized, and with the War and Navy Departments also organized as they now are to deal promptly and understandingly with the difficulties certain to arise in time of war, there need be no feeling of concern about the ability of the railroads under private ownership and management, with the cooperation of the Government, to handle promptly and effectively in the future any transportation situation with which they may be confronted.

I can think of no better way of bringing my remarks to a close than to quote from a public statement made by the late Newton D. Baker, Secretary of War. In referring to the achievement of the Railroad War Board, Mr. Baker said:

"It strikingly illustrates the patriotic cooperation of American railroads with the Government, and also their tremendous capacity."

It seems to me highly appropriate, having in mind the event to which I have briefly referred, that a memorial should be placed in this Union Station under the very shadow of the Nation's Capitol—a memorial designed not only to commemorate the work of the five able and distinguished railroad officers who gave the best of their thought and effort to the successful performance of the important task which had been confided them, but in a larger sense to mark a great and patriotic accomplishment by the railroad industry as a whole.

Mr. PELLEY. Mr. Willard has told you what was done in 1917, and how it was done. Now for the future. By act of Congress, responsibility for making plans for use of the Nation's economic power in any future national emergency is placed upon the Army and Navy Munitions Board, a continuing body which reports directly to the President of the United States. The responsible members of that Board are the Assistant Secretary of War, Col. Louis Johnson, and the Assistant Secretary of the Navy, Mr. Lewis Compton, both of whom are here today. It is to be our privilege to hear from Colonel Johnson, of West Virginia, lawyer, soldier, former commander of the American Legion, and now Assistant Secretary of War. Colonel Johnson.

ADDRESS OF HON. LOUIS JOHNSON, ASSISTANT SECRETARY OF WAR

Railroad Executives of America, I thoroughly agree with Mr. Willard. We in the War Department have full confidence in the innate capacity, in the cooperative spirit, in the ability, and in the patriotism of our railroads to cope successfully with the transportation problems that any grave military emergency would involve. Our faith is well founded.

We believe in the capacity of the railroads because we are impressed with the leadership of its management, which is so appropriately represented here today in the person of Daniel Willard.

"Uncle Dan," as we in West Virginia know him best, epitomizes the "master railroader"—a man who has risen from the ranks of labor to the presidency of a great corporation, but who has never forgotten the hopes and the aspirations of the common worker; a student whose education was cut short by economic adversity, but whose passion for the acquisition of knowledge has never abated; an executive who formulates broad principles of policy, but who by experience knows and understands to the minutest detail the operations of a vital industry; a courageous, self-reliant, independent soul, who, in peace or in war, gives of himself unstintingly to his community, to his people, and to his Government; in brief, the highest type of American.

I congratulate you upon his selection as your representative on this occasion when the railroads and the Government join hands to memorialize in bronze your patriotic cooperation during the crisis of 1917–18.

The cooperative spirit which you displayed during the World War, I am confident, will always be present to tide us over any serious military crisis that may arise in the future. Every day you manifest your helpfulness.

The quartermaster general of the Army, our traffic manager, relies upon your invaluable counsel to meet his transportation problems, and you never disappoint him. The five railroad employees whom you have assigned to his office have a complete understanding not only of the Army's needs but even of the War Department's own regulations, and they never hesitate to give us the full advantage of their experience.

In the recent concentration of troops for maneuvers, we transported by rail approximately 25,000 men with their arms and equipment, hundreds of motor vehicles with their spare parts, and tons of food and supplies; yet there were no delays, no break-downs, no injuries to men, and no damage to property. To be sure, we moved only by thousands, and a major mobilization might call for the transportation of millions, but the teamwork that we have developed between the Army and the railroads in meeting our peacetime needs should serve both of us well if a call for greater effort should ever be sounded.

Our confidence in the ability of the railroads to meet a transportation crisis more effectively than in 1917–18 is based principally upon the improvements which the industry itself has initiated. You railroad men have increased the efficiency of your plants with heavier rails, stronger ties, and more dependable signals. You have made tremendous strides in developing safety, in reducing time, in decreasing the drudgery for labor, and in improving service to the public. You have added shop capacity to maintain your equipment. You are making a serious effort to keep your rolling stock up to the high standard that you have established.

You have created and perfected an organization to meet the demands of war under private individual management. Your Association of American Railroads, with its far-flung regional offices, is performing a most useful function. It is helping you to meet jointly your common problems of peace and war without giving up the individuality of each one of your separate systems.

No; you are not in perfect shape. No industry is or can hope to be in a dynamic world. You are better prepared to meet a military emergency than you were in 1917–18. Of that no one is in doubt. You have your problems but none that cannot be met by mutual understanding, patience, courage, and cooperation.

The successful operation of our railroad system to meet the exigencies of war depends, however, not only upon the industry itself but upon the armed forces in whose interest it must operate. If the Army and Navy program for the mobilization, the training, the equipping, and the moving of our fighting men from home to cantonment and from maneuver area to theater of operations is not developed along sound lines, then no transportation system in the world, no matter how efficient it may be, will be able to function effectively. If the Army and Navy plans for the procurement, the transportation, and the storage of munitions are not well worked out and coordinated, then all the best efforts of the industry can be nullified.

Mr. Willard already has pointed out our shortcomings of 1917–18. We admit them, and we are determined that they shall not be repeated. In 1917–18 we waited until war was declared before we selected our cantonment sites. Today we already have established many training areas. During the World War we permitted five Army purchasing agencies and the Navy to bid against each other for supplies, loading and unloading facilities, and for transportation. Today we have plans for the coordination of procurement activities which do away with interdepartmental competition.

In the last military emergency we concentrated the production of munitions into a narrow geographical area in the eastern part of the United States. Today we have more than 10,000 private plants scattered throughout the entire country, which are prepared to meet a war load. In selecting each of these plants, we carefully examined its available transportation facilities and assured ourselves of their adequacy.

Our Army and our Navy should be better prepared than they were in 1917–18 to handle and to distribute expeditiously the munitions which industry would turn over to them. They have avowed that never again will they permit the congestion of terminals and miles of railroad sidings with thousands of cars awaiting unloading.

Our transportation plans are not rigid. They do not contemplate the regimenting of the railroads. They merely seek to establish a broader spirit of cooperation and a practical method of meeting a grave situation, if it should ever arise—and may God grant that it shall not. There is no place in our plan either for Government operation or for Government ownership.

Government operation of railroads is especially distasteful to us. We have predicated our whole industrial mobilization program on the maintenance of the established American way of getting things done. Our railroads now have proven their ability and their capacity. Those who operate them know more about transportation than any substitutes who could be mobilized in the midst of a grave crisis. The Army is not organized to run the railroads. It is honest enough to admit its own lack of training and capacity. It does not want the job. Moreover, it is satisfied that the railroads under private management are always in a state of national defense and are admirably suited to transport men and munitions in time of war. With the job of running a war on our hands, we would have all we could do without embarking on an experiment in Government operation or ownership.

Personally and officially, I am opposed to government ownership. I doubt whether it would offer the opportunity for development of such men as Dan Willard. I do not want to put on the public pay rolls the thousands upon thousands of wage earners, now privately employed by the American railroads. I am against revolutionizing our whole system of private investment, and perhaps jeopardizing the value of railroad stocks and bonds held by banks, insurance companies, educational institutions, and others. I dislike the idea of an absolute state monopoly in the field of transportation; and I assure you, gentlemen, that the plans of the Army and Navy Munitions Board in no way encourage Government ownership or operation of railroads.

The railroads play a tremendous role in the development of our country. They serve every one of our 48 States. They bring our people more closely together and knit them into a cohesive national unit. Other transportation agencies, such as water, air, bus, and truck have their place in the economic life of America, but the railroad still predominates. These may supplement the railroad but they can never replace it. From three-fifths to two-thirds of all of our transportation needs the railroads can and do meet. We must therefore keep them financially sound and physically strong. They are the blood stream of American life in peace and in war.

While I have talked about war, let my words be not misconstrued or my intentions misunderstood. In America we ask only that we shall be permitted to live and work and build to greater things in peace; in short, to carry on our normal functions as a Nation, at home and abroad, not at the point of a bayonet but according to sound governmental and business methods. Our whole philosophy as a people is opposed to war.

Thus we are organized for peace. The railroads and all industry are geared to the productive and progressive ways of peace. That this progress may not be halted by the mailed fist of war is our fervent prayer. But it will take more than prayers to protect it. We would be rash, indeed; yes, even criminally negligent, if in a world where armed men are on the march, and reckless leaders reach with greedy hands for conquest by force, we failed to do the things that are necessary to defend our American heritage.

In preparedness we shall find our greatest assurance of peace. So we are preparing to hold that which is ours by peaceful means if possible but by force if force is brought against us in spite of everything we shall do to discourage it. In this spirit, let the program of the War Department be understood by all people. We shall carry it to fulfillment not in secret conclave but in the light of constructive publicity to the end that our people shall be informed and being informed will understand.

We are making definite progress in our preparedness program—progress toward which not only the railroads but all elements of American society are contributing. We still have much to do, but, with the President's alert attention to our needs and the cooperation of Congress, we have every confidence that we shall reach our objective.

We want an army of the best-led, the best-trained, the best-armed, and the best-equipped fighting men in the world—an army that can be transported, supplied, and replenished by an efficient transportation system—an army that will not threaten the weak and the oppressed—an army that will stand majestically on guard over the peace we all cherish.

Mr. PELLEY. Thank you, Colonel Johnson, for such an analysis of our transportation situation, and so heartening an outline of the future, insofar as the national defense is concerned. It is good to know that the lessons of 1917 and 1918 have been taken to heart, both by the railroads and by the Government, and that through mutual conference and advance understanding we have set up the framework of cooperation between the Government and the railroads in any future national emergency.

Nazi Infiltration in the Balkans

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8 (legislative day of Wednesday, April 24), 1940

ARTICLE BY DOROTHY THOMPSON

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix an article by Dorothy Thompson on the subject of Nazi infiltration in the Balkans, published in the Washington Post of today.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of May 8, 1940]

FIFTH COLUMN ON THE MARCH

(By Dorothy Thompson)

NAZI INFILTRATION IN THE BALKANS

ZURICH.—If and when the war actually comes to southeastern Europe, it will have been preceded long before by the "fifth column" of those agents, secret and open, those conspirators, spies, commercial agents, provocateurs, revolutionists, and propagandists, who search out the Henleins and the Tisos and the Quislings, the malcontents and the traitors, the idealists and the rascals, who prepare the way and open the gates for the soldiers.

This is a strange war. It is not only a war; it is a revolution. There is little chivalry in it, unless it be perhaps among common soldiers who do their tasks, among airmen who form a transcendental society of their own, and among seamen who fight in actual conflict with their equals according to the old tradition. Waters and roads are mined by soldiers. That is war. But nations are mined and undermined in other ways. The Nazis have gone to school with the Russians and have been good students. The Italian Fascists know the technique also. Russia, Italy, and Germany are all led by revolutionists, who have made subversive movements into instruments of conquest. In this field the Allies are absolutely no match for them.

The Nazis, especially, proceed with a scientific thoroughness. There is not a disgruntled individual, not an overambitious statesman or politician, not a resentive social class, not a discontented national minority, not an avaricious businessman whom they overlook. Like strategists surveying the terrain upon which the campaign is to be conducted, mountains and streams that must be crossed, swamps that must be circumvented, the estates and farms upon which troops can be quartered; who study the climate and the seasons, who know when the roads will be muddy or under snows, estimating every advantage and every handicap, these twentieth-century revolutionary leaders sap the very structure of the society against which they are campaigning, and know all the weak points, which can be made weaker.

I write this on the train between Trieste and Zurich, on the way back from a tour which has taken me to Italy and Turkey, to Rumania, Hungary, and the two Provinces of Yugoslavia, Serbia, and Croatia—from the east of Germany to the Dardanelles, from the Adriatic to the Black Sea, and back again. In no country is the aspect of things quite the same as it is across the border in the neighboring country. But one aspect is everywhere typical: The technique of subversion as a weapon of conflict.

Because the Nazis have perfected the weapon with the most meticulous thoroughness, while, at the same time, their methods are the most crude and the most obvious, it is easiest to study the German side of the picture. The Russians are more devious, and the Italians more inhibited, subtle, and Machiavellian.

In contrast to the Allies, who pursue their own political aims along the more trodden and traditional paths, working through governments, established commercial connections, and espionage organizations euphemistically called intelligence services, the Germans, who use these mediums also, vastly expand them in an effort to reach, tap, and influence the broad masses. I have counted 10 ways in which they work; I have doubtless overlooked numerous others.

1. The German minorities. In all the southeastern countries there are large colonies of German-speaking people, settled there for generations, but never completely divorced from the influence of the mother country. These people have been worked upon for years. They have their own Nazi organizations, their own Gestapo, and they receive instructions from headquarters. In Yugoslavia,

German settlers began purchasing land along the Danube a short time ago. To counteract this, the Yugoslav Government published a decree forbidding the sale or transfer of land immediately proximate to this most important stream, or within 50 kilometers of its shore.

2. Through other dissatisfied national minorities. Thus the Magyar as well as the German minority in Rumania, has been promised reunion with Hungary when the time comes to "break the Rumanian yoke." In Croatia, the northwestern Province of Yugoslavia which has always been rebellious under the highly centralized government concentrating its power in Belgrade, the movement for Croatian independence is encouraged. Its leader is a man named Budak, with a scavenger named Buc. The powerful Croatian peasant party, led by Dr. Matchek, is against this group because they know that an independent Croatia, divorced from the rest of Yugoslavia and surrounded by Germany and Italy, would very soon forfeit its Adriatic coastline to Italy, and in any case be about as independent as Slovakia is today.

But there are idealists and scoundrels ready to join any movement that can call itself patriotic. Despite the fact that the Independence Party (the Frankists) are responsible for having produced the camarilla that, organized, drilled, and nourished on Hungarian and Italian soil, committed one of the most wretched crimes of the decade—the assassination of King Alexander and French Foreign Minister Barthou at Marseilles—they are not yet finished. The local leader, Budak, was recently imprisoned by the authorities. Only a few days ago his wife was found dead, head-downward in a well. The Frankists raised the cry of murder, although the verdict was suicide, and laid the crime at the door of the Peasant Party. Budak was released and his wife's funeral became the occasion for a great demonstration in the Croatian capital of Zagreb, where the Frankists appeared for the first time in a distinguishing dress—a sort of pill-box cap.

In the next few days, leaflets were distributed in Ljubljana, the capital of Slovenia, another Yugoslav province that wishes for home rule. These leaflets, supposed to have been distributed by students, demanded Trieste, Fiume, and the littoral—parts of Italy—for Yugoslavia. Immediately there were counter demonstrations in Italy. No responsible element in Croatia or Slovenia could possibly have been guilty of such nonsense. Yugoslavia wants nothing less than an incident with Italy at this time, and even the Frankists, supported by Italy, could not sincerely wish an incident.

Such incidents are not uncommon. Within the last 3 weeks the former prime minister of Servia has been arrested, together with the chief of police. The arrests were minimized in the press and Yugoslavia. Immediately there were counterdemonstrations in foreign diplomatic circles that both men were pro-German with Fuehrer complexes, nor are those facts alone sufficient to cause the arrest of two such prominent figures.

The point is that constant interference in internal political affairs is a cardinal policy of the undermining process.

3 and 4. Commercial agents and commercial offices exercise a constant pressure both upon individuals and upon the press. Germany is and always has been the most important seller and buyer in all the southeastern countries. The acquisition of Austria, Czechoslovakia, and Poland, along with industries and markets of those countries, has increased her position. In Budapest, Belgrade, Zagreb, and Bucharest shops are full of German wares of all kinds. The great German companies, such as A. E. G. (electrical products) and the sellers of machinery, cutlery, cosmetics, and similar products, luggage, cameras, and novelty articles are heavy advertisers in the newspapers, and their pressure greatly reduces the impartiality of the press. The newspapers almost invariably give front-page prominence to the official German communiques regarding the war and bury the Allies' news in condensed form in the back pages.

Every commercial office in this part of the world is a propaganda display. In Zagreb, for instance, the German travel bureau was displaying a few days ago photographs of the finding of the Polish documents, facsimiles of some of the correspondence, together with many photographs from the Norwegian front. A long queue of Zagreb citizens were staring at the display. The English Cunard Line office, farther down the street, contented itself with a long account and a boring picture of the British Fleet, which had probably been in the window since before the start of the war.

The "sensational" Ribbentrop revelations attempting to prove that it was the British and not the Germans who violated the independence of Norway were not taken seriously by a single Government official anywhere with whom I was able to talk, but the Germans believe that the broad public is greatly influenced by this sort of sensationalism. They hammer on it inside and out, while the Allies do nothing to counteract the impression upon the nationals.

5. Contacts between German and local businessmen are used constantly to emphasize the rationalization, efficiency, and progress which would ensue from German economic organization of the entire Danubian basin, and the advantages to executives who, when the change came, would already have become recognized as sympathetic and willing to cooperate.

6. Widespread anticapitalistic propaganda, spread among the masses mostly in the form of pamphlets, accusing Great Britain and France of trying to quench the social revolutions of the Nazis and the Russians. This propaganda makes full use of quotations from British left wingers themselves, depicting the worst aspects of social life in Great Britain and France, and is supported by Russian propaganda as well.

7. Appeals to soldiers and the population at large depicting the enormous strength of the German Army and the complete hopelessness of resistance, with terrifying references to the fate of Poland and Norway and the blissful happiness prevailing in wise and reasonable Denmark. This propaganda is distributed by leaflets and supported by the German press, which has wide distribution all through this part of the world, reaches it earlier than British, French, or Swiss newspapers, and is published in a language more widely spoken here than any other foreign tongue. Especially effective are the German illustrated papers, which tell their story in a language that even the illiterate can understand. The Allies have no press whatsoever that can tend to offset this.

8. Anticommunism. The Nazis do not hesitate to talk almost the exact language of the Communists in addressing factory workers and miners and to present themselves as the bulwark against communism to the conservative peasants. At the same time, in the Slav countries and to peasants and workers alike they undermine the malevolence to their cause of Russia, who in the Slavic peasant mind is still Mother Russia, whether imperial or Soviet.

9. Actual corruption of officials. It is very difficult to trace this, but it exists on a grand scale, according to the evidence of all who know these countries well from long residence in them.

10. Terror. The candid revelation of what happens to individuals and officials who take an outspoken stand against the Nazi plans: "If we succeed and you are known to be our enemy, exile, concentration camp, or death will be your lot."

Many who sincerely believe that the Germans will lose the war nevertheless contemplate the possibility of a temporary German occupation and have no desire to be its victims.

The Henleins, the Seyss-Inquarts, and the Quislings are the German advance guard who are all over southeastern Europe. The allied counterespionage, counterpropaganda, and counterorganization does not even touch the peoples whom the Nazis reach. For when the Nazis fail to reach the responsible they go after the irresponsible, and they have learned from experience how valuable both can be to them.

United States Aid to Allies

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8 (legislative day of Wednesday, April 24), 1940

ARTICLE BY LUDWELL DENNY

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the CONGRESSIONAL RECORD words penned by Mr. Ludwell Denny on the subject of United States aid to the Allies, recently published in the Washington Daily News.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News]

UNITED STATES AID TO ALLIES

(By Ludwell Denny)

Many informed persons here assume that the United States will be financing the Allies' war within a year. Whether that will lead to direct American military involvement is a matter of dispute.

Some military men think we will go into the war next year. Others think that, even if we went in, our participation would be limited to naval and air aid. Another school maintains that the Allies will be satisfied to let our Navy guard the Pacific, while our war industries supply Allied troops in Europe.

But few doubt that the United States will be furnishing the Allies aircraft and other war materials, metals, and food on loans—which probably never will be paid.

This may seem somewhat surprising in view of the fact that it is impossible under existing laws. The Johnson Act and the Neutrality Act prevent such loans and credits. Of course the theory is that those laws will be modified, just as the other neutrality law was amended when the pressure came last autumn. Under that revision the arms embargo was thrown out in favor of a cash-and-carry provision.

The Allies can meet the cash requirements of the law for several months yet. But by next winter they will be scraping bottom. Then we will be given the choice of losing their war business or financing it.

The arguments for loans will be potent. They will be the same as those used in the last war, brought up to date. Here they are:

1. To shut off the war business would increase our unemployment and disrupt industry dangerously.

2. It also would undermine our own military preparedness by depriving the United States Army and Navy of a going war industry, capable of turning out adequate equipment quickly, if and when needed for Western Hemisphere or Pacific defense.

3. The American farmer has been the victim of the cash-and-carry Neutrality Act provision. Because the Allies have been forced to use their resources for war planes here, they had to shift their purchases of agricultural products elsewhere. Only by loans to the Allies can the American farmer now regain and increase his foreign market, without which he is doomed.

4. Since the Allies are fighting our battle for democracy, standing between us and the aggression of dictators, it is our moral and patriotic duty at least to give them our products on credit.

Although one hears these arguments frequently today in off-the-record conversation, there is little public discussion. The reason, obviously, is that politicians are very much aware that public opinion is now isolationist. They fear that even preparatory propaganda for revision of the Johnson and neutrality laws might easily backfire. This being a campaign year, few are willing to take that chance.

But after the November election the attempt to legalize allied loans certainly will be made.

There is rather surprising evidence that the voters themselves, especially in the isolationist Middle West, are aware that this is the play. For instance, when Candidate Tom Dewey stopped at Oklahoma City last week, he was asked whether he would favor repeal or modification of the Johnson law, which prevents loans to nations which have not paid their last war and post-war debts to us.

Mr. Dewey said he was opposed to any modification of that law.

The isolationists will try to commit both parties on this issue in the campaign platforms, as well as the Presidential and congressional candidates.

But, regardless of commitments, many think the next Congress and administration will lift the loan ban—whoever is elected. That may or may not be the outcome. But, anyway, there will be a bitter fight on this war issue.

Administrative Law

EXTENSION OF REMARKS

OF

HON. EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. NATHAN L. MILLER

Mr. BURKE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able address delivered by Hon. Nathan L. Miller, former Governor of New York, and a great judge, at the meeting of the New York State Bar Association, held at Saranac, N. Y., July 2, 1938. Those who are interested in the basic principles will find in this address strong support for the passage of the so-called Logan-Walter bill.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I shall speak of what has come to be known as administrative law, which now requires the businessman to have a lawyer constantly at his elbow. Lawyers certainly can have no selfish reason to complain of that or to favor the administration of the law by regularly constituted courts of justice, though some may attribute selfish motives to the lawyers' support even of the Ten Commandments. The record of the bar for its unselfish and patriotic contribution to the establishment, development and preservation of our institutions and to the cause of liberty and human progress must constitute the answer to such critics.

By the slow process of attrition institutions may be destroyed that could not be overthrown by direct assault. I have witnessed that process at work for half a century. The founding fathers intended the Constitution to be the supreme law of the land. The people adopted it to be the supreme law of the land. No one doubted that its exposition was for the courts. No one supposed that the courts would determine rights of litigants according to a statute in conflict with the supreme law. That the supreme law should be controlling in the decision of causes was implicit in the definition of judicial power and in the declaration that the Constitution was the supreme law of the land binding even on State judges. The contemporary evidence is conclusive that those provisions were drafted with that intent. However, the question was mooted at an early date and was set at rest for a hundred years by John Marshall.

When I came to the bar the question was again being mooted, mostly in academic halls. Men out of sympathy with the spirit of our institutions began attacks upon the courts for usurping, as they said, legislative power. In truth they were against any limitations on the power of the popular branch of government, not understanding that the Constitution was designed to set limitations even on the popular will, to safeguard individual liberty. In truth they were against having any written Constitution at all. They preferred the parliamentary system of England.

But we had a written Constitution. It had been evolved from the experience of the ages to make our hardly won liberties secure. It had established a system and structure of government based upon principles which all human experience had proved to be necessary to preserve liberty from despotic and arbitrary power. It had been reconsecrated in the precious blood shed in a titanic civil war.

But all that meant nothing to doctrinaires. Their ranks were swelled from time to time by those who wanted to substitute an alien system for the one whose blessings they or their fathers had been allowed to enter this country to enjoy. Impressionable youth susceptible to false teaching and false idealism swelled those ranks in ever-increasing numbers.

Thus considerable body of opinion was developed that we had outgrown the Constitution, that it had become unsuited to modern conditions and social needs, though under it an acute social consciousness had been developed whose demands could be met within its provisions, and certainly by amendments adopted in the orde `y way provided without destroying the system based on the accumulated wisdom of the ages and established and preserved at such cost. Social need was the excuse put forward to deceive the people. The destruction of that system was the objective.

Finally, men bent on the accomplishment of that objective found themselves in positions of influence under conditions favorable to its accomplishment. They began their attack cautiously. But it gathered boldness as it developed, and today the only thing that stands in the way of its complete success is the abiding faith of the American people in the system under which they have enjoyed the greatest progress with the widest distribution of its blessings ever enjoyed by any other people anywhere.

By the process of trial and error administrative law has been hit upon as the most effective weapon to destroy our institutions. Through its channels those who have been well called termites can safely attack the foundations of our American system, for it has been discovered that administrative law screens them from judicial scrutiny. Oh, I know that when one swelled with arrogance oversteps the forms of due process he may not escape the judicial eye, but most of them are clever enough scrupulously to observe all the forms, while disregarding the substance, of due process, and they can do it in such a way as to thwart judicial review, as we all know.

Let no one misunderstand me. The exercise of legislative and judicial power by specially constituted tribunals has become a necessity in our complex civilization. There are problems constantly arising which neither the courts nor the legislatures are constituted to deal with and which can only be handled efficiently by specially equipped agencies or tribunals in whom under adequate safeguards some legislative and some judicial power must be vested.

We have heard at our meetings for many years concern expressed and warnings uttered by men of wisdom and experience because of the growth of such agencies and tribunals and the extension of their powers, though at first they were created with carefully defined powers to be exercised in accordance with plainly prescribed standards and though care was taken to assure their impartiality and their freedom from political influence. Thus the Interstate Commerce Commission, the Federal Trade Commission, and the Public Service Commissions of the States were created.

But in the effort to subject the varied activities of the people to Government regulation and control, all safeguards have been disregarded. New agencies have been created, existing ones have been clothed with legislative and judicial power, without a single thought of safeguarding the manner of its exercise. And I make the assertion that already there are enough governmental agencies combining in the same individual or individuals executive, legislative, and judicial powers without a single restraint upon their exercise to make this a government of men and not of law, though the forms of law may be preserved.

Already we have heard the head of an executive department, even a member of the Cabinet, charging the Supreme Court with usurping his functions, because, forsooth, the Court had held that in exercising judicial power he must comply at least with the forms of due process. We have heard members of these tribunals on the air defending their fairness and impartiality and charging that any interference with them is judicial usurpation. Such outbursts are symptomatic of what is going on. They show the effort to substitute executive authority for fair and impartial judicial determination. They show the confusion of thought already created by the extent to which administrative agencies have been clothed with judicial power. They show a growing impatience with the judicial process which requires notice, a fair hearing, and an impartial determination. That has become too slow and cumbersome. That is an unwelcome check on executive authority which must not be hampered in its worthy efforts to advance the public good. So has autocratic power always been justified. So may the people be made subjects and their servants become their masters. So may our free institutions be overturned by a process so gradual that it escapes

notice until it has all but succeeded. The truth is that the people have been drugged into a state of unconsciousness. By slow stages the safeguards of liberty are being destroyed one after another. The anesthesia is so complete that the patient is likely to awake to the discovery that he has lost his most precious possession when it is too late to regain it.

No one can say how many more of these agencies may be created or how many of the existing ones may survive in one form or another, and I am far from suggesting that there are not useful and even necessary functions for some of them to perform. The practical question, then, is how to remedy existing evils.

And the first great evil is the centering of executive, legislative, and judicial power in the same hands. That is the very essence of arbitrary power. Because of that the principle of the division of powers between three separate, independent, and coordinate branches of the Government was firmly established in the Constitution, some say, because of the teachings of Montesquieu. But history had taught and still teaches that that is necessary to prevent despotic power. Why then is not the delegation of judicial and legislative power to administrative agencies a violation of the provisions of the Constitution vesting all legislative powers in the Congress, the executive power in the President, and the judicial power in the courts? The reason is that the courts have construed our great charter as a flexible and practical document, as it was intended to be, not as a rigid and unworkable instrument, as many have charged. The definitions of the respective powers of the three departments of government have been given a practical construction. As complex problems arose requiring tribunals specially equipped to investigate and determine particular facts, the courts sustained the vesting of legislative and judicial power in tribunals so equipped subject only to the requirement that the power conferred be properly defined and that a sufficiently definite rule or standard of decision be prescribed. Under the construction so adopted it probably does not violate the Constitution to combine so-called quasi-legislative and judicial powers with strictly Executive power. But that does lead to the very evil that the separation of powers was designed to prevent, the exercise of arbitrary and despotic power. It does violate a fundamental principle proven by all human experience to be necessary to prevent abuse of power.

If you examine the services that the practicing lawyer now has to have, nearly a score, you will find many agencies of government making rules, not merely of procedure which every quasi-legislative or judicial tribunal needs to make but rules of conduct, rules of construction of statutes even sometimes contrary to their plain terms which, though not law, have the force of law, because it is either too bothersome or the necessary delay is too costly to test them in the courts. You will find rules and regulations obviously designed for ulterior purposes to secure a power of control and regulation not conferred. When such agencies have the coercive power to enforce their will, they are not likely to be meticulous to keep within the limits of the powers conferred. Naturally they lose sight of the distinction between executive, legislative, and judicial powers. Naturally they are irked and shout usurpation when the courts on rare occasions require them to observe at least the forms of due process in the exercise of judicial power.

Now these agencies are certain to be governed by some policy which their rules and regulations, and their decisions as well, are made to further. Everybody who has had any contact with them knows that. In truth that is inevitable when any administrative agency has the power to make, enforce, and judge of the compliance with its own rules.

The obvious way to remedy that is to separate rule making and fact finding from executive or administrative authority.

That no man shall be a judge in his own cause has been a maxim as long as law has been administered. Yet we find agencies combining the role of complainant, prosecutor, and judge. It is not in human nature for the complainant or the prosecutor to be an impartial judge. Observance of the forms of due process will not cure that. The only way to cure it is to separate those functions.

The rule was long ago established by the courts to accept determinations of matters of fact by the other departments of government acting within their own spheres, unless destitute of any basis. In the creation of these agencies the statutes have provided that their decisions on matters of fact are final, if supported by any evidence. That works all right with tribunals like the Interstate Commerce Commission. It does not work all right with tribunals whose decisions are bound to be predetermined by some matter of policy. For it is a rare case in which some evidence cannot be adduced to support a decision already made. The decisive question involved is usually a question of fact. The members of these tribunals can observe the forms of due process and still get some evidence into the record to support what they have decided to do. Under the present practice they ought to score a hundred percent of affirmances. If they do not, it can only be because of their contempt even for the forms of law. In fact, the present limited review is as a rule a vain and idle effort and gives their proceedings a purely fictitious appearance of fairness.

When there was a limited number of tribunals specially constituted with carefully defined powers to deal with specific problems, it was not necessary to burden the courts with a review of determinations made by experts especially qualified to make them. But that is no longer the case. If you were to take the trouble to compute it, I venture to assert that you will find that more of your time is taken in the study of the latest rule or regulation or decision of some administrative agency than in the examination of the reports of judicial decisions. And what law is so administered? Not the law prescribed by legislative authority, not the law determined by usage and custom, but rules and regulations of a departmental agency adopted to serve some policy, perchance to fit the particular case. That is not the rule of law. It is the rule of men.

Under the present limited review, the courts are helpless to prevent injustice. However much the courts may insist on compliance with the forms of due process, they cannot compel observance of the substance of due process, and law is being administered more and more by so-called quasi-judicial tribunals which are anything but judicial.

If we are to preserve the rule of law, and escape the rule of men, tribunals exercising judicial power, quasi-judicial tribunals, as we call them, must be completely divorced from administrative, executive, or political policy. They must be assimilated as far as may be to courts of justice. Our judges have no axes to grind, no political or administrative policy to further. Theirs is the sole duty to determine the rights of litigants according to the facts and the governing law. They have administered justice in this country for 150 years without losing the respect and confidence of the people, solely because, despite all that may be said to the contrary, they have scrupulously kept to the exercise of judicial power. They may have made mistakes. Who does not? But they have maintained the public confidence because they have kept within their sphere and have not had to go on the air to prove their impartiality.

There are three simple ways to improve the chances of the substantial observance of due process by quasi-judicial agencies, first, by creating them with specifically defined powers and a definitely prescribed rule of action, second, by divorcing them from executive authority, as the Interstate Commerce Commission has up to now been divorced from executive authority, and, third, by removing them as far as may be from political influence by their prescribed tenure and method of appointment.

If we are to have as many of such agencies as we now have, and we are threatened with more, there should be a broad power of court review. Decisions of such tribunals in the exercise of judicial power should not have greater weight than the decisions of our courts of first instance. The reason for giving their decisions on questions of fact finality disappears when the judicial function becomes predominant. I know that the bureaucrats regard any court review as a usurpation of their powers, but the very fact that they so regard it is proof conclusive of its necessity.

Already we hear the charge that the courts are usurping the functions of these quasi-judicial agencies as we have heard for years the charge that the courts usurped legislative power in deciding that the supreme law of the land is controlling in the decision of lawsuits. That shows how far we have traveled from the true conception of judicial, legislative, and executive power. What does the prefix quasi mean? In truth, it is used to save the exercise of judicial power by administrative agencies from condemnation for being in conflict with the division of powers prescribed by the Constitution. But the power exercised is nonetheless judicial for being exercised by a particular tribunal, though the notion seems to prevail in some quarters that the person exercising the power, not the nature of the power exercised, is the test.

I am not speaking of those determinations which every administrative agency has to make as a mere incident to the exercise of executive authority, and which do not require notice and a hearing. Those decisions are administrative, and since they partake of that character they should not be reviewed. I am speaking only of determinations that can only be made upon evidence after a hearing. The making of such determinations is a judicial function, the exercise of judicial power, and its nature as such is not changed by the prefix quasi. It certainly derives no added authority from being made by one unsuited to make it.

One review of the decisions of impartial judges on matters of fact is the rule in this and most jurisdictions. Should the exercise of judicial power by administrative agencies have greater force and authority?

You will observe that my proposition for a broad court review of such decisions was conditioned on the continuance of as many such agencies as we now have. Far better that there should be less. Far better that there should not be so many as to give rise to the suggestion, which we have already heard, of a special court of appeals to review their decisions, which would remove the last check to prevent these agencies from becoming a law unto themselves and would establish two separate and independent systems of administering law. One would establish the rule of men, no different in any essential particular from the rule now prevailing in the totalitarian states of Europe. The rule of law under the other system would continue only so long as our impartial courts of justice should survive the encroachments of Executive power.

Final determinations requiring special knowledge and experience may well be made by tribunals specially constituted in the way I have endeavored to indicate but beyond that, determinations both of fact and law are for the courts, and when the law ceases to be administered by the regularly constituted courts of justice, liberty will have perished.

A great effort has been made to discredit lawyers for being actuated only by selfish interest. Though, strange to say, the process which I have only imperfectly described is being directed by a cabal

of clever young lawyers indoctrinated with the belief that our American institutions have become archaic and that Russia is leading the way to the new freedom.

My appeal is to lawyers who reject the alien doctrine that the spiritual or material welfare of the mass of people can be promoted by reducing the individuals composing the mass to a common level. My appeal is to lawyers who believe that our free American institutions are the best so far devised by men to safeguard those freedoms, opportunities, and liberties of the individual essential to human progress. My appeal on this subject is especially to lawyers because in their daily work they are able to perceive the gradual encroachment of executive authority upon the judicial process and because they know that the impartial exercise of judicial power, no matter by whom, is essential to freedom. By no means the least of the charges on which our forefathers justified rebellion was the charge that King George had obstructed the administration of justice by refusing assent to laws for establishing judiciary powers and by making judges dependent on his will. The modern way of substituting executive for judicial decisions differs only in method. I appeal to lawyers to make their voices heard in their communities on this subject. That will require them to put patriotism above self-interest, because we have already reached the stage in this country where it has become imprudent, to say the least, to give free expression to one's views But the lawyer has been trained to put the justice of the cause he pleads above all else. Neither the hope of reward nor the fear of reprisals will deter any lawyer who is true to the ideals of his profession from pleading the cause of America. That cause stands in sore need of patriotic defenders.

Easy-Money Policy of the New Deal

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1940

Mr. WOODRUFF of Michigan. Mr. Speaker, the most fundamental, alarming, and penetrating analysis of the New Deal administration's easy-money policy has just come to light in the Twenty-sixth Annual Report of the Board of Governors of the Federal Reserve System. Beginning on page 77 is a recommendation by the Federal Advisory Council which should be read and studied by every citizen of the United States who wants to help preserve constitutional government and our present economic system.

At a meeting of the Federal Advisory Council with the Board of Governors of the Federal Reserve System, the Council submitted a resolution expressing the conviction that many of the fundamental effects of the continuing cheap-money policy have not been fully appreciated. The council advised that the Federal Reserve Board conduct a study of the long-range consequences of this cheap-money policy upon the accumulation and investment of the peoples' savings, and upon the financial structure of the country, with especial reference to its effect upon the maintenance of a sound banking system.

In view of the now well-established fact that the New Deal administration has been driving steadily toward acquiring political control of the banking and credit machinery of the country, these recommendations by the Federal Advisory Council are both timely and alarming.

There is no indication that the Federal Reserve Board will make the study recommended by the Advisory Council; in fact, it is understood it will not do so. The Federal Advisory Council in plain language says the country is moving toward a dangerous condition as a result of the easy-money policy. The administration theory is that this easy-money policy would act as a stimulant to business and would cause business to borrow and would impel banks to lend. It has not had that effect. But, in the words of the Advisory Council:

> It has done and is doing undeniable economic injury to the whole savings class of the American people.

The Advisory Council points out that this easy-money policy is, encouraging an unhealthy position of bond portfolios of the banking system through inducement toward lengthened maturities at progressively lower rates.

By lessening the current cost of Government financing, the policy has made the people, and even Congress itself, indifferent to the steadily mounting debt; thus it tends to create illusions as to the eventual burden of carrying this constantly increasing debt.

The cumulative effect of the policy is profoundly and adversely affecting the large group of industrious and thrifty persons who by reason of character and habit form the backbone of the country's social and economic structure.

Returns on accumulated savings have steadily decreased because savings institutions, facing diminished earnings, have been forced, step by step, to decrease interest rates on savings deposits.

Discouragement of savings investments in life insurance because the cost of insurance is slowly mounting and dividends payable on policies are steadily diminishing.

Schools, colleges, churches, hospitals, educational and charitable institutions of all kinds are receiving diminished returns on their accumulated endowments. With these returns being constantly lessened, salaries of staff members have been reduced, promotions have been delayed, services to students, patients, and dependents have been curtailed, with the result that more and more of the functions which are normally and most efficiently performed by these private or semiprivate agencies are having to be taken over by public boards at the expense of the taxpayers.

After listing these highly dangerous and cumulative effects of the administration's easy-money policy, the Advisory Council states that it believes the time has come to face squarely the fact that the entire banking system of the United States is thus confronted by a distinct menace to the soundness of its capital structure. The Council says it realizes that the long-continued easy-money policy has created a condition which can be corrected only gradually. It insists, however, that the problem portends critical consequences unless it is modified at once and changed as rapidly as possible.

Pilots or Politicians

EXTENSION OF REMARKS

OF

HON. CLARENCE J. McLEOD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1940

THE CIVIL AERONAUTICS AUTHORITY AND THE AIR SAFETY BOARD MUST BE RETAINED

Mr. McLEOD. Mr. Speaker, for several years prior to 1938, American aviation seemed to have reached an impasse. Most of the air lines were experiencing considerable financial difficulty and the future for them was far from bright. Aircraft manufacturers, likewise, were in the doldrums and the outlook for pilots was that of a group who had pursued a dead-end occupation. The public had lost confidence and all interest in air transportation.

In August 1938, Congress stepped into the picture by passing an act establishing the Civil Aeronautics Authority and taking from the Department of Commerce all regulatory powers over air travel. This action has proven to be one of the most important events in the progress of air transportation. The Civil Aeronautics Authority was to become, in fact, the Interstate Commerce Commission for the air.

From its very beginning the C. A. A. demonstrated, by action, that the Congress had been wise in establishing such a regulatory body. The C. A. A., in cooperation with all air lines, has established a most impressive record for the past year. Last year air lines carried more than 2,000,000 passengers and flew over 88,000,000 miles without a single fatality. Major credit for this feat goes to the operators and

pilots for their efficiency, sound training, and judgment. The aviation industry also must share in the glory in having perfected the equipment. However, the C. A. A., with its broad powers over air transportation, must be credited in no small measure for this accomplishment.

Compare the safety record of the air lines under the C. A. A. with the record of the Department of Commerce Bureau. During the last 20 months of operation of the Department of Commerce Air Bureau there were 9 accidents, in which 83 persons were killed. All of us remember the long list of accidents which occurred in Army flying when they carried the mail under Executive direction.

It would seem, in view of such a magnificent showing, that the Executive would for once forego his desire to be all-powerful and allow the C. A. A. to continue to function. However, with typical New Deal disregard for proven facts, the President recommends that the Air Safety Board be abolished, its functions merged with the C. A. A., then that the C. A. A. be transferred back to the Department of Commerce.

Nearly everyone who knows anything at all about aviation opposes the change. To those who are unfamiliar with the technical aspects of air-line operation their common sense tells them that with the amazing achievements under the present system it is foolhardy to throw this agency into the political boiling pot of the Department of Commerce—now in a state of confusion under the tutelage of Mr. Hopkins.

This backward step is being fought by the Republican Members of Congress, and everyone sincerely interested in the welfare of aviation in America. The men who actually carry the mail are against the transfer, pointing out the devastating effect the change will have on them. I am inclined to believe that they are not nearly so ignorant as the President would have people believe, and that they may know considerably more about the operation of aircraft than he does.

The House should, by all means, reject this reorganization proposal. I feel confident that a majority of the Members of this House will so completely repudiate this ill-conceived plan, that the Administration will realize that the people want pilots in the planes, not politicians.

Senator Wheeler and the Presidency

EXTENSION OF REMARKS
OF
HON. D. WORTH CLARK
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Wednesday, May 8 (legislative day of Wednesday, April 24), 1940

ITEM FROM THE MILLEDGEVILLE (GA.) NEWS

Mr. CLARK of Idaho. Mr. President, I ask unanimous consent to have included in the RECORD the comments of Mr. C. B. McCullar, editor of the Milledgeville News, of Milledgeville, Ga. Mr. McCullar discusses the Senator from Montana [Mr. WHEELER] in a column which he writes.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

[From the Milledgeville (Ga.) News of April 12, 1940]

In Current History, in its issue of March 1940, page 25, Robert S. Allen tries to decry and minimize the chances of Senator BURTON K. WHEELER, of Montana, to be the nominee for President. Senator WHEELER is one of the most outstanding Democrats in the United States, and is from a section of the country that can win. When these big Republican magazines and newspapers commence knocking him it is an indication that he is a serious contender for the nomination. If President Roosevelt should not be renominated, the odds are greatly in favor of Senator WHEELER being the next nominee regardless of what the ring-tailed corporation crowds want. Better watch his smoke.

A Congressman Reports

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1940

RADIO ADDRESS OF HON. EMANUEL CELLER, OF NEW YORK ON MAY 2, 1940

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD I insert my radio address of May 2, 1940:

Recently I heard an argument in the congressional cloak room as to whether or not the turkey is more symbolic of life in America than the eagle, and whether or not the turkey—not the eagle—should be deemed our national bird. I am inclined to the belief that the turkey, being a bird of peace and not, like the eagle, a bird of prey, and being more closely associated with our American history—dating back to the days of our Pilgrim Fathers—might well supplant the eagle as the bird symbolic of our American life. The eagle is not a pleasant bird. It is the robber and plunderer among birds. Benjamin Franklin, who championed the cause of the stately, native turkey, branded the eagle as follows: "He is a rank coward; the little kingbird, no bigger than a sparrow, attacks him boldly and drives him out of the district." Our patriotism apparently causes us to condone these faults in the eagle. These faults, to my mind, far outweigh his superb strength in flight and his so-called noble bearing. The turkey contributes to the support of the farmer and those dependent upon him. The eagle contributes to no one's support.

It would be hard, however, to dislodge the eagle, which is so deeply ingrained in the minds of the American people as the American bird. It appears on most of our coins and currency. Many of our posters and public buildings bear the picture or the replica of the eagle. Nevertheless, the "gobbler" would to a far greater extent typify our American ways and habits. I am for the turkey as against the eagle. Unfortunately, the bald eagle was adopted as our national emblem by act of Congress June 20, 1782.

THE DUTCH EAST INDIES

My hat goes off to Cordell Hull. When Japan's Foreign Minister Hachiro Arita made a "verbal pass" at the Netherlands or the Dutch East Indies, Cordell did not lose any time in putting Japan, politely, yet forcibly, in its place. The Dutch East Indies are assuredly a matter of genuine and major concern to the United States. It is one of the main sources of our rubber and tin. These islands supply our country with $100,000,000 worth of rubber each year. The neighboring federated British Malay States supply us with $50,000,000 worth. That area also supplies us with $50,000,000 worth of tin annually. It is well to remember that we are paying upwards of $1,000,000,000 a year for our Navy in the Pacific to maintain and protect a Pacific life line for rubber, tin, manganese, and other essential articles.

It was, therefore, with real concern—if not genuine alarm—that Cordell heard the Japanese Foreign Minister say "Should the hostilities in Europe be extended to the Netherlands and produce repercussions in the Dutch East Indies * * * it would give rise to an undesirable situation from a standpoint of peace and stability in east Asia." He added, "The Japanese Government takes the deepest interest in the Netherlands East Indies as part of the Empire's life line in the south." It would have been awkward and negligent for Cordell Hull to have received these words in silence. Bluntly and plainly, our Secretary of State said, "Intervention in domestic affairs of the Netherlands Indies or any alteration of their status by other than peaceful processes would be prejudicial to the cause of peace and stability not only in the region of the Netherlands Indies, but in the entire Pacific area."

President Roosevelt, soon after Cordell's utterance, went to the unusual extreme of confirming what our Secretary of State had pronounced. This is the time for plain speaking. It clears the air. Japan, with her hands full with China, will think twice before moving south in the event of Nazi invasion of Holland.

If our Secretary of State and our President would remain silent, in the face of Japan's pronouncement after a German blitzkrieg in Holland, that silence would have been a cue for Japan to walk in and seize the Dutch East Indies. All the more power to Roosevelt and Hull. They know that we must take a firm stand in the Far East. We can give no ground in asserting America's rights. We must be equally determined to enforce a so-called status quo as it may affect British, Dutch, and French rights in that same area. Japan knows we mean business. She knows that our hints are not academic, that our threats are not idle.

ICELAND AND GREENLAND

The average American little realizes the grave problems constantly facing the White House and the State Department. Isolation is not as simple or as easy as it seems. It might be well for the man in the street to know that the Monroe Doctrine, the Declaration of Panama, and various treaties have bound the United States and caused us to assume obligations that extend one-third of the way around the world. We have, e. g., a commitment to defend this entire hemisphere. Be it remembered that a vast part of this hemisphere is nearer Europe and Africa than it is to the United States. We have a further commitment to protect and defend the Philippines. They are 7,000 miles removed from us. We have other commitments in a war-torn world. Much might be in store for us as a result of the disappearance of Denmark as an independent nation. What about the problem of sovereignty in Greenland and Iceland? Both of these are strategically important to our safety.

The Monroe Doctrine affects Iceland and Greenland. It might be premature to make the statement that the Monroe Doctrine applies to Greenland, but the State Department can very easily point to a precedent upon which to base the invocation of the Monroe Doctrine. In 1916, during the World War, the United States purchased the Virgin Islands from Denmark, and at the time the Secretary of State, Robert Lansing, privately advised the Danish Minister that the United States might have been forced to take possession of said Virgin Islands. He apparently meant that Germany was at that time threatening Denmark and her possessions. The implication was that the United States would have defended the Virgin Islands as a possession of a neutral. There has been no official statement, but Greenland provides a parallel to the Virgin Islands in the last war. Nevertheless, President Roosevelt has stated that because of the war, America's responsibility toward Greenland has increased. Iceland lies just athwart the hemisphere line, and, I am sure, will be deemed within the protection of the Monroe Doctrine, just as Greenland.

BLEEDING THE CZECHS

We hear little from unfortunate Czechoslovakia. However, word seeped through the barbed-wire censorship to the effect that the Nazi policy is bleeding the Czech people of their economic and financial resources. The Nazis continue, e. g., ruthlessly to ship Czech silver coins to Germany in large quantities, to be replaced by Nazi paper money. In other words, the Czechs are getting worthless German paper money for valuable metal. At the present moment, there is more paper money in Czechoslovakia than there was formerly in Czechoslovakia, Austria, and Poland. For example, Nazi soldiers are allowed to reckon 1 mark as equal to 10 crowns in the shops, whereas the official rate of exchange is only 7 crowns. In Bratislava hairdressers post notices in their shop windows that Germans will be shaved free. Reason for this is as follows: The regular price of a shave is 2 crowns. The hairdressers are obliged to give their Nazi clients 8 crowns change from a mark. They would thus lose 1 crown on each shave.

NAZI TREACHERY IN NORWAY SEEMS INCREDIBLE

There is an amazing story that comes from Oslo. When the first Nazi troops reached Oslo, an attaché of the German legation donned his uniform and assumed active command over one of the naval detachments that had landed. He thus abused his diplomatic privilege by taking command of part of the forces invading "a country to which he had been attributed and assigned as a diplomatic agent."

The Lord only knows how many German spies, in and out of the diplomatic service, that are located in our own country, and who are reporting constantly to their home Government and authorities what our officers and what our private citizens may or may not be doing. Assuredly, considering the harrowing tales concerning Nazi diplomats, we should be on our guard. We should take nothing for granted.

NAZI TREACHERY IN HOLLAND

The other evening at a private dinner, at which a high dignatary of the Dutch Government was present, I heard the following amazing story which is probably part of the Hitler blitzkrieg.

It would appear that Holland has a population of about 8,000,000 and about 400,000 thereof are Germans, mostly Nazis. Hundreds of these Nazis in Holland are used as spies and espionage agents. Most of the domestics in the homes of the well-to-do in Holland are Germans, and these domestics have been known to keep diaries, or intimate records, of conversations of their mistresses and masters, particularly where the latter utter anti-Nazi sentiments. In that way, the entire records of thousands of families are known to the Germans. These records are often coupled with photographs which these domestics have stolen from the albums in the homes which they serve. In all likelihood these families will feel the scourge of the blitzkrieg if the Germans ever dominate Holland.

Furthermore, to the amazement of the Dutch Army officers, it was discovered that the records of the Dutch Army and Navy and uniforms of soldiers and sailors were stolen by the Nazi spies. There are today thousands of Nazis parading through Holland in Dutch uniforms. In this way, they spy into the innermost recesses of the Dutch Army and Navy records.

Punishments have been meted out to these culprits when caught, but the espionage is more rampant than ever. In one Army camp one evening an attempt was made to trap these false German soldiers, and the order was given not to salute. Of course, the Nazis knew nothing of the order and saluted. They were immediately apprehended. But there are any number of these false Dutch soldiers roaming the streets and entering the homes of the Dutch, and in that way have been enabled to increase to an amazing extent the Nazi knowledge of Dutch defensive and offensive practices.

SOUTH AMERICA

There appeared in the press about 10 days ago a rather important news item, indicating that the Rockefellers are looking toward Venezuela for additional investments. Nelson Rockefeller and his brother, Lawrence, are now en route to Venezuela, where the family plans an extensive real-estate development, including the building of a hotel at Caracas. There is a trek of powerful American companies in the direction of Venezuela. The Government of the latter has encouraged large entities to make considerable investments in the rich oil fields of that Republic. In addition, the Bethlehem Steel Co. plans to expend about $25,000,000 in developing its concessions. I believe such business campaigns in South America most constructive and worthy.

TOM DEWEY

Primaries have been conducted in Pennsylvania, Illinois, and Wisconsin, and are planned in other States, but, be it remembered, elections may be determined in Scandinavia. It becomes increasingly evident that the effects of the present European war are growing catastrophic. It, therefore, will become increasingly difficult for a Dewey to persuade the Nation that a mere local district-attorney background is sufficient Presidential equipment with which to deal with the present European chaos.

Concomitantly, a Roosevelt ian third term possibility increases and the possibility becomes more certain as each message from abroad tells of increased chaos. Of course, every current world event makes Roosevelt a stronger third-term candidate. Each crisis has the effect of belittling his opposition, Republican as well as Democratic. Frankly, the President is wise in keeping silent as to the third term. Yet I am one of those who believe that he will not accept a third term. The tradition against it is too strong for even one as great as he to resist.

And, by the way, who are the men who surround Dewey? Who are his managers and financiers and, therefore, the ones who will share his power if he gets it? First, there is Mrs. Ruth Hanna McCormick Simms, daughter of the late Mark Hanna, of Ohio, an inheritor of great wealth, and a politician in her own right. At Dewey headquarters, Ruth is boss. Then, there is John Foster Dulles, one of the senior partners in the law firm of Sullivan & Cromwell. This is a very wealthy, conservative, and powerful outfit. Dulles can be found on the board of directors of numerous blue-chip organizations. Another Dewey man is Artemus Gates, president of the New York Trust Co. Gates married the daughter of the late Henry P. Davison, one of the most powerful of the J. P. Morgan outfit. In addition, there are S. Sloan Colt and Roger W. Straus. The former is president of the Bankers Trust Co. The latter is a heavy holder and executive in the American Smelting & Refining Co. Need I say more as to the tremendous power and wealth supporting Dewey?

OUR BILL OF RIGHTS

An importnt decision has just been announced by the United States circuit court of appeals in Philadelphia. It is a precedent-shattering decision and provides that public-school children need not salute the American flag, if that patriotic ceremony violates their religious scruples. The Supreme Courts of New Jersey, Massachusetts, and Georgia had decided differently. The United States circuit court of appeals said that in some instances compulsory flag saluting would be violative of religious liberty; that no school director is empowered to censor another's religious convictions. It would appear that there is a sect known as Jehovah's Witnesses, and several children belonging to that religious group were wont to stand in respectful silence while their classmates and teacher daily saluted the flag. The children were expelled from the school by the school board for their refusal to salute the flag. The teachings of the sect of Jehovah's Witnesses, said the court, taught them that to salute the flag was to "bow down to a graven image." And "to do this was a sin against God." I, personally, of course, do not believe that the American flag is a "graven image" and it is highly unfair to say that to salute the flag is to sin against God. However, if that is their religion, I am willing to protect all true believers. The right to worship their God as their conscience dictates is sacred. All shall be protected in the enjoyment of religious convictions. The conscience of the individual is even supreme over the exercise of governmental authority. In my humble opinion, Jehovah's Witnesses are wrong, but nevertheless the Constitution gives them the right even to be wrong.

THE WAR

I have been canvassing the war situation in the cloakrooms and offices of departmental heads and have come to the conclusion that (1) the chances that the United States will get involved in the present European war on a military basis are small indeed, and (2) that the chances that the United States may get involved by becoming a base of supplies to the Allies will become greatly increased, and

particularly so if the present Allied reverses continue. To be specific, I have already noticed among some of the Members of the House and Senate a change, or rather a softening, of sentiment. It is a sort of recurring "benevolent neutrality." There is talk of an issue of French and/or British securities to be floated in this country for the purchase primarily of nonmilitary materials. I cannot put my finger on anything specific, but there is a definite feeling in that direction. I say this despite some very improvident statements made by some of the European leaders and, unfortunately, an unusually illuminating comment made by Premier Reynaud, of France, to a New York Times correspondent, as follows: "I think the tendency in the United States has been to underestimate the German strength and the scale of the effort the Allies must make to overcome it. Otherwise you would not proceed so comfortably on the assumption that we are sure to win. You would be more alarmed at the prospect of your own danger if we fell and the British and French fleets disappeared from the high seas. If that happened, the world would not be very safe or happy for you." Frankly, I do not believe statements of that character are very helpful to the Allied cause. To the contrary, such statements are very harmful. It is also an example of the so-called heat that will be turned on or directed at the American public opinion from France and/or England, particularly in the event of Allied defeats.

Plain Economics

EXTENSION OF REMARKS

OF

HON. FRANK CROWTHER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1940

ARTICLE BY JOHN T. FLYNN

Mr. CROWTHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John T. Flynn from the Washington News of today.

[From the Washington Daily News of May 8, 1940]

PLAIN ECONOMICS

(By John T. Flynn)

NEW YORK, May 8.—The Republican convention is less than 7 weeks distant—the Democratic a little further away. Everybody is talking about candidates. Those who talk about issues wonder what the war will do to the coming battle. No one seems very much concerned about what the domestic economic situation may do to it.

As 1932 dawned and the conventions of that year approached, the curve of business activity was moving down. It was 77 in January; it was 67 in June when the conventions met.

This year since January the curve of business activity has actually descended lower and faster than it did in 1932. There is a difference, of course, in this—that then it went from 77 to 67, while now it has gone from 107 to 93. It is a 14-point drop now against a 10-point one then, but, on the other hand, the rate from which it dropped this year was much higher.

But what if it continues to go down? It has never continued down so long or so far in any other year. It may taper off now a bit, but even if it does the drop will be a record one for the first half of the year.

Now, if you take these two periods—the first half of 1932 and the first half of 1940, and either add to the 1932 picture $300,000,000 a month of Federal spending or take this Federal spending away from the situation now, you have no other important difference.

Then, the business cycle was going down without any Government spending; now, in the face of huge Government spending, it is going down faster and further.

If the decline continues until the conventions meet it is difficult to see how the consideration of this important fact can be kept out of our reckoning. And if it continues after the conventions meet, nothing can prevent it from overshadowing the war.

This fact will make it quite plain why the Government is so anxious to keep the war issue to the front; to keep the war on people's minds. The President, himself, is, of course, fascinated by the war. He told a caller not so long ago that it was difficult for him to think about domestic issues. What is more, it must be unpleasant to think about domestic issues in the presence of this serious decline in business.

It becomes imperative, therefore, to keep other people from thinking of domestic issues. So, all the propaganda and publicity power of the Federal Government is turned loose on the war subject.

Would it not be an excellent thing if the President and his Cabinet and his opponents would stir themselves to thinking about a domestic issue which may be stated thus: After 7 years of spending of borrowed funds amounting to over $25,000,000,000, we still have 10,000,000 unemployed and the business index of the first 4 months of the year has gone down further and faster than in any year in the last 15. What can we do to change this?

Staying out of war is not so difficult. The people do not want to get in. The only way they can get in is by being led in. All we need for that is a leader who will not lead us in by "meddlin' in." But this other problem is more difficult. What are we going to do about it?

W. P. A. and Private Industry

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1940

ADDRESS BY HERBERT C. LEGG

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the work-projects administrator in my district, Mr. Herbert C. Legg:

To you gentlemen who are familiar with the hard labor as well as the engineering and construction problems of public work I can speak with some measure of experience.

Thirty-seven years ago I started in the construction business, carrying water in a railroad construction camp in southern Colorado. For 15 years I lived in a tent on such work. I have turned out yardage behind four mules on a fresno with the best of them, and I have been pitched as high from the beam of a rooter-plow behind eight mules as any of them.

I have ridden miles on the back end of a buckboard over location, trying to guess what was 10 or 20 feet below the surface—dirt, loose rock, or solid rock. Sometimes my guess was good and sometimes not. I have worked side by side with station men where our output was 15 and sometimes perhaps only 5 cubic yards per day per man of solid rock at 80 or 90 cents a yard.

I question whether anyone in this room has a better knowledge of the contractors' problems than myself, or, may I add, one who has a more wholesome respect for the construction industry as a whole. By and large, the industry is truly representative of all that we admire in ingenuity, resourcefulness, and decency in American industry. Perhaps if I were a contractor today, I would be over in the trenches with the rest of you, fighting W. P. A. If I were in the clothing or textile business I might be fighting the W. P. A. sewing projects. If I were a school teacher I would be apprehensive of the thousands of teachers who are on W. P. A., conducting education classes for millions of adults in the United States. If I were a shoe manufacturer I would regard with some concern the W. P. A. shoe-repair shops where hundreds of thousands of pairs of shoes are prepared each year for the relief clients, whose cash budgets do not permit the amounts necessary for new shoes.

But, knowing the relief problems as I do, knowing how intimately it concerns every businessman and every taxpayer, how it has drained the tax dollars from all local governmental agencies, I would, as a contractor, hesitate to recommend the abolition of W. P. A. Even if I were assured of customary profit on the additional volume of work, I would realize that the relief problem still remains. Probably, as a contractor, I might feel elated that I had won a fight, and temporarily perhaps I might have a little more profit, but the basic problem would still be there to engulf me, as it does all other businessmen and their prospects and commitments.

The Federal Government, through W. P. A., is not engaged primarily in carrying on a huge construction program to create buildings, highways, sewers, storm drains, and the like for the communities we are serving. It is engaged solely in creating jobs for the millions who are on the relief rolls unable to secure private employment. It is the only method the States find available in securing Federal assistance to care for their own relief problem. W. P. A. never puts anyone on the relief rolls. We employ only those whom the State relief administration has determined are a problem of the State and entitled to relief under the constitutional amendment of 1933, which the people of this State adopted by an overwhelming vote.

W. P. A. in California has never carried more than one-half of those registered on the State relief rolls as available for assignment to us. Today W. P. A. is employing 38,000 from the State relief rolls in southern California, but there are still 45,000 others on the same State rolls who would like to have a job with us and who are a financial responsibility of State taxpayers. W. P. A. in California has employed on an average of 100,000 from the State relief rolls during the past year. If there had been no W. P. A., the State

would have needed $40,000,000 more for relief the past 12 months than the legislature appropriated. I wonder if the members of the chamber of commerce would feel justified in recommending that W. P. A. be done away with and that the State take on that additional burden. If so, what would you recommend as a substitute?

Perhaps you say the projects should be turned over to the Public Works Administration. Relief work by contract methods have been tried out with billions of dollars appropriated and expended through P. W. A. Certainly, no one will say that any other purpose was in the minds of Congress in setting up P. W. A. But the record is clear and easily understood. If you want a real spending program, recommended to Congress that 2,000,000 unemployed be kept at work under P. W. A. methods. It will require nearly $3 for each man against $1 under W. P. A. methods. Furthermore—and this is the important question—P. W. A. will offer work opportunity to only a small percentage of the workers we employ on W. P. A. P. W. A. methods require a high percentage of skilled labor, W. P. A. the exact reverse. Certainly our work costs more, but the total cost in the end to the taxpayer is much less. Employing machinery and leaving the unemployed men and women on the relief rolls will never solve the basic problem we are facing. Actually, idle equipment and contractors' volume of work do not create the economic or social problems represented in 4,000,000 people on the relief rolls of the States.

The Third Street paving job we are doing for the State highway is about as well mechanized as any we have ever had on W. P. A., but it is being done with 75.5 percent of unskilled and intermediate labor. Our average construction project percentage of unskilled is nearer 85 percent. We agree you could do it faster and perhaps cheaper with machines and skilled laborers, but we don't have those on our relief rolls.

When we have the opportunity of referring W. P. A. workers to contractors on Federal construction work they hire less than 50 percent of those referred because our workers are not on the average up to the rigid requirements of the contractors.

The claim is often made also that, under private contract methods, greater employment is made necessary in contributing or cooperative agencies—factories, material plants, etc. That is true to so small a degree that it constitutes not much of an argument. W. P. A. also keeps many such plants going. Every day truck loads of materials are on the highways of southern California, delivering their goods to our projects. The purchases of our sponsors and ourselves for materials reach astonishing totals. Millions of dollars for rock, cement, lumber products, bituminous materials, brick, tile, and steel, textiles, etc. Many a material firm in southern California exists today only because of the millions of dollars we have expended with them. Our sponsors alone have paid out for equipment rental during the life of W. P. A. more than $1,500,000.

You may say that this business would have been available, too, had the work been done by contract methods. I agree with you, but the work would not have been done. Our sponsors, in a recent questionnaire, stated they would have done only 11 percent of the work W. P. A. has done for them had they been dependent upon local revenues available for such work.

You may contend that we have been trying to sell the W. P. A. methods of doing public work as against private contract methods, but I assure you such is not the case. I have never talked to any of the higher-ups in Washington, especially in the W. P. A., who would not like to see private contractors doing this job of taking people off the dole, if they offered a way of doing it. No one likes it. If private contractors in southern California were doing the volume of work we are now doing, I would be out getting my share, making more money than I am today, and working fewer hours per day in doing it.

But we are simply an adjunct to your relief agencies—your local ones if you please. If the taxpayers can stand the added cost, we would like to give you the load. If you feel the people on the relief rolls should not be working, but kept on the dole, you won't find many to agree with you.

And then if all our construction work were stopped, W. P. A. would still have about 30 percent of its activities left. They constitute what is known as the white-collar load. They fulfill, provide, and direct myriad functions in public service—service that is as essential as air, food, and water. They prepare, for instance, lunches for the children in our schools whose parents cannot afford adequate or nutritious food. More than 26,000 such lunches are being served to the children in schools in Los Angeles County each school day. Remember these are not children to whom we think lunches should be given. It is your own school and health authorities who decide the beneficiaries, who select the lists of the undernourished or improperly nourished from the school rolls.

Hundreds of our workers are employed with your courts in juvenile delinquency pevention work, and through their efforts have made white many black spots of delinquency in southern California's nine counties. Several thousands of our workers are employed on sewing projects, making hundreds of thousands of garments which are distributed to your local relief agencies each month for the use of our underprivileged, and with a consequent saving in their cash budget. Garments, not for those we think should have them, but in response to individual requisition from your local agencies.

Housekeeping aids, school libraries, the distribution of surplus commodities, historical records, music and art projects, visual aids to our schools, help for the blind, and countless other similar activities are today employing nearly 12,000 of our load of workers in southern California, rendering a service that can better be known and felt in your community when we have to close some of them through quota reductions.

Ask your civic clubs, your parent-teacher associations, your service clubs; yes, ask your many other chambers of commerce and scores of other fine community groups now making immediate demands upon us that the service be reinstated, what they think of W. P. A.'s contribution to public welfare in California and, indeed, all over the United States.

Remember I don't contend that we can compete with any highly specialized organization in doing many of the things we do, insofar as it relates to cost. The reason is immediately apparent: We are not free to select our personnel as you do. You pick your own workers—we have to take those who are given us. Our average monthly wage rate on construction projects, for example, is less than $62. Your's is more than twice that. While we try to keep all of our people working within their work-experience classification, it is not possible at all times, and if we have men who were former real-estate agents, shoe salesmen, or bankers, it usually means they have to go down in the bottom of a sewer ditch, and we know they won't dig as many feet per day as you get out of your trained and seasoned pick-and-shovel men. They may, and often do, try as hard. They get more blistered hands, more tired backs, and aching feet, but they are fighting to keep off the dole, to do their bit for what they get to keep soul and body together, and constantly they are looking for the private job that doesn't exist.

Despite the inevitable percentages of trial and error with raw recruits and hastily assembled organizations, we are proud of what we are doing and how we are doing it. Less than 3 percent of our employees are nonrelief. Over 94 percent of our labor moneys go to relief workers. Our administrative costs may be compared favorably with those of any highly organized private industry. This is the appraisal of Fortune magazine, and I know it to be true.

Every worker on W. P. A. has to be an American citizen before he can be employed. Each has to sign an oath of fidelity to our Government before he may be employed. Our executives on construction projects are men who have worked in responsible positions with private industry; some of them worked for you in the past. No better are to be found anywhere. They can and are doing as good work as you could do. All our workers, including those on relief, are your neighbors. They have an average of three and one-half dependents. More than 50 percent have been taxpayers in the past. Their average residence in the State is over 7 years. If they were offered private jobs they would eagerly take them, but even in W. P. A. work they contribute to the purchasing power of southern California. Their monthly expenditures keep over 200 grocery stores open. They purchase 30,000 gallons of gasoline each day going to and from their work. The big merchants, as well as the little places of business, know what their earnings mean, but whether they know it or not the fact is that no place of mercantile or kindred business activity gathers up its cash for the day without including money expended by W. P. A. workers. Their nickels and dimes and quarters may not seem like large contributions individually, but they trickle in, eventually to make a mighty river, measured in millions of dollars every month in the year.

Let me add in closing, W. P. A. is not in California because it wanted to be. It is here because you could not stand the drain on your pocketbooks for maintaining hundreds of thousands of your citizens on the relief rolls. It is here because you hammered on the door of Congress demanding that we come and help. We don't determine who should be on relief, and we don't do anything your own public officials don't ask for.

The problem is far deeper than that of interference with private industry. It is a problem for your taxpayers to be interested in also. Certainly it is a problem that should be commanding the serious attention of every business, commercial and industrial, in California. There is no point in picking at it with your eyes closed. Go into it thoroughly in all its phases. Help improve it if you decide you have to have it. But, above all, be able to offer an answer to all the questions that call for an answer if you feel it should be done away with.

Thousands of the Rank and File of Railroad Labor Support Wheeler-Lea Railroad Bill

---

REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1940

Mr. VAN ZANDT. Mr. Speaker, in this morning's CONGRESSIONAL RECORD, on page 8782, authentic information can be found showing 850,000 out of 1,103,600 railroad employees are strongly in favor of S. 2009, the Wheeler-Lea railroad

bill. In other words, 75 percent of all the railroad employees in the United States urge passage of this important legislation.

This morning I am in receipt of a telegram from Mr. T. H. Davis, president of the Brotherhood of Shop Crafts of America, representing some 30,000 shopmen on the Pennsylvania system, vigorously protesting any effort to recommit S. 2009.

The vast majority of these 30,000 shopmen are personally known to me, since it was my privilege during 24 years' service on the Pennsylvania Railroad, to come in daily contact with them. They truly represent the views of the rank and file of railroad labor.

The telegram referred to is as follows:

PHILADELPHIA, PA., *May 7, 1940.*

Hon. JAMES E. VAN ZANDT,
Member of Congress, State of Pennsylvania:

The Brotherhood of Railroad Shop Crafts of America, Pennsylvania Railroad system, representing some 30,000 shopmen on the Pennsylvania Railroad system, desire to vigorously protest against longer withholding the Wheeler-Lea bill cited as the Interstate Commerce Act national transportation policy, which bill we understand is scheduled for final consideration May 9. We as railroad workers believe the time has come when all competitive transportation should be regulated by the Interstate Commerce Commission. We believe that this bill will be of value to railroad workers, and therefore we are opposed to the bill being returned to committee, where we believe it will die. Your support is solicited in our behalf, and we will appreciate any effort you will put forth to assure the passage of the bill.

T. H. DAVIS, *President.*

Federal Aid For Highways

EXTENSION OF REMARKS
OF
HON. WILBURN CARTWRIGHT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1940

STATEMENT BY COL. SIDNEY D. WALDON, OF DETROIT, MICH.

Mr. CARTWRIGHT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an interesting statement by Col. Sidney D. Waldon, of Detroit, Mich., chairman of the highway and legislative committee of the American Automobile Association, in connection with Federal Aid for Highways.

Colonel Waldon actively participated in the launching of the first National Good Roads Convention, held in Cleveland, Ohio, in 1909. Through the years he has maintained interest in the continuing efforts to provide adequate public roads for the Nation. His views, as a member of the advisory board for the Michigan State Highway Department, and as spokesman for the American Automobile Association, an organization of a million private passengar-car owners, deserve serious consideration.

The statement referred to is as follows:

It seems highly significant that of all legislation brought before Congress from year to year, perhaps none receives such wholehearted and widespread support as authorizations for Federal participation in highway construction. Over a period of years hearings of roads committees in both the Senate and the House have developed consistent support of the Federal-aid policy. It has come from a great cross-section of groups concerned with the development of highway transportation, with the welfare of the farmer, with the national defense, and with the general economic progress of our country. In fact, the degree of support given to the Federal-aid principle is probably without parallel in the history of congressional legislation.

The American Automobile Association is, of course, one of the sponsors and a steadfast supporter of this program. We virtually launched the original national good-roads movement of 30 years ago. This Nation-wide campaign to get America out of the mud led to Federal aid for highway construction. We have always been extremely gratified that during the pioneer effort to secure Federal assistance in building a national network of highways connecting at State borders into an interstate system, Senator CARL HAYDEN, of Arizona, then a member of the House of Representatives, said on the floor:

SENATOR HAYDEN'S COMMENT

"The American Automobile Association, in its advocacy of national highways, has also rendered a great service. There was no real good-roads movement in America until this association and others interested in the construction of improved ways of travel put their shoulders to the wheel * * *."

During the twenty-odd years of experience with Federal aid for highways, the American Automobile Association has never wavered in its advocacy of continuation and extension of this program as greater road use made such extension both desirable and essential.

We again urge the Congress to continue the time-tested Federal-aid policy. We do so in behalf of our 750 affiliated A. A. A. motor clubs and branches in all parts of the United States and also in behalf of our membership of 1,000,000 owners of private passenger automobiles—the largest in A. A. A. records. This membership represents a great cross-section of car owners. It offers evidence that motorists generally subscribe to A. A. A. programs and activities.

BILLS NOW PENDING

Before discussing the bill (H. R. 7891) now before the House Committee on Roads, it seems fitting to discuss some general phases of the Federal-aid policy. These have to do with the trends in highway development and the influence of Federal aid administered by the Bureau of Public Roads, more recently the Public Roads Administration, on all road building.

When the initial Federal Aid Highway Act was approved in 1916, States were just beginning to shape highway programs. There was little or no real effort to connect roads at State lines. Comparatively few had State highway departments. There was also a vital need for research and utilization of the experience gained in planning for the future. At the time there were only 3,500,000 motor vehicles in the country, and there was considerable speculation as to the number that might eventually be in use. Many people still accepted the automobile as a passing fad and luxury.

By 1921 the number of vehicles had increased to more than 10,000,000. In that year the Congress enacted broader legislation, which continued many of the features of the 1916 act and also provided for the first time a designated Federal-aid system of roads connecting at State lines. All Federal funds for main roads, plus matching funds advanced by the States, have since been concentrated on building and rebuilding this system. This broad policy has been responsible for the rapid growth of highway transportation and the manifold benefits which have accrued to the whole country.

FEDERAL COOPERATION

In this connection it might be well to point out that through the years the Federal road-building agency has stood as a fine example of Federal cooperation with the States. While exercising a vital influence on the construction of roads composing the interstate system and road building generally, the objectives have been attained without Federal domination of projects. Actual construction is done by the States, within limitations and requirements set forth by the Congress. It is a tribute to the now Public Roads Administration that its important and tremendous job has been accomplished on a cooperative basis and in keeping with the letter and spirit of congressional authority.

As the Federal Air Highway Acts of 1916 and 1921 were important from the standpoint of the foundation for our present interstate system of roads, the pending legislation is equally as important from the standpoint of the future. We have now reached the point where development of our interstate highway system must not only be continued, but sections of it must be modernized to meet current traffic needs. The number of vehicles in use has increased 200 percent since 1921 and there has been an even greater increase in use of the highways on a mileage basis.

HIGHWAY SURVEYS

Fortunately, the preliminary but comprehensive findings from highway surveys underway in 47 States offer a body of facts to be utilized in highway planning. Highway needs are becoming clearly evident for the first time. Engineers now have a true picture of the good and bad features of our highway system. It offers an accurate guide for modernization. For example, they now know where funds should be concentrated to meet the heaviest traffic conditions and where funds should be expended to assure the maximum service of secondary or farm-to-market roads. However, as these findings have been transmitted to the Congress by the Public Roads Administration, they need not be again reviewed here.

Two other factors in connection with orderly highway development deserve particular mention as a preliminary to discussion of proposed legislation. First, the effort to link Federal-aid highway appropriations with special Federal excise taxes currently collected from motorists, and second, the ineffectiveness of that section of existing Federal-aid highway legislation which provides penalties in the form of reduced Federal-aid on States diverting special motor taxes to other than highway purposes.

FEDERAL MOTOR TAXES

From time to time the argument has been advanced that the Federal Government spends a great deal of money to help the States in the construction of roads. For this reason it has been suggested by some that the Federal levy on motor vehicles is proper. This is a hollow argument.

When the Federal Government launched its policy of Federal-aid for highways, it was with two definite purposes in mind. First, it was for national defense and justified on the basis of the vital

need for a strategically located system of trunk-line interstate highways. The War Department scrupulously maintains a military priority map of these highways, and no bridge on this system is constructed without its having been approved by the War Department. Certainly no part of Federal aid for this purpose could be a proper charge on the motor vehicle.

Federal aid to highways for national defense purposes is similar to appropriations for rivers and harbors and the structure of coastal forts to protect harbors and naval anchorages. Shipping derives benefit from these national expenditures, but is not subject to special excise taxes to pay for the improvements because they benefit the country as a whole. Likewise, the Federal Government spends large sums in services to aviation which, while beneficial to air commerce, are extremely helpful to the country and particularly advantageous in the event of war. Such services are a charge against the general fund and are not in any way offset by excise taxes on plane manufacturers, or the passengers, mail, and commodities transported by plane. Similarly, Federal expenditures on highways for military purposes are properly chargeable to the people as a unit rather than to one selected class of taxpayers.

DEVELOPMENT OF POST ROADS

In the second place, Federal road expenditures are intended to help in the distribution of mails as indicated by the term "post roads." In order to advance the accomplishment of both purposes, financial aid to the several States was considered a sound capital investment. In 1916 practically all of the rural mail routes of this country were served by horse and buggy and consequently this part of Federal aid could not have been considered by the Congress a proper charge against the owners of motor vehicles.

You will look in vain in the original debates on Federal aid to find one hint to the effect that such a contribution by the Federal Government should ever be predicated on a special levy on motor-vehicle users, as distinct from all other beneficiaries of the highways. In fact, it was definitely recognized that since distribution of the mails and the provision of adequate national defense benefited the Nation as a whole, the cost should be met by general taxation contributed by all taxpayers.

As a matter of historical accuracy, we make the point that this theory of Federal taxes on the motor vehicle, in return for Federal aid for highways, is of very recent origin.

In this connection, Representative Cartwright, in a recent address, very appropriately said:

"I have always believed that the participation of the Federal Government in the improvement of highways in cooperation with the States, using general Treasury funds therefor, is amply justified on the grounds of general welfare, national defense, post roads, and interstate commerce. When the first Federal Aid Road Act was passed in 1916, neither the States nor the Federal Government had levied any special taxes, commonly known as road-user taxes, such as the taxes on gasoline, lubricating oils, and motor vehicles.

"I think it is important that these broader reasons for justifying Federal participation in highway construction be not even tacitly abandoned by road advocates by putting too much emphasis on the relationship between road authorizations and road-user tax revenues. There might come a time in a few years when these taxes would not be levied, but that would not, in my opinion, remove the justification for further Federal participation in road improvements."

FEDERAL FISCAL PROBLEMS

We all recognize the serious fiscal problems confronting the Federal Government but, by the same token, we must not lose sight of the fact that the State governments have equally serious problems. The States have the responsibility of maintaining adequate road systems. For this purpose the State governments have to depend on revenues from special motor vehicle taxation. If you look at the record you will find that a great number of State legislatures have, year after year, adopted resolutions—resolutions duly presented to the Congress of the United States—urging the Federal Government to get out of the gasoline tax field and to leave this source of revenue to the States.

Despite the increasing highway needs, there is a strong disposition on the part of legislative bodies to divert the proceeds of special motor taxes to purposes other than highways. In the 10-year period through 1938 the States and their subdivisions diverted more than $900,000,000 of road revenue to other than road purposes. Congress took cognizance of this fact by declaring in section 12 of the Hayden-Cartwright Act of June 18, 1934, that it is "unfair and unjust" to impose special motor taxes unless the proceeds from such taxes are applied to the construction, improvement, or maintenance of highways. The act provides, of course, that any State that applies to highway purposes a lesser amount of motor taxes than was provided by law on June 18, 1934, shall be penalized as much as one-third of the Federal-aid apportionments to which it would otherwise be entitled.

PENALTIES FOR DIVERSION

Since the Federal provision designed to discourage diversion became effective, penalties in the nature of reduced Federal aid have been imposed on only 2 States and in comparatively small amounts. On August 7, 1937, $250,000 was withheld from the apportionment to New Jersey for the fiscal year 1937, and on June 2, 1938, $472,862 was withheld from the apportionment to Massachusetts for the fiscal year 1938. This in the face of the fact that in the latter year some 36 States and the District of Columbia were diverting revenue from gasoline taxes and registration fees. In the 3 years following enactment of the Hayden-Cartwright amendment, $488,273,000 of motor-vehicle revenue was diverted, while the total amount of Federal-aid withheld from States amounted to only $722,862. New York State alone, the worst offender, has diverted $251,427,563.

In fairness to the Public Roads Administration, it should be stated that it is powerless to even partially correct existing conditions, unless Congress is willing to provide legislative authority by putting teeth in the Federal antidiversion statute.

POLICIES OF A. A. A.

Over a period of several years the American Automobile Association, through policy resolutions, has urged strengthening of the Federal antidiversion amendment so that it can be vigorously and effectively enforced. Typical of such resolutions is that adopted by our thirty-fifth annual convention, in November 1937, as follows:

"In 1934 the Congress adopted the so-called Hayden-Cartwright amendment to the Federal Aid Act, the purpose which was to penalize those States diverting their motor-vehicle taxes by withholding from them a portion of their Federal-aid allotment. The Hayden-Cartwright amendment, as now framed, is vague and not wholly effective. This convention urges the immediate revision of the Hayden-Cartwright amendment in order that the intent of it may be carried out as an additional safeguard for the road funds of the country."

We respectfully submit that the antidiversion-penalty clause should embody the following principles:

1. The penalty should apply in respect to all diversion and not merely provide for freezing of expenditures of motor taxes for highway purposes to the level prevailing at the time the antidiversion clause was enacted.

2. The amount of Federal funds withheld should be sufficient to act as a deterrent to diversion and a formula to this end should be developed.

3. The States should be given ample opportunity to restore diverted money in order to escape the penalty, but such period of grace should not be so long as to interfere with effective enforcement of the statute.

FEDERAL-AID AUTHORIZATIONS

Now as regards the pending measures. Title I, of course, provides for authorizations for Federal participation in highway construction during the fiscal years ending June 30, 1942, and June 30, 1943. Thus it is a continuation of a long-established Federal policy and in line with the practice of making such authorizations 2 years in advance. Such a policy enables the State highway departments to plan highway developments in advance and thereby assures adequate planning. It also enables these departments to know what amounts they can anticipate from Federal aid when they submit road programs to State legislatures.

In leaving blank the actual amounts to be authorized for Federal aid and related projects for the fiscal years 1942 and 1943, it seems evident that this was done for several reasons. It was perhaps the desire of the committee to ascertain the viewpoint of all concerned with road building. It may be that the committee also wanted to study authorizations in the light of national defense and other demands on the Congress.

However, the American Automobile Association believes that current highway needs are such that authorizations for each of the fiscal years 1942 and 1943 should at least be at the level of authorizations made for the fiscal years 1938 and 1939, as follows: $125,000,000 for improvement of the Federal-aid system and its extension through cities; $25,000,000 for secondary or farm-to-market roads; $50,000,000 for the elimination of grade crossings; $14,000,000 for forest highways, roads, and trails; $10,000,000 for national parkways; $7,500,000 for national-park roads and trails; $4,000,000 for Indian-reservation roads; and $2,500,000 for nontaxable public-land highways.

Such a recommendation is in accord with the policies of the American Automobile Association as adopted in the form of resolutions passed at our annual conventions. For example, at our last annual meeting in November 1939, the following resolution was adopted:

"Because of the interest of the Federal Government in national defense and in post roads, the support of the American Automobile Association and its affiliated clubs is reaffirmed in the Federal-aid principle as a constructive and coordinating influence in the entire road-building activity of the Nation."

RECENT HIGHWAY TRENDS

In this connection, it seems proper to call the attention of the committee to recent trends which serve to emphasize the need for major attention to the Federal-aid system. Subdivisions and municipalities are more and more putting pressure on State legislatures for a greater share of special motor-tax revenues.

In some States motor-tax refunds are becoming a "grab bag" for diversion and loans to avoid new tax levies. The comparative ease in collecting motor taxes and penny outlays for gasoline taxes are, of course, factors in this whole situation. Add to this the heavy maintenance cost of existing highways, and it is readily seen that many States are finding it difficult to sponsor new construction and

to modernize existing main roads to meet current and future traffic needs.

As a result, Federal aid for main interstate highways is becoming more important than ever before and should receive first consideration of Congress, with due regard for the need for secondary roads and related projects. It is now evident that main interstate highways are not receiving the attention they deserve. For instance, as pointed out by the United States Commissioner of Public Roads, Thomas H. MacDonald, main rural highways and their transcity connections, comprising some 352,000 miles, or 11 percent of all highways, carried 153,000,000,000 vehicle-miles of traffic, or 57 percent of all traffic in 1938. Yet in the same year only $834,000,000, or 33 percent, of the $2,520,000,000 expended for highways and city streets was spent on main rural highways and transcity connections. Obviously, these figures and their implication deserve the careful attention of all concerned with meeting modern traffic needs.

PROBLEM OF CONGESTION

The most serious phase of the highway problem today is in connection with traffic needs in heavily congested areas. This includes the problem of getting through large cities and serving the large volume of traffic moving to and from the centers of these cities. For example, Commissioner MacDonald, in his last annual report to Congress, said:

"A system of direct interregional highways, with necessary connections through and around cities, is needed to meet the growing peacetime traffic of longer range and the requirements of national defense in time of war.

"Studies of the present flow of traffic on main highways indicate that such an interregional system should comprise not more than 30,000 miles. No attempt has been made as yet to fix the exact location of the proposed system. Existing highways could be modernized to form a large part of the system, but some new highways would be needed to provide directness of travel. A system of the scope suggested would represent less than 1 percent of the total mileage of rural roads, but the Bureau estimates that it would serve at least 12.5 percent of the travel outside of cities.

"The more complete information on the character of traffic in and near cities that has become available shows that existing facilities are seriously inadequate. The situation is becoming more aggravated by increases in traffic, and only the provision of major improvements at a large cost will provide a solution. Such improvements would be a necessary part of an interregional system.

"It is found that as much as 90 percent of the traffic on main highways near the entrances to large cities is bound to or from points in cities themselves and cannot be bypassed around them. The studies reveal also that a large part of the traffic is destined to or bound from points in the very heart of the city or points most conveniently reached by going through the center of the city.

NEED FOR EXPRESS HIGHWAYS

"There is need for express highways cut directly into and through the center of the big cities. These are needed not only for service of the through traffic delivered by the main rural highways but also for the daily in-and-out movement of local traffic between the downtown section and suburbs centering about the main highways at the periphery of the city.

"By preference such express highways should be constructed as attractively landscaped depressed thoroughfares passing under all cross streets."

Fortunately, through the highway-planning surveys there have been developed traffic-flow maps which show very definitely the areas of heaviest traffic volume and, in turn, the areas of greatest traffic congestion. In general, they are along the Atlantic seaboard between Washington and Boston; in the northeastern section of the country, particularly between Detroit and Chicago; and in a lesser degree at points on the Pacific coast in the vicinity of San Francisco and Los Angeles.

These sections mentioned and others are faced with a tremendous shuttlelike movement of strictly local traffic and vehicles moving to and from adjacent areas. In addition, they are focal points for passenger-car owners, commercial traffic, and mobilized national-defense units from all sections of the country. Thus the problem of efficient and safe movement of traffic in geographical sections with unusual traffic density is a matter of local, regional, and national concern.

PROBLEM IN LARGE CITIES

This is particularly true of large industrial cities. For many years industrial plants and large business houses were located in compact fashion in the heart of industrial centers. The movement of traffic, limited as compared with that of recent years, was into these centers in the morning and outward in the evening. However, in recent years there has been a trend toward the location of large industrial plants in outlying areas. Thus between these outskirt sections and main business sections have developed blighted areas occupied by low-income groups and with low tax values. Through these areas daily flow opposing streams of traffic in the morning and evening hours—workers living in cities enroute to and from outlying plants and suburban residents to and from city centers. In addition, there is heavy nonresident passenger and commercial traffic to and through the centers of industrial cities.

Express highways, preferably landscaped depressed thoroughfares, will not only expedite traffic with greater efficiency and safety but will bring light and air into the new blighted sections of cities and increase the usefulness and taxable values of these areas. Any programs for slum clearance, now being undertaken on a large scale with the aid of Federal funds, should go hand in hand with improvement in means of handling traffic. Joining these authorized traffic facilities through cities should be limited-access highways leading to and from city lines of other industrial cities.

MODERN TRAFFIC FACILITIES

It should be borne in mind that delay in providing modern traffic facilities increases the difficulty and cost of eventually creating them. Under existing conditions, State highway departments are, on the whole, hard pressed to keep abreast with traffic needs on major rural roads. They are financially unable to give necessary attention to real modernization of these rural roads, much less undertake the tremendous task of providing limited-access highways adjacent to, and depressed routes through, cities. Municipalities are, of course, facing great difficulties in maintaining current street maintenance and other municipal functions. In most instances cities are already taxed to the limit.

At the root of the whole problem of efficiently handling traffic in heavily congested areas and industrial centers is the tremendous costs for rights-of-way. It is these costs which are delaying needed improvements, despite the fact that modern traffic facilities create new uses which help defray their cost.

SECURING RIGHTS-OF-WAY

Recognizing the vital need for broadening the means of securing rights-of-way for highway purposes, the thirty-seventh annual convention of the American Automobile Association, held last November, adopted the following resolution:

"The American Automobile Association urges that the Federal Government and the State governments develop as quickly as possible a comprehensive land program for acquisition of adequate rights-of-way for future highway programs and for full protection of the rights-of-way when they have been acquired. To that end it recommends:

"(a) That the Congress of the United States authorize the Public Roads Administration, or other suitable agency, to aid the States, through loan, grant, or otherwise, to acquire needed rights-of-way, especially for limited-access highways.

"(b) That State highway departments be authorized to acquire land in advance of, and in certain cases in excess of, actual highway needs and to amortize the cost thereof over a term of years through rental or resale of the excess land, or by other appropriate means.

"(c) That every State adopt laws permitting the construction of free ways or parkways through limiting right of access by abutting property owners.

"(d) That every State simplify its condemnation proceedings, if necessary, to permit acquisition of land for highways and related purposes without undue litigatory delays.

"(e) That motor clubs in each State cooperate fully with the State highway departments in bringing about necessary changes in the law to permit the carrying out of these right-of-way policies."

FEDERAL ASSISTANCE

That congressional leaders are alert to the new conditions confronting road builders is evidenced by title II of the pending Hayden-Cartwright bills. It proposes one of the most important advances in highway construction since the drafting of the original Federal Aid Act. It seeks to provide a means of solving one of the most difficult problems in the highway field—the problem of providing money and legal authority for meeting traffic needs in areas of heavy traffic density and where the cost of acquiring needed rights-of-way is tremendous; in many instances too great for States or municipalities, or both, to undertake without Federal assistance.

Quite naturally there are conflicting viewpoints as to the proper procedure. But the fact remains that unless the Federal Government steps in to help solve one of the most perplexing of all highway problems, it will be postponed for many years to come, and we cannot attain the full benefits of highway transportation.

The basis of title II of pending bills is, of course, financial aid by the Federal Government to States and municipalities for large-scale traffic facilities through long-time loans for rights-of-way. There are many ways in which such loans can be used. They can be used in securing land to provide efficient and safe movement across industrial cities, thus serving commercial vehicles and passenger vehicles used by workers en route to and from their jobs, as well as foreign traffic destined to and through these cities. These loans can also be used for rights-of-way for limited-access highways between industrial cities. This latter is highly important from the standpoint of the flow of finished and raw materials and, in turn, plans for national defense.

ALL BENEFICIARIES PAY

If surrounded by safeguards to assure returns from all beneficiaries of such modern transportation facilities, there is no question that Federal loans would be repaid. And certainly there is no more advantageous way for the Federal funds to be expended in the interest of bettering economic conditions and providing employment than in helping to relieve the pressure of traffic conditions in heavily congested areas.

Federal-aid policies have through the years been liberalized to meet new highway conditions created by greater highway use. Federal assistance to States and municipalities for acquiring needed land for rights-of-way for highway purposes is now essential to an early solution of complex traffic problems. This can be accomplished within the scope of the present Federal-aid policies. The

Federal Government would continue to deal directly with State highway departments. Obviously, if provision is made for acquiring land in excess of actual traffic needs, these land values will automatically increase with the building of new traffic facilities. In turn, all beneficiaries would bear a fair share of the cost.

In our policy recommendation as regards rights-of-way, already quoted, the American Automobile Association urged that "State highway departments be authorized to acquire land in advance of, and in certain cases in excess of, actual highway needs and to amortize the cost thereof over a term of years through rental or resale of the excess land or by other appropriate means." This could well provide amortization of the cost through returns from all beneficiaries of proposed highway development.

Such a policy has long been advocated. In our Bill of Rights for Motorists, adopted in November 1936, article 2 reads as follows:

"* * * road programs should be definitely related to a road budget, which in turn is based upon a fair charge to all the beneficiaries of the highway—the community in general, real estate, commercial transport, the Federal Government, as well as the private passenger-car owners."

It Is Time To Be on Guard

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1940

Mr. HOFFMAN. Mr. Speaker, the peaceful, home-loving, Christian peoples of Norway and Sweden are enduring the horrors of a war for which they are in no way responsible. The people of Denmark have seen their Government taken over by a powerful and warlike nation which could find no fault with them, but desired to use their land and their resources to aid in its fight against the English and French.

Whatever may be the merits of the controversy between Germany and her enemies she has not even the shadow of an excuse for invading Denmark, Norway, or Sweden. She did it because she needed their resources and had the power to take them. Nor have you forgotten how the Russians came down like a pack of wolves on helpless Finland.

TREACHERY ABROAD

Doubtless, in last week's press you read the story—including the editorial in the Benton Harbor News-Palladium of April 18—of how, having bored from within, through the treachery of Norwegian officials, Germany's path for the occupation of Norwegian territory was made easy.

In other places in Europe, it is reported that similar undermining against neutral governments has been going on and, across the seas, no one knows from day to day whether his established government is secure or in the hands of those who, at the bidding of an outsider, will openly turn traitor.

HERE AT HOME

We have a Communist Party. It has openly proclaimed its purpose to be the overthrow of this Government by force. Its Presidential candidate brazenly made the statement:

> We industrial unionists are going to take over the factories some day for three very good reasons: (1) Because we need them; (2) because we want them; (3) because we have the power to get them.

Lewis, aided by the Labor Board, is trying to do it now.

Has that a familiar ring? Is it in line with what Hitler has just done to Sweden and Norway?

WILFULLY BLIND AND FOOLISH

For months—yes, for years—we, in the pride of our strength, in the fullness of our generosity, through an excess of tolerance, have permitted Communists, who would destroy our independence, our schools and our churches, to talk and to preach and to write against our Government.

REWARD TREASON

Not only have we permitted the Communists and others who would destroy a free America, who would establish the doctrines of a Hitler and a Stalin, to speak openly, advocate the adoption of their program, but, as in the sit-down strikes where they violated the laws, flouted the orders of the courts, beat peaceful citizens and destroyed property, State and Federal Government, by failure to protect our citizens, gave them aid and comfort.

Yes; and the Federal Government has many of them on its pay roll where, carrying on their treasonable schemes, living on the bounty of the country which enables them to purchase food, clothing, and shelter, they occupy positions, which, in time of war, would enable them to betray us into the hands of the enemy.

SOUTH OF THE BORDER

Down to Mexico last year went John L. Lewis, speaking to the Mexican Communists, to the representatives of the Mexican Government which have by force stolen the property of Americans; and our Government, up to the present time, has taken no effective steps to force the Mexican Communists or their allies from abroad to respect American property or American rights. It has been openly charged that those now in charge of the Mexican Government are but waiting an opportunity to extend their activities across the border into our land.

BLITZKRIEG PLOT READY

Charging that his committee had possession of a written Communist plan, obtained from Communist sources, to "'blitzkrieg' the United States at the proper hour," the gentleman from Texas, MARTIN DIES, this week told newspaper reporters that the plan contemplated paralyzing vital industries, such as utilities, communications, transport, steel, the navy yards, including factories making airplanes.

Have you forgotten that a short time ago I brought to your attention, to the attention of Congress, written proof from the Acting Secretary of the Navy that a union in Detroit defied the United States Navy and refused to give up plans and parts that were needed to operate the navy yard at Philadelphia?

The gentleman from Texas, Congressman DIES, said that the Communists and the Nazis, when the time is right, plan to do here what they have done in so many European countries. Do you doubt that statement? With the knowledge that the C. I. O. has been organized and aided by Communists; that they now claim the right, and, on occasion, have exercised the power, to stop production in essential industries; that that organization has been aided by the National Labor Relations Board and the operation of the National Labor Relations Act, do you doubt that, if war comes, not only our airplanes, our motor transportation, but many of our vital manufacturing industries, upon which this Nation would depend for its very existence, would be in the hands of those who claim the right to say when and where a man shall work and what and how much shall be produced in a factory?

WE SHOULD BE ON GUARD

The members of the National Labor Relations Board should be fired from their positions of public trust and be replaced by men of patriotism, who have the welfare of the country at heart; who believe in, and who will abide by, the Constitution.

OUR MERCHANT MARINE

Do you recall that very recently Representative Keefe, of Wisconsin, produced documentary proof that a seamen's union, honeycombed with communistic ideas, now sailing the ships of our merchant marine, has the power in time of war to turn them over to Russia or Germany? If it appears that Russia and Germany are about to win, what do you think these Communists, these agents of Moscow, in control of our ships, will do? Will they sail them across the seas, with the valuable cargoes with which they are loaded, and deliver them to the enemies of the Allies?

PUT OUR HOUSE IN ORDER

The passage last week of the Logan-Walter bill, by a vote of 282 to 97, shows that the House, regardless of what the Senate may do, is aware of the necessity for curbing

Federal agencies, which are usurping the power of both Congress and the courts. Let us finish the job by legislation which will convince the Communists, the administrative agencies and boards, the bureaucrats and those new dealers who believe in a dictatorship, that our people intend to have constitutional government, a Congress which will do our legislating, courts which will interpret our laws, executives who will abide by the law and keep faith with the people.

Civic Duty and National Glory

EXTENSION OF REMARKS

OF

HON. ANDREW EDMISTON

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1940

ADDRESS BY HON. LOUIS JOHNSON, THE ASSISTANT SECRETARY OF WAR

Mr. EDMISTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. Louis Johnson, Assistant Secretary of War:

Young leaders of West Virginia, today you are the junior executives of Clarksburg and other cities throughout West Virginia. Tomorrow their whole destiny may be in your hands. By affiliating yourselves with the junior chamber of commerce, you voluntarily have assumed a responsibility to serve your community. By devoting yourselves wholeheartedly to its program, you are preparing yourselves for the duties that may lie ahead. I commend your loyal civic spirit.

Civic consciousness is the first step toward national consciousness. When you participate in local problems and solve them, you grow into an awareness of State and National problems and become fitted to cope with them. As you help to plan and to execute projects which benefit your town, you have benefited your State; as you benefit your State, you have benefited your Nation. There is no purely local problem. There is no purely local benefit. All merge and become a part of our varied national life. The happiness and prosperity of your city are predicated on a sound and healthy West Virginia. The well-being of our beloved State, in turn, depends upon a strong and patriotic America. The interests of our city, our State, and our Nation are interwoven inextricably into the same pattern.

In grappling, therefore, with what are termed "local problems," you junior executives face issues that confront all of us everywhere in America. For the role that you play in civic affairs, you may indeed be regarded as the junior leaders of America.

As you face your problems from day to day, you must keep your vision clear. You must see beyond the limits of your city, beyond the boundaries of our State—yes; even beyond the far-flung shores that outline the Americas. Your clear eyes should be focused on the ever-changing horizon of world events. You must be alert to the fact that we are a part of a world whose boundaries are converging.

On the world's horizon we behold force rampant. Everywhere we note that weakness invites aggression. Need I but mention China, Ethiopia, Austria, Czechoslovakia, Danzig, Poland, Finland, Denmark? It was weakness that invited aggression in each of these areas. It was our apparent weakness that got us into trouble in 1917. If you entertain any doubt on that score, examine with me the German records that have been made public in the last 20 years. Let me quote a few pertinent statements from reliable authorities:

"I consider the intervention of America to be worth nothing at all," said the German Secretary of State for the Navy before April 6, 1917.

"The intervention of America would not be of much importance" was the sum and substance of the pre-1917 views of both Hindenburg and Ludendorf.

"I give my word as an officer that not one American will land on the Continent," promised the Chief of the German Naval Staff to justify his proposal to intensify submarine warfare.

To be sure, the Germans erred. They miscalculated our ability to recruit, organize, train, and transport an expeditionary force that would turn the tide of battle against them. But let us not forget that to teach them the error of their ways we had to pay, and pay dearly with thousands of American lives. On April 6, 1917, it was too late to do anything but fight. I repeat, we had to fight, and let no scoffing sophist of today try to tell you otherwise.

We went to war not to protect the interests of munitions makers, nor to pull British or French chestnuts out of a boiling international caldron. We broke with Germany because her unrestricted submarine warfare had taken the lives of American seamen engaged in occupations which they had a legal and a moral right to follow. We struck back at the German Imperial Government because we refused to submit our lives, our liberty, and our property to the arbitrary disposition of a war lord bent on aggression. That battle we won and won decisively; and you and I in America today live in relative security because in 1918 we defeated the German Imperial Army.

Today, as always, we are trying to build an Army and a Navy that will insure us against aggression. In the present world the most certain means of discouraging those who would trespass against us is to let them know in advance that we have adequate means to resist their thrusts. Let us, therefore, inspect the present state of our Army and determine whether it is adequate for our defensive needs.

At the outset, let me state unhesitatingly and unqualifiedly with all the strength and the energy at my disposal that an Army adequate for the safety of America does not contemplate an expeditionary force for use in Europe. On that score I am confident we are unanimous. We need an Army for these purposes:

First, to provide garrisons in our overseas possessions to protect our naval installations—in the Panama Canal Zone, in the Hawaiian and Philippine Islands, and in similar localities. For this purpose our General Staff has estimated a need for 70,000 soldiers. Today, we have approximately 65,000 in our overseas garrisons, but we are working toward the 70,000 goal.

Second, to protect America against raids. This means a force available on short notice sufficient to thwart any threat that may develop against the Panama Canal or the continental limits of the United States.

Third, to provide a basic force which can be expanded to meet the full needs of any grave emergency. This means, in turn, organizations reasonably manned and fully trained and equipped; and officers fully qualified and experienced.

In 1920, at a time of relative peace in the world, the Congress, after extensive hearings, enacted the National Defense Act. This basic law authorized 280,000 men in the Regular Army and 435,000 men in the National Guard. That force we do not have.

What do we have?

Our present strength for the Regular Army is 227,000 enlisted men and 13,000 officers. For the National Guard it is 235,000 enlisted men and 15,880 officers. In other words, our present force consists of a total of approximately 490,000 officers and enlisted men. Let us say a force of approximately one-half million. With the funds made available in the 1940 Appropriation Act we will be in a position to provide adequate supplies for an Army of only 400,000 men. That means only four out of five of our fighting men will be fully equipped for battle. That situation we hope Congress will remedy in the current appropriations.

In justice to the Congress, may I add that when it was dealing with the 1940 appropriations world conditions were not as grave as they appear at present. The increase to the 227,000 figure for the Regular Army and to the 235,000 for the National Guard was authorized by the President in his emergency proclamation after hostilities in Europe had broken out and after Congress had adjourned.

Questions naturally arise in your minds—what is our ultimate goal? What size Army do we finally want?

In the first place, it is very difficult to establish in advance an objective that will fit all possible future contingencies. Our need depends on conditions in the rest of the world. We want an army no bigger than is actually necessary. No one of any responsibility in the military service is in favor of a large standing army such as existed among European nations prior to the outbreak of war. Given the world as we find it today, we have adopted an objective which we believe is reasonable, conservative, and in keeping with the law as laid down by Congress.

In manpower we are content to go along with a force of approximately 500,000, to include both the Regular Army and the National Guard. If and when circumstances require, it should be increased. Based on previous records, it is the largest peacetime force that we have ever had. Based on present international standards, it is one of the smallest armies in the world. Despite recent augmentations and increased appropriations, we do not rank as well now as we did in 1938.

At the time of the so-called Munich appeasement, our land forces, including all trained Reserves, gave us a standing of thirteenth among the nations of the world. Among those that preceded us were both Czechoslovakia and Poland. Today, despite the fact that these last two nations have been eliminated as military powers, we rank twentieth. Certainly, no one can say that the War Department in asking for a force of less than 500,000 at this time is using the world situation as an opportunity to aggrandize itself.

In the current Budget estimates, the War Department is putting all of its emphasis on an increase in supply strength. We feel that our Army of 500,000 should have available at all times all the items necessary for its complete equipment. At this time we have asked merely for enough money to take care of minimum needs. Our War Department budget was carefully scrutinized by the Bureau of the Budget, approved by the President, and recommended by him to Congress.

It is a modest program, and even if fully enacted it would still leave us far short of the amount needed to meet our full supply requirements. We would still be deficient in Reserves to equip the full strength Regular Army and National Guard and the replacements necessary to maintain an efficient Army in the field. Without such a standing reserve of equipment, effective mobilization in time of a grave emergency would be impossible to attain. There would be no use in mobilizing men if we could not furnish them arms and equipment.

Reserves of munitions cost money and so does every other element in a well-balanced Army. Yes; our Army is expensive, but it is a necessity and not a luxury. Nor is the reason for the cost difficult to ascertain. Man for man, item for item, the cost to America is greater than in any other country. Our soldiers are better paid, better fed, better clothed, and should be better equipped than those of any other army in the world. Who of you would have it otherwise?

Totalitarian governments pay their bills by fiat. They conscript their labor. They confiscate capital. Our Government pays in good American dollars for value received. Our labor is free to move about, and it has the right to bargain. Our capitalist system encourages private industry and individual enterprise. Of course, we pay more for these American rights and privileges. Who of you would have it otherwise?

Here and there a hue and cry sometimes is raised about profiteering in our armament program. These insinuations have no basis in fact. As director of munitions, it is my job, within the appropriations made by Congress, to arm and equip America's land forces for combat. Let me assure you that in my dealings with industry I have seen no evidence of this so-called profiteering. On the contrary, I have found industrial leaders who, of their own accord, put their own business to great expense to make production studies of potential value to industrial mobilization. I see evidence daily of sincere efforts to cooperate and even to reduce costs to the Government.

Industry is willing to assume any production job in the field of munitions in time of war but willingness may not be enough. It must be accompanied by readiness. Industry must know how to make implements of war. After an emergency is upon us is a poor time to start to learn the intricacies of production. By our educational-order system we are taking steps this fiscal year to educate 115 civilian industrial plants to manufacture 73 separate noncommercial items. Next year, we hope that we will get the funds to train a similar number of factories on another group of strictly military articles of approximately the same quantity. On our lists we still have 600 munitions items that may give us difficulty and 2,000 plants that may be called upon to produce them. Preparedness on the industrial front will not be complete until we are ready to meet battle-front needs for every one of our military items.

Industrial mobilization will be achieved by the cooperation of the armed services and industry, backed and supported by the President and the Congress. The success of our civic plans, our State projects, and our national programs is predicated upon the cooperative spirit of our citizens. Cooperation is the keynote of American effort. We may disagree in politics but when our city, our State, or our country calls, we must rise above our differences and think and act as one. Under the American system of cooperation, we shall plan, create, and perpetuate a better city, a healthier State, and a stronger Nation.

All Chambers of Commerce Are Not in Favor of the Wheeler-Lea Bill

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1940

TELEGRAM FROM LEO C. DAILEY

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I wish to include a telegram from Mr. Leo C. Dailey, Secretary of the Sioux City (Iowa) Chamber of Commerce expressing the sentiment of the United States Chamber of Commerce in regard to the conference committee report on S. 2009.

SIOUX CITY, IOWA, *May 7, 1940.*

Hon. VINCENT F. HARRINGTON,
House Office Building, Washington, D. C.

Following wire sent to all Iowa Congressmen; hope it will help: "Today received stereotyped broadcast of United States Chamber of Commerce. Assume addressed to all local chambers, urging us wire you supporting Wheeler-Lea bill. This is to inform you position United States Chamber exactly contrary to position of vast minority membership of that organization taken recently at national annual meeting, Washington. On behalf our organization and speaking what we know to be sentiment of agriculture, this section, and what our people believe best interests of labor, we urge recommitment of bill. Please do not let great Nation-wide railroad and United States Chamber campaign now being directed and under way, inspired from small central steering committee, stampede Congress into passing this important measure. Interests of agriculture and Nation as a whole will be best served by recommitment with oportunity for further study."

LEO C. DAILEY,
Secretary, Chamber of Commerce.

Historic Notes

EXTENSION OF REMARKS

OF

HON. HENRY F. ASHURST

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8 (legislative day of Wednesday, April 24), 1940

SPEECHES AND LETTERS BY HON. HENRY F. ASHURST, OF ARIZONA, AND OTHER DATA

Mr. ASHURST. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD several letters written by me, certain speeches I have delivered, and several bills introduced by me which became laws.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

LATTER-DAY SAINTS

[Remarks of Hon. HENRY F. ASHURST, of Arizona, Tuesday, November 11, 1919]

Mr. ASHURST. Mr. President, I am glad that the Senator from Utah, Mr. Smoot, has spoken as he has. It was time for such a speech. A matchless maker of epigrams said that when "once a lie or a counterfeit statement gets into circulation it is well-nigh impossible to overtake it"; and therefore I believe the Senator from Utah has done a service to his country in exposing this infamous slander, which has been published broadcast against so many worthy people.

When I read the article I felt offended, because there are in Arizona a large number of Mormon people, or people who belong to the Church of Jesus Christ of Latter-day Saints; and I would be false to that principle of fair play for which I have always pretended that I stood if I failed at this time to say a word on the subject.

It may be that I do not understand fully the theology of the Mormon Church; but, Mr. President, the first church I ever attended was a Mormon Church. When there was no other church within 100 miles of the lonely frontier cabin where my parents lived, we found solace and comfort in attending the Mormon Church situated 9 miles distant. Our nearest—in fact, our only—neighbors for years were the Mormon people. Better neighbors no pioneer ever had. I am proud of the Mormon people. I am proud of the friendship that I have for them and that I believe they have for me; and I am able to say here in the Senate of the United States that their church has elevated many intellects and purified many hearts in my State.

As pioneers in a new country the Mormons are unrivaled. They are sober, industrious, frugal, honest. They are preeminently State builders; and today, if called upon to name a people who could most expeditiously transform a desert into splendid fields and farms, I would unhesitantingly choose the Mormon people. In many places where once the cacti lifted thorn arms into the brazen and heated air Mormon industry has reared temples, hospitals, homes, factories, and schools.

Moreover, I never saw a Mormon I. W. W.; but I have at some county courthouses in my State heard disgruntled, lazy, and indolent men who did not belong to the Mormon Church sit on the steps of the courthouse and curse the Government while Mormon citizens were going into the same county courthouse to pay taxes without complaint.

Mr. OWEN. Mr. President——

Mr. ASHURST. I yield for a question.

Mr. OWEN. I should like to ask the Senator if it is not a tenet of the Mormons to teach and preach industry and thrift?

Mr. ASHURST. I am able to state that industry and thrift are amongst the foundation stones of the Mormon Church. Absolute and unquestioned obedience to law is a tenet of the Mormon Church. Respect for authority is one of the tenets of the Mormon

Church. We need more of such people in these perilous times of the Republic; and, again, I would be false to every principle of justice and to every sentiment of gratitude if I failed to state at this time that when savage Indians galloped along by our pioneer homes, burning and murdering, plundering and scalping as they went, it was to the Mormon people that my defenseless but heroic parents went for refuge and defense.

Mr. President, I say the Senator from Utah has done well in "scotching" this falsehood, which has been given such wide circulation. I believe the American people are coming at last fully to understand the Mormon people. Their temples, schools, fields, homes, industry, frugality, their morality, and their patriotism testify for them in more eloquent terms than the Senator or I could speak. Then, again, observe their Representatives in the House and in the Senate. Look at the high class of public servants they send here. I ask that the Mormons be judged as a people, judged as a religion, by their fruits; and if they be judged by their fruits the verdict of the world will be in their favor.

It seems to me that the time should be welcomed in America when men shall not further be assailed because of their religion or lack of religion. Men ought not further be assailed or discriminated against because of their particular view of how to follow the Master. America was built up, and one of the reasons for the migrations from the old countries to these shores was that our ancestors desired to find a place to build free and strong States where such ignoble sentiments as bigotry could not survive.

I do not forget that the splendid domain of Arizona, one of the imperial States of this Union, came into being largely through the brave exploits of the Mormon people. When Gen. Stephen Kearney was beleaguered near San Diego during the Mexican War, and it seemed as though the Mexicans were going to capture and annihilate him and his entire command, it was the Mormon battalion that marched all the long way from Iowa into Tucson, Ariz., and occupied in then Mexican territory a domain we now know as the Gadsden Purchase, which was purchased by our Government in 1854. When the commanding officer of the Mormon battalion, Lt. Col. St. George Cooke, entered the then Mexican town of Tucson and raised the American flag, he issued a pronunciamento, as follows:

"We do not war upon civilians. We make war against men in uniform only. The property of individuals will be held sacred. All civil rights will be upheld. Those who obey the law and conform to order will be protected."

The command remained there some days to refresh itself and then marched on to the relief of General Kearney who, as I said, was beleaguered and surrounded near San Diego.

So, Mr. President, the Mormon people, as pioneers, as State builders, as statesmen, as people of industry and patriotism in every department of life, compare well and favorably with the general mass of their fellow citizens. This much I should have said; more than this I need not say.

WASHINGTON, D. C., *January 22, 1940.*

Mr. FREDERIC E. FOX,
Flagstaff, Ariz.

DEAR MR. FOX: Your letter of January 15 received, advising that you are compiling a history of the five Babbitt brothers.

It is now more than 53 years since I first met the Babbitt brothers, David, George, Charles, William, and Edward. Within a short time after they settled in northern Arizona they, severally, established character as forward-looking, courageous, reliable citizens and down through the years they contributed toward the upbuilding and the dramatic progress of Arizona.

When I was trying to earn $20 per month as a cowboy (I was overpaid) I rode scores of days and many hundreds of miles under the summer sun and winter stars with Bill Babbitt. Bill was a clean-spoken, chivalrous cowhand.

The thundering herd would sometimes stampede and this caused some cowhands to let out profanity as they rode furiously and hard, but Bill was serene, and silent as he rode, and let out no profanity, even of the low, sweet, soft kind.

When the chuck wagon would break down or get lost, or the camp cook would turn cranky and there was nothing for supper but "wind pudding," Bill was patient and pleasant and endured all hardships with an almost royal humor.

Some years ago Bill went to that vast realm where kings and queens are probably counted as deuces and the American cowboys are probably counted as aces.

With kind regards.

Sincerely yours,

HENRY F. ASHURST.

WASHINGTON, D. C., *May 6, 1940.*

Mr. T. E. STEVENS,
National Representative, Townsend National Recovery Plan, Inc., Phoenix, Ariz.

DEAR MR. STEVENS: Your letter of May 2 received.

Please convey to the delegates my cordial salutations and best wishes for a successful convention. Assure Dr. Townsend, founder and president, of my confidence and esteem.

Dr. Townsend's proposed plan of "Pay as we go," by means of an income tax, is one of the happiest hits of statesmanship of our day.

Many, if not most of the economists and financiers believe that Dr. Townsend's plan may be the method by which we may care for the aged, avoid inflation, and at the same time begin to reduce our national debt.

With kind personal regards.

Sincerely yours,

HENRY F. ASHURST.

WOODROW WILSON

[Remarks of Hon. HENRY F. ASHURST, of Arizona, in the Senate of the United States Tuesday, October 24, 1939]

Mr. ASHURST. Mr. President, the subject of the pending joint resolution has very deeply stirred the feelings of some excellent persons.

Not a few citizens, although thoroughly schooled and well trained in self-control, have, in discussing the joint resolution, been unable to keep their emotions within bounds.

During the past month some calumnies have been inflicted posthumously upon the memory of some characters who during their lifetime deserved well of our country and were highly esteemed by their countrymen.

It is, however, some consolation and comfort to know that such calumnies as were inflicted posthumously were not uttered in the Senate or by any Senator. They were uttered elsewhere.

Caustic words and whizzing javelins of accusation hurled in the hot blood of excitement and in the rough-and-tumble of debate against a living person are easily endured and quickly forgotten.

Unfair imputations uttered against a man while he is in existence will, if he declines to notice them, fall soon enough into the abyss of oblivion, as silence is the noblest weapon and most devastating rebuke with which to meet calumny; but when misconduct is charged to one whose voice is forever silenced, the dead must be allowed to reply in the only way they may reply; that is, through the record of their deeds done.

When, in his last hours, Woodrow Wilson said, "I am ready," he spoke as few men may speak. He was, indeed, ready. He had enlightened thousands of our young men and had sent them forth from our colleges with minds and characters trained for the truth; he had enriched our literature; he had been Governor of a proud State; he had, as President, ennobled labor and had shown a nation how to be valiantly honest. Such a man is always ready.

The Wilson administration was an epoch crowded with complex governmental problems; grave international involvements creating desperate emergencies, the surmounting of which ran to the foundations of our national existence; training, victualing, and transporting vast armies; providing and deploying an immense navy; raising revenue aggregating billions of dollars. In all of these stupendous duties Woodrow Wilson was moved by a zeal as warm as ever inspired the breast or nerved the arm of patriot warrior.

Rarely has there been a character like Woodrow Wilson. Even under the pressure of catastrophic events he insisted that all problems, at whatsoever pain to himself, should be solved only by the rule of justice.

The alluring temptation, always before public men, to obtain for immediate constituents some trifling benefit today, although at the sacrifice of a nation's vitality and efficiency for the future, has been the Circean spell that has since the days of antiquity deflected the purpose and weakened the fiber of many statesmen; but such temptation never influenced Woodrow Wilson.

He could not negotiate compromises; hence he did not consider what was or was not expedient. He reckoned not the cost to his health or to his fame, but pressed forward to his duty as he saw it, and as the horologe of time ticks on and on the waves of malice and hatred that once rolled so furiously about him will spend their force and his fame will be far shining, for he strove for superlatively great ideals.

Woodrow Wilson believed that human liberty is like unto a coral island—built from the deeps and by the dying of the builders until at last it greets the surface and the sunlight—and high above the range of doubt or fear, with the charm of a poet, Woodrow Wilson sacrificed himself in an effort to banish from the earth the incarnate Moloch of War. Such a man is always ready.

THE F. B. I.

[Remarks of Hon. HENRY F. ASHURST, of Arizona, in the Senate of the United States, Thursday, April 25, 1940]

Mr. ASHURST. Mr. President, the speeches just delivered in the Senate regarding the F. B. I. are timely and pertinent.

Charging the able senior Senator from Nebraska [Mr. NORRIS] with attempting to smear somebody is about like charging Abe Lincoln with engaging in a similar endeavor.

Mr. NORRIS. Mr. President, will the Senator yield?

Mr. ASHURST. Certainly.

Mr. NORRIS. When Abraham Lincoln lived he was charged with that and everything else imaginable in the category of crime and ridicule.

Mr. ASHURST. No one believed it.

Mr. NORRIS. They do not now; they know better now; but many believed it then.

Mr. ASHURST. If the Senator will pardon me, no one believed it then.

Mr. President, it is not my function, certainly not my duty, to make any elaborate defense of the F. B. I. or of the Department

of Justice. Some 1,600 men make up the personnel of the F. B. I. It would be impossible to imagine that out of 1,600 men there could be no weak member, no rotten bough. The greatest Wisdom, the greatest Mind, the greatest Good on earth, in choosing a cabinet found that He had a denying Peter, a doubting Thomas, and a bribe-taking Judas. Finite man will labor in vain to select men in large numbers without finding some weak one. Therefore, I do not doubt that out of 1,600 men there may be, and doubtless is, some unworthy man.

I speak now as a whole regarding the work of the F. B. I. I shall not even refer to the Detroit cases, because it is my habit never to discuss a matter pending in the courts. It was wise on the part of the speakers who preceded me not to descend into the details of those cases. It is proper in such circumstances to stand in awe of justice and let justice speak.

The members of the F. B. I.—that is, the Federal Bureau of Investigation—are trained men. In my service as a Senator I have made but one recommendation to the F. B. I. I did recommend that a young gentleman be appointed. He was given an examination and could not pass. I requested a reexamination. Still he did not pass. So far from feeling any resentment against Mr. Hoover, I admire him rather for the strong and sterling way in which he disregarded what might be called a political endorsement.

The F. B. I. requires men of unusual types, sagacious, prudent; they must know when to speak and when to withhold speech. They must know what a criminal would do in certain circumstances. They must even know who would be likely to commit a crime of a particular nature. They must be trained to know what a suspected person will do in certain circumstances. In order to be a successful member of the force of the F. B. I. one must understand physics—that is, natural philosophy; one must understand psychology—that is, the science of human emotions—to an almost perfect degree.

The persons against whom the F. B. I. agents are operating constitute some of the boldest, most desperate, most cruel, and inveterate criminals ever known. Such criminally disposed or antisocial persons desire sensations, wines, high-powered cars, bright lights, ease, comfort, luxury, but lack the ability to earn these things. Therefore they seek to take them by indirection and in violation of the law.

As to communism, I suppose one has a right, under our Constitution, to preach communism. Communism cannot prevail, because it is contrary to the inborn, ineradicable sentiments of the human heart. Deep in the human instincts and enshrined in the hearts of all humans are three things that may not be repealed by any government or any law:

Something to possess. That desire cannot be repealed. Therefore communism will fail because it cannot wipe out the desire to possess something tangible; some property.

Something in which to believe.

Someone for whom to care.

These three things are invincible and communism will attempt in vain to repeal them. They are part of human life and human destiny.

The Senator from Wisconsin [Mr. WILEY] opened the debate. I listened to him with care, as I listened, of course, with care to what was said by the Senator from Nebraska [Mr. NORRIS] and by the Senator from Florida [Mr. PEPPER]. I agree with them that a man charged with murder or any other crime should be tried strictly according to law. The only hope we have of maintaining this Government is to assure the accused person, no matter how lowly, how poor, how despised such person may be, that he will be tried by the same system of government, the same law, the same rule of evidence, and possibly by the same judge and the same system of jury selection under which the wealthiest, most eminent, most learned citizen would be tried.

Mr. President, more than a hundred years ago—yes; longer ago than that—an eminent orator—I leave it to some surer scholar to discover whom it was—said:

"If all the men who have fallen under American justice and have suffered the death penalty in America could be resurrected at the foot of the gallows and, after their resurrection, were to form a government, they would form a government of the same kind as the one under whose justice they fell."

There is no doubt about that, because it is the fairest system ever devised by man. Therefore, of course, it behooves us all to see to it that the civil liberty of citizens shall not be swept away, and that the lowliest and poorest citizen, the most meager in funds, shall be tried by the same law as the most opulent citizen.

It is a singular circumstance which, if it were not so poignant in its tragedy, would be ironical to the point of humor that when a cold-blooded, desperate, cruel, and inveterate gangster is arrested after spending a lifetime inveighing against the Constitution of the United States, after spending much of his ill-gotten gains in an attempt to subvert our system of government, the first thing that gangster does when brought into court is to appeal to this very Constitution for the preservation of his own liberty and for a fair trials. Sirs, the document he tried to destroy, the system against which he inveighed, and against which he bored from within, is the system to which in his day of trial and trouble he appeals for his freedom and his acquittal, if he is to have such. That statement shows the strength, the power, the beneficence, and the justice of the American system of government under our Constitution.

As to Mr. Hoover, let me say that he is a young man. So far as I know, he is a good man. He is not a great man, for no man is ever great until he has had much sorrow, humiliation, and disappointment. No man will be great, or can expect to be great, until he has had full measure of those chastening and refining influences. But measuring Mr. Hoover by his accomplishments—of course, he is not without error—measuring him by what has been done, the record seems good.

When Mr. Cummings was appointed Attorney General in 1933, I happen to know that tremendous pressure was brought to bear upon him to try to induce him not to retain Mr. Hoover as the Chief of the F. B. I. Mr. Cummings made an investigation, which lasted nearly a year, and at the conclusion of the investigation made by Mr. Cummings he determined—and I think wisely determined—to retain Mr. Hoover.

When Mr. Murphy succeeded Mr. Cummings, the same pressure was not brought to bear on Attorney General Murphy to release and discharge Mr. Hoover, but there was some opinion that it should be done. Attorney General Murphy retained Mr. Hoover as Chief of the F. B. I.

When Mr. Jackson succeeded Mr. Murphy as Attorney General—I do not now speak with authenticity or with any real degree of accuracy—he considered the question, and after his investigation he also retained Mr. Hoover as the Director of the F. B. I.

It would be childlike in simplicity to pretend that in such a wide field, a field so pregnant with possibilities for mistakes, no mistake has been made. Whenever you find a public man who has made no mistakes, you will find one who has been asleep. I say to my fellow Senators, when they go out into the field to begin their campaigns for reelection, they will be charged with having made mistakes. Admit it, certainly, for it shows that you are active; you are trying to do something. Those in the graveyard and those who are asleep probably make no mistakes. I have no doubt, Mr. Hoover has made mistakes. I hope he has not made as many as I have made; but it should not frighten one to be accused of having made a mistake.

Mr. President, again referring to the men required in the F. B. I., some Senators may have a phonographic brain. I congratulate them if they have. It is not, however, conclusive evidence of mental strength to have a phonographic brain, one which can reproduce like a phonograph. While it happens to be no sure evidence of mental strength, the F. B. I. man must have it.

How many Senators have a photographic eye? I congratulate such as have. With the photographic eye, what you see in a flash is engraved on your mind forever. If you have such an eye, you are a remarkable man. The F. B. I. man must have both a photographic eye and a phonographic brain.

The F. B. I. man must be cool. He must be so deliberate and so cool that he even appears to be like a gangster in temperament. Gangsters are the coolest of all men. There is no excitement about them. The first thing they learn about gangster warfare is to keep cool. A false move and the game is over.

Mr. President, these men in the F. B. I., moreover, must be above reproach. They must have no social ambition; they must have no political ambition; and, above all, they must have no financial ambition. It is not easy to find men, certainly regiments of men, who can meet such a test, and that is the test they must meet, otherwise the inexorable law of efficiency soon will exclude them from their positions in the F. B. I.

As for Mr. Hoover, I have never had sip or sup with him. We are not social, fraternal, political companions, or comrades, and when I speak of him, as I have done before, I do it because I believe I would exhibit a sort of cowardice, I would certainly exhibit a sort of timidity, if I did not lay before the Senate and the country these observations concerning impressions of the F. B. I. which have come to me down through the years.

I could tire the Senate by a long and detailed account of hundreds of cases which have been solved by the F. B. I., cases so startling in their nature, so remarkable, that one might imagine that the F. B. I. men themselves were endowed with some sort of telepathic sense, so remarkable and so startling have been their achievements.

BILLS INTRODUCED BY SENATOR ASHURST THAT BECAME LAWS

IN THE SIXTY-THIRD CONGRESS

A bill authorizing the survey and sale of certain lands in Coconino County, Ariz., to the occupants thereof.

IN THE SIXTY-FOURTH CONGRESS

A bill for the relief of Warren E. Day.

A bill authorizing the adjustment of rights of settlers on a part of the Navajo Indian Reservation in the State of Arizona.

A bill to provide for the storing and cleansing of commonly called garbanzo.

A bill to provide for an auxiliary reclamation project in connection with the Yuma project, Arizona.

A bill to authorize the Secretary of the Interior to lease, for production of oil and gas, ceded lands of the Shoshone or Wind River Indian Reservation in the State of Wyoming.

A bill providing that Indian schools may be maintained without restriction as to annual rate of expenditure per pupil.

IN THE SIXTY-FIFTH CONGRESS

A bill to extend the time for cutting timber on the Coconino and Tusayan National Forests, Ariz.

A bill to establish the Grand Canyon National Park in the State of Arizona.

A joint resolution authorizing the assistant to the Secretary of the Interior to sign official papers and documents.

IN THE SIXTY-SEVENTH CONGRESS

A bill for the relief of Walter Runke.

A bill to amend the act entitled "An act authorizing the survey and sale of certain lands in Coconino County, Ariz., to the occupants thereof."

A bill to provide for the completion of the bridge across the Little Colorado River, near Leupp, Ariz.

IN THE SIXTY-EIGHTH CONGRESS

A bill to authorize the Secretary of the Interior to issue patent in fee simple to the board of regents of the University of Arizona, for a certain described tract of land.

A bill authorizing the Secretary of War to grant a right-of-way over the Government levee at Yuma, Ariz.

IN THE SIXTY-NINTH CONGRESS

A bill for the relief of Eustacio B. Davison.

A bill (authorizing the withdrawal of certain public lands in Arizona for use as a municipal aviation field by the city of Tucson, Ariz.) to authorize the use by the city of Tucson, Ariz., of certain public land for a municipal aviation field.

A bill for the relief of Edgar K. Miller.

A bill for completion of the road from Tucson to Ajo via Indian Oasis, Ariz.

IN THE SEVENTIETH CONGRESS

A bill to authorize (appropriations for the survey, construction, and maintenance of highways on or adjacent to untaxed Indian lands) an appropriation for roads on Indian reservations.

A bill to authorize the use by the county of Yuma, Ariz., of certain public lands for a municipal aviation field.

A bill granting a pension to Lois I. Marshall, widow of Vice President Marshall.

A bill for the relief of William A. Light.

A bill authorizing the paving of the Federal strip known as International Street, adjacent to Nogales, Ariz.

A bill for the relief of William E. Thackrey.

A bill for the relief of C. R. Olberg.

A bill authorizing the Secretary of War to donate certain buildings in the city of Tucson, Ariz.

A bill authorizing the construction of a fence along the east boundary of the Papago Indian Reservation, Ariz.

A bill authorizing the Federal Power Commission to issue permits and licenses on Fort Apache and White Mountain Indian Reservations, Ariz.

A bill to authorize the construction of a telephone line from Flagstaff to Kayenta on the Western Navajo Indian Reservation, Ariz.

A bill authorizing the Secretary of the Interior to dispose of two bridges on the San Carlos Indian Reservation in Arizona.

IN THE SEVENTY-SECOND CONGRESS

A bill for the relief of Hamilton Grounds.

A bill to amend the United States mining laws applicable to the city of Prescott municipal watershed in the Prescott National Forest within the State of Arizona.

A resolution authorizing an investigation of the subject of the utilization of the water resources of the San Pedro River in Arizona.

IN THE SEVENTY-THIRD CONGRESS

A bill to amend the act of March 4, 1915, relative to desert-land entry.

A bill for the relief of A. E. Sholley.

A bill to provide for the selection of certain lands in the State of Arizona for the use of the University of Arizona.

A bill providing that no indictment shall be insufficient because of formal defects or because of presence of clerks or stenographers.

A bill to provide punishment for killing or assaulting Federal officers.

A bill to limit the operation of the statutes of limitations in certain criminal cases.

A bill to amend the act giving the Supreme Court authority to prescribe rules with respect to proceedings in criminal cases.

A bill to punish smuggling contraband articles into penal institutions, inciting riots therein, etc.

A bill to punish certain offenses committed against banks operating under laws of the United States or any member of the Federal Reserve System.

A bill to extend the provisions of the National Motor Vehicle Theft Act to other stolen property.

A bill giving Supreme Court authority to make and publish rules in civil actions at law.

A bill permitting employment of certain counsel in case of United States against Weirton Steel Co.

A bill permitting employment of certain counsel in cases of United States against Electro Metallurgical Co., New-Kanawha Power Co., and Union Carbide & Carbon Co.

A bill vesting courts with discretion relative to the forfeiture of vessels and aircraft seized for violations of law.

IN THE SEVENTY-FOURTH CONGRESS

A bill to amend an act entitled "An act to regulate the manner in which property shall be sold under orders and decrees of any United States courts."

A bill to prohibit the interstate transportation of prison-made products in certain cases.

A bill to authorize the acquisition of land on McNeil Island.

A resolution providing for the celebration on September 17, 1937, of the one hundred and fiftieth anniversary of the adoption of the Constitution of the United States of America by the Constitutional Convention.

A bill to amend an act entitled "An act to establish a uniform system of bankruptcy throughout the United States."

A bill limiting the operation of sections 109 and 113 of the Criminal Code and section 190 of the Revised Statutes of the United States with respect to counsel in certain cases.

A bill to amend the act entitled "An act forbidding the transportation of any person in interstate or foreign commerce kidnaped or otherwise unlawfully detained, and making such act a felony."

A bill to authorize and direct the Secretary of the Treasury to transfer certain moneys to "Funds of Federal prisoners."

A bill to provide an official seal for the United States Veterans' Administration.

A bill to authorize the Attorney General to determine and pay certain claims against the Government for damage to person or property in sum not exceeding $500 in any one case.

A bill to amend section 103 of the Code of Criminal Procedure for the Canal Zone and section 542 of the Code of Civil Procedure for the Canal Zone.

A resolution to print additional copies of the revised annotated Constitution, and further to revise the same.

A bill to supplement the act of June 25, 1929, which authorized and directed the Attorney General to institute suit against the Northern Pacific Railway Co. and others.

A bill to amend an act entitled "An act to establish a uniform system of bankruptcy throughout the United States."

A bill for the relief of Lt. Robert A. J. English, United States Navy.

A bill to reenact and amend certain provisions of the various national liquor laws.

IN THE SEVENTY-FIFTH CONGRESS

A bill for the relief of Stanley A. Jerman, receiver for A. J. Peters Co., Inc.

A bill limiting the operation of sections 109 and 113 of the Criminal Code and section 190 of the Revised Statutes of the United States with respect to counsel in certain cases.

A bill to authorize the transfer to the Attorney General of a portion of the Fort Reno Quartermaster Depot Military Reservation, Okla.

A bill to amend the Criminal Code by providing punishment for impersonation of officers and employees of Government-owned and Government-controlled corporations.

A bill to amend the act authorizing the Attorney General to compromise suits on certain contracts of insurance.

A bill to authorize certain officers and employees of Federal penal and correctional institutions to administer oaths.

A bill to provide for the appointment of additional judges in certain United States courts. (Introduced by Senator ASHURST and Senator HATCH.)

A bill to authorize membership on behalf of the United States in the International Criminal Police Commission.

A bill to provide for the care and treatment of juvenile delinquents.

IN THE SEVENTY-SIXTH CONGRESS

A bill to amend section 224 of the Criminal Code so as to penalize the making of false claims for the loss of insured mail matter.

A bill to provide for the administration of the United States courts, and for other purposes.

A bill to provide for the confiscation of firearms in possession of persons convicted of felony and disposition thereof.

A bill to authorize the temporary appointment of a special judge for the District Court of the Virgin Islands.

A bill to provide that records certified by the Court of Claims to the Supreme Court, in response to writs of certiorari, may include material portions of the evidence.

A bill to amend the act entitled "An act making appropriations for the naval service," so as to extend commissary privileges to civilian officers and employees of the United States at naval stations beyond the continental limits of the United States or in Alaska.

A bill to prohibit reproductions of official badges, identification cards, and other insignia.

A bill to extend the privilege of retirement for disability to judges appointed to hold office during good behavior.

A bill to provide that no statute of limitations shall apply to offenses punishable by death.

A bill to amend the Criminal Code in regard to obtaining money by false pretenses on the high seas.

A bill to limit the operation of sections 109 and 113 of the Criminal Code and section 190 of the Revised Statutes of the United States with respect to counsel in certain cases.

A bill relating to certain lands of the Papago Indian Reservation in Arizona.

H. R. 1

EXTENSION OF REMARKS

OF

HON. JOHN K. GRIFFITH

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1940

STATEMENT OF JAMES H. MORRISON

Mr. GRIFFITH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Mr. James H. Morrison, representing the Louisiana Farmers Protective Association, Inc., before the Ways and Means Committee:

Mr. MORRISON. Mr. Chairman, before I start I would like to correct one misapprehension. I am not really a Senator. I am a Senator merely by courtesy. I have adopted the title.

Mr. MCCORMACK. What is a Senator by courtesy?

Mr. MORRISON. They just call me that.

Mr. MCCORMACK. Will you give your address?

Mr. MORRISON. Hammond, La.

Mr. MCCORMACK. What is your business, Mr. Morrison.

Mr. MORRISON. I am an attorney. I came up here at my own expense; I represent the Louisiana Farmers Protective Association, Inc., which is an association of over 9,000 strawberry farmers in the Louisiana Strawberry Belt, which incidentally is the largest strawberry belt in America.

Mr. MCCORMACK. We are glad to hear you.

Mr. MORRISON. I come here as their representative, and I might say that the problems of that strawberry deal of Louisiana are perhaps similar to the problems of every fruit grower in America. They raise a perishable crop, like most of the fruit crops grown in America, and this association is for the protection of those strawberry farmers.

This association came into existence in 1937, after a very disastrous season, where the farmers of that deal received the lowest price for their commodity, on the average, that they had ever received in the history of the deal, so to speak.

In the year 1938, the following season, which happened in the early part of March, the association controlled the selling of all the strawberries that left Louisiana at that time. We had made a great deal of inquiry as to why the decline in price and the cause of the flop, so to speak, in 1937, and we were led to believe that the chain-store selling of strawberries as loss leaders was one of the main reasons for the failure of the grower to receive more money for his strawberries. So at the outset of the season of 1938 the representative buyers of the three major chains, A. & P., Kroger, and Safeway were on the ground, and we called them in for a meeting and asked them what would be the possibilities of assuring the strawberry growers in this association that they would sell their strawberries at least not as loss leaders, but at a profit.

They all agreed that 2 cents profit per pint, which is 48 cents per crate, was reasonable. So the association, inclined also to be reasonable, agreed that if the chain representatives agreed that 2 cents a pint was reasonable, that even 1½ cents would be more reasonable, so that association put a restriction on the sale of all strawberries, that they were to be sold at a minimum profit of 1½ cents or more by the chains, or else they could not buy.

The chains said they would take it up with their various organizations, and none of them agreed to do it. All three chains purchased strawberries on that auction down there, which, as I say, was under the control and direction of this association.

When this association found that one of these chain stores had violated that rule of selling at 1½ cents minimum profit per pint, they were not allowed to purchase any more strawberries. The first one to do so was Kroger, which had a buying subsidiary, the Wesco Food Co.; the next one was the buying subsidiary of the Safeway; and later on during the season Wesco agreed to sell at a cent and a half minimum profit, so they were allowed to come back on the auction and purchase strawberries.

When the regulations went in A. & P.'s buying subsidiary, the Atlantic Commission Co., went out and did not buy any more strawberries in Louisiana, and the understanding was that they purchased all their strawberries for their stores from terminal markets.

That is, in a way, a brief history and summary of the operations of this organization for the first year. Every time action was taken against these chain stores or their buying subsidiaries, there was a favorable reaction in the market, and I believe I am safe in saying that that is one of the main troubles of your strawberry farmer, and which I think is also applicable to every fresh-fruit farmer in America; that is, the selling of their products as loss leaders, together with the combined buying power which the chain-store subsidiaries have.

For instance, the Atlantic Commission Co. not only buys for the A. & P. stores from the farmers or on the markets, but they also purchase for independent jobbers whom they control by giving them business in other commodities, and in that way the buying power is lessened in the strawberry belt, which means that the farmer has a harder time securing a market, and especially where strawberries are sold at auction as they are down there, because where the buying power is all given to one man you haven't much demand on the auction.

This past season, 1939, the chain stores, regardless of the Robinson-Patman Act, sold strawberries as loss leaders in various cities and localities in the United States. I have seen various telegrams and letters come back from jobbers to the selling agency there in Louisiana, where they said they couldn't handle any more strawberries at that particular time, due to the fact that the chain stores had advertised strawberries at cost, and in some instances below cost, and for that reason they could not meet the competition and they could not handle the strawberries profitably.

So, as a result of the great buying power, and as a result of selling strawberries as loss leaders, the strawberry farmer has received less money than he would have received ordinarily had they not sold the strawberries as loss leaders and had that large buying power in this combination.

I might say, I believe I am safe in saying, that the chains handle approximately from 15 to 20 percent of the strawberries. If they took all the strawberries and paid a reasonable price for them the farmers would have no kick; but that 15 or 20 percent, where they use the strawberries as loss leaders, puts the farmer in a position where his market on the other 80 percent is ruined, and for that reason he is not able to get what he ordinarily would if they did not use the strawberries as loss leaders.

Mr. DINGELL. As I understand it thus far, your expressions here are centered largely against the vicious practice of selling certain products below cost.

Mr. MORRISON. At cost or below.

Mr. DINGELL. In this instance it is applicable to strawberries, and a certain group of buyers, large buyers, banded together, buy about 20 percent of the crop.

Mr. MORRISON. Yes.

Mr. DINGELL. At the lowest possible price, and then they sell them at the lowest possible price, even below cost, as loss leaders, and through that action force the other independent buyers to either buy strawberries at an excessively low cost in order that they can also sell as a loss leader, and through this combined practice the producer of this product, strawberries, in this instance, is made the victim of this vicious practice?

Mr. MORRISON. I would say that they buy from 15 to 20 percent of the strawberries for their own use, but their buying power for independent jobbers gives them a greater buying power than 20 percent.

Mr. DINGELL. They buy even for others?

Mr. MORRISON. Yes.

Mr. DINGELL. But your main complaint is the sale at or below actual cost and the practice which is known as loss leaders?

Mr. MORRISON. Correct.

Mr. DINGELL. You don't have any laws in Louisiana to curb that?

Mr. MORRISON. No.

Mr. DINGELL. I want to say to you that I have on more than one occasion attacked this practice of loss leaders, away back when we considered N. R. A. I had several tiffs with witnesses on that particular practice. That practice ought to be thoroughly considered, because whatever one merchant can do another must do, whether he wants to or not, and invariably will do. If you can sell a pint of strawberries for cost, the grocer on the other corner can do so and must do so, and then if you undersell him, he does the same thing, and there is no way of knowing how far they will go in cutting each other's throats. That is particularly harmful to the small merchant.

Mr. MORRISON. That use of the strawberries as loss leaders is a great weapon to the chain stores in inducing customers to come into their stores and trade. In other words, they have many stores in a community, and with the combined advertising power of 50 stores, say, they will bring a page ad out in the newspaper in that particular locality, and at the time the Louisiana strawberry crop comes in, there are no other strawberries on the market to amount to anything—Florida is the first, and they are practically through; Louisiana comes in when spring is just starting in the North and East; they come out with a page ad and in one corner there will be a conspicuous place, "Louisiana strawberries, two pints for 19 cents," or "two pints for 25 cents," or whatever they can get the price down to.

In other words, they have no motive to sell these strawberries at a reasonable profit and give the farmer who produces them a reasonable profit. Their main motive is to cut that price as low as possible so as to induce every possible customer they can to come into their stores with the price held before them of those strawberries.

Your independent merchant across the street has not that advertising power and he cannot buy in those large quantities; he will have to go to his jobber to buy. Even though he may chisel on his jobber and get those strawberries as low as possible he is only going to handle as many of those strawberries as is possible for him to get by on, because he is not making a profit on them. For that reason your independent does not push the strawberries or that particular commodity, and in that respect the chain

stores have a tendency to bring down the market. In other words, there isn't a possible chance for a bull market as long as your chain stores are in.

The chain stores retaliated when we refused to let them buy strawberries on the auction down there and said that they were not going to handle strawberries but after a careful check-up we found that they were handling strawberries, but they were buying them at the terminal markets. In other words, their business is so competitive that they had to handle strawberries if the independents and other stores were handling them, because that was a delicacy and a much-sought-after commodity which the housewife wanted, and if she couldn't get it in a chain store she would go to the independent store.

Mr. KNUTSON. May I suggest right there, I don't think this legislation covers the situation you are describing.

Mr. MORRISON. I haven't quite come to that particular part of it. I am going to bring that out later on. What I am primarily trying to do before this committee is to give you the grower's angle on chain stores and their operation. In other words, I am representing and talking for the grower, not for the retail merchant, not for the jobber, or not for any other agency except the particular grower. What I am trying to bring out—and I will bring out your problem later on in my discussion—is to show exactly how the farmer would like to have the chain stores regulated, or this practice stopped.

To go on with your chain stores, the farmer of America is completely unorganized. If these 9,000 farmers down there had not had any organization they would have been completely at a loss to do anything about chain stores selling their product as loss leaders.

When the A. & P. store, which is controlled by two gentlemen—I understand, two brothers—and the Kroger Grocery & Baking Co. and the Safeway Stores are really empires, rather than businesses, because of their great number of stores and the bigness of their business, if they want to they can control that situation.

It wasn't so long ago that the A. & P. employed a gentleman by the name of Mr. Carl Byoir, so I am told, as public relations counsel, and he advertised in every paper in America, or practically every daily in America, either through a page or half-page ad, the policy of the Atlantic & Pacific Tea Co. in the operation of their stores. Many people charged that that was done to get favorable cooperation for the chain stores by the newspapers.

I bring that out as an example of their organization and of their power and of their money as compared to the completely disorganized group of farmers.

There are many farmers in the United States of America that would like to come before this committee and testify, but wouldn't dare do so because the chain stores handle a certain percentage of their crop; and if they did, naturally they would suffer retaliation from the chain stores. In other words, they would not be able to sell their proportion of their crop to the chain stores.

I have talked to some shippers who say that dealing with the chain store is a slow death, but they are going to hang on as long as they can. If they stop doing business with the chain stores and oppose the chain stores, they go out of business, because they started off with them, and they have no other contacts in the produce game. But they realize if they stay with them in the future they are going to be out of the produce business, or at least they are going to be out of the shipping business so far as that particular commodity is concerned.

I realize that perhaps the chain stores will sponsor, very much under cover, and I wouldn't be surprised at all to hear of many farmers coming up and testifying before this committee on behalf of the chain stores, because to a certain extent they control a great many shippers and farmers here in America, and a great many of which know the evils of the chain store, but due to their particular circumstances and conditions they cannot dare to go against the present chain-store system.

I remember one particular instance down in Louisiana, where all the buyers of strawberries had a meeting, and they were asked to vote whether they would vote in favor of the chain-store policy of—I mean the association's policy of forcing the chain stores to sell at a minimum profit of a cent and a half, and one man in particular voted "yes," that he was for that policy, which was against the chain-store policy, because they wanted to sell the strawberries as loss leaders. An hour later that man came back and said he wanted to change his vote for the simple reason, he stated when I asked him, that he grew grapes in another State and the chain stores bought a certain amount of his grapes, and if he went against the chain stores in the Louisiana strawberry field, they wouldn't buy the amount of grapes they had been buying from him.

So, it is so interwoven, and the chains on the one side are so highly organized, and they have a great deal of buying power which their own stores give them, and which independent jobbers who are depending upon these chain stores give them, that they can make or break any perishable commodity here in America, so far as the grower is concerned.

There is an old saying, "There is some good in the worst of us and some bad in the best of us." The chain stores have put on several programs throughout the United States where they come in and say, "We have been the fairy godfather of the shippers; we have taken great quantities of their products which they were unable to sell or merchandise, and we have put on drives to try and help the farmers get rid of the surplus crop here and the surplus crop there."

In all instances where they do that, if you will carefully check and study that, in many instances they caused that situation to exist, for this reason, that they hammered down the price, and they cut the price so low that the farmer was helpless, and for that reason he had to call on the chain stores, if they were going to help him, and they took what they could of his commodity and sold it at a very low price, under the guise of doing a great deal to help that particular group of growers or farmers.

In other words, it is exactly like pulling a man out of the water after he has already drowned.

The chain stores of America, and these three in particular, who are the major ones, have fixed it so that their loss leader practices on every commodity that has a good market and that the housewife wants, have fixed it so that the farmer cannot get the price that he would get because of the loss-leader use of that particular commodity. In other words, they hammered down, down, and down on the price. They have even gone so far in some instances in the Louisiana strawberry deal, to fix their advertisements, so their own representatives have told me, 3 days in advance of when the strawberries would be sold, believing that they could control the market to the extent that they were safe in fixing the price at which they could advertise their strawberries and take a chance at not losing a great deal of money.

They are not in business to lose money, and they only sell those strawberries at cost, and in some instances below cost, so as to get the customer into their store, where the independent across the street, who has to charge a reasonable profit, cannot compete with them, and their idea of strawberries, or any other commodity of that nature, is not to sell it at a reasonable profit and have a reasonable market and reasonable market conditions, but to lower that market, because the lower they make that price, the more inducement it is for the housewife to come in and to buy that particular commodity, and in doing that with these other independent stores, the jobbers do not like to handle strawberries or any other commodity of that nature. They handle as few as possible, and the same way with the independent stores. So, all in all, it is a very serious situation.

Now, you say, what is the remedy, and perhaps, is this Patman bill the remedy?

As I see it, being a lawyer, there are two remedies, one by regulation and the other by taxation. With the regulation you have a bill to place on the statute books. Then you have to make your complaint to the Department of Justice or the Attorney General's office. That complaint is investigated and studied; time, delay, and a great deal of patience is required. Then there may be a trial in a lower court, and then it has to go through several courts. In other words, maybe before that particular case is tried there may be a delay and a change in administration. You may have the same people that started off with that particular complaint in private practice, and having nothing more to do with it, and in some instances it may be possible they would even represent the defendant.

And assuming that you did go to trial, then you would go from one court to the next court, and finally to the Supreme Court of the United States, and you would have maybe a lapse of several years, possibly 5 or 6, and there are your farmers, your strawberry farmers, grape farmers, plum farmers, and all your fruit farmers in America being damaged all the time.

Whereas, on the other hand, if you attempt to cure it by taxation, when you consider their ability to buy, their ability to advertise and sell as loss leaders, which is a distinct advantage, and that is an advantage that no small independent retailer or group of retailers enjoys, and for that privilege I think it is certainly logical that they should pay something to help support this great country which gives them that privilege, if we consider it a privilege. In other words, by taxation they have their choice, either to stay big or to get a little smaller, and when they become smaller they cannot use the loss-leader angle, and they cannot affect the strawberry grower and the other fruit growers of America.

There are chain-store taxes today in many States. In the State where I come from, Louisiana, there is a chain-store tax, and it goes up as regards the number of stores a chain has, so if a chain store like the A. & P., who, I understand, has something like 12,000, were in Louisiana, with that number of stores in Louisiana, they pay the highest tax. If they split it and have fewer stores, they pay a smaller tax, and with this bill that is now before you gentlemen for your consideration, taxation is the quickest and best way to remedy the chain-store situation in regard to its bigness and monopoly viewpoint, because so far as regulation is concerned, as I have just stated, it takes years and years and years to start at the bottom and get your measure into effect.

In other words, it may take so many years that the man that made the original complaint will be put out of business, stopped farming, or whatever he was doing, and engaged in some other business, or even moved away.

And there is a serious situation also in this: If you gentlemen will check the produce markets and the produce conditions and the fresh-fruit and vegetable industry in America, you will find, as I have been told by some of the leading produce men in America, that the produce, fresh-fruit and vegetable industry in America is today at a very low ebb, due to your chain-store practices, their buying power, and their loss-leader practices, and for that reason the farmer is suffering, the jobber is suffering, and the independent retailer is suffering, and, in particular, my main stress that I am trying to give you gentlemen is the fact that the grower who produces those strawberries and other commodities in America, who has no organization at all, comparatively speaking, can do nothing about your chain store. In other words, he is completely at the mercy of your chain-store buying power. If

your chain-store buying power gets larger, he will be more completely at their mercy instead of partially at their mercy, as he is today, and I say that the practice of loss leaders as used by your chain stores, and particularly your three major chain stores, has to a certain extent pauperized groups of farmers in America, and definitely has helped to pauperize farmers all over the country, and there is no better example of what the chain store can do to any farmer than right there in that Strawberry Belt of Louisiana.

Naturally, the chain stores want to create this fairy-godmother feeling that they want to help the farmer. They have gone so far as to come down into that Strawberry Belt in Louisiana and ask the various agents of the farmer to come out and endorse the various activities of the chain stores in buying strawberries, saying that they are a benefit to the farmer, and not, as we contend, a severe detriment.

With your Patman Act, with your taxes on your chain stores, that would give the chain stores a chance to either divide up and become smaller groups, which would take away that buying power and keep them from using loss leaders, or it would make them pay to enjoy that privilege which they do.

Mr. DINGELL. If you would indulge me there, I think you are altogether too sanguine in believing that loss leaders will be eliminated with the elimination of chains, because I believe there is a certain assumption that has crept into our business life in America here, which has been accepted, that we are always going to have a certain number of chiselers who, by using a method of this kind, can destroy their competitors, and in turn the competitors will apply the same sort of practice that has grown up in this country, but I don't know what it is going to take to wipe it out. But it ought to go, because it is vicious, it is not conducive to good business; I don't think the public benefits by it; I don't think anybody benefits by it. Certainly it is bad for the merchant, it is also bad for his employees, it is very bad for the producer; but I don't think the elimination of the chain is going to eliminate that practice. Something else, more fundamental, going directly to the root of the evil, is going to have to take place. We cannot extirpate this practice, I don't believe, by this means. We couldn't do it even through N. R. A. We had chiselers who tried to get around it and who did continue loss leaders in one guise or another.

Mr. MORRISON. I agree with what you say so far as the competitors of your chain stores having to, and, in some instances, selling to counteract business methods, loss leaders; that is true. But on the other hand, your independent grocers and your independent businessmen cannot use the loss-leader method as it is done, unless they were as powerful and big as these chain stores are. In other words, an independent grocery store in Chicago has not got the size to take a full-page ad in the Chicago papers, nor can they have a man down there in Louisiana to represent them, or several men, in buying their strawberries. That independent grocery store has to go to the terminal market and buy his strawberries there, and he cannot advertise, with a page advertisement, a loss leader.

Mr. DINGELL. But the small chains and the combinations of independent groceries can, and would do that. We have a number of grocery chains in Detroit, in Michigan, that run large chains. They are purely local, intrastate, not interstate, chains, and they get together and they advertise. I take it that probably this association would do that against the independents. I am not condoning or condemning. I am merely citing an observation that I know to be a fact, and they will use that to their independent chain, or of the local chain, which is strictly speaking a chain-store organization belonging to one corporation, under the control and ownership of one person. They will use that loss-leader practice. It wouldn't make any difference whether they can buy for less than the big chains are paying for a product to the producer or not. I don't think that enters into it, because the fact of the matter is the loss-leader practice, unless it is rooted out, will continue and be applied below the prices they are able to buy at. They may not be able to buy at a low price from the producer as the big chains now are buying strawberries, but whatever the cost to these combinations, or even to the individual merchant, my contention is that loss-leader sales will continue unless we find some way to kill the custom.

Mr. MORRISON. I think if you check into the matter you will find that the reason these local chains or independents are doing that is because they were forced to do that by these big chains.

Mr. DINGELL. I will grant you that, but my contention is we are going to have to go above and beyond anything that has been said here to kill off this practice of loss leaders, because I know we tried to abolish that, and tried to aid the merchants to do that very thing under N. R. A., and still they chiseled. They went around it and did everything possible to continue the practice of loss leaders.

Mr. MORRISON. So far as the strawberry growers are concerned, they feel if these three big chains are prevented, through taxation or otherwise, from using strawberries as loss leaders, that the loss-leader activity of the few independent chains or the few smaller chains will be relatively nil, and that they will have no effect so far as the strawberry growers themselves are concerned. For this reason, because one little independent chain of stores in Illinois cannot have a representative in Louisiana to buy their strawberries; they cannot have that buying power, and they cannot have that effect on the market, to force a lower market. They have to buy their strawberries, we will say, at a terminal market in Chicago, or their nearest city, and in that way they do not have a direct effect on the market in Louisiana.

Mr. DINGELL. I will grant that it might benefit your strawberry producer in Louisiana, but my contention is—and they may all be forced to buy Louisiana strawberries at a higher price—but I still contend that it will not prevent misguided merchants from selling those strawberries at whatever price they wish, at cost or below, as loss leaders to attract business, and that the merchants will foolishly do that and take their loss, regardless of whether this legislation passes or not.

That may be extraneous, I grant you, but what I am trying to point out and stress is that vicious practice is deeply rooted, and it ought to be destroyed, discouraged. But how to do it is a question. I am convinced that this legislation will not stop that regardless of whether every chain store in the country were wiped out. It may raise your strawberry prices to the producer in Louisiana, but it will not stop that reprehensible practice of loss leaders which ought to be stopped, I agree with you, by law or any other method.

Mr. MORRISON. I might add to your statement there, that before these big chain stores came into the picture, that they did not use strawberries or any other farming commodity in America to any great extent or appreciable extent as loss leaders. In other words, the loss-leader practice has grown with your three major food chain stores, the A. & P., Kroger, and the Safeway. Before they became so large and so powerful the strawberry farmer in Louisiana did not know what loss leaders were, and he received a much better price and had a better market for his strawberries down there at that time than he does today.

Mr. DINGELL. I wouldn't argue that with you, because that you know better than I, but all I know is it is a reprehensible practice and it is going to be very difficult to get rid of it.

Mr. MORRISON. We all know that.

Mr. DINGELL. Tell me this, you are from Louisiana; what do you people in Louisiana do about this practice of loss leaders? Have you prevented it under your chain-store regulation down there? You have chain-store laws that are enforced. Have you been able to destroy the practice of loss leaders?

Mr. MORRISON. That Chain Store Act came into the picture before this strawberry organization came into the picture, and from my understanding of the act it does not have anything to do with the selling of strawberries or other farm products as loss leaders, but it does tax the big chain stores—the bigger the chain, the bigger the tax.

Mr. DINGELL. Over a progressive scale?

Mr. MORRISON. That is right.

Mr. DINGELL. Now, then, under those circumstances, if you are going to repress, if you are going to hold them in check, if you are going to limit their buying power, if you are going to limit their advantages in the open market, shouldn't that have some bearing in Louisiana, since you say the enactment of this act will have a tendency at least to repress this practice of loss leaders in a national way? The principle of loss leaders, the one we are here discussing now, and what you have in Louisiana, are in principle identical. You admit it has not eliminated the loss-leader sales in your State, and you also admit that the law was enacted before this strawberry situation was brought up.

Mr. MORRISON. For this reason: That the chain-store representatives themselves admit that if other States in the United States had the same taxes that Louisiana has they would be forced to dissolve and form smaller chains, and they could not operate as the large chain that they do. If strawberries were only sold in Louisiana, that Chain Store Act would be a lot of help to those growers. But the fact remains that strawberries are sold in 36 States and Louisiana, and if all those States had a similar chain-store tax to Louisiana, you wouldn't have the A. & P., Kroger, and Safeway with the number of stores they have today. In other words, they would disintegrate and they would form a group of chains here and a group of chains there, and make them a whole lot smaller than they are today.

Mr. DINGELL. But still we are going to have chains. If this Patman proposal becomes a law, we will still have chains, and comparatively large chains, in the various States, and they will still have bigger buying power than the individual. Now, this thing of loss leaders, isn't that something the State ought to take cognizance of?

Mr. MORRISON. Well, Louisiana has not taken cognizance of it. The strawberry farmers feel if the chain stores were taxed, that is the only way you are going to force them to become smaller, and if they become smaller, we will say down to a reasonable group, as you term a small chain, then so far as the strawberry farmer is concerned, which is applicable to all fruit growers in America, the grower is not worried. It is the powerful chain stores; in other words, it is the power of these large chain stores that ruins the strawberry growers, and that makes the loss leader possible. You couldn't have the advertising, you couldn't have the loss-leader usage as it is today, if you didn't have your big chain stores. In other words, if the small chain stores were worrying us as much as these larger chain stores, we would be hollering about the smaller chain stores, but they are not. It is the big chain stores with their advertising advantage, with their buying power, and selling the strawberries as loss leaders.

Mr. DINGELL. I am conceding all that. But I am afraid your mind and mine will never get together on this one point that I am trying to bring out; that this problem will be next to impossible to root out, and I don't think this legislation will stop it as long as we have any chains at all, because the chain—take in my State, Michigan. Let us get away from Louisiana. If we have a

chain-store system in the State of Michigan, or if we have an association of chains, as we have—and we have some large ones; I think probably three, four, and five hundred stores in one association, an independent chain, they advertise together, they buy together, they have a warehouse of their own, they handle their own distribution, they eliminate the middleman, they do everything possible. Those people are going to use to their advantage the loss leaders if they can, in order to cripple independent competitors, aren't they? They are doing it now and they will continue to do it regardless of whether we enact this legislation or not, in my estimation, and no one can tell me different.

What I am trying to bring out in this dialog here is the question of loss leaders, which you brought out, has to be handled by another method than this legislation, that this legislation will not handle the loss-leader nuisance.

Mr. MORRISON. Well, to this extent: If you take the purchasing power away, or if you make the three big chains smaller, just as you have mentioned, with relation to your independent chain, then they have not the power to make any product in America a loss leader. They do not have the power over the shipper then.

Mr. DINGELL. I disagree with you entirely. The local chain will still have more power—if there are 200 stores in a small chain in the State of Michigan, for instance—than the little fellow, they will have 200 times the buying power of the little fellow.

Mr. MORRISON. Of the independent?

Mr. DINGELL. Of the little fellow who is not organized or who does not belong to any voluntary or compulsory chain or to any other type of chain. If he tries to waddle along with his own business, this association or group, buying as a unit, if there are 200 stores in it, will have 200 times the buying power of this fellow who is not a member of that chain. And this chain will use this reprehensible method to put him out of business.

Mr. MORRISON. But suppose you consider the power of the chain that is 60 times as large as that chain down there?

Mr. DINGELL. I am granting that.

Mr. MORRISON. Such as the A. & P.

Mr. DINGELL. What I am trying to convey to you is this. I do not think the chain-store bill, which we have here before us, will eliminate that practice. It may do everything else that you claim; I am not debating any other phase of it. But I do say that I do not think it will reach this curse of selling below cost.

Mr. MORRISON. Let us bring down the big boys and then we can work on the little fellows.

Mr. MCCORMACK. Why don't you both agree to disagree, then?

Mr. MORRISON. I think my time is up, Mr. Chairman.

Mr. MCCORMACK. No; your time is not up.

Mr. MORRISON. I understand there is another witness to come on.

Mr. MCCORMACK. Are there any other questions?

Mr. CROWTHER. I would like to ask one or two questions. Senator, have you given any consideration or any study to the constitutionality of this bill, or of such a procedure?

Mr. MORRISON. I will answer that by saying that personally I have not given it a great deal, but I have talked to some lawyers whom I consider outstanding lawyers, and they are of the opinion that it would be constitutional.

Mr. CROWTHER. I quote from a short report that was made to us by the staff of our committee on internal-revenue taxation. They quote from a court decision, *Heiner* v. *Donman* (285 U. S. 312):

"It is now considered well settled that a Federal statute passed under the taxing power may be so arbitrary and capricious as to cause it to fail before the due-process clause of the fifth amendment."

I do not have to read the due-process clause to you, you being an attorney, but article I, section 8, says:

"The Congress shall have power to lay and collect taxes, duties, imposts, and excises * * *; but all duties, imposts, and excises shall be uniform throughout the United States."

You say you have not given such consideration to this question of constitutionality?

Mr. MORRISON. No; except to talk to some lawyers who I think are outstanding in their qualifications as constitutional lawyers. I certainly think, knowing this Patman Act, and knowing of the Louisiana State Chain Store Act, which passed the test of constitutionality in the United States Supreme Court, that this has a chance of being constitutional. So far as I am concerned, no matter what I think, no matter what all of these gentlemen think, no matter what anybody else in America may think, it is those nine men on the Supreme Court who are going to be the judges of that.

Mr. CROWTHER. I agree with you. We have no way of getting a preliminary judgment or opinion on such things as that.

Now, one of the witnesses testified yesterday that the independent organizations as such did exactly the same thing as the corporate chain stores do; that is, they adopt the loss-leader plan on a certain percentage of their merchandise and then raise the ante to their customers in the store on other commodities. They are all alike. They use the same method. Are you aware of that fact? There was testimony here to that effect yesterday.

Mr. MORRISON. Well, I can readily understand how that is possible. If I were in a business where I was an independent, and the big chains were pressing me, I would follow the old saying, "If you are in Rome, you have to do as the Romans do." If you are in business, you have to do as the big chains do or else go out of business.

Mr. CROWTHER. It is just tit for tat.

Mr. MORRISON. I will say this, that your three big chains have so much more power with strawberries and other commodities as loss leaders that the little chain cannot compare.

Mr. CROWTHER. Let us forget strawberries for a minute.

Mr. MORRISON. Well, any other commodity.

Mr. CROWTHER. That leads up to another question that I think is pertinent at this time. Are there any other large groups or independents that employ this price-destroying buying-pressure power, if that describes it, as these chains do, that you have spoken of?

Mr. MORRISON. No, sir.

Mr. CROWTHER. There are none of them?

Mr. MORRISON. None of them have 12,000 stores with a central buying agent.

Mr. CROWTHER. So that you think that the evidence as regards this price destruction and buying pressure all points to what you denominate as the three large corporate chains?

Mr. MORRISON. That is right.

Mr. CROWTHER. You do not think there is anything like that that parallels it among the independents?

Mr. MORRISON. No.

Mr. CROWTHER. But will you agree that to some extent the same methods are used, in the matter of the loss leader, and that they attempt by pressure buying, buying in great quantities, to destroy prices?

Mr. MORRISON. I understand that they have had to do that in order to meet the competition from these three chains.

Mr. CROWTHER. How much money do you get out of your chain-store tax in Louisiana?

Mr. MORRISON. Offhand, I do not know. It runs anywhere from $10 up to $500 per store.

Mr. CROWTHER. Have you any way of knowing what the total is in your State?

Mr. MORRISON. No; I have not.

Mr. CROWTHER. It is $406,000. Now, if this proposal is put forth on the basis of taxation for revenue purposes, that is not a very considerable sum of money; is it?

Mr. MORRISON. That is because there are not many chain stores there.

Mr. CROWTHER. You do not have many chain stores there?

Mr. MORRISON. No, sir.

Mr. CROWTHER. Do you think that is because the tax has stopped the development of the chain stores to any degree?

Mr. MORRISON. Definitely; they have less chain stores now than they did before the tax.

Mr. CROWTHER. Is that the result of building superstores and doing away with two or three small ones, where the aggregate of the business is just as large as it was before? After all, total of the business is what counts; it is how much money they take out of your community.

Mr. MORRISON. I believe the chains themselves, in the public papers, said that they were leaving the State because of the excessive tax.

Mr. CROWTHER. They were leaving the State?

Mr. MORRISON. Yes.

Mr. CROWTHER. May I add this fact for the record; it may be of interest to some of the members of the committee: It seems that one State that gets something that looks like real revenue from this chain-store tax is Florida, where in 1939 they collected $2,369,000. That appears to be the high point among the States that have this sort of tax.

Other States collect as follows:

Texas, $785,000.

Michigan, $597,000.

Indiana, the State of our distinguished colleague, $544,000.

Those are the outstanding amounts.

That is all, Mr. Chairman.

Mr. MCCORMACK. If there are no further questions, thank you, Mr. Morrison.

Mr. MORRISON. Thank you.

America's Duty to the Future

EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1940

ADDRESS BY J. EDGAR HOOVER

Mr. O'BRIEN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by J. Edgar Hoover, Director, Federal Bureau

of Investigation, before the New York Federation of Women's Clubs, Hotel Astor, New York City, May 3, 1940:

In modern times, the Nation has not witnessed a more significant and important development of civic spirit than is found in such organizations as the Federation of Women's Clubs, which I am proud to address today. When things go wrong in the business, social, and political world, women are among the first to suffer. From them usually comes the first inspiration to improve conditions which might otherwise become chaotic. Thus, my message to you today concerns the welfare of that place where womankind rules supreme—the home, and the happiness, the peace, and the security which should surround it.

Our present position of national prominence did not result from accident. As a Nation we became great through thoughtful planning for the future and through an invincible determination to translate those plans into action. The time has now come when we must plan anew, otherwise hordes of schemers with fantastic ideas that sprang from unworkable and alien philosophies from abroad will eat away the otherwise firm foundations upon which our Nation is built. Vile and vicious forces are today seeking to tear our America asunder—killing freedom, ravishing justice, and destroying liberty in the name of transplanted totalitarianism. The one achievement above all others which America must preserve is that of good citizenship. By this I mean a preservation of our democratic institutions, freedom, liberty, respect for country, and better Government through the efforts and will of all our people.

Without a superior stalwart national citizenship, everything is insecure. The ideas which international propagandists would foist upon us are the very antithesis of American citizenship. Churches have been closed by the mere whim of a dictator; the members of the clergy have been humiliated. As has been the case in other lands, homes can be wrecked, businesses ruined, jobs lost forever, and personal security relegated to fearful outrages of secret police more criminal than even the worst murderers they can accuse.

Some of our dangerous gangsters have come from foreign shores. The worst of these, however, are not the murderers or racketeers. Far more dangerous are those who advocate revolution under the disguise, as the Communist spokesman, Earl Browder, put it, "We are the Americans and communism is the Americanism of the twentieth century." Such masqueraders have not as much respect for constituted authority as does the average robber, highwayman, or murderer; at least the latter admit their crimes and, in many cases, accept their punishment as just and due. Those who would subvert liberty meanwhile shout most loudly for the protection of the Constitution while seeking to destroy its sacred guaranties. There is no such thing as liberty unless it is liberty under law.

A great many false notions of liberty are now quite common, due to plausibly worded propaganda designed by the seducers of our liberties to mislead Americans. This they will never do, because the heart and soul of America, once aroused, is unconquerable.

This has been demonstrated time and again. Until recent years the kidnaper thought that all he need do to enrich his coffers was to snatch the body of some defenseless child or adult and then collect his ransom. In this he was successful until Congress, acting upon urgent appeals, authorized the F. B. I. to function under laws designed by a far-seeing Attorney General.

How many kidnapings occurred before that time no one knows. Any figure at best would be an estimate, because victims then were afraid to speak up, facing inevitable gangland vengeance. But we do know that since 1932, 179 cases of kidnaping have been reported to the F. B. I. and 177 of these cases have been completely solved. Thus, the kidnaping menace that once was a nightmare in every home in the land has come to be a thing of the past, because an aroused people determined that kidnapers must no longer operate with impunity.

The same applies to the bank robber, whose vicious plunderings have been reduced to a faint echo of past activities. The same is true of the extortioner and organized gangdom in general. These vicious forces are fearfully conscious that they are no longer at liberty to rob, plunder, and steal, because the American people have decreed against their invisible empire.

However, the notion is prevalent in too many communities that liberty means, "Do as you wish, as long as you don't get caught." That is why 4,067 serious crimes are committed every 24 hours. That is why a human life is sacrificed on crime's altar every 44 minutes, and that is why a robbery occurs every 9½ minutes, a larceny every 36 seconds, and a burglary every minute and a half.

Because of misdirected energy and perverted teachings, we have in the F. B. I. today the fingerprints of some 5,000,000 persons who have been arrested for an offense more serious than a traffic violation. Before this year comes to a close, approximately 1,000,000 persons will have heard the clanging doors close behind them as they enter jails, prisons, and reformatories, and all because they had not been properly schooled in the true meaning of liberty.

Because of misinterpretation of liberty, often deliberately brought about by inciters of violence, the Nation is paying a crime bill which in 3 years would equal our national debt. Hence, every decent citizen should rededicate himself to a furtherance of liberty in its truest sense, defined by our democratic traditions. There is only one way to insure liberty to all peoples. That is by a firm adherence to justice, such as has been provided and established in our American heritage, and in our Constitution which we must preserve for the future at all costs.

America's duty to the future demands that the cherished principles of liberty be preserved for all time. We can do this best by striking at the forces which assail liberty—the lawless, the thoughtless, and the exponents of totalitarian serfdom and slavery.

We must and shall cope with this effort to enslave us through perversions of the truth. The first line of defense is the home, with its all-important atmosphere of expectations and fond hopes for the future and the training so necessary to develop future generations of Americans.

Modern law enforcement has demonstrated its ability to cope with the hardened criminal, but at best that is only first-aid treatment. The only permanent cure lies in killing the infectious and deep-seated germs of lawlessness with a thorough prophylactic, which is best administered by proper home training and environment.

Sinister forces of the underworld, with totalitarianism, constantly seek new places to work their evil. Youth, more youth, is sought for this purpose. We must inoculate our young against such treacherous germs. This means proper home training, proper precept, and proper example. We can prevent more crime in the high chair than in the electric chair, whether that crime be against property or against our Nation.

Youth must be told about the slime and dirt that infest the underworld. Dishonesty is one common denominator found in all criminals. It must be met with the daily teachings of the virtues of honesty. In teaching honesty, you are also teaching Americanism. You are piercing smoke screens of falsehood and subterfuge thrown up by enemies of America, one of which insists—to quote a resolution of the Communist Party—"More revolutionary novels and short stories especially based on American life must be issued for the youth."

The corruption of our youth by subversive activities is a violation of our American liberties and is an attempt to lure us into the fear, the injustice, and the slavery of totalitarian barbarism. And this is so regardless of the high-sounding names of hypocritical "front" organizations. Our greatest asset is intellectual freedom. Our worst menace is intellectual debauchery, which is as rotten and untenable as the filth from which it springs. Certainly we have a right to inquire into the character of our children's education. We have the inalienable right to see that they are taught the true principles of Americanism and nothing else. If young Americans are to be educated for the future, parents must accept the responsibility of seeing that this education is properly given for a better and safer nation.

What are you doing to make your child recognize his good fortune in being an American? Are you teaching him a respect for his country and its institutions? Does he respect the American flag as a symbol of liberty? Does he respect honorable forces of law and order? Have you compared his plight with that of boys and girls in other lands? Do you take him to the shrines of great Americans and tell him their glorious histories? Does he go to Sunday school and church, and is he taught that he is responsible to God rather than to some spouting dictator whose insane ego denies even the power of the Deity and charges that religion is the opiate of the people?

A flood of vilification has recently been loosed upon all things American by scandal sheets which espouse the cause of foreign isms. We must counter with a constant program of education, designed to penetrate this thinly veiled and slimy propaganda. We are a peaceful people and we want no part of the terrible turmoil and sickening strife that is going on across the seas. Let us not be blinded, however, to the necessity of preparedness for any emergency.

We of the F. B. I. have not been spared from the sting of vicious, anti-American propaganda cleverly designed to blind the eyes of otherwise sincere and conscientious citizens. We have been charged with having created an American Ogpu or Gestapo. Let's get at the truth of what is behind a lot of such untrue and utterly malicious statements.

I charge that the most vicious "smear" campaign which is being directed against the F. B. I. is a part of the working program of various anti-American forces, the basis of which is to undermine public confidence in the law-enforcement bodies of America, and thus weaken the defenses of our internal security.

And I want to state emphatically that my remarks are not directed at any individual who sincerely criticizes the F. B. I. from a constructive viewpoint. I do say, however, that the Communist charge that there is the slightest desire in the F. B. I. for an Ogpu or a Gestapo is nothing but blustering ballyhoo designed to cover their own Trojan-horse activities. The Communists hope that with the F. B. I. shackled, they can proceed without interference as they go their boring, undermining way to overthrow our Government.

You must learn to judge people by what they think. These totalitarian tricksters are the very first ones who would introduce un-American, violent, murderous types of spy systems into our country. They desire to break down true law enforcement in every part of America under the guise of the protection of alleged civil liberties so that they may, in turn, destroy the very things that they pretend to revere. Then they seek by a type of confidence game to steal away your liberty, your home, and your constitutional rights to life, liberty, and the pursuit of happiness.

In proof of this, I say to you that under constitutional safeguards as they now stand, it is utterly impossible for such a thing as an Ogpu or a Gestapo to exist in America. Let us look, for instance, at the Federal Bureau of Investigation. I am merely the

Director of this Bureau's activities under laws enacted by Congress; I have no right, no desire, and no means of being anything else.

The F. B. I., like all Federal bureaus, must present its report of activities and justify its work, for the purpose of securing appropriations, once each year. To do this, its record must be presented, not only before the public, but first, to the Attorney General of the United States, the Nation's chief law officer, who certainly would not favor the setting up of an Ogpu or a Gestapo.

From the Attorney General the facts concerning the work of the F. B. I. go each year to the Budget Bureau where each item is carefully scrutinized. From the Budget Bureau the reports and estimates covering the F. B. I.'s activities go to the White House, where they are reviewed by the President of the United States. From the White House the estimates and reports are sent to the Appropriations Committee of the House of Representatives, where the Director of the F. B. I. must explain every major item and the reason why it has been entered in the estimate for appropriations. The various items of the appropriation are then considered on the floor of Congress by Members of the House of Representatives before being forwarded to the Appropriations Committee of the Senate for review. The estimates then must be considered on the floor of the Senate. It is utterly ridiculous for the foreign-ism advocates to charge that with these annual executive and legislative reviews of the work of the F. B. I. it could develop into anything resembling an Ogpu or Gestapo.

When these poisoners of American opinion tell you that an effort is being made to instigate an Ogpu or a Gestapo they infer that every system of representative government has failed and that it is time for some other kind of government to come along and take over. That kind of governmental procedure is the perverted, subversive, serpentine type of nonrepresentative totalitarianism from lands of viciousness.

These perverted people scream about the denial of civil liberties in this country, although nowhere on earth is there less liberty, civil or of any other nature, than under the foreign governments they so vociferously champion. It has been proven time and again that they have every civil liberty which possibly can exist, that they possess in America more honest safety in life, liberty, and the pursuit of happiness than in any other nation in the world. And when their rights allegedly are violated, the courts of a free land are open to them. Their rights are as closely guarded here in America as the rights of subjects are defiled in the countries whose views they espouse. Therefore, what these people want is not civil liberty. They already have that. They are demanding, under a pretense of misapprehension, and deliberate falsehood, nothing more nor less than licentiousness—the right to take what they will of our possessions and our traditions and defile them as they please. They want the right to rule when, in many cases, they are not even citizens. These people are seeking to accomplish by propaganda what other aggressors usually do by force of arms, because they know they could not at the present resist the real force of Americanism which is found in this Nation.

It is America's duty to perpetuate a heritage that will continue to be a beacon light of freedom and equality to oppressed peoples the world over. Likewise, there is a present duty to evaluate the "front" organizations that exist by the score, designed to carry on destructive activities.

We should awaken to the fact that as soon as one "front" organization is exposed, another springs up to carry on the program of scuttling America.

We must ever be on the alert to protect our democracy from the bacteria of barbarism. We need to stand firmly and fearlessly on democratic principles and upon no other foundation.

Our task requires patience and forbearance. It requires the faith of our fathers, and the courage of present-day pioneering. We must know and respect and fight for only one ism—Americanism.

The motivating spirit of America must ever be justice. We need have no fears, so long as justice reigns. May we consecrate ourselves to this sacred cause in order that the Stars and Stripes may reign supreme and that our Nation may retain its supremacy as the exemplification of true democracy.

Discharge of Employees of American Potash & Chemical Corporation

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1940

Mr. GEYER of California. Mr. Speaker, under permission to extend my remarks, I am including a letter from a Los Angeles, Calif., citizen and the clipping from the Washington Merry-Go-Round, referred to in that letter.

It seems to me that an investigation should be in order.

LOS ANGELES, CALIF., *May 4, 1940.*

Hon. LEE GEYER,

United States House of Representatives, Washington, D. C.

DEAR SIR: Enclosed is a clipping from the Merry-Go-Round, which is self-explanatory. I hope that you will be able to start some sort of an investigation of this business, and if possible, arrange to have the Smith committee and Mr. Toland disciplined in some way.

I am one of the workers discharged by the American Potash & Chemical Corporation in 1936 for union activity. There were a good many of us, though only 19 appear in the case itself, and we have all had a tough time in finding jobs. Several times as soon as a job had been obtained, the American Potash would see that the new employer discharged us.

However, the worst thing about it is this: Over 750 employees of the American Potash in Trona, Calif., have been denied the law of the land, and have been hindered in self-organization. The case has been taken to the Supreme Court, and at present the N. L. R. B. is attempting to have the American Potash cited for contempt in the Ninth Circuit Court of Appeals. It is very possible that these confidential files, referred to in the clipping, are being used in the contempt action presently pending.

I hope that the Smith committee and Mr. Toland will be asked to explain this matter before the Congress of the United States, and that if guilty of misconduct they will be punished accordingly. This seems a heinous thing to us here. Goodness knows, workers have a tough enough time organizing themselves, finding a job, fighting the organized employers, etc., without underhanded activity such as this, using the Congress to beat down the law of the land.

Thanking you for your attention in the matter, I am

Sincerely yours,

ELBERT M. BALL.

WASHINGTON MERRY-GO-ROUND

(By Drew Pearson and Robert S. Allen)

One of the most important cases pending before the National Labor Relations Board is that of the American Potash & Chemical Corporation, which is charged by the A. F. L. Borax and Potash Workers' Union with coercion to block collective bargaining. The Labor Board ruled against the company, and the decision was sustained by a circuit court and even by the United States Supreme Court.

Contempt-of-court proceedings are now pending against the firm to compel it to obey the verdict. But the confidential Labor Board files on the case very mysteriously have vanished—somewhere between the N. L. R. B. and the House committee investigating it.

Adding a note of peculiarity to the mystery is the fact that Edmund Toland, now general counsel of the House investigating committee, once represented American Potash & Chemical. Furthermore, he represented the company in this very same case.

Toland hotly denies knowing anything about the missing records. So does Russell Whitesell, committee secretary, who insists they have never been in his possession. Both admit that the files of the Wheeling Steel Corporation case, in which Toland also participated as private counsel, were obtained from the N. L. R. B. by a member of his staff while he was in Florida.

But Whitesell says that as soon as he heard about it he ordered the records returned, and Toland asserts that his assistant "did not even examine the entire file. He was merely looking for a letter in connection with our 'blacklisting' record."

Meanwhile the big mystery remains: Where are the missing confidential records?

United States Plans for Peace

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1940

EDITORIAL FROM THE MONTREAL GAZETTE

Mr. THORKELSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I ask unanimous consent to insert an editorial from the Montreal Gazette, Montreal, Canada, Tuesday, May 7, 1940.

Mr. Speaker, the letter which enclosed this clipping had this to say:

Kindly note the Gazette's leading editorial today indicates exactly at what stage the State Department, F. B. I., et al., will find it necessary for the United States of America to go to the aid of civilization—the Versailles Treaty brand, I guess.

This writer evidently is not in favor of war, and neither are we, for there is nothing to be gained by it. A point I wish to bring out is that there seems to be some prearranged plan whereby the United States is to render aid to Great Britain, of which I believe the people should be informed.

It occurs to me that Mr. Welles is another Mr. House, and I have little regard for meddling diplomats who are sent from the Executive or State Department to pave a road for us to enter a conflict which no doubt will end in the killing of millions of American young men.

It is now time for the people themselves to speak through their representatives in Congress. They should speak before it is too late and inform their own representatives as to their attitude toward a war that could have been averted had England been willing to restore some of the colonies she grabbed as a prize in the last war.

The editorial is as follows:

[From the Montreal Gazette of May 7, 1940]

UNITED STATES PLANS FOR PEACE

The Department of State in Washington is reported to be making intensive preparations for the peace that must come sooner or later in Europe. Mr. Cordell Hull, in January last, set up a special advisory committee to study post-war problems and this committee has since organized three groups, one under Sumner Welles, which deals with matters of general policy, another under R. Walton Moore, counselor to the Department, which deals with limitation of armaments, and one under Leo Pasvolsky dealing with economic and financial matters. Pasvolsky is special assistant to the Secretary of State. The three groups will have Hugh R. Wilson, former Ambassador to Germany, as liaison officer. The studies which are being undertaken, which indeed are in progress, are designed to enable the United States to protect itself against post-war effects and to play a constructive part in the post-war era, and with these two ends in view the conditions of the last 20 years are being examined, including international economic relations and what has been done in the field of disarmament. One of the matters under consideration is consultation with other neutrals with a view to post-war disarmament and a freer movement of trade.

That publicity has been given to this official enterprise at Washington at this time is interesting and perhaps significant. At the outset the question arises as to whether the special committee and the three groups are giving any consideration to the kind of peace that will be established in Europe in the event of a German victory. Presumably that eventuality is being ruled out, because the State Department must be fully aware that a German peace would nullify all these efforts and all the plans which may result from them. In a post-war era in a Europe dominated by Germany the United States would be in no position to do anything. There would be no question of disarmament except the disarmament imposed by the conquerors upon the conquered. There would be no neutrals with which to carry on trade and other discussions because German domination would be complete. Mr. Pierre de Lanux, in his address to the Canadian Club yesterday, made it abundantly clear that in the event of a German victory no nation will have anything to say about future European conditions except Germany. This means that what are described in Washington as the primary interests of the United States in a post-war settlement and in post-war developments in Europe, would be nonexistent except insofar as a triumphant Nazi-ism might be disposed to recognize and tolerate them for purposes of its own. Mr. Cordell Hull, Mr. Sumner Welles, and Mr Hugh Wilson must know all this, the former Ambassador especially.

It seems to follow that the United States Government is contemplating a peace sequent to an Allied victory, and this being so, the investigations that are in progress in Washington assumed the significance above mentioned. The United States Government's certainty of an Allied victory must be based upon something more dependable than what has come to be called wishful thinking. It must be based upon a determination to ensure that victory by whatever form or degree of participation may be necessary. It is a common statement south of the border that while the United States will cling to its isolationist policy as long as possible it will abandon that policy if the belligerent democracies are facing defeat. It cannot be doubted that were a formal declaration to be made along these lines the effect upon wavering European nations would be decisive and an Allied victory would be hastened. It is possible that what the general public do not know in regard to the ultimate reach of United States policy, some European governments do know. The recent conference between Mr. William Phillips and Count Ciano, following a shorter talk between the American Ambassador and Premier Mussolini, is said to have been marked by a definite statement as to the course which the United States would pursue in the event of Italian military action on the side of Germany.

Whether Mr. Phillips did or did not present some sort of ultimatum to the Italian Foreign Minister, it is unreasonable to suppose that the United States Government has reached no decision as to the extent of its responsibility or as to the manner in which that responsibility will be discharged in the event of the war's extension to the Mediterranean. It is illogical to suppose that Washington is busying itself seriously with peace problems at this early stage unless it is prepared to ensure, if necessary, an Allied victory through which alone an opportunity for constructive participation in the rebuilding of Europe will be afforded. Mr. Hull and his associates would be wasting their time in a discussion of peace problems if the possibility of a German victory had any place at all in their minds.

Farmers' Interest in Transportation

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1940

Mr. HOPE. Mr. Speaker, a great effort is being made at this time to convince Members of Congress that the farmers of this country are opposed to the Wheeler-Lea transportation bill. There are possibly 32,000,000 people living on farms in this country. Thirty-one million nine hundred and ninety-nine thousand of them know nothing whatever of the provisions of this bill. I doubt if there are very many of the remaining 1,000 who know very much about it, and probably there is not a single one who is acquainted with all provisions of the legislation. Therefore anyone who assumes to state the position of farmers on this measure is taking a great deal upon himself.

This lack of familiarity with the bill is not because farmers are not interested in transportation. They are very much interested in it. It is one of their big problems. They have obviously not had any chance to familiarize themselves with the pending legislation as embodied in the conference report which will be before the House tomorrow. Therefore it is ridiculous and silly for anyone to get up on the floor of this House and say that farmers, or any considerable portion of them as a group, are opposed to the adoption of the conference report.

Farmers are interested in transportation; but as a whole they are not interested in water transportation, because its facilities are available to so few of them. They are smart enough to know that all the ballyhoo which has been put out in Congress and elsewhere to the effect that the farmer has been benefited by the hundreds of millions of dollars which have been spend on the inland waterway systems of this country is pure bunk.

The fact is that an almost infinitesimal quantity of farm produce moves on our inland waterways. In the first place, a large proportion of farm produce is perishable. Perishable products are not transported on inland waterways. In the second place, most nonperishable products require more speed in their transportation than can be furnished by waterways. In the third place, only a small proportion of the commodities that might be transported by water are produced where waterway transportation is available.

I submit herewith figures compiled from the reports of the Army engineers for the calendar years 1937 and 1938, showing the tonnage handled on important inland waterways in the United States during each of those years, broken down as to types of commodities. Figures for 1939 are not yet available. It will be noted particularly that farm products constitute a very negligible proportion of this transportation.

PRINCIPAL COMMODITIES CARRIED IN COMMERCE ON IMPORTANT INLAND WATERWAYS OF THE UNITED STATES

Coverage: The data below includes tonnage (2,000 pounds) on the following waterways for the calendar year 1937: Ohio River; Allegheny River; Monongahela River; Big Sandy River and Tug and Levisa Forks; Cumberland River, above and below Nashville; Kanawha River; Missouri River, Kansas City to mouth; Mississippi River, Minneapolis to mouth of the Missouri; Mississippi River, mouth of

Missouri to mouth of the Ohio; Illinois and Mississippi Canal; Illinois Waterway; Chesapeake and Delaware Canal; and New York State Barge Canal.

Total tonnage.—All of above waterways, 1937, 70,721,931 tons.

Principal commodities

Commodity	Number of tons	Percent of total tonnage
Coal and coke	39,935,353	56.5
Petroleum and its products	7,812,019	11.0
Sand, gravel, and stone	11,618,410	16.4
Lumber, logs, etc	325,045	.5
Iron and steel products	3,225,008	4.6
Vegetable food products	2,012,115	2.8
Cement	370,909	.6
Pyrites (cinders)	243,496	.3
All other commodities	5,179,481	7.3
Total	70,721,931	100.0

Source: Annual Report, Chief of Engineers, U. S. Army, 1938, pt. 2.

Principal commodities carried in commerce on important inland waterways of the United States[1]

Calendar year 1938

Principal commodities	Number of 2,000-pound tons	Percent of total tonnage
Coal and coke	29,754,928	49.7
Petroleum and its products	8,270,730	13.8
Sand, gravel, and stone	10,683,255	17.8
Lumber, logs, etc	398,535	.7
Iron and steel and their products	2,433,606	4.1
Vegetable food products	4,235,299	7.1
Cement	291,454	.5
Pyrites (cinders)	252,860	.4
All other commodities	3,585,744	5.9
Total tonnage	59,906,471	100.0

[1] Ohio River and tributaries: Ohio River, Allegheny River, Monongahela River, Big Sandy River (Tug and Levisa Forks), Cumberland River (above Nashville), Cumberland River (below Nashville), Kanawha River. Mississippi River and tributaries: Missouri River (lower), Mississippi River (middle), Mississippi River (upper), Illinois and Mississippi Canal. Illinois Waterway, Chesapeake & Delaware Canal, New York State Barge Canal.

All of the information has been compiled from the annual reports of the Chief of Engineers, U. S. Army, except certain data for the New York State Barge Canal which was secured from the annual reports of the superintendent of public works, State of New York.

I deplore, and I think most farmers deplore, the lobbying activities of organizations like the Mississippi Valley Association in their efforts to make it appear that farmers are vitally interested in vast Federal expenditures for waterways—a large part of which will eventually have to be paid by the farmers of this country. Farmers know that waterway transportation is not cheap transportation, but that in many cases it is the highest-cost transportation we have, the only difference being that most of the cost is paid by the Federal Government. Farmers know that they are not getting the benefits of this Federal subsidy and resent the fact that most of the benefits, as indicated in the tables set out before, go to big coal companies and oil companies which maintain their own fleets of barges.

During recent months, lobbyists and field men for the Mississippi Valley Association have been particularly active in their efforts to stir up farmer opposition to the pending transportation bill. Just as an illustration of this lobbying activity, I include herewith a copy of a letter from Mr. W. G. Jamison to the Mississippi Valley Association, reporting upon his lobbying activities among farm organizations for the week of February 11 to 17:

[Mississippi Valley Association. General offices, Chamber of Commerce Building, 511 Locust Street, St. Louis. Copy of letter from W. G. Jamison supplementing report of field work to February 17, 1940]

TOPEKA, KANS., *February 19, 1940.*

The following is report of work done during week February 11–17, inclusive:

The National Cooperative Elevator Association, Frank Rutherford, secretary, 314 Barker Building, Omaha, Nebr., will write to each of the State secretaries of the State members—Iowa, Nebraska, Kansas, and Oklahoma—of this organization, asking that each one of them write to their respective Senators and Congressmen supporting the waterways resolution passed by the organization at its annual meeting, Hutchinson, Kans., November 20, 1939. Each of the State secretaries will be asked by Mr. Rutherford to also have each member of their respective boards of directors, five in each State, to write to the two Senators of each State, and to the Congressman from the respective district in which each director lives in support of inland waterways and in opposition to river rates being made by any Government rate-regulatory body.

Mr. Rutherford is also the secretary of the Nebraska Farmers Elevator Association, which is the Nebraska member of the National Cooperative Elevator Association. Mr. Rutherford will carry out the program outlined above with his organization in Nebraska. In addition to this, Mr. Rutherford will ask for similar letters from about 20 strategically located members of his association in Nebraska, in addition to the letters from the 5 directors and the official letters from his office. Mr. Rutherford has already been in correspondence with the 2 Senators and 5 Congressmen from Nebraska on the subject of the Wheeler-Lea bills and his organization's opposition to the river rates being made by the Interstate Commerce Commission. He has also been in correspondence with all the members of the Wheeler-Lea conference committee on this same subject. He has replies from most of them and most of the replies are noncommittal.

The annual meeting of the Nebraska State Farmers Union, H. G. Keeney, president, Omaha, Nebr., was in session while I was in Omaha. Mr. Keeney, president, and Mr. Elwood, chairman, legislative committee, asked me to appear before the legislative committee, which handles the national legislative proposals and resolutions of this organization. The enclosed resolution was discussed and approved by the legislative committee and later was presented to the delegate body of this organization and was approved. This resolution stands as part of the program and policy of the Nebraska Farmers Union. This resolution, with appropriate letters, will be sent immediately to the two Senators and all the Congressmen from Nebraska.

Contact with Mr. Charles Stewart, chairman, legislative and transportation department, Nebraska State Farm Bureau Federation, Lincoln, Nebr., developed the fact that this organization had anticipated taking action in defense of the inland waterways and opposition to those parts of the Wheeler-Lea bills that put waterways rate making under the jurisdiction of the Interstate Commerce Commission. Official action, in the form of a resolution passed at the annual meeting of this organization and an affirmative vote by the board of directors, authorized Mr. Stewart to take whatever action necessary to officially inform the two Senators and all the Congressmen from Nebraska on the position of the Nebraska Farm Bureau relative to the Wheeler-Lea bills and the rivers rate-making provisions of this legislation. The enclosed copy of letter to each of the Senators and Congressmen from Nebraska is Mr. Stewart's official communication to each of them. It speaks for itself. These letters left Lincoln, Nebr., February 16. Mr. Stewart advised that it was not necessary for me to see or communicate further with any other officers or directors of this organization.

This completes work done with farm organizations in Nebraska.

The Kansas State Farm Bureau passed a resolution relative to transportation at their annual meeting in November 1939. Dr. O. O. Wolf, president, Kansas Farm Bureau, Manhattan, Kans., tells me that he will write official letters to both Senators and all the Congressmen from Kansas in support of this organization's transportation resolution. He will also ask that the rate making for inland waterways be not placed under any Government rate regulatory body. These letters will leave Manhattan, Kans., on February 19 or 20. Dr. Wolf will also address letters to each of the nine directors of this organization, living throughout the State and giving good regional coverage, asking each of them to write to both Senators and their respective Congressmen. Dr. Wolf will ask the directors to express themselves to the Senators and Congressmen in support of the transportation resolution and in opposition to the Wheeler-Lea provisions for waterways rate making by the Interstate Commerce Commission. A copy of Dr. Wolf's letter to the Senators and Congressmen from Kansas will come to me later.

This completes the field work done for this week.

W. G. JAMISON.

Farmers are interested in transportation, but for practically all of them there are only two forms of transportation available—by railway and highway. Anything which improves the service which they can get from these two types of transportation is beneficial. I sincerely believe that the passage of the Wheeler-Lea bill will be helpful to all types of transportation, and particularly those in which farmers are interested and which they are in a position to use. Therefore, it would seem to me to be a great mistake, if we want to look at this problem from the standpoint of agriculture, to take any steps which are likely to result in the defeat, directly or indirectly, of transportation legislation for this session.

Your Government in Action

EXTENSION OF REMARKS

OF

HON. WESLEY E. DISNEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1940

ADDRESS BY HON. WESLEY E. DISNEY, OF OKLAHOMA

Mr. DISNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech made by myself at the Principia College, St. Louis, Mo., on April 26, 1940, entitled "Your Government in Action":

Some fine day you will likely journey to Washington when the Congress is in session, the President is at the White House, the Supreme Court is at work, and all of the departments of the Government are buzzing with action. You will visit the House of Representatives and the Senate, perhaps the Supreme Court, the huge buildings housing the executive departments, will see some of the White House apartments, the Bureau of Engraving and Printing, some other objects of tourist interest, and will feel that you have seen your Government at work.

As a matter of fact, you will have simply seen the high spots of the governmental machine—a few of the symptoms of government. The details of how laws are made, interpreted, and executed, comprise so complex and detailed a system, that the time we have will only permit of some of the more cursory observations on the governmental machine.

Let us suppose that on your imaginary trip to Washington you go with a guide through the Capitol Building and have explained to you the physical and historical elements of that symbol of our Government, including the statues of statesman in the Hall of Fame, the old Supreme Court chamber where the Webster-Clay-Calhoun debates were held, and other objects of interest in that famous building, each one of them alive with most intense human interest, seen by most of our people in their hurried trips through.

You are taken into the Chamber of the House of Representatives, which, with its present Chamber, is new, as compared to the older part of the building, having been added in 1857. You may see nearly all of the 435 Members in the House, but the chances are that only a comparative handful will be present, maybe a third or a fourth, or even less of the membership, and you will wonder: "Is this the House of Representatives—the people who make our laws? Where are the rest of the Members?"

The answer is manifold. The absent Members are not at a ball game or on the golf course. They may be snatching a hasty lunch. The likelihood is that some of them are out of the Chamber attending committee hearings in various of the 47 House standing committees; others are at their offices attempting to answer the multitude of letters they have received about legislation or jobs; still others are preparing speeches or studying pending legislation.

When you are looking in, maybe the House will be in the Committee of the Whole House on the state of the Union for the consideration of some bill that has been previously considered by some certain committee. If so, the Speaker of the House will not be presiding. Under tradition coming down from English Parliament, he is not permitted to preside over the Committee of the Whole, but must select some other Member. The Speaker presides only over the House itself in session.

You may see Members offering amendments to the pending bill or moving to "strike out the last word." In either event, they will have a chance to talk only 5 minutes, under the House rules. You may see a demand for a teller vote, enforced by one-fifth of the membership present standing for the demand, after which the Members present file through the center aisle and are counted by an opponent and the proponent of the amendment. You may hear a demand for a quorum, a call of the House, upon which the outside doors are closed, the bells in the Capitol and the Members' offices are rung to notify absent Members, the Members file in, and answer to their names as they are called by the Clerk.

During this period of time you may see a Member stroll down to the little black box near the Speaker's desk and drop a bill in the "hopper." If so, you have seen a proposed law of the United States of America introduced in the House. No formality is involved. It is simply placed in the little receiving box.

Now, we are down to action in the process of legislation. Our bill (which we will call H. R. 12000) is turned over to the Parliamentarian, who on the next day, at the so-called first reading of the bill, refers it to the proper committee. Technically, the Speaker never sees them. The Parliamentarian simply marks the name of the appropriate committee on the bill, the bill clerk refers this bill to the committee designated, and the document is sent to the chairman of that committee, for, as a matter of practice, it is filed with the clerk of that committee for action if and when it is called up by the bill's author, by the chairman of the committee, by a member of the committee, or by some Member interested in it.

It depends on the subject matter of the bill as to what committee it shall be referred. If it deals with legalistic matters, it goes to the Judiciary Committee; with Indian affairs, to the Committee on Indian Affairs; with rates, to the Interstate and Foreign Commerce Committee; with appropriations, to the Appropriations Committee; with census, to that committee; with patents, to that committee; with farm legislation, to the Committee on Agriculture; and so on through the list of 47 standing committees.

During the present session of Congress over 10,000 bills have been introduced. Only a few hundred at most will ever reach the President to be signed.

Let us suppose that our bill, H. R. 12000, is a revenue bill. Under the Constitution, revenue and tariff bills originate in the House and, under the rules of the House, must be referred to the Committee on Ways and Means, which, up to the Civil War, was the revenue-raising committee as well as the money-spending committee. After the Civil War the Appropriations Committee was created, which, since then, has looked after matters of appropriations. The Ways and Means Committee devotes its attention to revenue raising. This committee is known as the policy committee of the House, and in Democratic administrations selects the membership of the majority party on other committees.

H. R. 12000 having been referred to the Ways and Means Committee, it is filed by the clerk of that committee with several hundred other bills involving tariffs or revenue. If the author of the bill is alert he will promptly request the chairman of the committee to demand a report from the executive department of the Government having the most information on the subject matter of the bill, which is usually the Treasury Department (although, since social-security legislation, involving taxes, liquor legislation, originally came from this committee, it may be referred to the Social Security Administration or the Liquor Control Administration rather than the Treasury Department). In due time a report from the Department is made and comes back to the chairman of the Ways and Means Committee and is filed by the clerk. The author of the bill interviews the chairman and requests a hearing. The chairman, in turn, usually calls together the members of the majority party for discussion and determination by the majority, whether or not a hearing will be granted. Hearings are not allowed as a matter of course, because the importance of legislation, its partisan nature, or troublesome aspects may be conditions in deciding whether or not a hearing will be allowed. These same conditions are usually involved in other committees, although the regular appropriation bills follow through as a matter of course, because it is necessary for the public moneys to be appropriated in order that the departments of Government may carry on. Public interest in a bill has great bearing as to whether or not a hearing will be granted. For instance, the Townsend old-age pension legislation became the subject of so much pressure on the Congress last year that a hearing was granted although when the subject was actually voted on it lost by a vote of 302 to 97. At the present time a subcommittee of the Ways and Means Committee is holding an extended hearing on the chain-store tax bill—not because the majority of the members may necessarily be in favor of the bill but because various types of public pressure were put on the Congress and the committee to hold hearings.

If the majority of the committee decides to hold a hearing, the chairman fixes a date, makes public announcement of the beginning of the hearing to the effect that all who care to be witnesses may be heard in the great committee room in the New House Office Building. The chairman, or someone designated by him, presides; and the witnesses are called both for and against the legislation, in rather an informal order arranged by the clerk of the committee and the chairman. Witnesses usually are limited to time, because vast numbers of people usually want to be heard on bills of public interest and importance. If it is a minor bill, the author of the bill usually produces the witnesses, and usually the department of government affected has representatives of its department as witnesses. Twenty-five members of the Ways and Means Committee were probably attending a hearing when you visited the House and saw so few Members on the floor, because committees can sit and hold hearings, with special permission, while the House is in session. Probably other big committees were also in session.

If the committee refuses to grant a hearing after 30 or more days, the author or other parties interested may apply for a discharge rule to discharge the committee from further consideration of the bill. This is done by filing with the Clerk, on the proper blanks, such a demand that the committee be discharged. Members may sign this document in open session, as it is kept by the Clerk at the Speaker's desk. If 218 Members sign the document, the committee is automatically discharged from consideration of the bill, and under certain detailed rules it may be called up for consideration by the House on the second or fourth Monday of each month, with special privilege over other bills being considered when it comes to the House floor.

After a hearing is had on our bill, H. R. 12000, and the witnesses have presented their testimony, the whole committee goes into executive session, which means that only committee members and experts are present, to consider the bill for amendment. It is read in most meticulous detail, paragraph by paragraph, section by section, word for word, and after amendments are agreed to, it is ready to go to the floor of the House. The consideration of the bill in hearings and in executive session may last for weeks, or even months. Thirteen weeks were consumed by the Ways and Means Committee on the original social-security bill, and—4 years later—15 weeks on amendments to the same law. The members of the committee carried on their usual work, attending sessions of the House and looking after their constituents, during the same period of time, trying their best to get to their meals on time, too.

H. R. 12000 being a revenue bill, it is privileged (meaning it has the right-of-way over other bills), and any member of the Ways and Means Committee may call it up ahead of any other bill. This does not produce an awkward situation, because these matters are worked out amicably. If it were not a revenue bill or an appropriation bill, or for some other reason were not privileged, it could not be called up by any member or committee member of the House, but would have to go through the all-powerful Rules Committee, which decides whether or not bills shall be permitted to go to the floor for consideration. You can readily see the necessity for the Rules Committee, because the untold thousands of bills introduced cannot possibly be handled separately by the House, and this policy committee determines which bills are of sufficient importance for the House to use its time on. If the Rules Committee does not grant a rule giving the bill special privilege, the bill is dead—unless 218 Members sign a petition to discharge the Rules Committee.

But since our bill, H. R. 12000, is a privileged bill, the chairman of the committee calls it up on a convenient day for passage, simply by getting recognition from the Speaker, which is usually prearranged, and an agreement is usually entered into between the chairman of the committee and the ranking minority (Republican) Member, on the floor of the House, as to the amount of time of debate to be devoted to the bill and the time is divided equally between them, say 2 hours on either side. This gives the chairman of the committee and the ranking minority Member command of the time for debate, with members of the committee having the first right to the time, whereupon the chairman and ranking minority Member allot to those desiring to speak on the bill a reasonable amount of time, considering the number who want to speak, and the amount of time agreed upon. Usually, in general debate, as it is commonly called, the individual does not speak more than 10 to 20 minutes.

The chairman of the committee makes a motion that the House resolve itself into a Committee of the Whole for the consideration of H. R. 12000. Whereupon, the Speaker appoints some other Member to preside and the debate ensues. At the conclusion of the agreed time for general debate, the bill is read, word for word, by the clerk, and section by section, for amendment. At the conclusion of each paragraph any Member of the House may offer an amendment, and is entitled to speak for 5 minutes in favor of his amendment. Any Member who obtains recognition by the chairman is entitled to speak in favor or in opposition to it. This is usually done by motion to "strike out the last word." When debate on the amendment has been concluded, a vote is called for and may be taken by voice vote and the chairman declares the result. A division may be called for. Those voting aye arise and remain standing until counted, then the noes are counted.

If dissatisfied with the results, any Member may call for tellers and 20 Members may arise to second his demand. This orders tellers. The Chairman designates the author of the amendment and its main opponent to take the vote. This is done by their standing opposite each other in the center aisle and the Members pass between them to be counted, first those voting in the affirmative and then those voting in the negative; concluding the vote the tellers address the Chair, announce the votes on either side, and the Chairman reannounces the vote and declares the result. Then a vote is taken by the Committee of the Whole House, on the whole bill as amended, whereupon the Speaker resumes the chair and the Chairman of the Committee of the Whole House announces to the Speaker the result of deliberations of the Committee. Whereupon, the Speaker reannounces the result, calls for the third reading of the bill by title, and inquires if separate votes are demanded on the amendments attached to the bill in the Committee of the Whole. This may be by voice vote, rising vote, or roll call. After the amendments are disposed of, a motion to recommit the bill to its original committee is in order, and can only be made by a Member opposed to the bill, with members of the committee, from which the bill (in this case the Ways and Means Committee) came, having prior right. A roll call, demanded by one-fifth of those present, may ensue on the motion to recommit the bill, usually taking about 40 minutes for each roll call, after which the Speaker declares the bill passed—if it did.

H. R. 12000 is then engrossed and enrolled, usually on the next day, is signed by the Speaker, in the presence of the House, and goes on its way to the Senate where it is delivered by the Clerk to the Senate, read for the first time by title and, on the next day, is referred to the Senate committee having jurisdiction of the subject matter. Hearings in the Senate, as in the House, may continue for days, even weeks, maybe months. When the bill gets back to the Senate, it is subject to unlimited debate, because in that body, being smaller, the rules are not complex, and any Senator may talk as long as he is physically able, either in favor of or in opposition to, the bill. If it finally passes in the Senate without change, either by voice vote or roll call, the House is notified; it is signed by the Vice President or President pro tempore of the Senate, and goes on its way to the President.

If the Senate shall have amended the bill, it must be returned to the House and the House is notified of the Senate amendments. If the House agrees to the Senate amendments it goes on its way to the President. If the House disagrees with the Senate amendments the bill is dead, unless the House calls for a conference, and a maze of procedure ensues, resulting in the appointment of a conference committee, consisting of Members of the House, appointed by the Speaker from the majority and minority sides of the committee which reported the bill to the House, and Senators appointed by the President of the Senate. Conference committees are not large in number, usually consisting of about three or five House Members and an approximately equal number of Senators. Often, the conferees from either House vote en bloc, rather than as individuals. If the conference committee cannot agree on the legislation, the respective conferees report to their respective Houses, and unless further action is taken the bill is dead.

If the conference committee does agree upon a report, both Houses must act upon the report affirmatively before the bill can go to the President. No matter can be considered by the conference committee that was not put in the bill either originally, or by amendment, by the Senate or the House. Complex rules involving conference reports must be followed in the procedure on presentation, debate, etc., in either House. Roll calls and rising votes are to the same purpose and procedure as on the original bill as presented to either House. After the conference report is adopted, the whole bill as amended and agreed upon by the Houses at the conference must be enrolled and engrossed, signed by the Speaker and the Vice President, and then sent to the President.

The President may sign the bill, after which it becomes public law and is printed in the United States Statutes at Large. He may hold it for 10 days, let it become law without his signature, or he may subject it to a pocket veto by holding it without signing it (after adjournment) until 10 days after its receipt by him; again, he may veto it, in which event he returns the vetoed bill to the House in which it originated, with a veto message, which has precedence over other matters. If both Houses by a two-thirds vote override his veto, it becomes a law. The presiding officers present the issue after debate to the respective Houses in this language: "Shall H. R. 12000 become a law, notwithstanding the President's veto?"

Now, you may logically ask, since we have gotten the bill passed through the Congress and signed by the President, what of it?

If our particular bill, H. R. 12000, makes a substantive change in the revenue law, the Treasury Department has jurisdiction to write what it termed "regulations" for the executive department's handling of the new statute. This amounts to the Treasury Department's interpretation of the law in order to apply it to the incidents whereby citizens will be affected by it. If it is a further raising of taxes, the Treasury Department's regulations go into detail as to how the average citizen must deport himself with reference to the application of the law in his dealings with the Treasury. If it should amend the Social Security Act, or the liquor law, the same procedure is had—regulations are issued and put into bound form by the Treasury Department, and may be had by the citizenship upon request. All agents of the Department are furnished copies of these regulations so that the tax collectors, liquor-license inspectors, and division heads in the Social Security Department, may be apprised of the final treatment of the law by their department.

When a bill is passed which creates a new governmental activity, it usually provides for a board or commission with general authority to set up its organization, hire stenographers, clerks, and do the necessary things for the organization of a new department. Regulations are also issued by the new department concerning the department's administration of the law. These regulations, theoretically at least, are not an addition to the law or in opposition to it. If a new department is set up, the appropriating machinery of the Congress has to pass a separate bill to provide the money for the new department. Or if an amendment to existing legislation is passed by the Congress which requires the addition of new governmental machinery, and hence the employment of new people, or other expenses, a separate appropriation bill for the payment of these expenses must be passed by the Congress.

I should refer to what is called the Consent Calendar and the Private Calendar. These calendars usually consist of bills of minor importance that are permitted under the rules to be called by the Clerk for the Consent Calendar on the second and fourth Mondays of the month and the first and third Tuesdays for its Private Calendar. If opposition is heard, the bill is marked off the Private and Consent Calendars and goes back to the Union Calendar and can only be brought to the floor again by the Rules Committee. Certain special rules relate to these calendars and procedure thereunder.

Calendar Wednesday is so called because on each Wednesday committees, in their order, have the right to the time of the House for that day. For instance, on next Wednesday the Committee on Indian Affairs may have the first call. If it has no bills to present, or concludes its work, the chairman of the next committee in order may call up such bills as his committee may direct him to present to the House, and so on.

On the following Wednesday the next committee in turn (the list having been fixed by precedent) "has the call," as it is stated in parliamentary procedure.

A great majority of bills, of the thousands introduced, die without any action whatever having been taken and are not killed, as is usually thought. Actual action by the committee or the House is taken on comparatively few of the bills introduced. Most of them do not get consideration even by the committee. The death of a bill may be by this process: The committee may never have considered it; it may have considered it and rejected it; it may have been rejected by the House after the committee favorably reported it. It may be emasculated by amendments so that the House defeats it. It may smolder in a Senate committee or be killed by a Senate committee or by the Senate, or die in a conference, or by a conference report being rejected, or by veto by the President. Thus the ordinary bill has slight chance of becoming law.

You may have heard mysterious references to cloakroom conferences, and it may be interesting to you to know what the cloakroom is. The cloakrooms are small rooms opening on the House floor under the galleries. They are simply comfortable rooms for Members who do not care to be physically present on the floor at all times. A large number of telephones are in these rooms, where Members may be called off the floor by pages to answer calls. A small lunch room is provided, where light lunch may be purchased by the Members. Additional equipment includes a number of comfortable chairs. Members gossip, smoke, tell stories, and discuss legislation in the cloakrooms. But no great affairs of state or business of government is carried on in the so-called cloakroom conferences. They are simply a clearing house for all types of conversation amongst the membership of the House.

Party caucuses are seldom held. They are cumbersome, unwieldy, and usually result in more disagreement than harmony. Under the system in recent years, party fealty is not an important element in the consideration of legislation, and a Member may vote according to his knowledge and information, his personal feelings, his bias or partisanship, or whatever other motives which might influence him. It may generally be said that a Member may vote as he pleases, the first consideration being in the interest of his State and district. He likes to be regular and go along with his party, but there is nothing legally or morally binding upon him that requires him to do so.

The length of time a Member has served in either House is important. The longer he has been a Member, the more experience he has had, the higher up he is on his committee. A man goes up on a committee by some man above him dying, resigning, or being defeated. No man can be taken off a committee, once he has been assigned to it. His leaving the committee is purely voluntary, except for the processes I have indicated.

The Speaker of the House is usually considered the head of the party in control of the House, and the floor leader of the party in power is a kind of general manager of legislation on the floor. Together with the party whip, whose function it is to keep the Members advised as to what legislation is about to appear in the near future and its importance to the administration and to the party, these two Members usually confer closely with the members of the outstanding committees on party matters.

If they desire to have a reflection of public opinion in the House on a given matter, a meeting of the steering committee is called. The steering committee is a group consisting of Members from all over the Nation, about 15 or 20 in number. A matter on which information is sought is presented to the steering committee, and the Members get in touch with the Representatives from their States, and at a given time report back to the full steering committee their judgment as to the opinions on the given question.

Reorganization Plan No. IV

EXTENSION OF REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1940

Mr. THOMAS F. FORD. Mr. Speaker, my opposition is based on the fact that I have more confidence in the judgment of President Roosevelt than I have in either the distinguished gentleman from California or the lobby that has for days infested the halls of Congress.

It occurs to me that when distinguished gentlemen arise and take the floor of the House for the purpose of asserting that the President is asking the Congress to do something under a misapprehension of just what that something is, they are to say the least, just a bit presumptious.

In the debate on the Lea resolution great stress was laid on the fact that there had been no accidents on main-line transport systems in the year of 1939.

What seems to me to be the weak spot in that argument is this: The Safety Board's activities are confined entirely to investigating accidents—get that—investigating accidents. No accidents on main-line transport service, no investigations. Plenty of accidents outside this field. But—will my distinguished friends tell me how, and to what degree the occult operations of the Safety Board affected the volume or character of these accidents?

I am just wondering if there are other factors in this safety record. Could it be barely possible that the agreement between competing lines not to take the air when weather conditions were bad, may not have been a factor. I am also wondering, not being a technician, nor an experienced pilot, if the advances in aircraft production, in pilot experience, in better landing fields, in a better beacon system, in improved methods of receiving weather reports might not be a factor?

In this connection I want to ask my friends who are in favor of this resolution, this question, Do you honestly believe that our great President, whose immediate family are most consistent users of the air service, would jeopardize the lives of his loved ones by proposing a measure that would endanger the lives of those who travel by air?

I do not believe he would do such a thing. Therefore, I am opposed to the Lea resolution, which, by the way, has the solid support of the Republican Members of the House of Representatives, plus the support of those Democrats who are openly or covertly opposed to Roosevelt.

Employees of World's Largest Railroad Shops at Altoona, Pa., Support Wheeler-Lea Railroad Bill

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1940

Mr. VAN ZANDT. Mr. Speaker, back in July 1916, as a mere youngster of 16 summers, I entered the employ of the Pennsylvania Railroad as an apprentice boy in the world's largest railroad shops located in my own home town of Altoona, Pa.

From 1916 to 1939 I had the opportunity of completing 24 years of active service, the greatest portion of which was spent among my fellow railroaders in my own home town. As many of you know, I came from the rank and file of railroad labor to the Congress of the United States.

It is with a great deal of pleasure that in this morning's mail I received a resolution speaking for 11,461 of my fellow railroaders urging me to support S. 2009—the Wheeler-Lea railroad bill—and to vigorously oppose any effort to destroy this legislation by recommitting it.

The resolution is as follows:

BROTHERHOOD OF RAILROAD SHOP CRAFTS OF AMERICA,
ALTOONA WORKS LOCAL, NO. 42,
Altoona, Pa., May 6, 1940.

Mr. JAMES E VAN ZANDT,
Congressman, Twenty-third District of Pennsylvania,
House of Representatives, Washington, D. C.

DEAR SIR: The members of the Altoona Works Local, No. 42, of the Brotherhood of Railroad Shop Crafts of America, have on this date, May 6, 1940, voted to recommend the following resolution and a copy of the same be sent to Senators JAMES J. DAVIS and JOSEPH F. GUFFEY, of Pennsylvania, and to JAMES E. VAN ZANDT, Congressman, Twenty-third District of Pennsylvania:

Whereas that the Wheeler-Lea railroad bill, commonly known as the transportation bill (S. 2009), be enacted into law; and

Whereas it proposes equal treatment and fair regulation to the several modes of transportation; and

Whereas the interests of the railroad shopmen will be improved by the enactment of this bill, as there have been thousands of shopmen who have lost their jobs on account of unfair transportation policies and lack of Federal regulation of other modes of transportation other than railroads: Therefore, be it

Resolved, That you use your vote and influence to effect the passage of the Wheeler-Lea bill, commonly known as the transportation bill (S. 2009), which provides for all subsidized water and motor carriers to be placed under the regulation of the Interstate Commerce Commission.

Very truly yours,

W. S. GARDNER,
President, Altoona Works Local, No. 42.

The Wheeler-Lea Transportation Bill, S. 2009

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1940

Mr. ANGELL. Mr. Speaker, the people in the Northwest are greatly interested in the Wheeler-Lea transportation bill, S. 2009. I have had many communications urging that this bill be recommitted for further study. I have had other communications in favor of its adoption. The farm organizations, under date of May 7, 1940, wrote me, as they have other Congressmen, urging that this bill be recommitted and enclosing a copy of a letter they had sent to President Roosevelt. I also have received a telegram from the five railroad brotherhoods, and a copy of a letter from the Grand Lodge of the Brotherhood of Railroad Trainmen, written to my colleague, the Honorable CLARENCE F. LEA, chairman of the House Committee on Interstate and Foreign Commerce, urging that the bill be recommitted. I ask that these documents be included in an extension of my remarks. They follow:

WASHINGTON, D. C., *May 7, 1940*

Hon. HOMER D. ANGELL,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN ANGELL: The undersigned, representing agricultural organizations throughout the United States, on May 2, 1940, addressed to the President of the United States, and delivered at the White House, the following protest against enactment of the Wheeler-Lea omnibus transportation bill. At the same time they presented for the consideration of the President a bound copy of resolutions adopted by 25 national and regional agricultural groups protesting against the enactment of the Wheeler-Lea omnibus transportation bill, and the principle of restrictive control embodied in the legislation.

Among the resolutions delivered were the following:

American Farm Bureau Federation; American National Livestock Association; National Grange. National Farmers Union; National Cooperative Elevator Association; National League of Wholesale Fresh Fruit and Vegetable Distributors; National Wool Growers Association; Texas Sheep and Goat Raisers Association; United States Livestock Association; Vermont State Grange; Nebraska Farm Bureau Federation; Indiana Farm Bureau, Inc.; Kansas Farm Bureau; Kansas Farmers Union; Louisiana State-Wide Conference, Baton Rouge, La.; Mississippi Farm Bureau Federation; and Missouri Farm Bureau Federation.

Respectfully yours,

Frederick Brenckman, National Grange; Irvin B. King, master, Washington State Grange; Oscar Heline, president, Farmer Grain Dealers Association of Iowa, Marcus, Iowa; Frank Rutherford, secretary, National Cooperative Elevator Association, Omaha, Nebr.; J. Elmer Brock, president, American National Livestock Association; J. B. Wilson, secretary, Wyoming Wool Growers Association, executive committee, National Wool Growers Association; T. M. Hoskins, manager, Lone Tree Farmers Exchange, Lone Tree, Iowa; Earl Peterson, Midland Cooperative Wholesale, Minneapolis, Minn.; Herschel D. Newsom, master, Indiana State Grange.

WASHINGTON, D. C., *May 2, 1940.*

Hon. FRANKLIN D. ROOSEVELT,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: We are opposed to the adoption of the conference report on the Wheeler-Lea transportation bill for the following reasons:

1. It ignores the public interest and lays the basis for a transportation monopoly.

2. It will increase the cost of distributing agricultural products, which cost the farmer has to bear, thereby reducing his income.

3. It will increase the cost of things that the farmer has to buy, thereby further reducing his income.

4. The destructive effects of this legislation upon agriculture will retard the economic recovery of the Nation, and this, in turn, cannot fail to adversely affect the railroads themselves, who are the advocates of this bill.

5. Those who drafted this legislation appear to have lost sight of the fundamental purpose for which Government regulation was established, namely, to protect the public interest. Instead of adhering to this sound principle, under the bill regulation would be employed to stifle competition and to bring water and motor rates up to the level of rail rates, regardless of the cost of rendering the service.

The cost of transportation is the heaviest service charge that the farmer has to pay. Approximately 20 percent of all the freight revenues accruing to the railroads are derived from carrying agricultural products to market. In 1929 the farmer's freight bill amounted to $1,000,000,000. In 1937, when the farmer's income was greatly reduced, the figure was $638,000,000. These items do not include the freight charges paid on commodities purchased by the farmer, which he must likewise pay.

Last year the farmer received only 39 cents out of every dollar paid by the consumer for food. At the depth of the depression the farmer's share of the consumer's dollar dropped to 33 cents. While transportation and distribution must be regarded as legitimate and indispensable functions in the affairs of civilization, the fact remains that when those who merely transport and distribute the products of our farms receive vastly more than the share that goes to the producer, it amounts to the same thing as the perpetration of an economic crime. Instead of ameliorating the conditions that have so long handicapped agriculture in matters relating to transportation, the pending bill would most certainly aggravate the situation.

We are sensible of the fact that railroads are a necessity, and we want every properly managed railroad to be solvent and prosperous, but we must not lose sight of the fact that agriculture is also a necessity, even more fundamental to the well-being and the very existence of man than the railroads or any other agency of transportation can possibly be. Common sense should teach those who are charged with the management of our railroads that they cannot expect to benefit by reducing to bankruptcy the fundamental industry upon which their prosperity rests.

There is justification for condemning the report of the conference committee on the transportation bill by virtue of the fact that the Miller-Wadsworth amendment, which passed both House and Senate, was entirely eliminated from the bill. The gist of this amendment was to the effect that no form of transportation could be compelled to charge higher rates than would be compensatory. The full wording of the amendment was as follows:

"In order that the public at large may enjoy the benefit and economy afforded by each type of transportation, the Commission shall permit each type of carrier or carriers to reduce rates so long as such rates maintain a compensatory return to the carrier or carriers after taking into consideration overhead and all other elements entering into the cost to the carrier or carriers for the service rendered: *Provided*, That nothing in this paragraph shall be construed so as to affect the long-and-short-haul provision of section 4."

It is manifest that with the Miller-Wadsworth amendment stricken out the declaration of policy contained in section 1 constitutes nothing but empty words because nothing contained in the bill gives the public any assurance that it will receive the benefit of transportation at the lowest possible cost. In our opinion, the Miller-Wadsworth amendment was so fair and reasonable that it would be nothing short of tragic to pass the bill without this provision.

Those who are engaged in agricultural pursuits find an additional reason for dissatisfaction in the report of the conference committee because an amendment adopted by the House which provided for reduced rates on farm products for export, comparable to the lower rates granted to industry in this connection, was eliminated.

We maintain that there are only two legitimate grounds upon which the Government could justify itself in attempting to regulate transportation on our inland waterways and in the coastwise trade. One of these grounds would be in the interest of public safety, and the other to protect the public against monopolistic practices. So far as safety is concerned, the Department of Commerce already looks after that; and when it comes to protecting the public against monopoly, the truth is that no monopoly whatsoever exists among the carriers on our inland waterways, nor in the coastwise trade. The rivers, the lakes, and the seas are open to all. So, far from breaking up any monopoly among the water carriers, which in reality is nonexistent, the pending legislation takes a long step toward creating a monopoly.

The carriers now operating would be permitted to continue, subject to rules and regulations laid down by the Interstate Commerce Commission; but before it would be possible to establish a new service, it would be necessary to secure from the Commission a certificate of public convenience and necessity. If this bill should be enacted it is very doubtful if there would be any new water carriers, because the legislation is so worded as to virtually instruct the Interstate Commerce Commission to deny any person a certificate of convenience and necessity if the Commission comes to the conclusion that the present transportation facilities are adequate to take care of existing commerce. The fate that befell

many of the common and contract carriers under the grandfather clause of the Motor Carrier Act of 1935 furnishes an example of what may happen to many of our water carriers if the present bill is passed.

As the Secretary of War, the Secretary of Agriculture, and the Chairman of the Maritime Commission well said in a joint letter addressed to Senator JOSIAH W. BAILEY on February 16, 1940, in opposition to this legislation:

"Certificates of public convenience and necessity should not be used to create a monopoly in the branch of transportation industry where monopoly is presently nonexistent and where the public interest requires that competition, although it should be regulated to prevent abuses, should not be limited or discouraged. The great advantage of water transportation to shippers is the flexibility and variety of service it can offer. Certificates of public convenience and permits would destroy this advantage and stifle competition. The same effect of stifling competition is discernible in the provisions of the bills, that except with the permission of the Interstate Commerce Commission, no carrier can operate both as a common carrier and as a contract carrier."

We think the writers of the joint letter already mentioned are on the right track when they said:

"All the provisions of the bills seem designed to free the railroads from restraints and obligations, while imposing restrictions on their water competitors and making it more expensive for the public to move freight. Under these provisions inland water carriers can easily be regulated out of existence without the recapture of enough tonnage to affect railroad earnings appreciably."

We also endorse the further statement of the writers of the joint letter when they declare:

"Farmers and other shippers should not be required to pay rates based on transportation costs of properties improvidently built, wastefully operated, or partially obsolete. The advocacy of thorough regulation of the minimum rates of motor and water carriers by a centralized agency appears to represent an attempt to use Government power to bring competing transportation agencies into a cartel, and in this manner to share traffic and adjust rates in such a way as to earn a return upon all transportation capital of these agencies. The present high rail-rate level would be protected from the impact of vigorous competition. Undoubtedly such a policy would also result in more rigid rates in times of depression, since the motor carrier and the boat line would no longer play their role as an effective competitive force in bringing down rail rates on commodities susceptible to rail or truck, and rail or water movement."

We are impressed by the fact that the general public has had no opportunity whatever to become acquainted with the conference report on the transportation bill; the Members of Congress as a whole have not had time to familiarize themselves with its details; there is no public demand for this legislation; it is filled with numerous objectionable features and ambiguities; and for the good of all we are strongly of the opinion that it should be defeated.

Respectfully submitted.

J. Elmer Brock, president, American National Live Stock Association; Frederick Brenckman, National Grange; J. B. Wilson, Secretary, Wyoming Wool Growers Association, National Wool Growers Association; Irvin B. King, master, Washington State Grange; T. M. Hoskins, manager, Lone Tree Farmers Exchange, Lone Tree, Iowa; Oscar Heline, president, Farmer Grain Dealers Association of Iowa, Marcus, Iowa; Frank Rutherford, secretary, National Cooperative Elevator Association, Omaha, Nebr.; Earl Peterson, Midland Cooperative Wholesale, Minneapolis, Minn.

WASHINGTON, D. C., *May 7, 1940.*

Hon. HOMER D. ANGELL,

Member of Congress, House of Representatives:

Approximately 1,000 general chairmen representing employees in the transportation service of the railroads of the United States now in session at Chicago are deeply concerned in railroad bill, S. 2009, and they have authorized us to urge you to support the motion to recommit the conference report on this bill, which will be considered by the House on Thursday, May 9, and provide protections against unemployment resulting from consolidations, etc. We appeal to your sense of justice and fairness to save railway employees from the menace of further unemployment.

A. Johnston, grand chief engineer, Brotherhood of Locomotive Engineers; D. B. Robertson, president, Brotherhood of Locomotive Firemen and Enginemen; J. A. Phillips, president, Order of Railway Conductors; A. F. Whitney, president, Brotherhood of Railroad Trainmen; T. C. Cashen, president, Switchmen's Union of North America; V. O. Gardner, president, Order of Railroad Telegraphers.

Sent from Chicago.

GRAND LODGE, BROTHERHOOD OF RAILROAD TRAINMEN,
Cleveland, Ohio, May 6, 1940.

The Honorable CLARENCE F. LEA,

Member of Congress, Washington, D. C.

MY DEAR CONGRESSMAN LEA: I take pleasure in replying to your courteous inquiry by letter of May 2.

As you have previously been informed, the source of our opposition to the Wheeler-Lea transportation bill, S. 2009, was the fact that, as you have many times stated, the consolidation section of that bill proposed to facilitate railroad consolidations. The House conferees correctly stated in their report, which report was signed by yourself, at page 61:

"Employees had a fear of unemployment and to some extent communities feared the loss of transportation due to the possible consolidations under present circumstances where a revival of the transportation industry might show that such consolidations were unwarranted."

We have felt all along, as have 275 Members of Congress who signed a petition on behalf of adequate labor protection, that this Congress should deal courageously with this justified fear of unemployment and deflation of communities. As stated in the joint letter to Congress from the five transportation brotherhoods, the joint conferees struck from the proposed bill the consolidation section, as amended by the House, which was the only provision in the entire bill that proposed direct benefits to railroad labor. To be sure, when this provision was stricken from the bill, the provisions designed to facilitate consolidations also were stricken, and accordingly, as I advised you in my telegram of April 29, that removed the source of our opposition to S. 2009. But also, as I advised you in that telegram, "We shall continue our earnest effort to obtain legal protection for labor in consolidation and abandonment situations." We naturally urge recommitment of the conference report as affording the only present opportunity of achieveing legal protection to the railroad workers we represent, the workers most seriously affected by railroad consolidations.

In your address, as reported in the Appendix of the CONGRESSIONAL RECORD page 2685, you suppose that our efforts along these lines would be confined to the separate bill which Congressman HARRINGTON, of Iowa, introduced after the joint conferees failed to provide for adequate labor protection.

Do I understand that your committee will give this bill speedy consideration and do all possible to obtain action on it at this session of Congress? I am sure you understand that, unless the committee of which you are chairman would give wholehearted cooperation and support, it would be difficult, if not impossible, to obtain action at this session of Congress; hence, we have no practical alternative but to seek recommitment, with the hope that the conferees will respond to this great demand for adequate labor protection against the desire of railroad bankers to economize at the expense of railroad workers.

In your letter of May 2, you suggest that in favoring recommitment we have made ourselves "a party with a group fighting to destroy the bill." The only possible interpretation that can be placed upon that conclusion is that you are convinced, in advance, that the conferees will not carry out the wishes of the House of Representatives and write into their report the adequate labor protective provisions so clearly favored by an overwhelming majority of the Members of the House. In such a contingency, it would be the conferees, rather than we, who favor recommitment, that would destroy the bill. We have no intentions or aspirations to destroy the bill; we ask only that the voice of democracy be harkened to and the wishes of the majority be responded to. If that is done, S. 2009 will yet become law this session of Congress.

Your address, as reported in the Appendix of the CONGRESSIONAL RECORD suggests that your conception of the labor-protection provision is entirely erroneous. You state that such a legal provision would have the effect of imposing "on the employer the duty of indefinite if not a lifetime support of employees for whom he no longer has a job." As a practical matter you must know that is not so. Average railroad consolidations eliminate from 20 to 25 percent of the employees. Without the labor-protective provision, those employees youngest in point of service would be spared that fate, and the eliminations would come from the other end of the seniority list, as deaths, resignations, and retirements occurred. Such attrition from deaths, resignations, and retirements, for all railroad employees, now averages upwards of 5 percent per year; but for train service employees who are most severely affected by consolidations, the attrition rate is between 2.5 and 3.5 percent. Thus, on the whole, employee eliminations from consolidations would be gradually and humanely absorbed within a short period of time, especially with an increase in railroad business, which is claimed if S. 2009 is enacted into law. The only way in which you could be correct in your reference to lifetime support is to assume that the lifetime of railroad workers will be short, indeed. Although we railroad employees feel somewhat hardier than that, it may be true that if you force tens of thousands of us into the bread lines you will so shorten our span of life.

I must again remind you that railroad financial interests have expressed the hope that they could save $500,000,000 annually from consolidations if they succeed in obtaining enactment of S. 2009 without the labor-protective feature. Eighty percent, or $400,000,000 of that sum would come from pay rolls. The so-called Washington jobs agreement, executed 4 years before this ambitious banker program was revealed, constitutes only what the railroad financial interests would agree to—it is not a standard of equity or social desirability.

You erroneously refer to the proposed labor protective provision as a "dismissal wage" proposition. The dismissal wage is only another attempt to achieve national prosperity by providing meager compensation for nonproduction. Before concluding that such an arrangement is equitable, ask yourself if you would be willing to forego pursuit of your life's calling for a mere 60 percent of your

present salary for a few months. Railroad employees want honest pay for honest work; that is what the labor protective proposal offers. A dismissal wage proposition proposes to buy up, at bankrupt prices, the jobs of needy workers. I regard the Washington dismissal wage agreement of 1936 now, as I did when it was executed, on which occasion I said:

"I want to emphasize that so far as the Brotherhood of Railroad Trainmen is concerned, the agreement with the carriers relative to consolidation and coordination can in no sense be interpreted to mean that the way is clear for railroad consolidation and coordination. This brotherhood will continue to fight as vigorously as it always has such efforts to economize at the expense of humanity. We have now entered into an agreement with the carriers, designed not to improve the standards of living or working conditions of railroad workers, but to share with them a small portion of the booty that would come to the coupon clippers if Wall Street's demand for 'economy' at the expense of humanity is carried out."

I am sure that when you ponder these considerations in the light of the fact that unemployment and business deflation constitute the Nation's No. 1 economic problem, you will understand why we are anxious that S. 2009 be recommitted, so that you and your colleagues among the House conferees may yet be given an opportunity to recommend a bill that will be of great benefit to the country.

I hope I have made our position entirely clear to you, but if questions still arise in your mind, please submit them to me. In order that my position may be clearly understood by all Members of Congress, I am mailing to each of them a copy of your letter of inquiry, together with a copy of this reply.

With best wishes, I am

Sincerely yours,

A. F. WHITNEY, *President.*

Appropriations for Parity Payments and Purchase of Farms for Tenant Farmers

EXTENSION OF REMARKS

OF

HON. PHIL FERGUSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1940

Mr. FERGUSON. Mr. Speaker, today the House of Representatives is going to vote on whether the farmers of this Nation are to receive parity payments for their crops. I hope the Republicans, you on the left side of the aisle, have changed your attitude since a year ago. Last year 140 Republicans, almost your entire Republican group, voted against parity payments. You voted against sending the bill to conference and again the 140 Republicans refused to agree to parity payments when it came back from conference as it is coming back today. I want to plead with you, the Republicans who represent yourselves as being for a farm program, as well as my Democratic brothers, to receive and concur in the Senate amendments.

First, I want to plead with you to vote for the $212,000,000 that is provided for parity payments. It has been definitely proven that every dollar that goes into the hands of the American farmer increases the income of this Nation by $7. The Committee on Agriculture, of which I have the honor of being a member, authorized this appropriation. In these times of world stress, when nations are crumbling for lack of national defense, when the future of this Nation may be in jeopardy because of inadequate defense, and I am a supporter of an adequate defense, there is one industry, one section of our national life on which we can depend, come what may, the farmer has in the past and will in the future feed and clothe this Nation. All that the Committee on Agriculture asks is that the farmer receive a fair price for his product in comparison with the products he has to buy. This $212,000,000 provides the farmer the difference between the price he gets for his products and the price he is entitled to receive. No friend of the farmer will vote against this amendment.

I, also, at this time want to plead for the $500,000 appropriation that provides for water facilities. This program will make many farmers in semiarid areas self-sufficient.

And last but not least I want to appeal to you to support the provision providing $50,000,000 for the purchase of farms for tenant farmers. I wish you could read the many letters I have received from tenant farmers who have their own equipment and their own livestock, a thorough knowledge of farming, that desire to obligate themselves to pay Uncle Sam every cent of the purchase price of a farm they can call their own. These letters are from farmers who have applied to purchase a farm under the Bankhead-Jones Act and have been turned down. They throw into the discard the arguments of the opponents of the Bankhead-Jones Act that because it provides for the purchase of only a few farms that it should be abandoned entirely. Every one of these tenant farmers look forward to the day they can be financed to purchase a farm that they can call their own. Why this desire of farm ownership? All through these letters runs this story: "I have to put my rented place all to wheat because my landlord demands a cash crop," or "I had to sell my milk cows, or my sheep, or my hogs before I moved on the place I rent now, because my landlord wanted a cash crop and would not allow me to keep livestock." Most of these applicants have the necessary machinery to successfully farm a place. Most of these applicants point out with a 40-year purchase agreement they could buy a farm for the same amount they are now paying in cash or grain rent.

The future of this Nation depends on the family-sized, owner-operated farms of this Nation. We cannot continue our policy of allowing the productive farm land of this Nation to drift into the hands of bankers, lawyers, and insurance companies. Our best line of defense, our Maginot line, the people who will actually defend this country against all "isms" and foreign invasion by providing adequate food and clothing for the Nation and, if necessary, defending with their lives the farms they own, is the farm population of this Nation. Let us give the American farmer a chance to own his own plot of land.

Support of Jones-Wheeler-La Follette Farm-Credit Bill

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1940

LETTER FROM FIRST NATIONAL FARM LOAN ASSOCIATION

Mr. VOORHIS of California. Mr. Speaker, the letter which follows speaks for itself. It is from the chairman of the First National Farm Loan Association, of Los Angeles, which, I am told, is the largest such association in the Nation. Mr. Reese sets forth why the practical experience of his board of directors leads them to be earnestly in favor of the passage of H. R. 8748.

If this bill is passed, this Congress will go down in history as a really great Congress. Mr. Reese's letter is as follows:

FIRST NATIONAL FARM LOAN ASSOCIATION OF LOS ANGELES,
Los Angeles, May 1, 1940.

Hon. JERRY VOORHIS,
138 Old House Office Building, Washington, D. C.

DEAR SIR: I am writing to urge your support of bill H. R. 8748, introduced by Mr. JONES of Texas. The members of our board of directors are unanimously in favor of this bill and we believe that most of the borrowers through this association are likewise in favor of it. We believe the opponents of the bill are greatly exaggerating disastrous results if the bill becomes a law.

We are very much in sympathy with the provisions of the bill that will enable the farmers to obtain cheaper interest permanently, to obtain a refund of stock, and will provide for increasing the functions and responsibilities of the National Farm Loan Associations.

We understand that objectors to the Jones bill are advancing the argument that the Federal land banks are already providing the benefits that are available in the new bill as far as forbearance and reamortization of loans is concerned.

However, it is my opinion that most of the benefits now available to borrowers who are in distress have been brought about since about November 1, 1939, when policies changed.

I am submitting below certain statistical information which may be of interest to you and which may prove my argument in this regard:

	Number	Amount
Federal land-bank loans as of Jan. 1, 1940	781	$6,397,200
Land Bank Commissioner loans as of Jan. 1, 1940	576	1,991,600
Total number of loans	1,357	8,388,800

Reamortizations completed during 1938 and up to February 28, 1939—Federal land-bank loans, 129; Commissioner loans, 23.

Reamortizations rejected—Federal land-bank loans, 18; Commissioner, 7.

Of these rejected loans all except one have been reamortized since November 1, 1939.

From March 1, 1939, to November 1, 1939, only 8 applications were submitted for reamortization.

Since November 10, 1939, including April 5, 1940, 231 land-bank and 128 Commissioner applications were submitted, none of which were rejected.

The present policy of the Federal land bank as regards reamortization is about the same policy as was proposed by this association in a resolution passed about February 1, 1938, but in order to conform with the strict collection policy of the Federal land bank it was necessary for us to practically discontinue reamortization and enforce collections through recommendations for foreclosure where payments could not be made. Several foreclosures were completed during that period and a number were started which have since been reinstated.

Under a change in policy since November 1939 we are now being urged to grant the aid to borrowers which we had previously recommended, and for which we were criticized by the examining board of the Federal land bank.

We believe the board of directors of this farm loan association is better qualified to know the credit needs of the community than the credit department of the Federal land bank.

We believe the present policy being followed by the Federal land bank will be insured continuance by the passage of the Jones bill, and we urge your full-hearted support of it.

Respectfully yours,

EVERETT M. REESE,
President.

Reorganization Plan IV

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1940

Mr. PLUMLEY. Mr. Speaker, this is too important a matter not to have been entitled to a full and fair hearing.

I recognize the right of, as well as the necessity for, the members of the committee to have and to take such time as they may care to use. It is, nevertheless, barely possible that some of the rest of us might have contributed something to the discussion if we had been afforded an opportunity so to do.

It seemed useless to take a minute and "to extend and revise." The occasion neither excused nor justified such procedure on my part.

So, under the permission granted me, in order to keep the record straight and to keep faith with those who asked me to speak, I am appending some of the reasons, only a few of many, which justify my vote against Reorganization Plan IV.

As one who has flown many thousand miles since 1933, I am convinced that we should leave well enough alone. What a record of accomplishment. It cannot be excelled.

It is not a partisan matter with me. You will believe me when I say this.

I am, however, opposed to any change in the present set-up. My life has been at stake. It will be at stake if I continue in my present committee assignments. I am opposed to taking any chance to lose it to satisfy some "reorganization theory" as against the demonstrated capacity and ability, based on experience, of the existing establishment.

I cannot escape the fact, and I assert, that somebody was personally responsible and chargeable for the death of 10 or more Army pilots, politically and impetuously ordered to fly the mail, due to a created alleged emergency some years ago. There should be no repetition of this catastrophe caused by injudicious political emotionalism. Why open the door by favoring this proposition?

I adjure you to resent any interference with demonstrated efficiency based on experience. No lives lost! You cannot beat that. Why experiment? Experience not only suggests but compels you to hold fast to that which you have.

Too many lives and too much money is involved in such an experiment as is proposed to justify any change. I hope you agree, as a rational human being, whatever your partisan political alinement.

The suggested reorganization should not obtain. I am opposed to Reorganization Plan IV.

May Day and the Eight and Forty

EXTENSION OF REMARKS
OF
HON. BERTRAND W. GEARHART
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 6, 1940

ADDRESS OF MRS. ELLEN LOUISE WARREN

Mr. GEARHART. Mr. Speaker, under the auspices of the American Legion and of the American Legion Auxiliary, a most impressive patriotic ceremonial was held in the Nation's Capital on May Day last. Among the speakers who addressed this gathering was Mrs. Ellen Louise Warren, Chapeau National des Huit Chapeaux et Quarante Femmes.

Because of the unusual nature of Mrs. Warren's patriotic expressions, her outline of the mission of the great organization which is her honor this year to lead, I believe that she is entitled to and should have a much wider audience than those who composed the group which crowded about the District of Columbia World War Memorial Monument to hear that which she then had to say.

In order that Mrs. Warren's speech may have the widest possible circulation, I ask the unanimous consent of the membership that the text of her address may be spread upon the pages of the CONGRESSIONAL RECORD of this day's proceedings.

Unanimous consent having been indicated, Mrs. Warren's address follows:

We of Des Huit Chapeaux et Quarante Femmes, affectionately known as the Eight and Forty, the honor organization for members of the American Legion Auxiliary, are here at the District of Columbia World War Memorial as participants in the commemorative observance on this 1940 May Day.

As the national president of our organization, I find myself concerned with conflicting emotions. In the early celebrations of May Day we recall that the ancient Romans pompously paraded to the Grotto of Egeria. In medieval and Tudor England, May Day was a great public holiday; all classes of people were up with the dawn and went a-Maying; branches of trees and flowers carried back in triumph to the village center to the Maypole, gloriously decked with ribbons and wreaths, the focal point of festivity. Within our own generation we can recall a similar fever of activity throughout our country, when we felt that with the approach of May we could look forward to the pleasures of a full springtime season, the advent of beautiful flowers, and the anticipated pleasures that came with warm weather. This is the May Day we like to remember.

It is tragic that this day, with its significance of beauty, happiness, and contentment, should be selected by certain groups of people as a day of demonstration and agitation against the God-fearing principles under which our people endeavor to live. European countries are deeply enmeshed with communistic activities. France has banned the Communist Party since the start of the war, and now the British Government is seriously considering steps to suppress the British Communist Party. Surely it behooves our United States Government to stand solidly with the Dies committee and aid them in all ways possible to protect our citizens from any and all subversive groups within our lands. We don't want our

Government, our homes, or our safety undermined by grapevine "isms"; we do want to keep America for Americans.

Perhaps in our activities on this day we can in some measure maintain the old-time happy spirit of May Day. I quote from a message of the President wherein Mr. Roosevelt said: "There is need in this country for a genuine concern for our freedom which will parallel and transcend the fanaticism being aroused among young people in behalf of tyranny. No greater service could be rendered by our schools in these times than to make vivid to our children of America the plight and suffering of children of many races and religions in various parts of the world where the principles of fair play set forth in our Bill of Rights are ruthlessly disregarded."

In 1924 our 8 and 40 organization proclaimed May 1 as its national day to emphasize the importance of play for children and adult interest in them. Child welfare is the serious objective of our organization, organized as a national body at New Orleans in 1922. We have been assigned by the American Legion a special field of service, that of childhood tuberculosis prevention. In our State and local organizations the work includes Mantoux tests, care of underprivileged children, establishment of TB clinics, usually working through and with the county and city health departments and nurses. Nationally we have given to the American Legion child welfare division more than $20,000 over the past 17 years; nine beds at $1,000 each have been endowed in the National Jewish Hospital in Denver, Colo., a hospital nonsectarian and whose slogan is, "None may enter who can pay—none may pay who enter"; $1,500 contributed for equipment at the American Legion's Hospital for crippled children in St. Petersburg, Fla.; $1,000 for five geographical area scholarships of $200 each for rehabilitated tubercular children of deceased veterans, 16 years of age or over; $1,000 for a solarium in the Children's Hosp'tal in San Francisco, and annual contributions to the research division of the National Tuberculosis Association. This year we will establish an 8 and 40 health center at Tucson, Ariz., with an initial contribution of $1,000, and in specifically concrete methods we bring May sunshine, with its symbolical reference, to many children who otherwise might be neglected.

Simultaneously with Eight and Forty's May Day plans a movement started in 1923 when the American Child Health Association suggested that May Day be set aside as a day on which to stress child health. President Coolidge in 1924 expressed approval, and expressions of approval were published from persons, both in public and private life; Governors of States issued proclamations from then and on until May 1928 a joint resolution of Congress empowered the President of the United States to annually proclaim May 1 as National Child Health Day, and to ask for its observance in all parts of the United States. President Roosevelt in his proclamation this year called upon all citizens "to take steps needed to strengthen and extend health protection and medical care for mothers and children in every community."

The month of May is one of national significance in many directions: May 1, National Health Day; May 5 to 11, National Music Week; May 1 to 8, National Employment Week, sponsored by the American Legion and strengthened by the President through his proclamation to the Nation's citizenry; May 12, Mother's Day, so dear and sacred to every man, woman, and child; also, May 12, National Hospital Day, when friendly interest is centered upon every veteran in every hospital in our country; May 25, Poppy Day; and May 30, Memorial Day, established in 1868.

May Day was chosen deliberately for the District commemorative observance at its World War Memorial to combat subversive demonstrations, so with a month of human emphasis by our grateful people we again take cognizance of the President's message "that no greater service could be rendered by all sources dispensing information than to bring to the people of the United States of America the realization that the suffering and pain of most of the peoples of our larger nations today are now, and will continue to be, spared to our people so long as we appreciated the Constitution of the United States and our own Bill of Rights"; so at the District World War Memorial's hallowed shrine we rededicate ourselves to a service of considerate helpfulness to those less fortunate than ourselves, and to the principles and doctrines of this great Nation of which we are a part.

The United States Postal Service

EXTENSION OF REMARKS

OF

HON. THOMAS H. CULLEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1940

ADDRESS OF HON. JAMES A. FARLEY, POSTMASTER GENERAL OF THE UNITED STATES

Mr. CULLEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the Postmaster General, Hon. James A. Farley, at the luncheon of the Sales Executives Club at the Hotel Roosevelt, New York City, Tuesday, April 23, 1940:

There is something very gratifying to me in this large and representative gathering of businessmen, taxpayers, patrons, and cash customers of the United States Post Office. It proves to me that this great human and commercial agency of the people is not merely taken for granted.

It proves something more. It proves that you as American citizens are proud of the tradition and accomplishments of the United States Postal Service down through the years, and that you are eager not only to see it continued and improved but also extended to new heights of achievement in a swiftly moving, progressive civilization.

I am glad to be here on this occasion for a special reason. Every official and every employee of the Postal Service throughout the Nation, from the highest to the lowest, is a servant of the public. We never lose sight of that fact in the Post Office Department. We are highly grateful and truly appreciative of the opportunity you have given to us to be of personal service to the fine and generous American public. For this reason, I make it my business as Postmaster General to meet with citizens and businessmen as often as I can to exchange ideas with them, to get their views in matters of administrative policy, and to obtain their suggestions for the improvement of the Service.

I think this is a good thing to do for another reason. I think the people of this country should have the chance to size up their public officials at close range and determine for themselves what kind of job he is doing. It has been my experience over a long period of years that sooner or later our people get the true measure of every man in public life. They have a way of finding out for themselves whether a man is a sound and able administrator or a disappointment, and whether he really has something under his hat or is just talking through it.

The United States Postal Service is the greatest business organization in the world. It is difficult to realize, but it is a fact reported by the Comptroller General of the United States, that the United States Postal Service is an $8,000,000,000 business. By that I mean that the actual money transactions in the post offices throughout the country result annually in a total cash turn-over of that huge amount; an amount which exceeds the total of all the money in circulation.

Today, the United States Post Office serves 130,000,000 people out of more than 44,000 post offices and branch offices in all parts of the country; it has approximately 250,000 loyal and efficient employees working all hours of the day and night and in all kinds of weather; it took in more than $745,000,000 in cash during the past fiscal year, and, eliminating the subsidies and nonpostal items fixed by law, it is being operated for the benefit and convenience of every man, woman, and child in this Nation, without cost, other than for his postage, to the ever-faithful, heroic American taxpayer.

The United States Postal Service operates as a monopoly in that part of its affairs relating to the handling of letters. There are many special reasons why this monopoly should exist. The first and principal reason is the need for secrecy; that is, the requirement that the contents of your letters be safeguarded and handled as confidential communications. Ordinarily we do not think much about this, but when because of war conditions the mails are subjected to censorship it becomes extremely embarrassing when this privilege of secrecy is withdrawn.

The educational and social aspects of the public management of the post office are also quite obvious. It enables the public generally to have the cheap delivery of letters, newspapers, magazines, and books. The extension of the service into the rural districts, where no private operator could afford to carry it, is indeed important from a social and educational viewpoint. In many ways it is set apart from the usual industrial enterprise, indicating that it is obviously a field for public management.

The post office is a business which the Government should be able to operate most efficiently and economically. The management of the Postal Service is not beset with the ordinary risks encountered in the operation of a private industry, and there is little or no speculative element in its affairs. The business is one of orderly routine and clocklike precision. Therefore it needs but a small number of high-salaried executives. As evidence of this fact I call your attention to the present organization of the Post Office Department, which is managed by an executive staff of five men—the Postmaster General and four assistants to the Postmaster General—appointed by the President.

This executive staff is assisted by a group of trained and seasoned administrative officials numbering about 30 in the Department headquarters at Washington. The entire departmental staff at Washington, including assistants to the administrative officials, clerks, and all other employees, is less than fifteen hundred. It is probably the smallest organization in Washington of any of the executive departments, and yet it manages the largest and most effective agency of Government.

The entire Department is separated into four great administrative bureaus, each of them under an Assistant Postmaster General; an accounting bureau under the Comptroller; a law bureau under the Solicitor; an investigating bureau under the chief inspector; and a procurement bureau under the purchasing agent. The duties and authorities of each of these bureaus are well

defined; duplication is eliminated to the fullest extent possible, and where the interests of several bureaus overlap their efforts are coordinated to an amazing degree.

Our organization of the Department is along the same general lines as those followed in the organization of our large industrial and public-service concerns that are operated privately. Briefly speaking, the First Assistant Postmaster General has to do with matters relating to the selection and supervision of postmasters and personnel in the post offices throughout the country. The second assistant is charged with the transportation of the mail; that is, he must see that the mails go through. The third assistant has jurisdiction over our financial transactions, and the fourth assistant operates the real-estate bureau of the Department, the motor-vehicle service, and the division of post-office supplies.

We have somewhat rigid disciplinary policies in the Post Office. If it were otherwise such a large organization could not be so well timed and so serviceable to the people. We avoid, however, any harsh or unfriendly attitude toward our own people or to the public. We have a friendly organization that is eager to serve. One great thing about the Post Office that pleases the public, especially businessmen and businesswomen, is that the huge revenue and the great amount of money which we take in is almost immediately put back into circulation through the payment of salaries, the purchase of supplies, and in disbursements for service.

Our pay roll last year amounted to more than $595,000,000, and this money went into every city and hamlet throughout the Nation on a twice-a-month basis. We bought in the open market, as we needed supplies, $12,000,000 worth of merchandise. We paid $18,000,000 to individuals and companies for contract service, such as star-route transportation of the mail. We paid the railroads of the Nation more than $98,000,000 for carrying the mail, and we paid $25,000,000 to the aviation companies engaged in the transportation of our foreign and domestic air mail. We paid another $18,000,000 to our American citizens and American business concerns for the rent, heat, and lighting of our post-office buildings. So you can see that the Post Office Department is doing its part in promoting the economic condition of the country.

I feel assured that this audience will appreciate a brief reference to contributions made by the post office in the fascinating development of our great national and international systems of airplane service.

It was the post office, with the cooperation of the Army, which established the first regularly scheduled air line, carrying the mails between New York and Washington. It was the post office which established in its own name, under its own management, the first transcontinental air line, carrying the mails from New York to San Francisco; and it was under the management of this Department that the first fields were lighted and the first beacons set up for night flying. When the Department's success had reached the stage where private interests were attracted with the idea of developing these lines as passenger routes, as well as mail routes, the Post Office Department went out of the business of operating the air lines and became the best-paying customer of the privately operated services.

You people here well know the progress that has been made in the establishment of air lines, the setting up of more frequent schedules, the improvement in equipment, and the increased efficiency of the operating personnel that has occurred since 1933. The Post Office Department has fostered and encouraged this new transportation agency. The Department has helped at every stage of its development by dispatching mail on every available line where the mail could be expedited, and paying to the operators millions of dollars in cash annually for this service.

During the fiscal year ending June 30 last, the Department paid to the domestic air-line operators more than $16,000,000. More than 15,800,000 pounds of mail were transported by these air lines in the fiscal year 1939. In other words, there is more than a ton of mail over our heads every hour of the day, every day in the year.

An important event of the last fiscal year was the inauguration of the trans-Atlantic air-mail service. It operates twice a week on the southern route between New York and Lisbon, Portugal, and on the northern route it operates between New York and Foynes, Ireland. The United States foreign air mail system now serves directly 93 cities in Alaska, Canada, Europe, Cuba, Mexico, Central and South America, Hawaii, the Philippine Islands, and Asia. During the past fiscal year the Department paid to the carriers in this foreign air-mail service alone more than $9,200,000. The poundage in the foreign air-mail service is steadily increasing, and since the interruption to ordinary means of transportation for the mails to Europe on account of the wars, this service across the Atlantic has provided a means of sure transportation for important correspondence to and from the European countries. Neither the trans-Atlantic nor the trans-Pacific service could be maintained by the operators but for the payments made to them regularly through the Post Office Department for mail transportation. Therefore, we are again pioneering in the development of modern travel facilities.

There is one more aspect of the Postal Service of which I am proud. I am proud of the postal surpluses in every year of my administration save one; not because those annual surpluses are a credit to my record as a businessman, but because I firmly believe that it is the duty of a Postmaster General "to serve the public more and more and tax them less and less."

If I ran a deficit as Postmaster General, it would have to come out of your pockets in taxes. That is why I have tried to live within our income in the Post Office Department and do my part toward balancing the National Budget.

When we came into office on March 4, 1933, we adopted policies calculated to safeguard this great public business, to improve its efficiency, to assume our full responsibility to the workers, and to save money for the taxpayers. As we have gone along with the work we have stood by those fixed policies. And the record shows that we have been successful. Let me illustrate:

For the fiscal year 1932, the last full year of operation under the previous administration, there was a staggering gross deficit of more than $205,000,000. Deducting $52,000,000 for nonpostal items, the net deficit for that year amounted to more than one hundred and fifty-three millions.

There was a net deficit in the fiscal year 1933 of more than $50,000,000, notwithstanding that in the beginning of that year the postage rate on all first-class matter was raised from 2 to 3 cents.

The fiscal year 1934 was the first full year of this administration. As the result of my recommendation at the beginning of that year, the local rate on first-class matter was reduced from 3 to 2 cents. In spite of the loss in revenue from that reduction in the rate of postage, a net surplus was shown from our operations in 1934.

In 1935 another net surplus was shown.

In the fiscal year 1936, due to the adoption of the shorter workweek, which cost millions of dollars and put thousands of men to work, and because also in 1936 the post office took over for the first time the custody of Government office buildings from the Treasury, costing us approximately $20,000,000, we suffered a net deficit of less than $17,000,000.

Increased efficiency on the part of the postmasters and employees, coupled with increased revenues, enabled us to again show a net operating surplus in the fiscal year 1937.

The same is true of the fiscal years 1938 and 1939.

Therefore, by adopting the same methods of bookkeeping as my predecessors, and by taking credit for nonpostal items in the same manner as previous administrations claimed this same credit, in five of the six full years of operation under my administration we have shown a net surplus from that part of our services which we have rendered to the public for hire.

I am proud to be at the head of this magnificent and universal system of communication. I am proud to be associated with the fine men and women who make up its field forces, and I am pleased to express publicly here and now my appreciation to them. I make claim to no special amount of personal credit for the present high efficiency of the postal system. I do assert, however, that under this administration we have made decided progress.

America—A Trust and a Promise

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

ADDRESS OF HON. LOUIS JOHNSON AT PITTSBURGH, PA.

Mr. GEARHART. Mr. Speaker, in order that it may be spread upon the pages of the CONGRESSIONAL RECORD of this day's proceedings, I ask unanimous consent to include as a part of my instant remarks the text of an address delivered on May 1 last by the Assistant Secretary of War, the Honorable Louis Johnson, an address which was delivered in Soldiers and Sailors Memorial Hall at Pittsburgh, Pa., at a patriotic gathering held under the auspices of the American Legion, an organization which Mr. Johnson has served in the days gone by as one of its most illustrious national commanders.

The unanimous consent of the membership having been indicated, Mr. Johnson's address follows:

Fellow citizens, we have gathered under the auspices of the American Legion to welcome into our American family our newest citizens. They have come to us from nations across the seas in search of the American way of life. They have become so impressed with our institutions that they voluntarily have forsaken their loyalties to foreign governments, rulers, and potentates and have cast their lot permanently with us. We accept them without reservation.

America is a nation of immigrants. Only the Indians have been truly native to the soil of this continent. The rest of us either came here ourselves or are the descendants of those who migrated to these shores. Recognizing the roots of our origin, and holding

true to the principles of our democracy, we make no distinctions among our citizens between the native and the foreign born.

Regardless of place of birth, each one of us in this country has the opportunity to carve out for himself a useful and perhaps a conspicuous niche in the political, social, scientific, and economic life of our country. With the sole exception of the Presidency of the United States, our newest citizens may aspire equally with those of us who have been privileged to enjoy the blessings of America for a longer time to practically any public office within the gift of the American people. On the Supreme Court Bench, on the floor of Congress, under the domes of our State capitols, and within the walls of our city halls we find useful and influential Government officials who first saw the light of day under foreign skies.

It is only right that we should expect more of our native-born citizens. If there is anything to heredity, then the sons of our pioneering ancestors who came to these shores in search of liberty should be imbued with the same ideals. If there is anything to environment, then those who from the cradle have been exposed to liberal American influences should be among the most ardent champions of our democratic principles. Yet, regrettably, we do find men and women born in America who break our laws and scoff at our institutions.

On the other hand, among our naturalized citizens, who have had less experience with democratic traditions, we find thousands upon thousands who are ardent disciples of Americanism; who live every day in observance of our American code; and who are ready in every crisis to die if need be for an American cause. It is hardly necessary for me to tell you, my comrades, of the bravery and of the loyalty of our fellow soldiers of foreign birth, who marched by our side, shared our privations, and sacrificed their lives in our common fight for a more decent world.

The records of the Eightieth Division, in which I served with many of you, fellow Legionnaires of Pittsburgh and vicinity, are replete with heroic examples among men of foreign birth. Let us look at the compilation of the coveted and highly prized Distinguished Service Crosses that were won by men of our Blue Ridge Division. There we find Pvt. Clemente R. Pullono, who was born in Italy, and Corps. Jiozef Adamski and John Pamaranski, both of whom came to this country from Poland. The citations for their valor speak for themselves:

"Seeing the enemy mounting a gun which when operated would sweep his platoon at close range, Private Pullono shot the gunner just as he was about to open fire. He also shot another German who attempted to fire the gun, after which he charged the position and captured the remainder of the crew."

"Rushing ahead of his advancing lines, Corporal Adamski discovered a trail which was not being covered by enemy fire and through which men could pass in safety. He returned with this valuable information to his company commander, his action permitting his company to safely pass through the zone.

"When Corporal Pamaranski's platoon was held up by an enemy machine gun, which had caused many casualties in the platoon, he advanced to within bombing distance of the gun, killed one, and captured two of the enemy, together with the machine gun."

Not only in the Eightieth, but in practically every one of our fighting divisions, names and records of foreign-born soldiers stand out boldly. In addition to those I have already mentioned, the Distinguished Service Cross winners of Pittsburgh and vicinity include Maj. Frederick W. Patterson, of the Seventy-ninth Division, who was born in England; Capt. Robert S. Cain, of Pennsylvania's own Twenty-eighth, the Keystone Division, who came from Scotland; First Sgt. Thomas J. Cavanaugh, of the same outfit, who spent his childhood in Ireland; Private Harry Mates, of the Second Division, who left Russia; and Private Nick Monula, of the Third Division, who migrated from Serbia. Of the 60 Distinguished Service Crosses distributed among the men of Pittsburgh, 8 were awarded to foreign-born heroes.

Even the most casual perusal of the list leaves a definite impression of the mixed origin of our valorous soldiers. Yes; there are Atwood and Botsford and Newcomer and Potter, that show Anglo-Saxon origins or influences; but there are also Finnigan and Flaherty, Cohen and Levenson, Monula and Pullono, Reiter and Shenkel, Patterson and Pedersen, Kaperzynski and Pamaranski. What a testimonial to the rich mixed blood that flows in our American veins.

The American Legion is a cross section of this, our America. It is a group of World War veterans who have proved their right to be considered Americans by their loyalty and by their example in war and in peace. They hold before us the ideals of America toward which every citizen, native- and foreign-born, should reach—justice, freedom, democracy, and loyalty. These principles are a sacred trust handed down to us by our American forefathers. Take them to your heart, fellow citizens. Maintain them. Perpetuate them. Live for them. If necessary, prepare to die for them. They are the cornerstone of America. They are the foundation of all civilization.

What a privilege it is to be an American in the world of today. Compare the blessings we are enjoying this very minute right here in this hall with what other countries have to offer. While we assemble without fear in a large body, there are few places across the seas where men may meet even in small groups without arousing suspicion. While we speak freely, others must padlock their lips or whisper in guarded undertones. While lights brighten these walls, others live in black-out darkness. While we breathe God's own pure air, others are adjusting gas masks. While we live peacefully among ourselves, others stand in terror of their nearest neighbors. In Europe there may be a stigma attached to one's origin which may taint the life and business of a whole family, even a whole people. Here men are measured by their own conduct. Each is free to live his own life in his own way so long as it does not encroach upon the similar rights of others. While we may dial our radio to any program anywhere in the world, others must deafen their ears to the outside and listen only to the voice of self-anointed masters. While we may think, write, and say what we please, the lives of others are circumscribed to the minutest detail.

The American way of life confers many rights and privileges, but we must not forget that it also includes serious duties and heavy responsibilities; and it is toward the latter that I would today direct the attention of our newly made citizens. You who most recently felt the hand of oppression and the force of suppression across the seas must realize more keenly than any one of us who have had the good fortune always to live as American citizens the full import of the meaning of America. You should be ever ready to uphold it as the promised land for yourselves and for your children.

Your first obligation as an American citizen is to maintain a good character, or "a good name," as most of you would have it. "A good name is rather to be chosen than great riches and loving favor rather than silver and gold." Temptations may arise to plague you in your relations with your neighbors or with your competitors, but remember the Golden Rule and try to apply it to your life. America is a moral and a religious country. We may worship as Catholics, Jews, or Protestants, but the fundamentals of morality and of good conduct we all have in common. A good American citizen is loyal to his family, to his church, and to his community. To win and to hold the respect of the America that you love so dearly you must conduct yourself as a man—"Do justly, love mercy, and walk humbly with thy God." Remember, that back of the universe in space, back of Nature's processes, back of the life of man, back of all we do and are, as the source and ground of all that exists, stands the Divine Providence. In these hours of grave concern, we do well to recall the words of James Russell Lowell, "Behind the dim unknown, standeth God within the shadow, keeping watch above His own."

Good citizenship also calls for prompt, loyal, efficient, and cheerful service. It means participation in your Government, which is a privilege nowhere else so universally accorded. It means attending the primaries and voting at elections. It means studying the platforms of the political parties and the character of their candidates. It means preparing to meet the obligations of a soldier in defense of our beloved America in time of emergency. It means accepting jury service and participating in the process of justice when your name is drawn. It means paying the taxes which are necessary to maintain the Government and the free institutions we so dearly cherish. It means giving your time and your energy toward making the American way of life representative of your most honest, painstaking, and intelligent effort. When all American citizens so regard their obligations of service, our Government will become truly representative—in complete harmony with the ideals of freedom and liberty.

An equally important obligation of the good citizen is to obey the law—not merely its letter, but also its spirit. Every organized society must have laws and rules to control the action of its individuals. If every man were a law unto himself, there could be no orderly community life; there would be anarchy. To be sure, we are entitled to freedom, but not to a license which interferes with the equal rights of other members of our society. We may not always be in sympathy with a law. It then becomes our right and our duty to seek its change in an orderly and constitutional way; but so long as it is on our statute books we must obey it. Violation of one law encourages the break-down of all law. We must, therefore, in our own defense, protect our orderly legal processes.

It should be a point of honor with us all to obey the law. We, ourselves, have made it in the American way—and that means in the spirit of good sportsmanship.

If an election does not turn out to our liking, we should accept the result in good grace so long as it was obtained in the established legal manner. We must accept the umpire's decision, regardless of its immediate import. Otherwise, there can be no game.

In some countries, elections are but a mockery. The party in power cannot lose. If party success demands it, the whole government structure may be overturned to fit the plan of an autocrat. The spirit of fairness in life, as well as in sports, however, is a cardinal principle of the American way. We must take our victories and our defeats as gentlemen. We must cultivate the ideals of good sportsmanship in our personal and official relations with our fellow Americans.

The final obligation of the good citizen is to strive to raise life in America ever and ever toward a higher ideal. We have reached a high standard of civilization in America, higher perhaps than in any other country of the world in this or in any previous generation, but we are still far from perfect. Greed and intolerance often raise their ugly heads. Vice and squalor occasionally show their filthy hands. Graft and corruption from time to time break out on our political face. The good citizen not only does not succumb to these dire influences but devotes his time and his energy toward driving them out of American life. By trying to lead an exemplary life,

himself, and by recognizing his obligation to be his brother's keeper, he contributes his part toward raising the standards of living in our country.

"We must live with the idea that we have a solemn duty to this Republic, that we are its large debtors, and that the only limit to our obligation is our capacity to help in lifting its life to a higher and nobler plane."

In conclusion, I ask that you keep constantly before you the spirit of the American Legion:

"The emblem of the American Legion is the emblem of Americanism. Americanism is unity of love, singleness of allegiance, practicality of purpose, care of the distressed, the education of children, all directed to the promotion of a common good. It is that spirit of patriotism which shall ever preserve our land from the stagnation which is the death of peoples. As members of the American Legion, we must preach and teach the religion of patriotism throughout the Republic. We must not forget our obligations as citizens, and ever must we strive to redeem those obligations. In the emblem of the American Legion there is a great prophecy. It is the promise of the defenders of the Republic bespeaking the fullest good for each in the betterment of all."

Civil Aeronautics Authority

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1940

TELEGRAMS FROM CAPTS. EARL HALE AND FRANK C. JUDD

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegrams from pilots of Billings, Mont.:

BILLINGS, MONT., *April 25, 1940.*

Representative JAMES F. O'CONNOR,
Washington, D. C.:

Arguments of penurious economy do not justify present effort to abolish effectiveness of Civil Aeronautics Authority. The real price paid in lives of passengers and pilots must not be lost by such tampering. Depending on you to prevent it.

CAPT. EARL HALE,
Northwest Airlines.

BILLINGS, MONT., *April 25, 1940.*

Representative JAMES F. O'CONNOR,
Washington, D. C.:

Worth of present Civil Aeronautics and Safety Boards has been definitely proven. Contrasted with old Commerce Department supervision with its many catastrophes is outstanding. Please do your best to retain present set-up.

CAPT. FRANK C. JUDD,
Northwest Airlines.

Wheeler-Lea Transportation Bill

EXTENSION OF REMARKS

OF

HON. LINDSAY C. WARREN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1940

TELEGRAM FROM RAILROAD ORGANIZATIONS

Mr. WARREN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

WASHINGTON, D. C., *May 7, 1940.*

Hon. LINDSAY C. WARREN,
Member of Congress, House of Representatives:

Approximately 1,000 general chairmen representing employees in the transportation service of the railroads of the United States, now in session at Chicago, are deeply concerned in railroad bill, S. 2009, and they have authorized us to urge you to support the motion to recommit the conference report on this bill, which will be considered by the House on Thursday, May 9, and provide protection against unemployment resulting from consolidations, etc. We appeal to your sense of justice and fairness to save railway employees from the menace of further unemployment.

A. JOHNSTON,
Grand Chief Engineer, Brotherhood of Locomotive Engineers.

D. B. ROBERTSON,
President, Brotherhood of Locomotive Firemen and Enginemen.

J. A. PHILLIPS,
President, Order of Railway Conductors.

A. F. WHITNEY,
President, Brotherhood of Railroad Trainmen.

T. C. CASHEN,
President, Switchmen's Union of North America.

V. O. GARDNER,
President, Order of Railroad Telegraphers.

Sent from Chicago.

The Walter-Logan Bill

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 9 (legislative day of Wednesday, April 24), 1940

ARTICLES BY CHARLES G. ROSS

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix two persuasive and carefully reasoned articles appearing in the Washington Star of May 6 and May 8 by the noted columnist Mr. Charles G. Ross, in opposition to the Walter-Logan bill.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Star of May 6, 1940]

DEAN LANDIS DISSECTS LOGAN BILL—ANALYSIS URGED AS REQUIRED READING FOR SUPPORTERS

(By Charles G. Ross)

Required reading for all those editorial writers, columnists, bar associations, et al., that are clamoring for enactment of the Logan-Walter bill, which has passed the House and is now awaiting action in the Senate, should include the analysis of this measure in the May issue of the Harvard Law Review, by Dean James M. Landis, of the Harvard School of Law. The article is reprinted in the Appendix of the CONGRESSIONAL RECORD, beginning at page 2571.

The devastating findings of Dean Landis with respect to the Logan-Walter bill—glibly described by its proponents as needed to "protect the citizen" against usurpation of power by the executive agencies of the Government—cannot be dismissed as the views of a mere theorist in the law. Before he went back to teaching he was the Chairman of the Securities and Exchange Commission. There will be very little dissent from the opinion expressed by Representative RAYBURN in the House debate on the bill that Mr. Landis was a "great Chairman." Certainly he brought to the work of the S. E. C. a fair-mindedness that won for the Commission under his regime the applause of both liberals and conservatives. His qualifications as a student of the law, and especially of administrative law, are equally impressive.

Dean Landis tears the Logan-Walter bill to shreds. More accurately, he cuts it to pieces with a surgeon's knife. He traces the history of the bill from A to Z, shows the absurd fallacy in the titular description of it as a measure "to provide for the more expeditious settlement of disputes with the United States," exposes numerous of the misrepresentations that were used to get votes for it in the House, reaches the conclusion that "to apply the procrustean formula suggested by the association's (the American Bar Association's) pending proposals is to cut off here a foot and there a head, leaving broken and bleeding the processes of administrative law."

COMPARES BILL TO N. I. R. A.

With damning effect he compares the Logan-Walter bill to another ill-considered piece of legislation—the National Industrial Recovery Act. This was another bill put together with "war cries and shouts," another bill "superimposed upon an existing administration scheme with only fleeting concern given to the problem of its joints." This bill also, like the Logan-Walter proposal, was shot through with exceptions "dictated by the happy thought of the moment." When the Supreme Court killed the N. I. R. A., it "expunged from the statute book an act that was bound to fail of its

high purpose because behind it was none of that understanding essential to the effectiveness of reform."

Dean Landis cites various of the misstatements made on the floor of the House in support of the Logan-Walter measure. There was, for astonishing example, the linking of Justice Frankfurter's name with the proposed legislation in such a way as clearly to imply that he favored it. This was done on two occasions in the House debate by Representative WALTER, Democrat, of Pennsylvania, one of the nominal authors of the bill. Justice Frankfurter was described "one of the distinguished gentlemen who contributed in the drafting of the original recommendation" of the American Bar Association respecting administrative law.

The facts are entirely different. Justice Frankfurter, then of the Harvard law faculty, was a member of the original committee named by the American Bar Association in May 1933 to report on the subject of administrative law, but owing to absence in Europe he took little part in the work of the committee, and did not examine or sign its report.

The fact is, moreover, that the Logan-Walter bill, in anything like its present form, did not see the light of day until 1937, though the statement was made in the House that "this bill was proposed in 1932, before there was anything known as the New Deal." No one who has read the opinions of Justice Frankfurter touching administrative law can imagine for a minute that he favors or ever did favor the Logan-Walter bill or anything comparable to it.

OPPOSED BY CALDWELL

Again the House was given to understand by Mr. WALTER, "whose irresponsibility of statement in this debate is almost beyond belief," that among those supporting the bill was Louis G. Caldwell, a practicing lawyer of Washington, D. C., and Chicago and the former chairman of the American Bar Association's special committee on administrative law.

Mr. Caldwell, in fact, is on record against the bill with a scathing memorandum pointing to its "obvious defects" and declaring that bar associations have endorsed it apparently on the basis of the "astounding claims" made for it, rather than its actual contents. "With minor exceptions," says Mr. Caldwell, "it is difficult to know just what agencies and what quasi-judicial functions are reached by the bill that are not already equipped with at least equal and usually superior machinery." Refuting the claim that the bill carries forward the early work of the American Bar Association on administrative law, he says that in fact it represents a reversal of the position taken by the association in 1934 and 1936.

Mr. Caldwell's analysis appears in the CONGRESSIONAL RECORD for April 18. It, too, should be required home work for all bar and other associations before they do any more resolving on the Logan-Walter bill.

[From the Washington Star of May 8, 1940]

THE REVERSE OF COURT "PACKING"—LOGAN-WALTER BILL SEEN AS APPLYING JUDICIAL CENSORSHIP

(By Charles G. Ross)

The Logan-Walter bill to heighten the control of the courts over the work of the administrative agencies of the Government—which is a very mild way of describing it—might be called a court-packing scheme in reverse.

The scheme advanced by the President in February 1937 would have tended to bring the courts under the thumb of the Executive. Wisely and patriotically, the Senate sent it to the scrap heap. Though within the letter of the Constitution, the President's proposal would have violated the fundamental constitutional principle of keeping in balance the three independent branches of the Government—legislative, executive, and judicial.

The Logan-Walter bill, except in the case of those agencies which have been exempted, would subject the administrative branch to a court censorship as disruptive of the proper distribution of governmental powers as would have been the court-packing proposal.

DOUBLY HARMFUL

Where the court bill sought to aggrandize the executive arm at the expense of the courts, the Logan-Walter bill seeks to reverse the process and give the courts an unprecedented and wholly unwarranted power over the day-to-day functioning of the affected agencies. The result would harm not only the executive branch but the courts themselves.

Hear the independent testimony of the Brookings Institution:

"The ultimate consequence would be not only to swamp the (appellate) courts with a flood of minor administrative matters that have never been regarded as justifiable cases or controversies, but to retard and hamper the work of the executive branch of the Government to an intolerable degree. The control of the executive branch would be transferred to the courts, and the performance of all executive duties would be subjected to the supervision and control of the judiciary.

"Theoretically, this is contrary to the basic ideas of our form of government, which makes a clear demarcation between executive and judicial duties. Practically, it will destroy the efficient and expeditious operation of the executive departments and throw them into confusion. The cost of government would be multiplied tremendously.

LACK OF CONFIDENCE SENSED

"It is a significant fact that certain administrative agencies are expressly excepted from the operations of the law. While there is no objection to freeing any agency from the shackles of the proposed legislation, the very fact that some agencies (such as the Interstate Commerce Commission and the Federal Trade Commission) are to be exempted would seem to be an indication of a lack of confidence in the basic theories on which the legislation is predicated."

Properly jealous of its own place in the constitutional system, the Supreme Court has yet shown its full awareness of the rights of the administrative agencies. This from Mr. Justice Stone, in one of his opinions, is pertinent to the discussion of the Logan-Walter bill:

"When the courts are faced with interpretation of the particular, administration breaks down and the manifest purpose of the legislature is defeated unless it is recognized that, surrounding granted powers, there must be a penumbra which will give scope for practical operation. * * * In carrying such schemes (for regulation by administrative bodies) into operation, the function of courts is constructive, not destructive, to make them, wherever reasonably possible, effective agencies for law enforcement and not to destroy them."

A. A. A. DISSENT PERTINENT

And again Mr. Justice Stone said, in his famous dissent in the A. A. A. case: "Courts are not the only agency of government that must be assumed to have capacity to govern."

When the present Chief Justice, Mr. Hughes, was Governor of New York, he made a memorable speech at Elmira in 1907 in defense of pending State legislation for the regulation of public-service corporations. This was the speech in which he said: "We are under a constitution, but the Constitution is what the judges say it is, and the judiciary is the safeguard of our liberty and of our property under the Constitution." But Mr. Hughes, pleading for the creation of a regulatory commission with broad powers, gave the other side of the picture as well. He might have been speaking against the hamstringing provisions of the Logan-Walter bill when he said:

"No more insidious assault could be made upon the independence and esteem of the judiciary than to burden it with these questions of administration. * * * Let us keep the courts for the questions they were intended to consider. * * * To say that all these matters of detail which will be brought before the commission * * * should, at the option of the corporations, be taken into court is to make a mockery of your regulation. * * * You must have administration, and you must have it by administrative officers. You cannot have it otherwise. Under the proper maintenance of your system of government, and in view of the wide extension of regulating schemes which the future is destined to see, you cannot afford to have that administration by your courts."

COX STATES ITS PURPOSES

In an illuminating colloquy in the House, Representative COX, of Georgia, a leading proponent of the Logan-Walter bill, said it was framed primarily to "get" the National Labor Relations Board and the Wage and Hour Division of the Labor Department.

The obvious answer is that if Congress wants to "get," or curb the powers of, any specific agency it ought to pass a law addressed to the specific requirements of the case, and not, in the language of Dean Landis, of the Harvard Law School, apply the formula of the procrustean bed. The Logan-Walter bill would do precisely that.

Insurance and the Federal Government

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, May 9 (legislative day of Wednesday, April 24), 1940

ADDRESS BY FRANK GANNETT AT HARTFORD, CONN.

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Frank Gannett at Hartford, Conn., on April 30 of this year.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

What the new dealers in Washington have done to insurance, as well as what they plan to do, will affect every man, woman, and child in America.

Life insurance has built in the short span of one century the greatest social-security system that any people have ever known. Life insurance is the very embodiment of democratic ideals of individual responsibility. It flourishes in the democracies, not in the totalitarian countries. Ninety percent of life insurance is in force in 15 democracies, and 70 percent of it is in the United States, although we are only 7 percent of the world's population.

In 5 years of depression, life insurance has distributed to its American beneficiaries $3,000,000,000 more than the Federal Government has distributed for relief. Yet only 6 cents out of every dollar of the people's income as a whole goes into life insurance. That little rivulet of thrift has filled a giant reservoir of security. Life-insurance assets amount to $30,000,000,000. As you in the insurance world know, 100,000,000 policyholders and beneficiaries are affected by life insurance. The total amount now in force in the United States is approximately $114,000,000,000.

No wonder the Washington bureaucrats, having exhausted their genius for inventing new taxes, are itching to get their fingers on this $30,000,000,000 prize. They have taxed and taxed, spent and spent to their wits' end. Now necessity can easily account for their turning their sharpshooting to insurance. The sniping is in its second year, and the end isn't in sight. But the plain inference is that the new dealers, unless they are stopped, will take over and attempt to run this gigantic business.

The first question the New Deal inquisitors level at insurance is an old one. It has been answered many times. But it serves the purpose of raising a doubt in the minds of the uninformed. So the new dealers ask it again. It is directed against the vast army of men and women who, with missionary zeal, spread the gospel of thrift and individual responsibility—the life-insurance agents.

"Turn the job over to us," say the Washington bureaucrats, "and we'll make everybody buy life insurance; we'll force it down people's throats." The superb educational job that insurance men and women carry on, inspiring people to work and save and provide security for their dependents, is all waste effort, according to the bureaucrats. They would accomplish the result as Stalin and Hitler do, by compulsion, and do away with the insurance agencies.

Experience has answered the new dealers' question many times. Massachusetts provided a system of life insurance to be sold over the counter. In 31 years it did 3 percent of the insurance business in that State.

Wisconsin established State insurance 27 years ago. In that time it has sold, without agents, $1 of insurance for every $1,000 sold by the private companies in Wisconsin.

Another point of attack by the new dealers is on the bigness of insurance companies. Of course, insurance is big. A few individuals in Boston, attempting to help one another, launched the idea, and public support has made it big—not by monopoly but by legitimate growth.

On the other hand, the new dealers say that big government is all right—the bigger the better, so long as they are the government. Concentration of political and economic power in their own hands is desirable. In other people's hands, the President blandly told Congress, "instruments of public power" forged by the new dealers would provide "shackles for the liberties of the people." So they start their insidious, underhanded attack on private enterprise by pointing their suspicious finger at the size of all business.

Can anyone believe that the purpose is not to take over the insurance industry and operate it as a Government monopoly? If that is not the purpose of the New Deal, why Senator WAGNER's proposal to put the Government into competition with the insurance companies in the sale of annuities at less than cost?

In support of his proposed bill, Senator WAGNER stated that the Government could sell annuities 30 percent lower than the insurance companies.

This is just plain bunk. The Government cannot sell annuities 30 percent cheaper without soaking the taxpayers for its loss. The actual cost of getting annuity business is between 7 and 10 percent. If Government could administer insurance as efficiently as private enterprise and save all the cost of the new business, it could not save the purchaser of annuities more than 10, instead of 30 percent.

A further fact should be considered: If the Government sold annuities and was required to invest the proceeds in its own bonds, which always yield 20 to 30 percent less than private investments, the annuity would cost more than an insurance company's annuity. Of course, the New Deal way would be to take the difference out of the Treasury and sell the annuities below cost.

Senator WAGNER has a radical "brain trust" that prepares Constitution-breaching bills. His National Labor Relations Board strips Congress of power by the identical provisions used in the bill that the advisers of Secretary Ickes prepared to place Government in control of the petroleum industry.

When the history of this period is written, Senator WAGNER will stand out as one of the men who most persistently worked with legislation he proposed to break down our Government. He is an expert at camouflage. He professes one objective and accomplishes another. His so-called Wagner national health bill was in reality an attempt to put politicians in control of the medical profession and make the State the dispenser of medical service.

The new dealers have designs on the institution of insurance. They start with a proposal for destructive competition by government. The next step openly discussed is Federal supervision. The ultimate end is the taking over of insurance assets. Every one of the hundred million holders and beneficiaries of life-insurance policies has reason to be concerned. Look squarely in the face what the New Deal has already done to insurance.

The earnings of all insurance companies and savings banks have been pulled down by the New Deal policy to starve capital. Idle money makes idle men. Therefore the deliberate intent of the New Deal to reduce interest rates to the vanishing point is a crime against all thrifty people. Insurance companies, earning less, must charge more for insurance.

Take, for example, a woman who recently called on her lawyer. She and her husband, through a lifetime of thrift, had paid for a $5,000 home and had saved $12,000 before his death. Through 20 years, as they accumulated, they had received 4-percent interest. The widow received $480 a year interest, or $40 a month, until the New Deal. Meanwhile, taxes on the home have risen from $80 to $200. Insurance costs more.

This widow said to her lawyer: "What am I to do? Last year the bank gave me 1½ percent, which is $15 a month, and now they are going to give me 1 percent, which is $10. I can't live on that.

Her lawyer couldn't help her, because the policy of driving down interest rates to the vanishing point is made by the President and the Treasury in Washington. Every college and university, every trust fund, every hospital or endowed private charity is suffering from this same cause.

The thrifty self-reliant people who pay their own way, who have saved for their own future and for their children, and who are being taxed by government to pay all that government spends for necessary services and for political purposes to buy votes, are now being liquidated and their possessions destroyed.

All this to the end that a profligate Government may continue to borrow at low interest three to four billion dollars a year more than it can collect in taxes.

The great promiser of the White House, in a speech in Pittsburgh on October 1, 1936, said: "This (public) debt is not going to be paid by taking away the hard-won savings of the present generation."

Why, two-thirds to three-quarters of the interest earned by their "hard-won" savings has already been taken away from them. And the New Deal's liquidation of thrift goes on relentlessly.

It should be plain to the most trusting citizen that the New Deal must find some new sources of revenue. It has raised taxes to the height of diminishing returns. It can't squeeze out any more golden eggs nor pluck any more feathers to line its bureaucratic nest.

New Deal taxing and taxing, spending and spending, have strangled new enterprise. Venture capital, which would create new enterprise and new jobs, is afraid to venture. Why should it rush in where its only reward is a death sentence?

Social-security taxation was so devised as to permit the money collected now to be spent for other Government purposes. The wage earner is given a promise that he, in his old age, or his beneficiaries, will be paid. But what is back of the promise to pay? Nothing but the good faith of some future politicians, who must levy and collect new taxes from another generation of taxpayers. What will happen to your social security if the next generation of politicians are some members of the present Communist-dominated Youth Congresses who boast that they will repudiate the debt?

How different from this social security is the guaranteed security which life insurance has built through private enterprise. The insurance companies have first of all educated people in ways of thrift. Then they have collected premiums, year by year, and invested mainly in wealth already created—not in promises of Government to collect from wealth to be created and taxed in the future. Thirty billion dollars of life-insurance assets, which really comprise already-created wealth, have been accumulated.

What ten-strike for the new dealers, with their backs to the wall, if they could only bring life insurance under Federal supervision, then weaken it by Government competition, and finally take over its assets. What a step toward national socialism.

Why have we got into such a mess? Why are the people of the greatest, richest country on earth being swept down the mad stream of reaction, back toward the discarded system of one-man government? In order to understand the origin of these reactionary New Deal policies it is necessary to go back to the origin of the great depression.

During the first hundred days of the New Deal we had recovery. Confidence and courage were at work. The normal processes of private enterprise were functioning.

Then the President shifted his program. It is now known that he was all the time shuffling the deck of New Deal cards. He was allowing industry and agriculture to recover and at the same time was preparing hobbles and halters and strait jackets.

During those first hundred days Mr. Roosevelt was following the policies which had brought substantial recovery to Great Britain and the sterling group of nations. They had diagnosed the depression as a price disease affecting all the producers of primary commodities. Three-fourths of mankind are engaged in producing primary commodities. Only a minority of the world's population is engaged in the industrial processes. In the United States we are about evenly divided—half of us living on farms and in rural communities directly dependent on production of food, fibers, and minerals which the other half transport, convert into finished products, and distribute. When the prices for primary products collapsed all over the world, buying power of farmers, miners, and all people in rural communities disappeared.

Economic statesmanship of the British Empire was directed toward remedying this condition. The New Deal started to follow on that road. President Roosevelt at the very same time was listening to the planned-economy boys—the Tugwells, the Hendersons,

the Corcorans, and Cohens, and the other little "fix-its" who planned the Triple A and the N. R. A. to regiment agriculture and industry. An architect working at the same time on two sets of blueprints—one, a plan to liberate private enterprise and build a house where freedom could live; the other, a plan to restrict and regiment private enterprise—a blueprint for a house of bondage. In that house, don't forget, the execution chamber, for the "death sentences," was the most important room.

Meanwhile, what was the rest of the world doing? The British were rejecting the very philosophy and the very same philosopher whose plan Mr. Roosevelt adopted. That philosopher and theorist is John Maynard Keynes, English economist, father of the borrow-and-spend idiocy. After Keynes' failure to convince his own Government that it should spend itself into bankruptcy, he came to the United States. He was invited to the White House, where he recommended an annual deficit of $4,800,000,000 as the "cure" for Uncle Sam's ills.

Keynes said the United States had become the outstanding economic laboratory of the world and that he envied the young administrators for their opportunity to experiment. Apparently a half million Americans either envied him or did they need to get on a pay roll? At any rate, the New Deal has added half a million of them to the number of jobholders directly in the Federal Government's service. How many of them are there to experiment on the rest of us—on you and me?

I don't envy any of them—whether their purpose was to experiment or to get a job. I believe the public service should attract men and women who don't need the jobs; for whom office holding will be a sacrifice. I want to see that kind of ability brought into elective offices—the ability which private enterprise develops and rewards; ability which also knows the highest obligations of citizenship.

Until we throw the pink and red economic planners out of Washington and substitute business sense and experience, our country will go from bad to worse. Four or five more years of New Deal borrowing and spending would pile up a debt which could not be paid. Repudiation or printing-press inflation would be the way out.

The road to revolution everywhere has been paved that way. Underneath is a layer of the rough stones of economic distress. Bitter deflation, the destruction of values, the wiping out of life's savings—that is the next layer.

Rising taxes for public relief comes next, with mounting public debt. The crushed stone in this layer of the pavement seems less cruel. More people have to tread on it, for the thrifty middle class is being liquidated and shoved onto relief. But the transition is gradual. The sufferers are doped with hand-outs while the insidious germs of inflation are taking effect.

The pavement is now ready for the top dressing—the poured-on promises of the demagogues who tell us that this slick, slippery highway to national socialism leads straight to Utopia and the abundant life.

Then what happens? Just what has happened everywhere, time and again in history. An inefficient, time-serving bureaucracy, goose-stepping at the command of some ruthless man who is drunk with power, puts an end to liberty.

Neither labor nor capital any longer has a voice. The private enterpriser has no voice, because private enterprise has been liquidated. The self-reliant, thrifty middle class is liquidated. Instead of depending on his own initiative and providing his own social security through voluntary insurance, the citizen looks to the state and serves only the state. That is the ultimate and inevitable end of the road of New Dealism—it ends in national socialism, which the Germans call nazi-ism and the Russians call communism and the Italians call fascism.

The New England spirit rebels against all this backward marching under the New Deal. For New England is the home of the virtue of thrift. It knows what thrift and self-reliance mean. It knows how to live within one's income and what it means for an individual or a government to go headlong into debt. We can no more spend ourselves into prosperity than a fat man can grow thin by eating more fattening food.

New England knows why dollars go into hiding and what it will take to coax them back to work. Dollars, like men, want security and reward.

New England would enjoy a fireside chat about the men and women forgotten by the New Deal—the thrifty people who can no longer eke out a living from their work and the reduced income from their savings. These are among the really forgotten men and women, the 42,000,000 with savings-bank accounts which now can pay them only a fraction of the interest they earned before the New Deal. Mr. Roosevelt doesn't make speeches about them, unless he includes them among the economic royalists.

After all, he may have planned it that way, for he has been as ruthless in liquidating thrift as in persecuting business.

Now, he talks about Europe, about the Far East, and about our obligation to save the world for democracy. I say, and shall keep on saying, that we can do most to save democracy for the world by saving it for ourselves. We can do more by practicing representative self-government than we can by preaching it to the world.

And we can accomplish most by putting business experience and common sense back into government.

Here, in the insurance capital, the trustees of the people's thrift can wield tremendous influence. The army of insurance men and women, all over our country, are a vital factor in the processes of economic education. They are in contact with everyone of the hundred million life-insurance policyholders and beneficiaries. They can carry the truth into every home. If they rise to their responsibility, the New Deal threat to thrift can be ended.

Every life-insurance agent, every employee of an insurance company, every officer and employee of a savings bank, everyone who draws his or her living from an endowed institution, has a personal stake in saving private enterprise in America.

I charge that the underlying intent of the New Deal is to destroy private enterprise, little by little; to reform it not for the good purpose of eliminating its abuses and correcting its errors, but for the ultimate purpose of bringing about national socialism.

We Republicans must make this clear. If these facts were generally understood by lawyers, doctors, clergymen, the leaders of labor, agricultural and women's organizations, by the great middle class of the country, we should have an overwhelming majority against the New Deal's national socialism in the fall election. Once the state is supreme, labor unions go, and the skilled worker who has an investment in his skill, who has insurance funds in his union, will stand with us in that fight.

The great, thrifty middle class, the honest, hard-working, self-reliant Americans, aroused, mobilized, and united in a common purpose, can and will end the chaos that is the New Deal. They will save the Nation which they have built.

I have enlisted in their fight. I am in it, for whatever I may have to give, and so long as I have strength to carry on.

If you are one of the more than 64,000,000 policyholders, the value of whose insurance is being imperiled, or if you are a savings-bank depositor whose interest has been cut down by these destructive New Deal policies; if you are a shareholder in a company that has working money in the bank that will be endangered by paper money inflation that will result from the spending-lending program, now is the time to act.

Discuss these dangers with your friends. Go to the chairman of your party. Write to the delegate who will represent you in convention and tell him that this year you will work and vote only for a platform and a candidate who will abolish these policies, who will pledge himself to restore free enterprise and protect constitutional government. Now is the time to make your vote count.

American Forum Poll on a Big Navy

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 9 (legislative day of Wednesday, April 24), 1940

ARTICLE BY UNITED FEATURES SYNDICATE

Mr. MEAD. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a press dispatch which appeared this week in a number of newspapers. This dispatch, from the United Features Syndicate, furnishes the results of a poll conducted following a newspaper presentation by the American Forum on the question of a big Navy. Mr. Theodore Granik directs the American Forum and the results of his question on whether the United States should maintain a large navy are most interesting. The tabulation of reader response throughout the country shows sentiment 2-to-1 in favor of Secretary Edison's position.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

AMERICAN FORUM READERS 2 TO 1 FOR BIG NAVY

Readers of the American Forum's debate between Secretary of the Navy Charles Edison and Senator GERALD P. NYE are overwhelmingly in favor of the United States building the world's biggest navy.

Debating the question, Shall we build a navy second to none? Secretary Edison, who answered "Yes," received 68.9 percent of the votes received, while Senator NYE, who said "No," received 31.6 percent.

This sentiment was found in all the regions polled, with the exception of Ohio, which voted for Secretary Edison by the much narrower margin of 56.5 percent against 43.5 percent. Heaviest big Navy sentiment was found in Texas, where Edison received 86.8 percent.

Additional returns from the Farley-Hamilton debate on the benefits of the New Deal have reduced Mr. Hamilton's slight lead. Final tabulation gives Mr. Farley, arguing in favor of the New

Deal, 49.6 percent of the vote, and Mr. Hamilton, arguing against it, 50.4 percent.

Following is the vote by States on the Edison-Nye debate:

SHALL WE BUILD A NAVY SECOND TO NONE?

	Edison ("Yes") (Percent)	Nye ("No") (Percent)
Texas	86.8	13.2
Kentucky	73.7	26.3
Washington, D. C	67.3	32.7
Rhode Island	67.1	32.9
Pennsylvania	64.9	35.1
Ohio	56.5	43.5
Scattered	77.4	22.6
Total	68.9	31.6

The Territory South of the River Ohio

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, May 9 (legislative day of Wednesday, April 24), 1940

PROCLAMATION BY GOV. PRENTICE COOPER, OF TENNESSEE; HISTORICAL SKETCH BY ROBERT H. WHITE; AND STATEMENTS BY B. O. DUGGAN AND HARRY LEE UPPERMAN

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, as a part of my remarks, a proclamation by Gov. Prentice Cooper, of my State, concerning the establishment of the Territory South of the River Ohio; also a historical sketch of the establishment of said territory, written by Mr. Robert H. White, a distinguished historian of my State; also, a statement by Messrs. B. O. Duggan and Harry Lee Upperman, members of the Southwest Territory Commission. The article is most interesting and instructive.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

PROCLAMATION

Whereas by the act of Congress approved May 26, 1790, there was established the Territory South of the River Ohio, marking the beginning of the Territorial government which, within 6 years, developed into the State of Tennessee; and

Whereas this act of Congress brought vast new pioneering areas into the United States of America, settled and developed by a hardy, resourceful citizenship; and

Whereas the General Assembly of the State of Tennessee in joint resolution approved February 27, 1939, provided for the observance and celebration of the one hundred and fiftieth anniversary of the formation of the Territory South of the River Ohio, and for this purpose established the Southwest Territory Commission, with the duty of preparing a program for the sesquicentennial:

Now, therefore, I, Prentice Cooper, Governor of Tennessee, having appointed said commission, do hereby call upon all citizens of the State to cooperate in the proper observance and celebration of the founding of the Southwest Territory, and do especially request schools, colleges, civic and patriotic societies to join with the Southwest Territory Commission in the general program culminating May 26, 1940.

In testimony whereof I have hereunto set my hand and caused the great seal of the State of Tennessee to be affixed this the 23d day of April 1940.

PRENTICE COOPER, *Governor.*

By the Governor:

A. B. BROADBENT,
Secretary of State.

TENNESSEE'S AGED ANCESTOR TO BE HONORED BY TENNESSEANS

At the last session of the Tennessee Legislature a resolution was adopted to provide for the celebration of the one hundred and fiftieth anniversary of the formation of the Southwest Territory, out of which the State of Tennessee was created. The First Congress of the United States accepted as a gift from North Carolina what is today Tennessee, and on May 26, 1790, George Washington, as President of the United States, approved the action of Congress. For about 6 years, 1790–96, this territory belonged to the Federal Government, which set up rules and regulations for its government.

In order that the present generation of Tennesseans may know something as to how their ancestors were governed during the 6-year period, Gov. Prentice Cooper has requested State Commissioner of Education B. O. Duggan to urge the schools and the general citizenry as well to study and discuss a brief outline of the territorial times of our forefathers.

For more than 4 years, June 6, 1790, to August 25, 1794, the inhabitants of the "Territory of the United States of America South of the River Ohio" had no voice whatsoever in their own government. All powers of government were lodged in a governor, a secretary, and three judges, all of whom were appointed by the President of the United States. President Washington named William Blount as governor; Daniel Smith as Territorial secretary; and Joseph Anderson, David Campbell, and John McNairy as judges. Governor Blount was the Territory's military and civil executive officer. He was given the power to appoint county officers. He even could carve up old counties and from the fragments create new counties. If Congress did not forbid, the Governor and the judges could adopt for the Territory any of the laws in effect in any of the Original States. The territorial secretary was required to keep a proper record of the transactions of the Territorial government and was eligible to serve as governor in case of the latter's death, removal from office, or temporary absence from the territory. The judges acted as a court with common-law jurisdiction.

What might properly be termed the second stage of the Territorial government was reached when there were as many as 5,000 free male inhabitants of legal age in the territory. Such of these inhabitants as owned as much as 50 acres of land in the Territory were allowed to elect their representatives to a territorial house of representatives, in the proportion of one representative for every 500 free male inhabitants. Incidentally it was a requirement that the representative must own not less than 200 acres of land in the Territory.

The Federal regulations further provided that when these representatives met they were to nominate 10 men, each the owner of 500 acres of land, from whom the President of the United States was to select 5 to compose the territorial council. The general assembly, then, consisted of the governor, the council, and the house. No law could be enacted without the approval of the governor and a majority of both the council and the house. At this point it might be interesting to note that the Territorial Governor had the power of the veto, a privilege denied to the Governor of Tennessee until the adoption of the third constitution in 1870. The council and the house were empowered to elect a delegate to Congress who was allowed to discuss questions in that body but who was denied the privilege of voting on any measure before Congress. The first delegate was Dr. James White, of Davidson County (not Gen. James White, of Knox County, with whom he is often confused), who was elected over William Cocke by a vote of 11 to 7. This type of government in the Territory held forth from August 1794 to March 28, 1796, when the temporary government ceased to exist.

William Blount, Tennessee's only Territorial Governor, was only 41 years of age when he received the appointment from President Washington. Although he received his commission on July 6, 1790, Blount did not arrive in the Southwest Territory, as it became known, until October. In the following July Blount decided to locate where the present city of Knoxville is located. Town lots were sold to interested purchasers, but each lot was awarded by a lottery scheme perfectly legal at that time. Buildings were started and by the spring of 1792 Governor Blount moved his family into the territorial capital, where he was kept more than busy trying to quiet the disquieted Indians. In the summer of the same year (1792) Governor Blount, by an ordinance, created two new counties—Jefferson and Knox. Emigrants continued to pour into the new country, and by the latter part of 1793 it was evident that enough free males of full age were there to justify the setting up of a territorial government.

On February 24, 1794, the first Territorial legislature assembled in Knoxville, among whose membership were such men as Dr. James White, of Davidson County; John Tipton, who had been a thorn in Sevier's side during the days of the State of Franklin; William Cocke, who later was to be one of the State's first United States Senators; and Joseph McMinn, who later served the State as Governor. The principal work done during the 6-day session was the nomination of 10 men from whom President Washington selected the following 5 as the Territorial council: Griffith Rutherford, John Sevier, James Winchester, Stockley Donelson, and Parmonas Taylor.

It was not, however, until August 25, 1794, that the first Territorial general assembly, made up of both house and council, met in Knoxville. Without the council, no Territorial laws could be passed. For 36 days the law-making body worked industriously at passing laws for the benefit of the pioneers who had pushed their way into the western country. Colleges were chartered, counties created, and a tax law was enacted that levied 25 cents on each 100 acres of land.

In June 1795, the Territorial legislature met for a second and last time. The chief object of the meeting, so Governor Blount stated, was to find out whether a majority of the people wanted "The Territory to become a State," provided a proposed census showed a population of 60,000 free inhabitants in the Territory. The Federal act under which the Territory was organized stated that when the population reached the above number steps were in order to apply for admission into the Union.

Governor Blount had reached the conclusion that the Territory should take steps toward meeting the requirements for statehood.

Upon his recommendation an act was passed in July 1795 for taking a census of the inhabitants and for finding out whether it was the will of a majority of the voters that a State should be established or not. The census was to be taken within the period from the middle of September to the middle of November of that year under the direction of the sheriff and his deputies in each county. The census revealed that there were 77,262 people in the Territory, of whom 10,613 were slaves and 973 were free Negroes. The distribution of the population showed that 65,338 lived in the eight eastern counties, Jefferson, Hawkins, Greene, Knox, Washington, Sullivan, Sevier, and Blount. The three western counties, Davidson, Sumner, and Tennessee contained 11,924 people. Every eastern county voted for statehood. Davidson and Tennessee counties opposed statehood, while Sumner County was not enough interested to vote on the question at all. On the whole, 6,504 votes were for statehood and 2,562 were opposed.

Since there were more than 60,000 free inhabitants in the Territory, and since a large majority favored statehood, Governor Blount called an election in December for electing 5 delegates from each of the 11 counties for holding a constitutional convention.

On January 11, 1796, the Constitutional Convention met in Knoxville. On the following day, the convention appointed two members from each county as a committee to draft a constitution. Within less than 4 weeks, the constitution had been drafted and approved. The pay was voluntarily reduced by the members from two and one-half dollars per day to one and one-half dollars for the session of the convention.

Without waiting for the approval of Congress, steps were taken to put the State government into effect. John Sevier was elected Governor; members of the legislature were selected. On March 28, 1796, the legislature convened in Knoxville, and 2 days later Sevier was inaugurated as Governor. His inaugural address consisted of two brief paragraphs containing a total of 130 words. William Blount and William Cocke were elected as United States Senators.

In the preceding month (February) Joseph McMinn had been sent to Philadelphia to carry a copy of the State constitution to President George Washington.

On April 8, Washington submitted to Congress the constitution of the new State, calling attention to the fact that the law establishing the Southwest Territory conferred upon its inhabitants "the right of forming a permanent constitution and State government, and of admission, as a State, by its delegates, in the Congress of the United States * * * when it should have therein 60,000 free inhabitants; provided the constitution and government so to be formed should be republican * * *." Washington made no recommendations as to what action Congress should take.

The question of the admission of Tennessee into the Union came at a bad time. A Presidential election was "just around the corner." The Federalists and Republicans were in a hot contest. It was expected that Tennessee would cast her votes for the Republican candidates. The Federalists sought to delay her admission into the Union, thereby eliminating her electoral votes for the political opponents.

In the House of Representatives Washington's message was referred to a committee that reported favorably upon the matter; this committee recommended that the new State be admitted. Opposition to this report developed at once, being based upon these grounds in general:

1. Congress, not the people of a Territory, should first authorize the formation of a new State.
2. The census should be taken under the direction and authority of Congress.
3. The census had not been "fairly" taken.
4. The constitution was hastily and poorly drafted.
5. To admit Tennessee under the circumstances would be a bad precedent.

COMMENTS UPON SPEECHES CONCERNING ADMISSION OF TENNESSEE TO THE UNION

William Smith, Congressman from South Carolina.

Smith was elected four times to Congress as a Federalist. This fact largely explains his opposition to the admission of Tennessee to the Union. In the main, his arguments fell along the following lines:

1. The inhabitants could not claim the right of admission as a State until the Territory was formed into one or more States. Congress alone was competent to form the Territory into one or more States.

2. Under whose authority was a census to be taken? The taking of a census was an act that fell wholly under the jurisdiction of Congress. Since the inhabitants of the Territory had been enumerated under an act passed by the Territorial Legislature, such an enumeration was not valid, and should, therefore, be discarded.

3. Had the census been fairly taken? Mr. Smith asserted that it had not been fairly taken. Smith said the Federal act governing the Territory "spoke of the inhabitants within" the Territorial region, whereas the Territorial law "spoke of the people within the respective counties." Smith then argued at some length as to the differences between "inhabitants" and "people."

4. Smith objected to the duration of the time in which the census was taken, September 15 to November 15, 2 months. Since the sheriff of each county was allowed $2 for each 200 names enrolled, Mr. Smith thought that the census rolls may have, in effect, been "padded." He further alleged that "the law being so framed as to authorize the enumeration not only of all transient persons and strangers but also of the inhabitants and travelers, several times over; it was not an uncharitable conclusion that the enumeration was not so correct as to be admitted by Congress on so solemn an occasion."

5. Mr. Smith did not like the proposed Constitution of Tennessee. He said: "It carried with it the same marks of haste and inaccuracy as the rest of the proceedings. In several parts it was repugnant to the Constitution of the United States." This statement of Smith's is in striking contrast to that of Thomas Jefferson, who pronounced the Tennessee Constitution "as the least imperfect and the most republican in form." Smith concluded his harangue by saying that "the whole business was premature, and that the United States had not been on this occasion treated with that consideration and respect to which they were entitled."

JAMES MADISON ANSWERS SMITH

Mr. Madison, a strong advocate for the admission of Tennessee, replied in a direct manner to Mr. Smith's objections. If the Territory must first be acknowledged as a State by Congress and then have its inhabitants numbered under the authority of Congress, such a method "would be spinning a finer thread than was necessary and would give the people reason to suppose that the General Government was disposed to keep them in their present condition as long as possible." In referring to the census, Mr. Madison said that "the fact of population was the only necessary one, and would no evidence satisfy gentlemen but such as they themselves shall direct?" The Territorial Governor, who had directed the taking of the census, was a direct official of the Federal Government and that fact "gave the measure the authority of the United States." To Madison, "There appeared no just ground for supposing the census had not been fairly taken."

But Madison saw a great principle of government at stake. On this point he made the following observation: "The inhabitants of that district of the country were at present in a degraded situation; they were deprived of a right essential to free men—the right of being represented in Congress. Laws were made without their consent. An exterior authority appointed their Executive, which was not analogous to the other parts of the United States, and not justified by anything but an obvious and imperious necessity. Congress ought to lean to a decision which would give equal rights to every part of the American people. If there should be any inaccuracy in admitting them into the Union before they possessed the full number of inhabitants, it was only a fugitive consideration; the great emigrations which take place to that country will soon correct the error. I do not believe there is any doubt on that subject; the evidence is sufficient and satisfactory."

John Nicholas, Congressman from Virginia, supported the views of his fellow Congressman, James Madison. Nicholas said in part: "If, for instance, the determination as to there being one or more States might be at any time made, it is competent for Congress to postpone such determination, and when they do determine, they may divide the country in such a manner as to preclude their inhabitants forever from self-government or representation in Congress. If it depends alone on Congress to make the enumeration, they may delay this also at their own will, and defeat the rights of the other party."

Thomas Blount, a brother of William Blount, and a Congressman from North Carolina, rallied to the cause of Tennessee. He jumped on Congressman Smith, of South Carolina. He called attention to the fact that the Territorial Governor, William Blount, had all along kept the President of the United States informed as to the state of affairs in the Southwest Territory. In July 1795 a copy of the law governing the taking of the census had been sent to President Washington. When the census had been taken in November a copy of the returns had been sent to Washington. He had also sent the President a copy of the proclamation requiring the people to elect members of a constitutional convention, and on February 19, 1796, a copy of the constitution had been sent also. Governor Blount had also informed President Washington that the General Assembly of Tennessee would meet on February 28, at which time the temporary government would cease. This last information, Congressman Blount declared, "was to my own knowledge received by the President on February 28, 40 days before it was communicated by the President to Congress, and 11 days after it must have been known to the Secretary of State, if not to the President, that the State government had gone into operation."

Congressman Blount said that if the census was not a just one, or if there had been any fraud used in taking it, "an impeachment would lie against the Territorial Governor, who, upon his responsibility as an officer of the United States, sanctioned the law for taking it and acted under it after it was taken." The census could not have been taken in 1 day, Congressman Blount asserted. "People daily come to the Territory in great numbers; if the census had been required to be taken in 1 day, they could by no means have been numbered." He concluded his remarks by referring to Congressman Smith, of South Carolina, in the following words: "The gentleman from South Carolina had said that his arguments of yesterday had been today admitted. If the gentleman had supposed that he (Blount) had admitted them, he was mistaken. That he might not continue under the mistake, he would inform him that what he had called arguments were mere quibbles, such as could have only been expected from a county-court lawyer at the bar of a county court."

Another strong Tennessee supporter was Congressman Rutherford, of Virginia. "I do not wish to cavil with this brave and generous people. I would take them out of leading strings, as they are now able to stand alone. I would take them by the hand and

say that we are glad to see you stand on your own feet." Rutherford concluded his speech by saying, "We should not be too nice about their turning out their toes, or other trifles; they will soon march lustily along."

Congressman Nathaniel Macon, of North Carolina, hit the nail on the head when he said that most of the arguments had revolved about a topic that was not really before the Congress, namely, the number of Representatives to which the new State would be entitled. The question before Congress was on admitting the Territory to the Union as a State. To Macon, it appeared that the admission of the Territory as a State of the Union "was a matter of course, and that it seemed that the Executive, President Washington, was of that opinion." "President Washington," Macon pointed out, "has been duly informed with the proceedings of the Territory toward being admitted into the Union, and if he had thought they had been doing wrong he would have set them right." To Congressman Macon, "everything has been done fairly, and they have a right to claim admission as a member of the Union."

Albert Gallatin, Congressman from Pennsylvania, was of the opinion that the people of the Southwest Territory became ipso facto a State the moment they amounted to 60,000 free inhabitants. It was the duty of Congress, as a part of the compact, "to recognize them as such and to admit them into the Union whenever they had satisfactory proof of the fact." As to the census, Gallatin maintained that "the census bears on its face every appearance of fairness, and the number of inhabitants therein so far exceeded 60,000 as fully to compensate for any possible error or abuse."

Congressman William B. Giles, of Virginia, presented the report of the committee on May 28 as to the admission of Tennessee into the Union. Mr. Giles contended that the "proceedings of these people has been regular and authorizes the admission of them as a State into the Union." He called attention to the fact that the Senate bill "proposed to lay out the Territory into a State and order a census to be taken before they could be admitted." This committee report of the House was supported by Congressmen Giles, Nicholas, Madison, Gallatin, Venable, Lyman, and Holland. It was opposed by Smith, of South Carolina; Sitgreaves, of Pennsylvania; Thatcher, of Massachusetts; Coit, of Connecticut; and Harper, of South Carolina. The lower House of Congress passed the bill admitting Tennessee without delaying for another census to be taken. As may be seen, the Senate bill called for a census before admitting Tennessee to the Union.

All along the lower House of Congress was favorable to the admission of Tennessee. The spearhead of the opposition in the House was William Smith, the South Carolina Federalist. Smith was unable, however, to get a majority to support his views. While the lower House was the scene of the oratorical fireworks, it was in the Senate that the legislative "hand of Esau" was at work. Rufus King, of New York, an ardent Federalist, was able to obtain a postponement of Tennessee's admission from time to time. Undoubtedly Senator King was merely playing for time. If Tennessee's admission could be delayed until the adjournment of Congress, then the Federalists would have that much less opposition to overcome in the next Presidential race. The Senate never acted favorably upon the admission of Tennessee until May 31, at which time it voted to recede from its disagreement with the House bill admitting Tennessee. This action permitted the House bill to become a law, thereby admitting the Territory into the Union upon the status of a State.

A reading of the Annals of Congress for the year 1796 shows that the Senate throttled every effort favorable to the admission of Tennessee except that of May 31. There is a strong probability that Tennessee would not have been admitted to statehood at that session of Congress had not Rufus King resigned his seat in the Senate 8 days before adjournment of Congress. William Blount and William Cocke, Senators-elect from the new State of Tennessee, were never able to get their credentials approved whereby they would have been seated as Senators from Tennessee. On May 23 the Senate, by a vote of 12 to 11, permitted Messrs. Blount and Cocke to "be received as spectators and chairs provided for that purpose." At the 5 o'clock session on June 1 (the last day of Congress) Senator Martin, of North Carolina, moved that "the Honorable William Blount and William Cocke, Esqs., who have produced credentials of being duly elected Senators for the State of Tennessee, be admitted to take the oath necessary for their qualification, and their seats accordingly." The following action was then taken by the Senate:

"*Ordered*, That a paper purporting to be the credentials of Mr. Blount and Mr. Cocke be read.

"And, on the question to agree to the resolution, it passed in the negative—yeas 10, nays 11, as follows:

"Yeas: Bloodworth, Brown, Burr, Butler, Gunn, Langdon, Martin, Robinson, Tattnall, and Tazewell.

"Nays: Bingham, Bradford, Foster, Latimer, Livermore, Marshall, Potts, Read, Ross, Rutherford, and Trumbull."

The above action was the last taken by the Senate except attending to a few routine duties concerned with confirmation of Executive appointments. But Tennessee had barely been able to get its application for admission into the Union acted upon before the adjournment of Congress. If any doubt existed as to the part partisan politics played in the matter, that doubt would be dispelled by reading the jointly signed letter of William Blount and William Cocke to John Sevier, Governor of Tennessee. The letter was written on June 2, 1796, the day after Tennessee's admission into the Union. One statement in the letter hits the "bull's-eye":

"It is generally believed that the State of Tennessee would have experienced no difficulty in the admission of her Senators if it had not been understood that George Washington would not again accept the Presidency and that that State would throw its weight into the southern scale against Mr. Adams, whom it seems the northern people mean to run at the approaching election."

Tennessee was the first State to be created out of a Federal Territory. The population was at the time small and isolated but determined. Pioneer conditions prevailed, and her voice was unheard. In the two succeeding generations her position in commerce, military operations, and politics was of extremely high rank. Within this period she ranked at one time as the greatest corn-producing State in the Union. For more than a quarter of a century Tennessee was a leader in national political life, three of her citizens becoming Presidents of the United States.

The citizens of such a commonwealth, with such a glorious history and heritage, should be proud of their State's notable achievements. That pride will be highly justifiable when others view the long and difficult trek made by our forefathers. We of the present generation will love our State all the more when we come to know the story of her struggles, her hardships, and her success nevertheless. From that story of achievement must not be blotted that day on which her first definite step to honors and awards was taken. On May 26, 1790, President George Washington signed the document that subsequently paved the way for the sixteenth star to be added to our National Emblem. We honor ourselves by honoring this day.

STATE OF TENNESSEE,
DEPARTMENT OF EDUCATION,
Nashville, Tenn., April 25, 1940.

To Civic, Historical, and Educational Organizations:

Governor Prentice Cooper recently announced the appointment of a State committee to be known as the Southwest Territory Commission to make plans for celebrating on May 26 the one hundred and fiftieth anniversary of the formation of the territory southwest of the Ohio River. Appointment of this commission is authorized in a joint resolution passed at the last session of the State legislature.

The commission met in the Governor's office on April 18 to make plans for the observance of this one hundred and fiftieth anniversary. In order to obtain as nearly as possible State-wide participation in this celebration, it was decided to request all civic, historical, and educational organizations in the State to observe this anniversary in their scheduled meetings.

On May 26, 1940, at 3 p. m., the main celebration will be held in Nashville, Tenn. For this particular occasion the commission is inviting a prominent Tennesseean to deliver an address. A suitable musical program will also be a feature of the program. Arrangements are being made for this program to be broadcast for the benefit of those who cannot attend.

The members of the commission feel that your organization will be interested in cooperating in the proper observance of the founding of the southwest territory. The commission is leaving the type observance entirely in the hands of local groups. Whether it be study of this period or appropriate addresses does not matter, but we do feel it important that all citizens join in this observance.

Material prepared by Dr. Robert H. White, member of the commission, dealing with the period in which the territory southwest of the Ohio River was formed is enclosed.

Very truly yours,

B. O. DUGGAN,
Chairman, Southwest Territory Commission.
HARRY LEE UPPERMAN,
Secretary, Southwest Territory Commission.

Life Insurance and the Federal Government

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, May 9 (legislative day of Wednesday, April 24), 1940

RADIO ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by me on May 4, 1940, on the subject of Life Insurance and the Federal Government.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of the radio audience, tonight I wish to talk to you as a life-insurance policyholder as well as a United States Senator. For it so happens that aside from my home and a small New England farm, my insurance represents all of my life's savings. It has been my belief that this insurance of mine will bring my three boys to manhood in the event that I should die or become disabled. It is my way of assuring them an education, clothes, a home, and the other necessities of life regardless of what happens to me. This protection which I have afforded them gives me comfort day by day as I go through the hazards of life. I am fortified by the realization that regardless of what tomorrow may bring, I have done the best I could to safeguard the future of my three children. I dare say this is the story of the overwhelming majority of those who are listening in tonight. You know there are 64,000,000 other Americans today who have taken this same course to protect their loved ones.

The appreciation of the meaning of life insurance came to me at an early age. My father died when I was 9 years old without making any adequate provision for my mother or the three children. Realizing the struggle which my mother made to provide for herself and her children, I determined to acquire insurance just as fast as I could. It so happened that I got my first policy at the age of 16. It was a small one, of course. I have constantly sought to add to my insurance ever since.

Life insurance concerns everyone in the United States. It affects the life, the home, and the pocketbook of all of us. The 64,000,000 foresighted Americans I have referred to own 125,000,000 policies. If we include the beneficiaries of these policies it can truthfully be said that life insurance directly affects the economic lives of approximately 100,000,000 of us, or nearly all the adult part of our population. The laborer and the banker, the city dweller and the farmer, men and women in every station in life are building security for themselves and their loved ones through life insurance. It has been estimated that the estates of 8 out of every 10 persons who die in this country today are in the form of life insurance policies.

These 64,000,000 policyholders are planning for the future delivery of the amazing sum of $113,000,000,000 to themselves and to those for whom they are thus making provision. These dollars will do many things. Group insurance, amounting to $13,000,000,000, is a great security fund for American workers to provide a continuance of salary to their families. Insurance purchased by individuals amounts to some ninety-eight billions to provide funds for burial and the expense of last illnesses, but more important to make it possible for families to be kept together until children grow up and can support themselves; to provide funds for education and, in many cases, to make the mother financially independent for the rest of her life.

Life-insurance assets are invested in many ways, including Government, State, and municipal bonds, which means relief, schools, waterworks, roads, irrigation projects, and other public works. Life-insurance money helped build the railroads in the West, opening up the Nation for development and expansion; today it finances streamliners and improves railroad operation; purchase of public-utility bonds has meant more electricity, more telephones. Farm and city mortgages promote agriculture and housing.

Life insurance has been the only industry to withstand the disaster of depression and national calamity. Throughout the recent great depression and in other critical times for business, industry, and financial institutions, the life-insurance companies were in a solid position. Not more than three-quarters of 1 percent of the assets of the insurance companies were impaired by the failure of not more than a handful of companies during the depression.

The insurance companies, whose solvencies have meant the safeguard of the savings of a thrifty people, have been handling depressions before most of the New Dealers were born.

In the present depression the Federal Government, from January 1, 1933, to December 31, 1938, paid out for assistance to persons in need a total of $12,871,327,000. The insurance companies during the same period paid to policyholders and their beneficiaries a total of $15,700,000,000. There is no doubt either that our private insurance system prevented a much greater disaster than did occur to us in 1929. It has indeed been the bulwark of our capitalistic system.

Since the New Deal administration has been in power it has entered into practically every phase of the public and private lives of all of us. It has regulated our industries, controlled our banks, told our farmers what, when, and where to plant. It has gone into the public power business; it has gone into the rum business. It has taxed and spent and regulated our lives to such an extent that there can be only one conclusion arrived at and that is this administration wants complete control—and even greater power than it has today—over the fundamental forces of our national economy.

The real purpose of my talk tonight is to bring to the attention of the American people and particularly to those who are holders of life-insurance policies, that the forces of the administration in Washington have leveled their big guns on life insurance. Not for the purpose of regulating the type of insurance investments, not for the purpose of regulating the rates. But for the purpose of discrediting the insurance companies first, and later putting the Federal Government itself into the life-insurance business.

Life insurance, a magnificent structure, built by the American people to provide security and protection, maintained through strict State laws, thorough supervision and able management, has finally become the target of the economic "Tinker Toms" in Washington who propose that the Federal Government take over entire regulation of the business.

There is no necessity for this uncalled-for interference. Insurance companies are not gambling institutions; insurance companies are not stock exchanges; insurance companies are not interstate carriers. Insurance companies are the safe-deposit boxes to which your children and my children and our dependents will go for their livelihood after our deaths. Every advance made by life insurance is today protected and regulated and guided under the watchful eyes of State insurance commissioners. If a mistake is made in one State it is a warning to 47 others. If an improvement is made in one State it is a guiding beacon to 47 others. Under a system of centralized control this would not be possible, and life insurance would be frozen in its present state with no further advances.

Today there are 4,400 pages of insurance laws on the statute books of the 48 States. The courts have examined, tested, and interpreted these laws and their provisions, and they are now incorporated in the policies now in force. Should the Federal Government take over control there would be confusion and doubt as to the proper interpretation of policy contracts, with possible loss to beneficiaries until the mass of law could be weighed in Federal courts, which would take many, many years.

Federal control would mean a never-ending congressional discussion and debate on the subject of life insurance. I do not believe that the American people want politics played with their savings, their insurance policies, or their children's future.

The billions of assets of the insurance companies would be an ever-present irresistible temptation to an administration devoted to spending, lending, squandering, and other forms of deficit financing. Even if these economic "Tinker Toms" were not entirely successful in their attempt to gain direct control of the insurance-company assets, there might be attempts to force the companies through decrees and regulations into unwise fields of investments; not based upon profit or safety, but upon social experimentation. The best argument for the continuance of our tested and proven system, which has resulted in the growth and strength of life insurance is its efficiency, solvency, and desirability, in the minds of the overwhelming majority of the American people.

What is this specific danger to which I have been referring? It is the Senate Monopoly Committee, technically called the Temporary National Economic Committee, which was set up in June of 1938 in order to make a study of our American industry in order to answer the question, Why do we have idle men and idle machines in a land of plenty? Although this Committee has congressional representation, it has, through force of circumstances, been controlled by representation made up of left-wing New Dealers from the various Federal administrative boards; men of the same school that attempted to cure the evils of the American farmer by shooting his pigs and plowing under his crops; men of the same school that attempted to cure the evils of American justice by attacking and attempting to pack the Supreme Court; men of the same school that attempted to cure unemployment by using W. P. A. funds to buy elections in many of our States 2 years ago.

These New Deal economic wizards have an objective. They want to make a case against all industry and the system of private insurance in particular. And to this end they have directed the testimony of witnesses to prove only what they wanted to prove. They have attempted to create hostilities against the insurance companies. They have sought to build up feeling against insurance salesmen by suggesting that insurance would be cheaper if handled by the Post Office Department.

In addition to this Senate Monopoly Committee we have the example before us of one of the most outstanding New Deal Senators, namely, WAGNER, of New York, announcing in November of last year that he planned to seek legislation to put the Federal Government in the insurance business to the extent of selling annuities up to $100 a month. These annuities, he said, would be 30 percent cheaper than those of the private companies. Senator WAGNER made this claim despite the fact that the taxes which the private insurance companies pay, plus their overhead, does not exceed 12 percent. That being the case, I fail to understand how the Government policies would be 30 percent cheaper.

Regulating private industry out of business is a well-known custom and practice of the New Deal. If regulation fails, then the administration puts the Government into competition with private industry. The taxpayers' money is used to such an extent that the continued operation of the private company is impossible. Sensible and sane regulation of an industry as closely interwoven into the private lives of our people as life insurance is wise. But there are two kinds of regulations. One is for protection; the other is for control and political power. It is this latter type for which the American life-insurance companies are now earmarked.

If the insurance companies become the victims of this grasp for control of power, and if the economic panaceas which would then be invoked for the conduct of insurance business along New Deal lines should fail, a national calamity would result. Then, for the first time in history, there would be no backlog insurance assets for you or for me or for the 125,000,000 Americans who are directly dependent on life insurance to fall back on.

The lives of American people today are regulated from birth to death by their Federal Government. Licenses, taxes, permits, registrations, and rules of conduct are laid down for them. After his death the estate of an American citizen must pay taxes before one cent can be turned over to his beneficiaries. Those things we have now. If this attempt to give the Federal Government the regulation of life insurance and to put the Federal Government in the life-insurance business is successful, then the trustee of everything that a citizen has, of everything that he wishes to leave to his loved ones, will be at the mercy of the social experimenters.

And that is why I come to you tonight. It is up to the 64,000,000 life-insurance-policy holders in this country to say in firm and strong language to the New Deal, "Hands off." It is up to all of us to arise and speak in protest before it is too late.

Reward Offered by Samuel Harding Church

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES
